The Investors' Review.

The Week's Money Market.

Bank Rate 4½ per cent. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

Before the time we anticipated the Money market has forced the Bank of England to raise its rate. It did this by quoting rates above the 4 per cent. Bank rate which existed until yesterday afternoon, thereby driving the holders of bills to the Bank with inconvenient masses of paper. As the Bank did not wish to take over the burden of the market it began by taking only short dated bills, but on Tuesday the Governor announced that he would not take bills of any kind below 4½ per cent. This decision reacted upon the open market, causing the discount houses to quote 4¼-⅜ per cent. as their finest rates on three months remitted paper, and foreshadowed the advance in the Bank rate announced yesterday after a somewhat prolonged session of the Court.

All week short loans have been plentiful and easy enough, in part because the Bank has been supplying the open market with credits, but more because controllers of credit prefer to keep their hands on it and therefore lend at easy rates for short periods. Joint stock banks never got more than 3 per cent. on seven-day money, and all loans have run about 2½ per cent. The advance in the Bank rate has made little change in this respect, and call loans are still quoted at 2½-2¾ per cent., seven-day money being usually 3, but occasionally 3¼ per cent. The India Council has been getting 3¼ per cent. for month to month money.

In the usual manner, when the Bank rate rose banks and discount houses mechanically put their allowances on deposits to the figures shown in our table and discount rates advanced yesterday afternoon to 4 7/16-½ per cent. for three months' bills and 4⅞-5 per cent. on full six months' bills. Even the sharpest traders did not quote lower figures than these, and rates on short-dated bank bills were 4⅜-½ per cent. The market, in short, came at once close up to Bank rate, and held there this morning with sufficient firmness to again drive a large part of the current business direct to the Bank. It worked freely enough for the market in short-dated paper at its minimum, but accepted three months' bills from its customers alone at that figure.

Before the close discount houses again became nervous for some reason or other, and pushed the three months' quotation up almost to 4⅝ per cent., nobody quoting less than 4⅝ per cent., and for sixes the minimum rate became 5 per cent. everywhere. Should this attitude be adhered to, it must soon have the effect of pushing the Bank of England up to 5 per cent., and many people were ready to accept that further rise as probable next Thursday. Why credit-jobbers and bill brokers should be so nervous we have not been able to ascertain. Trouble in Berlin is still predicted, but if facts warranting rumour are known to certain houses in the City nothing tending to confirm them has reached the Press.

If the figures of the Bank return alone are examined, small reason can be found for a higher Bank rate. It is not a remarkably strong return, but still one much improved compared with a week ago. The reserve has risen by £1,109,000, and although the decrease in other deposits has been £1,537,000, the total is still rather above poverty limit. No doubt, however, the decision of the directors was dictated by the action of the open market combined with the reports received from Germany and elsewhere as to the state of tension existing on markets there. And the advance in the Bank rate is unquestionably judicious, because delay might have permitted unfavourable symptoms to develop, as they are very likely to do this autumn, with a rapidity tending to spread alarm and cause the Bank rate to jump to 5 per cent. at once.

Compared with this time last year, the Bank is weak too, or rather it is barely so strong, and we have a more critical season to face in the approaching autumn and winter than even then. Last autumn many hard words were uttered against the Bank for its delay in raising its rate. Perhaps this criticism was remembered yesterday, and certainly the directors cannot this time be accused of dallying with danger. Their action steadied markets everywhere for a moment, but by no means puts an end to our troubles.

The advance in our Bank rate has had a slightly stiffening effect upon foreign exchanges, although they have not yet risen to an extent which precludes all idea of competition for the small supply of gold to be dealt with in the open market next Monday. There is only about £383,000 altogether to be then sold, and some of the bullion houses think this too small an amount to attract foreign buyers. Others regard competition as probable, and the exchanges will have to move much more decidedly in our favour if foreign buyers are to be altogether kept off. Not only may they pick up the gold in the open market, or as much of it as the Bank of England allows them to take, but some estimate that between £6,000,000 and £7,000,000 of the metal will be withdrawn for Egypt before the end of the year, and if the crisis in Berlin develops we may be liable to sudden drafts from that quarter any day. Fifteen per cent. money in New York might also force it out.

Calls due next week come to about £1,231,000, of which the Straits Settlements loan takes £757,578 on Monday, and British Coalite and other shares £393,000.

Silver.

The market for bars was somewhat unduly depressed in the early part of the week, and quotations were driven down to 31 5/16d. per oz. for both positions by heavy selling on Chinese account. Operators there, however, suddenly turned round on Wednesday and sent orders to buy "at best," and as the bazaars also chose that day to buy largely, the market found itself unable to cope with the demand. Prices consequently rebounded sharply, gains of 15/16d. and 1d. per oz., respectively, being recorded, movements which have not been equalled since August 30, 1905. The rise proved to have been too rapid, as before the day was out sellers were offering spot metal at 32d., and a further relapse has since taken place, leaving final quotations at 31 13/16d. for cash, and 31 15/16d. per oz. for delivery two months forward. Tenders for Rs. 35,00,000 Council drafts on India were received at the Bank on Wednesday, when applications amounted to Rs. 1,62,82,336, all in bills, and tenders at 1s. 4 1-32d. received about 71 per cent. The amount to be offered next week is reduced to Rs. 30,00,000.

BANK OF ENGLAND.

The Stock Markets.

One more anxious week has been worried through by the City, and once more everybody is now again hoping the worst has been seen. We fear that hope is not yet likely to be realised, but there is great difficulty in assessing the causes of this week's extreme depression. It does not seem to spring from the Stock Exchange itself. Had it done so it would have been impossible to get through the settlement without heavy failures. All passed off, however, with the usual surface smoothness accompanied by the usual gossip about this and the other firm being in difficulties. Difficulties there doubtless are in many directions, but it must be true also that the Stock Exchange as a body is not deeply committed to American Railroad finance or to speculation for the rise in many directions, for if it had been the failures would long ere now have been numbered by dozens. It is inanition our market is dying of, not losses by gambles. This in one sense is a good sign and puts the market, or that part of it that can hold on, in a strong position, so that it can take advantage of improvements when they do come, as they will one of these days. Until that better day arrives it will be well if the Stock Exchange continues to stand aloof and to allow business to pass through it rather than commit iteself to any large extent in the direction of operating for the rise. Money was again in reduced demand for this settlement except in one direction, more American paper was offered in pledge, but bankers are shy of taking in securities of that class at present, and this also is well, for our salvation may lie in isolating ourselves as much as possible from the complications of other markets. We have quite enough to carry, and must not forget the hundreds of thousands of clients who have been financially scotched or killed during the long agony, nor yet the many thousands of people who are to-day, by their inability to meet their differences, compelling the brokers to carry lines of stock, possibly enough to their own ruin, stocks they cannot sell except at crippling or destructive losses. There we have the other side of the picture.

This week the further sharp decline in Consols is said to have been brought about in great measure by sales on German account, and the market has been treated to further gossip about the difficulties in Berlin and the distressing weakness of certain German banks. How far this is true it is really impossible to say, because weak institutions are certainly not going to confess how they stand as long as they can by one device or another keep up appearances. It is, however, obvious enough that foreign Stock Exchanges are in a decidedly worse plight than our own; most of them at least, for we may perhaps except Paris as a market, which, being more self-contained than any other, has not partaken in the widespread distress to the extent our own has done. None the less is it from other markets that our troubles are likely to be intensified, and however satisfied we may be that our position at home is in the main sound, there can be no real confidence in a recovery, or a steadying even, in prices until the Berlin and New York markets in particular have worked clear of their complications. Berlin, indeed, is feared more than New York at this moment, and we share in the general feeling of apprehension. But all trouble is not over in New York either, in spite of the assistance said to have been given to Wall Street on Thursday by Messrs. J. P. Morgan and Co. and other powerful financiers. The disease is too far-reaching and too deep-seated to be cured by mere plastering of this or any description, and we may be quite sure that Mr. Pierpont Morgan is not the man to engage his own fortune to a dangerous extent in propping any market. Pauses, however, are welcome, and if the New York market contrives in spite of its inherent rottenness to steady prices and raise them a little, those here who may still be involved with American shares of any description should not miss the opportunity to clear out.

Consols and Other Trustee Securities.

In spite of the great depression which has ruled nearly all week, a fair amount of small investment business has continued and the public is showing considerable wisdom and discrimination by the way it comes in on every fall to pick up securities that strike it as cheap. This is contrary to its old habits when every fall brought in a swarm of terrified sellers to realise and in so doing to aggravate the troubles of the market. That the public should be buying just now is also a proof that the recent fall has not caught a great multitude of holders on credit. A certain proportion of such are always to be found, people who are ill-advised enough to play without knowing the game, to plunge at the bidding of reckless and irresponsible advisers, but there is very little evidence of the existence of a large account of this kind now. Instead

we have the small investor hunting around to pick bargains up. We hope he will continue to do this, because even if prices fall further, as they will not unlikely do in many departments of the market, should the stocks bought be intrinsically sound it can only be a question of time when health will return to business and profit accrue. Keep buying, then, stocks whose interest is safe.

The lowest price touched by Consols this week was 80⅞, but we have got so accustomed to see the stock slipping back, and compared with French and German Government securities the price is still so high, that no particular general effect was produced by this further relapse, and had we been clear of the Berlin liquidation and the New York ferment, Home securities would probably have been on the whole firm. Trustee stocks certainly have not gone back to any noticeable extent, and some of them have latterly betrayed a tendency to improve along with Consols, which did not stay at the lowest price beyond a few minutes. London stocks went lower with Consols, but Indian have been firm, and the great bulk of home municipal stocks have never moved. The Colonial market has likewise been utterly neglected, with prices, however, disposed to recede.

Contangos.

The Stock Exchange obtained its money from the banks for the new account at 3½ per cent., the same rate charged a fortnight back, money jobbers getting their supply at ¼ per cent. below this figure. Some of the banks were inclined to ask rather more, influenced by their fear of the state of the New York market, but, on the whole, the charge was a fair one, and as the account was undoubtedly smaller than it has been for many a day, it was often difficult to get remunerative rates inside the market, even when the money to be lent only cost the intermediary 3⅜ per cent. Contangos on Home Railways were heavier in one or two instances, but on the average borrowers seldom paid as much as 6 per cent. for their money, all extras allowed for, and there was still little indication of a free supply of stocks like Brighton "A," Dover "A," or North British deferred. There was also less Great Northern deferred stock to be borrowed upon, and altogether the account was an easy one to arrange in this section. As for Foreign Government bonds, rates may be said to be stereotyped. Fortnight after fortnight the same quotations are given, and the same microscopic amount of business has to be arranged. On all the leading bonds, except new Russian 5 per cents., money seldom cost as much as 5 per cent., and was often lent at 3 per cent. The rate on Peruvian Corporation stocks, which have been phenomenally weak of late, remained at about 5 to 6 per cent., but the account to be carried was not altered in any marked degree, and altogether the speculative Foreign Bond market remains dead, or next to it.

About ½ per cent. additional was paid on American railroad shares, but that seldom meant more than 5 per cent, which was surely a light enough rate in the circumstances, certainly it promises to be higher next account because the utmost effort will be made by Wall Street to shift some of its floating liabilities to European markets, particularly to London. The advance in our Bank rate will also affect contangos at the end of the month, but meanwhile borrowers on American rails got off cheap in the circumstances. The rate was also down on Grand Trunk stocks, and in no degree heavier upon Canadian Pacific shares, in spite of the formidable masses of them thrown out by Berlin. Money was just the same upon Argentine and other Foreign Railway securities, rather lighter perhaps on Mexican second preference, but the contango on Hudson's Bays was distinctly higher, indicating a somewhat distressed "bull" account. Instead of being 2s. 6d. to 3s. 6d., the rate charged a fortnight ago, it was 3s. 6d. to 4s. 6d., which meant about 6 per cent. on the average, because in the interval the price has gone down.

The Foreign Market.

Argentine bonds as well as Brazilian and Chilian have lost ground, rather badly in some cases, but the early weakness of Japanese caused by rumours of yet one more loan has given place to strength, and the declines have been obliterated. Business has been good in the 4½ per cents. San Paulo bonds are lower, and among prominent European Government stocks both French and German have suffered. For all that, the foreign market has been somnolent rather than flat.

Home Railway Stocks.

Neither the fulminations of railway chairmen against their workmen, or the agitators whom they allege to be disturbing the minds of their workmen, nor the satisfactory traffic returns, have done anything to put life into this part of the market, yet a small business of the best kind goes on in some of these stocks; the public is buying in a small way, so that towards the end of the week, and in spite of the advance in the Bank rate, the leading Home Railway stocks showed some tendency to harden. This observation does not apply to the deferred stocks of the Brighton, South-Eastern and other companies or to Metropolitan stock, all these having been more or less unpleasantly depressed right through. And the best that can be said is that some little resistance to the general tendency has been displayed by the heavy stocks, which have lost nothing to speak of on the week. Some are even a trifle better. The traffic returns, all things considered, were again wonderfully good, as the *Railway News* points out, showing as they do an increase of £58,456 on the week, and bringing the aggregate increase for the six weeks elapsed of this half-year up to £341,810. Privileged stocks, debenture, guaranteed and preference, give no sign of rallying, and a fair number of them show further losses, partly on forced sales by people struggling to clear their feet.

American and Other Railroad Stocks.

Something like a half-developed, partly smothered panic has been fermenting on the New York market all the week, and although it appears to have pulled itself together a little towards the end, there is every probability that the decline will be resumed. Our market is merely a go-between for the Continent and New York, but even so, some of our jobbers have had all their work cut out to be able to escape losses. It is not New York alone which has caused the trouble, for Berlin has been selling steadily on every opportunity, and sometimes whether there was opportunity or not. Its sales yesterday sent prices here rattling down, after a rather firmer opening, until Union Pacific shares touched 125. We have had these slumps and partial recoveries most days this week, but the general result has been a staggering fall comparing last night's prices with a week ago. Union Pacifics show a fall of 6½. Pennsylvanias are down 1½, New York Central nearly reached par yesterday, and have fallen 7½ on the week. Louisvilles 4½, Atchison 4¾, Southern Common 8, Reading 4, Erie 2¼, and so on, last night's prices being all above the lowest.

Naturally, Canadian Railway stocks have gone with American, particularly as Berlin has been the distressed seller of Canadian Pacific shares. That company's dividend announcement had therefore no apparent influence whatever in steadying the price of the shares which have lost $5 on the six days' business. Grand Trunk stocks were likewise flung out either by home or Canadian operators, and the market here continues to express in anything but choice language its feelings of disgust over that £40,000 set aside from revenue to begin a pension fund or something of the kind. They think it foreshadows no dividend, or very little dividend, on the third preference stock at the end of the year, and, of course, the ordinary stock's chances are pushed away into the distance more than ever.

The weakest stocks latterly amongst those of the Foreign Railway list have been Mexican, where the selling is also said to have come from Germany, but

there has been no strength at any point, and business has been sluggish at the best, even in such favourites as the leading Argentine stocks, which are usually lower where altered. Cuban Railway issues also continue out of favour, and we fear there must be Continental holders in these likewise, compelled by their struggles to escape ruin to unload. The weakness has extended to the preference and debenture stocks of the Argentine list, and the only stock prominently better on the week is San Paulo, up 2. Antofagasta deferred has dropped 3½, partly on fears of loss by exchange. Yet the last issued revenue exhibit shows a nett gain in sterling, in spite of the depressed exchange.

Banks, Breweries, Commercial, and Other Stocks.

In the other divisions of the market only isolated examples of the distress can be cited. It is unnecessary to do more, because business has continued so thin. Bank shares have suffered with everything else, and London City and Midland and Standard of South Africa are both 30s. worse on the week.

The shares of the textile companies have been anything but buoyant, just because business has been poor. Calico Printers, though, are firm, and none of them have lost much. They are only what the slang of the street describes as "off colour." The shares of motor companies, however, are still flat with their debentures too, and those of catering companies have by no means resisted the universal tendency. Waring and Gillow shares, too, have been somewhat heavy, and during the week there was something like a slump in San Paulo Electric shares, which fell 13½, while the stock of the London General Omnibus Company continued in the way it has been going for many weeks past. Hudson's Bay shares touched 81½ on Thursday, but recovered, as the fashion is, part of the fall before the finish. Anglo-American Telegraph deferred is as much out of favour as any Yankee Railroad share of them all, and there has been no vigour in any part of the iron, coal, and steel share market, and United States Steel common dropped yesterday to 29¾, rallying, of course. The impression, however, begins to spread that we are on the eve of a set-back in the iron trade, and that securities of iron and coal companies here and in the States will presently suffer in the way copper mine shares have been doing. Tea shares may be said to continue to form the only good market of them all.

Friday Evening's News.

Another mood has again laid hold of the Stock Exchange, and this afternoon everybody has been talking things down. Some large account, or accounts, is said to be undergoing liquidation after the usual fashion. Whatever can be sold is flung on the market, and what cannot be is divided up amongst the creditors. This cannot go on much longer without rendering pretty well every firm in the Stock Exchange an object of suspicion, and to-night the effect of hidden windings-up of this description was particularly noticeable in the Home Railway market, where prices were so flat at the close that we give a few of the latest to keep readers abreast, the more so as they afford some warning contrast to the figures in our tables. Consols, it may be remarked, were comparatively steady, the liquidation in that quarter having for the present slackened or dried up, and the closing price to-night was 81⅝. In Home Railways, however, North-Western ordinary finished at 138½, Great Western at 117, South-Western deferred at 39⅜, and Brighton deferred at 70¾.

Less feverishness was exhibited in the Yankee market, but selling is still indulged in there the moment quotations harden, and the Continent is again accused of being busy unloading on the least opportunity. Can. Pacs., however, finished at 170¼, and among other prices worth noting are Japanese 4½ per cent. second issue 88¼, Mexican Railway ordinary stock 44, Rosario ordinary 99⅞, and among new issues new Durban stock 1½ discount and Manchurian Railway bonds ⅝ discount.

The mid-monthly Copper statistics show an increase in the visible supply, but did not have much influence on Tinto shares, though the Copper share market in general was depressed. The Kaffir Circus was also in anything but a merry mood.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: India 3½ p.c. A/c. ½, to 97-98, do. 3 p.c. A/c. ½, to 85-86. **Fall:** 2½ p.c. Annuities ½, to 79½-80, do. A/c. ½, to 79½-80, Guaranteed A/c. ½, to 81⅝-82¼, Exchequer 3 p.c. Red. 14th Oct., 1909 ½, to 99¼-99⅝, Local Loans A/c. ½, to 93½-94½, Transvaal A/c. ½, to 91½-92½.

WATERWORKS.—Fall: Cons. of Rosario 1st Db. 1, to 89-91, Sutton Dist. Ord. 5, to 240-250.

Critical Index to New Investments.

"Miraculum," Limited.

This company is concerned with an invention of a compound bearing its name which, when injected into the inner tubes of motor car and other india-rubber tyres, renders them "immune from ordinary puncture troubles." Apparently the substance originated in Australia, and a company in Melbourne has been developing the invention. What profit it has made, or whether the business is likely to be good, the prospectus does not enable anybody quite to judge, but the capital is only £25,000 all told, in 24,980 ordinary shares of £1 each and 400 deferred shares of a shilling each. There are 19,450 of the ordinary shares offered for subscription at par, and profits are estimated at a very high figure.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

London and North-Western Railway.

From many points of view the June half-year should have been a satisfactory one for the ordinary stockholders of this great company, and in a dreary way it was so. Gross receipts amounted to £7,484,541 or £237,111 more than in the first half of 1906. Working expenses, however, unfortunately rose by £151,989 to £4,791,142, or 64 per cent. of the receipts, so that the nett profit on working the railway was only £85,122 greater at £2,693,309. Even this gain, too, was slightly lessened by a decline of £3,373 in the miscellaneous receipts, which amounted to only £75,597 in the half-year, so that as a final result the free revenue of £2,768,996 was but £81,749 up. Interest on debenture stock, chief rents, leases, &c., took, however, £2,588 less at £685,564, while £24,955 more was brought forward from December than was available a year back, making the entire available free revenue £2,202,261 or £109,292 more than in June, 1906. Out of this the directors set aside £70,000 to the general reserve, raising it to £100,000, and then after meeting all the guaranteed and preference stock dividends propose a distribution at the rate of 5½ per cent. per annum on the consolidated stock, or the same as last year. A balance of £133,385 will then remain to be carried forward against £118,829 brought in from December and £96,114 carried forward on June 30, 1906. There was a decrease of 831,103 in the number of passengers carried, but the passenger, mail, and parcels receipts went up by £49,150, as against an increase of only £191,073 in the receipts from merchandise, live stock, and minerals. We say "only" because the increased weight of merchandise and minerals carried was no less than 1,446,612 tons. The entire revenue, it may be added, was earned at a cost of running 744,704 train miles in excess of the running of the first half of the past year. Items of working expenses are all higher, maintenance of way, works, &c., rose by £13,593, locomotive power by £32,464, traffic expenses by £77,862, carriage and wagon repairs by £9,170, and compensation by no less than £11,627, the total of this last item having been £81,998 for the past six months. There was also an increase of £2,794 in general charges, but rates and taxes fell off by £3,334 to £286,989. As usual, no particulars are given about the profit or loss on the company's steamship enterprises. We get the steamboat expenses but not the receipts, and even the expenses item is blurred by the entry of cost of working the Greenore service, which is deducted from the gross £65,038 for the past half-year. This cost is put down at £10,880, but to what department it is charged we have no means of knowing. As already mentioned, the fixed preferential charges of all kinds were slightly lower, and no increase occurred in the guaranteed and preferential dividends. Capital expenditure in the six months amounted to £437,829, of which £285,157 went into lines open for traffic and £120,250 into new working stock. In the current half-year the capital expenditure is estimated at £655,000, of which another £145,000 will go into working stock and £427,000 into lines open for traffic. We infer from this and from the general position of the capital account, which is now overdrawn by £3,356,335, that a fresh issue of stock cannot be far off. The unexhausted borrowing powers of the company amount to only £156,465, but borrowing powers to the extent of an additional £1,200,000 have been created, although not yet available, and there is uncreated stock available to the amount of about £3,500,000. Issues will have to be arranged for before long because the position of the capital account is the reverse of satisfactory. In spite of the fact that in the course of its existence the company has received £9,875,328 by way of premiums upon its stock, money that is on which it has to pay no interest, the total trust funds in the company's hands are exhausted to within about £210,000. Amongst these trust funds is £1,420,282 belonging to the superannuation fund, and there is another £647,615 in the company's own savings bank, besides £162,648 belonging to the widows' and orphans' funds. What is the position of these trusts? Have the men who have found the money to form them any means whatever of knowing how the balance-sheet stands? Is a balance-sheet of the trusts ever drawn up or exhibited to those interested in these various funds, all of which are absorbed in the capital account or in the general business of the company? When we note successive railway chairmen fulminating against the demands of their men we confess to feeling a certain amount of fear lest their "bluff," to use a slang term, should provoke their servants to inquire into these trust accounts. Were any move of the kind made it would, we feel certain, embarrass the companies to a degree at present little suspected.

Grand Trunk Company.

The full half-year's statement of the Grand Trunk Company runs as follows: Gross receipts £3,381,200, working expenses £2,446,500, or 72.34 per cent. of the receipts. This leaves a nett revenue from the working of the system amounting to £934,700, from which £480,000 of nett revenue charges, less credits, have to be deducted, leaving £454,100, which is further diminished by £87,800, being the loss for the half-year on the Canada Atlantic line, and £11,000, the deficiency on the Detroit line. When this £98,800 in all has been subtracted £355,300 remains to be dealt with, or including the balance of £13,200 brought forward, £368,500. Of this, as already intimated, £40,000 is set aside to begin the pension fund referred to by Sir Charles Rivers Wilson at the last meeting of the company, and from the remainder the full dividends upon the guaranteed and first and second preference stocks are met, after which about £14,600 will be left to carry forward. Further contributions to the pension fund will, it is estimated, amount to about £15,000 per annum. It is added that the accounts of the Grand Trunk Western Company, the old Chicago and Grand Trunk, show a surplus for the half-year sufficient to provide the interest on the first mortgage bonds and leave about £18,200.

Neath and Brecon Railway.

Gross receipts for the six months ended June 30 rose by £3,308 to £35,754, the increase being almost entirely due to the greater activity of the collieries along the company's line. Thanks to this, minerals yielded £3,082 more, while the gain in passenger traffic was £633 and receipts from merchandise fell off by £397, owing to the completion of the Swansea waterworks at Cray. Working expenses were only £645 heavier at £20,370, leaving a nett revenue of £14,865 against £12,171, to which was added £519, giving a total available of £15,384. After payment

of the interest on the first and "A 1" debenture stocks and providing for the half-year's interest on the "A 2" debenture stock, a dividend at the rate of 3 per cent. per annum is paid on the "B" debenture stock against nothing a year ago, and £2,874 is carried forward.

Port Talbot Railway and Docks Company.

Gross income from all sources for the six months ended June 30 was £65,708 or an increase of £8,774, but working expenses rose by £5,712 to £35,370 or 53.83 per cent. of the gross revenue compared with 52.09 per cent. in 1906. The traffic carried over the railways amounted to 1,392,106 tons, of which 1,283,943 tons consisted of coal and coke, these figures showing increases of 249,531 and 226,204 tons respectively. Receipts from coal and coke were consequently £2,540 up, but the largest improvement was in shipping and dock receipts, which rose by £6,013. Of the increase in working expenses, £2,133 was in locomotive power and £2,343 in shipping and dock costs. Nett revenue was £30,338 against £27,276, and with £955 brought forward, £2,055 land rent charges remitted, and £193 from interest, the disposable total came to £33,541 or £4,093 more. Provision having been made for all fixed charges, the preference dividend is met, and the ordinary shares receive a dividend at the rate of 2½ per cent. per annum against 1 per cent. a year ago, leaving £2,608 or £1,316 less to be carried forward.

Didcot, Newbury, and Southampton Railway.

There was an improvement of £336 in the gross earnings of this small line for the past half-year, but even so the balance available after meeting the interest on the 5 per cent. debenture stock was only £1,557, whereas £3,060 is required. Presumably, therefore, the arrears of interest will be further augmented by the difference. In the balance-sheet this is shown to be £17,194, and the capital account is overdrawn £17,350.

Northamptonshire Union Bank, Limited.

In the June half-year the nett profits of this bank were £28,333, making with the balance of £2,167 brought forward £30,500 in all. Out of this the usual dividend of 12s. 6d. per share, £11 paid, being equivalent to 5.6 per cent. on the capital for the half-year, or over 11 per cent. per annum, is to be paid and another £3,000 is added to the reserve fund, or the same as a year ago. After these assignments have been met and the income-tax, which takes £1,417, paid, £3,584 will remain to be carried forward. The total of the balance-sheet is £3,353,477, and it shows no important changes. Liabilities on deposit and current accounts, &c., are down £13,286 to £2,561,691. The bank held £14,200 more in cash or bank balances at £236,378, but its investments in Consols, Local Loans stock, and other securities show a decline of £22,363 at £800,339. This, we presume, is due to writings down, but no particulars are given as to the way the investment books are kept. Bills of exchange are £2,138 less at £304,278, and the advances on current accounts, &c., show a reduction of £2,093 at £1,941,823. Bank premises, after writing off appropriations, show very little change at £34,363, but other freehold property held has gone up by £6,478 on the year to £36,295.

Lanarkshire Tramways Company.

During the half-year ended June 30 this company opened another 3¼ miles of its system, making a total of 15.82 miles, and the number of pasengers carried increased by 1,193,746 to 6,009,522. At the same time the average fare rose from 1.12d. to 1.16d. and traffic receipts consequently showed an improvement of £6,528 at £29,190. With miscellaneous receipts the total income was £29,703, of which working expenses took £16,052 and contributions to local authorities £621, leaving a surplus of £13,030. Interest on debentures and loans required another £832, but with £883 brought forward the available balance was £13,081, and after paying a dividend at the rate of 5½ per cent. per annum £5,182 was carried to the new account. The paid-up capital of the company is now £287,230 and £30,400 has been raised by an issue of 4 per cent. debentures, but the outlay on the system, including payments to local authorities and cost of orders and promotion expenses, amounts to £350,814, so a further £12,500 has had to be borrowed from the bankers and the reserve of £10,000 has also been employed in the business. Sundry creditors are also heavy at £6,784, apart from an item of £5,704 for Parliamentary deposit, Order of 1903, which appears on both sides of the balance-sheet, while sundry debtors owe no more than £707 and cash £3,753 is barely half the sum required to meet the dividend now declared. Nothing has been written off the capital account for depreciation, but this is merely an interim report, and the directors state that they will deal with the matter as usual when the final accounts are made up at the end of the year.

Chatham and District Light Railways Company.

This company is under the same control as the Lanarkshire Tramways Company, and, like it, had a rather larger mileage in operation during the past six months than in the corresponding half of 1906. The number of passengers carried was only 113,102 larger at 3,626,503, but the average fare rose from 1.11d. to 1.18d. and traffic receipts were £1,595 better at £17,847. Advertising, rents, &c., gave another £424, making a total of £18,273, of which expenses took £12,941, and the nett profits, including £579 brought in, amounted to £5,911. Of this £1,190 was paid away for debenture interest and £222 was written off for cost of line abandoned, leaving £4,493, which is carried forward to the end of the year. Capital expenditure for the six months was £8,575, bringing the total to date up to £304,298, against which there is a depreciation reserve of £9,000. Like its companion the undertaking has to rely very largely on credit, and in addition to £59,800 in 4 per cent. debentures has borrowed £2,500 from its bankers and owes £12,008 to sundry creditors. On the other hand the amount due from sundry debtors is only £559 and cash is decidedly small at £1,411, so that it looks as if further capital would have to be raised shortly.

Old Albion Brewery, Limited.

The directors of this company were so well pleased with their explanation of the causes of the improved business a year ago that they make it do duty again in their report for the year ended June 30. Accordingly, we are told that careful management and the production of malt liquors of the purest and finest quality account for the increase of £615 to £11,727 shown in the nett profits, after providing for depreciation, contribution to the compensation fund, &c. The amount brought in was a trifle less at £601, but the total, nevertheless, was £577 larger at £12,398. Interest on debentures and loans and preference dividend having been met, the ordinary shares again get 8 per cent. for the year, and in addition to transferring another £2,000 to property reserve, £500 is put to general reserve, leaving £667 to be carried to the new account. The allowance for depreciation considered adequate is not disclosed in the accounts, but it is probably small, and as further properties appear to have been acquired this item is £2,432 larger at £163,140, against which the reserves will now amount to £13,000. Loans are only a trifle up at £15,447, and liabilities to creditors have been reduced by £639 to £5,072. On the other hand, debtors have risen by £1,351 to £9,232, but investments are £425 down at £1,025, and cash is trifling at £134 and as £2,440 has to be found for the dividend just announced, the margin of free assets is none too substantial.

Page and Overton's Brewery, Limited.

Croydon seemed to be as thirsty as most other places during the past year and this brewery, which operates there, gathered a profit of £34,710, or much the same as for the previous twelve months. Repairs, insurance and depreciation accounted for £8,196 and debenture and other interest for £11,507. Directors', trustees' and auditors' fees, income-tax and the charge payable under the Compensation Act come to £3,210 and £12,299 remains, including £503 brought forward. Preference dividend is £7,125, a dividend of 5 per cent. is paid on the ordinary shares, £500 is written off preliminary expenses and £351 is carried forward. Some day, goodness knows when, the directors may be able to give the question of reserve some attention, nothing having been accumulated so far and we fear it must be agreed that the company is overcapitalised. Estates, goodwill and fixed plant accounts have a book value of £408,112 and casks, horses, drays, &c., are entered at £11,080. Trade creditors, loans and deposits come to £28,712 besides which there are mortgages and interest for £8,253, but book debts, rents and loans amount to £28,874, cash is £5,581 and stock £11,874. Preliminary expenses have now been reduced to £2,000.

Dutton's Blackburn Brewery, Limited.

Trading profits, including rentals and interest, for the year ended June 30 last came to £32,684, and after deducting interest on debenture stock and loans as well as the directors' fees, together with £804 for the compensation charge and £1,500, being the company's proportion of the cost of rebuilding the Bull's Head Hotel, Wilpshire, the free balance was £18,518, which compares with £16,621 for the preceding year. This does not include £966 brought forward. That added, the disposable balance is £19,503, out of which the pre-preference shares got their 4 per cent., while the 5½ per cent. cumulative preference shares received altogether 4½ per cent. for the year. These dividends met, £2,753 is left to carry forward. Depreciation does not appear to be very lavishly attended to by this company, and the only reduction in the main assets represented by the brewery premises, plant, beer houses, shops, cottages, &c., &c., was £2,578, being money received as compensation for lost licences and sales of properties. Against this £1,729 of additions were made, so that the total value of these assets is brought out at £636,707 compared with £637,737 a year back. Beyond the £250,000 of 4 per cent. first mortgage stock the company appears to owe very little money, and the business is evidently a steady-going one.

Clarkson's Old Brewery, Barnsley, Limited.

This company made a profit for the year ended June 30 last of £14,958, made up to £15,869 by £911 brought forward, so the directors are able to meet the preference dividend and to pay 10 per cent. on the ordinary shares besides setting aside £700 against doubtful debts and contingencies, £500 to depreciation of working plant and adding £2,000 to the reserve, raising it to £50,000. A balance of £2,269 will then remain to be carried forward, so that the business would appear to have been improving, and the balance-sheet looks a comfortable one.

Waller and Son, Limited.

This Bradford brewery company earned £9,022 last year from sales and rentals, after making ample provision for bad and doubtful debts. Adding the balance of £1,010 brought forward, the free revenue was £10,033, out of which the preference share dividend of 7 per cent. has been paid for the year, together with the interest on the mortgages, after which £2,301 remained to be carried forward. It is a small company, but appears to be

in a very fair condition, only that the ordinary capital of £70,000 has to go without a dividend. Its total share capital is £140,000, its debt on mortgages £71,000, and in addition to that it owes £32,691 on account of sundry loans, plus interest. Other debts due by it come to £7,213, and debts owing to it to £11,306, but the accounts are not very full or clear, these amounts being entered nett.

William Muiray and Co., Limited.

There was not much difference in the trading profits of this Scotch brewery for the twelve months to June 29 compared with the previous year, but the movement happened to be the wrong way. The revenue was £5,025 against £5,151, interest and transfer fees came to £573 and £738 was brought in, making a total of £6,336. Depreciation allowance does not look very great at £325, income-tax is £214 and managing director's salary and directors' and auditors' fees amount to £685. The preference dividend takes £1,900 and the 4 per cent. proposed on the ordinary shares £1,330. Reserve fund is next credited with £1,000 and £881 is carried out. Reserve fund is thus built to £10,000 or about 20 per cent. on the property valuation of £49,062. Debtors owe £15,425 against £11,465 due to creditors, stocks are valued at £9,145 and cash and bills appear at £22,023.

Dailuaine-Talisker Distilleries, Limited.

The writing down of the capital which took place in 1901 does not appear to have been nearly drastic enough, and the company is still floundering along unable to do much more than earn the dividend on its preference shares. According to the directors' report for the year ended June 30, the nett profits after providing for the upkeep of the works in the highest state of efficiency were £15,663, making with £1,971 brought forward an available total of £17,634. Out of this the preference dividend is paid and £1,000 is transferred to depreciation and reserve account, but this leaves only £2,134, and the ordinary shares have therefore still to go without a return. Outlay on the property during the twelve months was £1,420 or rather more than the provision now made, and after deducting the reserve fund this item will stand at £233,429, apart from the goodwill which is valued at the fancy figure of £88,269. Liabilities to sundry creditors amount to £30,599 and £24,365 is due to creditors holding security over whisky stock, property, &c., and against these there are sundry debtors £28,021, stocks valued at £197,173, investments at cost £5,870, and cash £1,386.

Dublin Distillers Co., Limited.

We do not intend to do more than record the bare result of this company's operations for the past year ended June 30 last because it is waste of time and space to dilate at length upon the company's hopelesly waterlogged condition. Trade seems to have been a little better in the period under review, the profit being returned at £28,218 which yielded £18,840 nett, an increase of £3,703, after providing for maintenance, depreciation of casks, interest, income-tax and directors' fees, the last-named being £1,500. Debenture interest takes £14,962 and £3,878 remains to go in reduction of the debit brought forward bringing it down to £3,448. Share capital is £650,000, of which £300,000 is in 6 per cent. cumulative preference shares, and goodness knows how much is now owing on account of unpaid interest. There is also a debenture debt of £350,000 and we find that the premises, plant and goodwill are valued at £640,381 and stocks at £330,093. No reserves are possessed with the exception of trifling sums for returnable casks, freight and debtors. Sundry creditors amount to £17,995—fortunately not a large sum—sundry debtors and storage rents come to £40,230 and the cash balance is £4,144, a most deplorable position.

British Dyewood and Chemical Co., Limited.

A year ago it seemed as if this company was at last on the point of pulling itself round, as the directors actually managed to pay off as much as 4 per cent. of the arrears on its preference shares. But the progress has not continued, and the report for the twelve months ended June 29 is a melancholy enough document. The accounts show a profit on trading of £15,998 and the total income, including £221 brought in and £2,412 from interest, amounted to £18,631, out of which £115 is written off for bad debts and £7,500 is allowed for depreciation. Out of the balance £10,500 is utilised to pay 3 per cent. on the 5 per cent. preference shares, making 4 per cent. on account of the year 1905-6, and £516 is carried forward. Arrears of preference dividend therefore now amount to 6 per cent., but if this were the only trouble the company had to face the difficulties might, perhaps, be regarded as only temporary, especially if the hopes regarding the Jamaica enterprise in which the company is interested are realised. Unfortunately, however, some two or three years ago the directors thought fit to assist in the promotion of an Argentine Tannin Extract Company, which was to give this company the sole selling rights of its products, and bought £30,125 of its shares at a cost, including a proportion of the preliminary expenses, of £30,894. The directors make no reference to the present condition of things in their report, but the auditors make good the omission, and state pretty plainly that the above-mentioned sum is practically a dead loss, as the Argentine Company is in liquidation. Another loss which ought to be provided for has arisen in connection with two of the company's own mills which have been closed, but are nevertheless still carried in the account at their old value. Even these do not complete the story, as investments appearing in the balance-sheet at £64,316 were worth on June 29 no more than £53,726 or a depreciation of £10,590, against which the reserve fund is only £585. Additions to capital account during the year were £6,741, entirely in connection with the Jamaica business, and after deducting the provision for depreciation this item stands at £335,685. Creditors are small at £8,238 against £53,416 due from debtors and £102,556 in stocks, but the company has had to borrow £5,903 from its bankers, and has only an odd pound or two in cash.

Lancashire Wagon Co., Limited.

Rents of wagons in the half-year to June 30 were £63,389, profit on sale of wagons was £994 and transfer fees gave £1, or £64,384 in all. After meeting sundry expenses and replacing £53,050 to capital there was a balance left of £10,067 to which is added £1,088 brought forward making £11,155. Interest took £4,809 and preference dividend £1,048, while a dividend at 7½ per cent. per annum on the ordinary shares accounts for £1,132. This is the company's jubilee year and shareholders are therefore to have their bonus now instead of six months hence. It will be 3s. per share on the £2 paid shares and 2s. 3d. per share on the £1 10s. paid shares, leaving £1,885 to be carried forward. At the same time, however, it is proposed to make a call of 10s. per share on the new ordinary shares and £2 10s. per share on the new preference shares, the amount being deducted from the dividend and bonus. Wagons were purchased during the half-year to the value of £74,884 and, allowing for the replacement of capital above referred to, the value of the wagons, &c., is £333,458. Share capital paid up at the date of the accounts was £76,401 and total creditors were £264,415 including £86,718 due on debentures and £114,123 on loan. Sundry debtors come to £29,700 and the cash balance is something under £4.

North Central Wagon Co., Limited.

Receipts from interest on wagon leases, wagon hire, works profits, &c., for the six months ended June 30 were £35,468, of which expenses, debenture interest, and depreciation allowances took £22,269. Including £313 brought in the nett profits were £13,512, and out of this the directors pay a dividend at the rate of 10 per cent. per annum and a bonus at the rate of 3 per cent. per annum, and after placing £3,000 to reserve carry forward £763. The company owns 32,674 wagons which cost £1,474,199, but on this the depreciation allowance now comes to £367,089 and there is also a reserve fund of £106,159. From the nature of the business a good deal of credit has to be given, and we therefore find amongst the assets such big items as sundry tenants for wagon rents £59,291 and sundry debtors £39,380. Freehold land and buildings, at Rotherham, Swansea, Stoke, and other places bring the total of the balance-sheet up to £1,265,953. On the other hand, the paid-up share capital is only £150,000, and in addition to £909,649 raised on debentures the company owes £1,596 to wagon builders and £32,405 to sundry creditors, and has also been obliged to borrow £39,380 from its bankers.

Regent's Canal and Dock Company.

Revenue was barely maintained at a total of £40,930 in the past half-year compared with the corresponding six months of 1906, which was bad because last year's figures showed a decline of £3,166. Working expenses, however, were pulled down by £660 to £16,961 and the balance of nett revenue therefore shows slender improvement at £23,908. After providing interest on debenture stock and annuities and crediting the sum brought forward together with interest there is a balance remaining of £14,230 from which the stockholders again receive a dividend at the rate of 2 per cent. per annum with £649 carried forward. There is now a small debit on account of capital and a suspense account of £3,633 remains to be cleared away.

Milford Docks Company.

The tonnage of vessels entering this company's docks during the past half-year showed a further falling off from 383,860 to 364,171 tons, but either the dock dues and wharfage charges, &c., have been raised or the company has some new source of revenue which it does not disclose, as receipts increased by £1,537 to £12,610. After providing for all charges, including interest on special mortgages and depreciation of plant, &c., a balance of £5,243 or £821 more was left, and out of this interest on the "A" debenture stock is paid at the rate of 26s. per cent. for the half-year. For the corresponding six months of 1906 the distribution was 22s. and for the two preceding years 20s. 6d. and 18s. 4d. respectively, so that progress is certainly being made, but it is unlikely that the company will ever become a really sound concern. The directors report that the mackerel season, although not favourable throughout, closed with an improvement, while the trawl fish traffic continues to increase, and a satisfactory season for herrings is anticipated.

Manchester Ship Canal Warehousing Co., Limited.

For the twelfth year of this company's existence ended June 24 last the profits, including £363 brought forward, came to £12,978 after meeting all expenses and the interest on the debenture stock. The usual assignments have been made to the sinking funds for the redemption of the share and debenture capital of the company, and the ordinary shareholders have received two dividends of 6s. per share, making 6 per cent. for the year. This will leave £516 to be carried forward subject to the payment of directors' fees. Everything appears to be straightforward in the accounts, and the sinking funds of the various descriptions of capital are all separately invested together with the accrued interest thereon, the total of such investments and interest being now £11,917.

Manchester Dock and Warehouse Extension Co., Limited.

This is a similar business to the Ship Canal Warehousing Company, and it also showed a profit of £15,592 for the year ended June 24 last, including £814 brought forward, and after meeting the current expenses and debenture stock interest. Here there is no preference capital, but the sinking funds for the redemption of the debenture stock and ordinary share capital in the year 2001 took away £921, and out of the balance of £14,671 an interim dividend of 5s. per share was paid six months ago. Another dividend of 5s. 9d. per share is now recommended for the second half of the company's year, making the total distribution for the twelve months 5⅜ per cent. These payments made, £1,234 will be left to carry forward. Formation expenses to the amount of £15,000 are still carried as an asset in the balance-sheet, otherwise the accounts seem to be just as clean and comfortable as those of the Canal Warehousing Company.

Grand Canal Company.

Receipts for the six months ended June 30 again showed a small decrease of £544 at £46,181, and at the same time most items of expenditure were heavier, with the result that the nett revenue was £653 down at £13,126. The balance of £6,255 brought in, however, was considerably larger, so that the disposable total came to £19,381 or £528 more. After providing for debenture interest and preference dividend, and putting another £1,000 to the accident insurance fund, the dividend on the ordinary shares is maintained at 4 per cent. per annum, leaving £6,789 to be carried forward against £6,261 a year ago. Nothing has been spent on capital account, and the overdraft remains at £18,162, against which the reserve amounts to £16,852, apart from the accident fund of £4,919, and the special reserve of £2,924 for the cost of the Baggot Street houses. Liabilities on current account are £6,771, but debtors for rent, freights, &c., owe £8,374, cash comes to £4,636, and loans to £10,500.

Commercial Gas Company.

Sales of gas during the six months ended June 30 after deducting discounts and allowances yielded £187,247, while rents gave £21,254, residual products £54,598, and miscellaneous items £83, making a total revenue of £263,182. Expenses, including £2,896 for profit-sharing and £1,028 written off for bad debts, absorbed £201,376, and with £22,947 brought in the nett surplus was £84,754. Debenture and other interest having been met, the directors pay dividends of £5 4s. per cent. per annum on the 4 per cent. stock and £5 per cent. per annum on the 3½ per cent. stock, leaving about £23,000 to be carried forward. Expenditure on capital account for the six months was £11,639, making a total of £2,609,697 against £2,544,587 received, and as the reserve and insurance funds amounting to £66,782 are practically all invested outside the business, temporary loans of £60,500 have had to be negotiated. Sundry creditors come to £47,559, but debtors owe £76,817 and the company holds £5,404 in cash.

Croydon Gas Company.

Sales of gas during the six months ended June 30 amounted to [illegible] or an improvement of £5,902, and with larger receipts from meter rentals and residual products, the total income was £9,610 up at £111,081. Cost of manufacture rose by £6,044, and with small increases in management and miscellaneous charges the total expenditure was £6,201 heavier at £82,911. Nett revenue, therefore, came to £3,409 more at £28,170, to which was added £4,460 from the previous account, and after providing for all charges and putting £1,000 to renewal fund, the available balance was £28,511. Dividends ranging from 5 per cent. to 14½ per cent. per annum on the various stocks, including the issues of "D" and "E" stocks made during the half-year absorbed £21,024 of this, leaving £7,487 to be carried forward. In accordance with the Croydon Gas Act of 1904, the price in the Carshalton area of supply has been reduced to that charged in the Croydon area; as a consequence, the holders of "C" stock will be entitled from July 1 to a dividend at the same rate as that upon the "B" stock. The reserve and insurance funds have been increased by the interest earned, and now amount to £32,197 and £15,158 respectively, of which £36,341 is separately invested. Creditors amount to £29,428, against £30,286 due from sundry debtors and £14,066 in cash. Expenditure on capital account was £14,546, but £27,136 was received, and there is a credit balance on this account of £34,922.

Tottenham and Edmonton Gas Light and Coke Company.

The price of gas was reduced to 2s. 6d. per 1,000 cubic feet on January 1 last, but the expansion in the business made up the loss of revenue thus caused, and the increase in the sale was actually £2,416. After meeting all charges, the nett revenue was £12,280, to which £21,253 brought forward is added, making the available sum £33,530, out of which a dividend of 6¾ per cent. is recommended on the "A" stock and one of 4½ per cent. on the "B" stock. These when paid will leave £19,743 to be carried forward. The increased dividend arises from the reduction in the price of gas.

The Seville Water Works Company.

A heavy decline occurred in the nett earnings of this company for the year ended March 31 last which came to only £3,154 against £6,915 for the previous year, after meeting all working charges and the service of the debentures. Accordingly no further dividend is declared, but this balance is added to the £4,300 brought forward from the preceding year, making £7,453 at the credit of profit and loss. Increased expenditure in Seville is ascribed principally to special outlay on repairs and renewals of machinery, replacement of temporary and accidental machinery by new and permanent plant of greater capacity, repayment of the amount expended by the municipality upon the upkeep of the footbridge in previous years, an expenditure for which the company was adjudged to be liable, and to the larger amount of water taken from the Santa Lucia Spring and Aqueduct as well as to the provision for arrears of taxation. The directors report with regret the retirement of their engineer and manager in Seville, Mr C. A. Friend, who has served the company loyally and faithfully for over 20 years, latterly in times of great difficulty. It is proposed to give him a well-deserved pension. In his report for the year Mr Friend mentions that throughout Andalusia the drought last year was not only sustained but accentuated, the rainfall showing a deficiency of 67 per cent. of the mean of 37 years. Amongst the working charges that are higher are pumping and engine charges up £1,296 and taxes £2,388 more, but as a whole the business appears to be worked with economy. It may be well to recall that a dividend at the rate of 1 per cent. per annum was paid upon the share capital in September last out of the profits of the preceding year. Capital expenditure still goes on and amounted to £6,653 gross last year, or after deducting sundry credits to £6,132 nett.

South Staffordshire Water Works Company.

In the half-year ended June 30 the revenue from water rates amounted to £70,117, and with £7,250 brought forward and £608 from other sources the total income was £77,976. Expenses took £34,168, adjustments and allowances and bad debts £1,539, and debenture and preference interest £12,268, leaving a balance of £3,000 to be dealt with, out of which a dividend at the rate of 7 per cent. per annum is paid and £7,593 is carried to the new account. Capital expenditure for the six months was £9,909, making a total of £1,422,100, of which £1,002,288 has been provided by the stock issues, £238,210 by debenture stock and £163,851 by premiums received, leaving £17,751 due to bankers and others. Liabilities to sundry creditors amount to £10,683 and £13,200 is due for interest accrued on debenture and preference stocks, &c., and to meet these the company has £12,936 to come in from sundry debtors, £4,084 in stocks, and £36,186 in cash.

Vyse, Sons and Co., Limited.

This Wood Street company made a profit of £12,060 last half-year, which was reduced to £8,060 by the leases sinking fund, directors' fees and the interest on the debenture stock. £6,331 brought forward had to be added, so that the free profit was £14,391, out of which the dividend on the 5 per cent. preference shares took £5,000 and a like payment on the ordinary shares another £5,000. Half of these dividends were paid on both classes of shares in February last, and when the payments are completed, £4,391 will remain to be carried forward. The company has a reserve fund of £10,000 in the balance-sheet, and its leases sinking fund has been invested to the amount of £13,380, the investments being entered at cost price as well as the purchases of the company's own debenture stock by trustees, of which £6,550 nominal has been bought in at a cost of £6,315. The heaviest item amongst the assets is £120,325, representing debtors on open accounts after deducting discounts. The creditors of the company on open account can claim from it only £37,314, so in spite of the fact that goodwill stands in the balance-sheet at £56,927, the exhibit seems a cheerful one.

East Worcestershire Waterworks Company.

A profit of £2,549 was made by this little company in the past half-year ended June 30, and adding £980 brought forward there was £3,529 for disposal, out of which a dividend at the rate of 5 per cent. per annum is paid on the share capital, while £100 is written off for depreciation on buildings and £600 for depreciation on machinery and mains, leaving £998 to be carried to the new half-year.

Peek Bros. and Winch, Limited.

The improvement in this company's business noted a year ago has been maintained fairly well during the twelve months ended June 30, and a further advance of £2,888 to £31,562 was secured in nett profits. As a small balance of £133 was brought forward instead of having to write off a big debit balance, the directors had £31,695 or £5,030 more at their disposal, and are therefore able to clear off all arrears of preference dividend, with a surplus of £574, which they put to reserve. This is certainly a better result than those obtained in the two preceding years, but if the directors' actions are governed by prudence the ordinary shares are by no means in sight of a dividend yet, as the position of the company badly needs strengthening. On freehold property and goodwill valued at £280,515 the allowance for depreciation is a beggarly £500, and we should like to know what proportion of this represents goodwill. Leasehold properties show a reduction of £75 at £3,862, and fixtures and furniture are £681 down at £4,867, but plant, &c., after all writing off, is £768 up at £1,381. Stocks have increased by £8,120 to £19,115, so that further recourse to the bankers has been rendered necessary and temporary loans are £25,558 up at £31,544. But deposits at £20,363 and sundry creditors at £8,131 show little change. Debtors owe £8,900 less at £10,373, a decline which is far from being compensated by increases of £1,927 to £6,415 in cash and £3,295 to £10,295 in bills receivable.

Henry Briggs, Sons and Co., Limited.

Considerable changes were made in the position of this company during the twelve months ended on June 30 last, being the 42nd year of its corporate existence. It was a prosperous year, the directors say, and, including a gross revenue of £12,656 from investments, the profit was £63,347. Adding £38,395 brought forward, the free balance was £101,741. Out of this the directors make up the dividends on the "A" shares to £2 15s. and on the "B" shares to £1 16s. 8d. for the year, these distributions representing about 18⅓ per cent. upon the "A" and upwards of 36 per cent. on the "B" shares. In the course of the year the Newmarket Haigh Moor Colliery was purchased by the company, and gave it a large area of additional coal reserves. The total of the reserve fund is now £120,640 and the investments outside the business stand at £212,443, of which £114,835 is in debenture and railway preference stocks, the remainder being in unspecified shares. Debts owing by the company amount ot £81,650 and cash and bills on hand stood at £52,421, while sundry debtors owed the company £55,232 at the date of the balance-sheet.

Williamsons, Limited.

This company owns a number of grocery and provision shops, and is not afraid to set out in detail how its profits are arrived at. All the main items of expenditure are shown, such as salaries and wages, house expenses, advertising, lighting, rents, rates, and taxes, and so on. When you come to think of it, it is usually the companies that pay no dividend that so scrupulously guard their working particulars. All told, this company's revenue came to £91,983 in the year to April 20 and the total outgo was £74,908 leaving £17,075 nett. Sum brought in was £6,064, bringing up the sum for disposal to £23,139, and after providing the preference dividend and giving the ordinary shareholders 8 per cent., £2,400 is required for directors' and auditors' fees, managing director's salary and balance of income-tax. Another £2,000 is reserved against depreciation of leasehold properties, £1,000 against fixtures, machinery, plant, &c., and £600 for special expenditure. A sum of £100 is then contributed to the provident fund, and £6,539 goes to next account. On the whole the allowances for wastage appear very fair, trading accounts are favourable, stock is valued at £55,393, and the cash balance amounts to £8,940. Goodwill is down for £61,129 and the reserve is £25,000.

Northern Co-operative Co., Limited, Aberdeen.

In spite of the advance in wholesale prices which could not be fully compensated by the rise in retail, the profits of this business for the year ended June 30 last came to £89,583, including £179 brought forward, and after paying interest on the capital and assigning £5,763 to depreciation of the company's real estate the directors were able to divide £76,205 amongst the customers, leaving £809 to be carried forward. This is a penny per £ on the purchases less than the dividend of the year before, but that is a very small price to pay for the advance in prices, especially as the retail overturn of the year was £49,199 smaller than in the previous year, owing to the depression of many branches of industry in the city and the consequent increase in the number of people unemployed. Wholesale sales also went down by £13,790.

Zapiga Nitrate Co., Limited.

By dint of much effort this company has just got out the accounts for the year 1906, and in that time there was a profit on sale of nitrate of £15,152, increased to £15,305 by interest and transfer fees. From this the usual items of expenditure have been provided, including a loss on exchange of £1,074, and after meeting income-tax and adding £524 to reserve, the statutory contribution, a balance is left of £9,555. The earnings have been affected, in common with other nitrate concerns, by the abnormal cost of stores and the rise in wages, and we should judge that the directors do not expect the current year to be too brilliantly successful, because, having paid an interim dividend of 1s. per share, absorbing £4,000, they do not propose any addition, but carry forward £5,554. This money was no doubt wanted for the first redemption of £5,300 of debentures which took place on February 1 last, reducing the amount outstanding to £44,700. Additions to property account in the year were £13,278, the outlay being necessary in order to obtain the most economical results from the raw material treated. Property now has a book value of £140,778, and while creditors are pretty heavy, there is not much in the way of liquid assets.

'York Street Flax-Spinning Co., Limited.

This first-rate business found the year to June 30 last a highly successful one, the profit after allowing for bad debts being £19,611 higher at £106,384, comparison being with the previous twelve months. Debenture interest took £11,250, and after adding in £16,641 brought forward the credit for disposal comes to £111,775 against £87,568. Sundry expenses, income-tax, directors' fees, &c., take £4,143, and the directors are fully justified in raising the ordinary distribution from 6 per cent. to 8. This done, £15,000 is placed to ordinary reserve, and £30,000 to capital reserve, leaving the largely increased balance of £23,632 to be carried forward. Some slight additions were made to properties in the year, raising the total to £630,634, but against that the capital reserve now amounts to £360,000, so that the nett value of these assets is £270,634 only. The ordinary reserve of £160,000 further pulls down the value to £110,634, if one cares to regard it in this light. Sundry creditors under various heads, including bills payable, open accounts and terminable loans, amount to £258,498, but debtors come to £294,297, stocks appear at £669,523, and cash and bills are £35,175.

J. and J. Cunningham, Limited.

After providing £5,125 for depreciation and making provision for bad and doubtful debts the profit for the year ended June 30 last was £32,782 out of which £5,000 has been placed to the general reserve making it £25,000. From the balance the directors complete the 5 per cent. dividend upon the preference shares and provide for a dividend at the same rate on the ordinary shares for the whole year. After paying this balance £12,782 will remain to be carried forward as against £6,764 brought in. Debts due to the company and bills receivable less reserve for doubtful debts stand at the high figure of £144,877, and the stock of manures, feeding stuffs, &c., at £56,368, but the company appears well able to carry this apparently heavy burden, and the debts due by it come to no more than £31,779. Its reserves altogether amount to £43,000, including the special reserve for the preference dividend, which continues at the full figure of £18,000. It is strong in cash in hand and at the bank, the total of which is £35,086.

Walker, Maynard and Co., Limited.

This Middlesbrough company earned £42,168 nett in the year ended June 30 last and adding £35,479 brought forward had £77,647 to distribute, out of which the 6 per cent. dividend on the preference shares, absorbing £9,600, has been paid together with dividends aggregating 7½ per cent. upon the ordinary shares of the company. Large writings off have also been made, including £9,288, the cost of relining and repairing furnaces and kilns, £2,562 special expenditure on extension of sidings, &c., and £2,423 carried to a special reserve account for reinstating preference capital. After assigning all this and paying the directors and managing directors £3,600, besides meeting income-tax, which aggregated £642, a balance of £43,533 is left to carry forward. During the year a further £5,000 was invested in War Loan stock, and a like amount in Cape 3½ per cent., £48 10s. paid, the company's investments now amounting altogether to £30,215. It is strong in cash, the total of which was £25,406 on June 30 last. Its sales of pig-iron and ironstone came to £525,763 during the year and the cost of materials, stores, charges and wages, &c., amounted to £486,847. Debts due by the company stood at £39,594, and debts due to it at £15,413.

Marbella Iron Ore Co., Limited.

The six months' profit of this company was £9,537, to which £1,434 brought forward has to be added, making the entire revenue £10,971, out of which an interim dividend "at the rate of 3s. per share" has been declared, which will leave £7,221 to be carried forward. The directors say that shipments of ore were brisk in the earlier months of the year, but fell off slightly later on; but the iron ore market continues good, and a fair demand has been experienced for the company's ore at remunerative prices. The report is merely an interim one, and no figures are supplied.

Blackburn Loom and Weaving Machinery Making Co., Limited.

The profit for the year ended June 30 last amounted to £15,382, and the free balance altogether, including £754 brought forward, was £16,138, out of which the interest on the debentures was paid, together with £569 for bankers' interest and 10 per cent. was given on the ordinary capital. Then £9,500 was placed to reserve, bringing the total up to £14,000, and £762 was left to be carried forward to the new half-year. During the year the £20,000 issue of 4½ per cent. debentures was renewed at the same interest, but without premium on redemption, whereas on the original £1,000 in premiums was paid. The company owes sundry creditors £18,274 and sundry debtors owe it £22,979 less reserve for doubtful debts. Its cash in hand came to less than £13.

Owen and Robinson, Limited.

During the twelve months to May 31 this company gathered a gross revenue of £10,108 which yielded £6,730 nett making with £672 brought in a disposable sum of £7,492. Debenture interest took £1,575 and after providing the preference dividend the ordinary shares receive 6½ per cent., £300 going to the insurance reserve, £400 to general reserve and £841 to next account. Freehold property stands in the balance-sheet at £42,909, fixtures, safes, &c., at £5,056 and goodwill at £11,918, while the reserves, including that for depreciation, come to £5,810. Sundry creditors are £5,265 against debtors £3,700 and cash £2,388. Sale and pledge stocks—it is jewellers' business—are valued at £57,112.

McNamara and Co., Limited.

Whether this company made a real, true nett profit in the year ended June 30 last or not the accounts do not enable us to say, and the report puts the matter in curious language. The profit and loss account "has been credited with £18,707 from revenue account," the directors say, but no revenue account is shown. Adding £2,265 brought forward and £1,023 received as interest on investments, the available sum was £21,995, and after payment of the £1,000 "placed at the disposal of the chairman and directors at the last meeting," together with the interim dividend on the cumulative preference share capital, interest on the first and second mortgage debenture stocks, besides allowing for an unnamed sum for depreciation, adding £2,000 to the

general reserve, and £250 to the bad debts reserve, the board is able to pay the preference dividend for the second half of the year, together with a 5 per cent. dividend for the whole year on the ordinary shares and a bonus to them of a like amount, these various distributions absorbing £7,800, and leaving £2,258 to be carried forward. Nothing intelligible can be made out of the balance-sheet, but it is worth noting that the deficiency on June 30, 1893, £49,570, is still carried as an asset.

Weldon's, Limited.

The insatiable desire of the feminine mind for something new in blouses, kimonos, pinafore styles, and so forth provides this well-known "Newnes" company with excellent business, and during the year to June 30 the demand for fashion books and patterns brought in profits to the tune of £35,871. This is after writing off depreciation on leasehold property, furniture, fittings, &c., and all other charges. Balance brought in was £5,405 making £41,276, from which £10,000 is required for the 5 per cent. preference dividend. Ordinary share dividend of 10 per cent. takes another £18,000, a sum of £7,000 goes to reserve, being £2,000 more than last year, the profits having shown a moderate increase, £1,000 is applied as bonus to staff and management, and £5,276 is carried forward. Reserve will now be £27,000 and the goodwill and copyrights are entered at £337,415, so it is to be hoped the rational dress agitation will not be revived for a good long spell. Leasehold property, furniture, fittings, machinery, &c., £15,422, seems almost ludicrous beside this giant item, but there are investments of £35,000, cash £25,503, stock £3,921 and debtors £17,672, the last a good £10,000 more than the sum due to creditors.

Friswell (1906), Limited.

No profit and loss account is vouchsafed to the shareholders of this concern, and although the secretary informs us that there was an increase of more than £28,000 in the sales for the year ended June 30 the information is not of much service. The nett profits, after deducting directors' fees, managing director's salary and commission, and other charges, providing for depreciation and writing £910 off preliminary expenses was £10,341. This the directors promptly proceed to divide up to the hilt, and in order to pay 10 per cent. on the ordinary shares, leave no more than £366 to be carried forward. The recklessness of this policy is much to be deprecated, as out of a total capital of £125,000 no less than £72,500 is represented by goodwill, and the item of preliminary expenses seems heavy at £7,000. Plant, machinery, &c., stand at £5,384, and lease of premises at £5,653, and against these the capital reserve amounts to a paltry £300. Liabilities to sundry creditors at £29,841 exceed the sum to come in from sundry debtors by £14,683, but stocks are valued at £44,487, and in addition the company has £7,820 in cash and £2,492 in bills receivable.

Palace Theatre, Limited.

In spite of bad times the receipts of this music hall for the twelve months ended July 26 reached the respectable total of £78,896, of which £24,552 was retained as profit. During the year many alterations were carried out to comply with the requisitions of the L.C.C., and advantage was taken of the occasion to make extensive improvements in the way of reseating, &c., and the entire cost, amounting to £3,499, has been met out of the nett revenue. In addition £1,300 has been written off scenery, plant, &c., and after providing for interest on mortgage the available balance was £16,553, out of which a dividend of 12½ per cent. is paid, leaving £15,500 to be carried forward, compared with £10,197 brought in. Property, scenery, costumes, &c., stand in the balance-sheet at the fairly high figure of £172,582, while the only reserve is the special sum of £3,000 set aside to meet further requisitions of the L.C.C., depreciation of Consols and other contingencies. The directors, therefore, would have been better advised if they had kept down the dividend, especially as the holding of Consols is taken into the accounts at par. Sundry creditors amount to £4,182 against £2,171 to come in from sundry debtors, but £1,000 has been spent on production account, and cash in hand reaches the satisfactory enough total of £21,889.

Woolley, Sanders and Co., Limited.

After three years of dwindling profits the decline seems at last to have been checked, and nett profits for the twelve months ended June 30 show an improvement of £303 at £9,374. It is not much compared with the shrinkages of former years, but it is sufficient to encourage the hope that the worst is now over. Adding £7,708 or £908 more brought forward and deducting £635 for directors' fees, &c., the nett amount available after meeting preference dividends was £14,007, out of which the ordinary shares again receive 10 per cent. and a larger balance of £9,007 is carried forward. Creditors are £1,533 up at £11,711, but debtors owe £35,820 or an increase of £2,163, bills receivable are £341 down at £2,236 and cash is £1,066 lower at £6,385. Freehold and leasehold properties, goodwill, &c., show very little change at £70,801 and stocks are valued at £12,068. Reserves and sinking funds, insignificant though they are, remain unaltered, even the interest earned on the investments representing them being taken to help out the revenue.

London Improved Cab Co., Limited.

The accounts made up to May 31 last show very poor results. Gross receipts came to £82,641 and expenses to £79,880, so that the gross profit was only £2,755, and adding in £750 brought forward the free balance was only £3,504. An interim dividend at the rate of 4 per cent. was paid last January and after meeting this and debenture interest only £1,085 is left, out of which the directors make no further distribution. Instead they put £750 to the leases redemption fund and £250 to the depreciation and reserve account, leaving £85 to be carried forward. They complain of the weather as interfering with the cab traffic and also of the restrictions imposed by existing traffic regulations, but hopes are held out that these may be improved and there is certainly room for improvement. Accompanying the report are illustrations of the new motor cab which the company is going to put upon the streets. We trust it will bring success and profit.

Homocea, Limited.

This company has never been able to catch the popular fancy with its products, and it is now in such a moribund state that we doubt if the shareholders would object to its being wound up. General depression and competition are good stock excuses to put forward to account for the miserable exhibition made for the year ended March 31, but they hardly seem adequate when the history of the concern from its formation is considered. Trading profits amounted to no more than £584 or a drop of £1,110, and with £133 more at £490 brought forward and £6 from interest and transfer fees the total income was only £1,080 compared with £2,057. Wretched though these results are, the directors see no reason why they should not have their fees, amounting to £350, and although they claim to have cut down expenses in every possible way, London office charges, including these fees, were £33 heavier at £604. After writing off £25 for depreciation at 5 per cent. on the Willesden property, furniture and fittings, the balance left was £452 against £1,463, and as this is not worth distributing, the preference shareholders, who a year ago received half their fixed dividend, have now to go without any return. The directors seem to have great faith in trade marks and last year bought another at a cost of £19, bringing the total spent on "purchase of business" up to £49,338, a figure which seems out of all proportion to the real value of the item. Other capital assets consist of the Willesden property standing at £268 and furniture and fittings £201. Creditors are £256 up at £658 against an increase of £348 to £4,216 in stocks, but sundry debtors have been reduced by £1,061 to £1,948 and cash shows a further shrinkage to £365.

East India and Ceylon Tea Company, Limited.

The total crop gathered by this company during the year ended November 30 amounted to 1,802,552 lbs. or an increase of 134,617 lbs., of which 1,395,449 lbs. were sold in London at an average of 6.61d. against 6.15d., and 195,122 lbs. in green tea were disposed of in Colombo at an equivalent of 5.87d. in London or an advance of 0.74d. Trading profits were £3,162 better at £10,006, but £1,088 was brought in compared with £10,244 a year ago, and the disposable balance was therefore £5,994 smaller at £11,094. Arrears of preference dividend, however, had been paid up to the first half of 1905 out of last year's profits, so that the directors had only to provide one and a-half years' dividend against 2½ years, which left £1,094 to be carried to the new account. Nothing has yet been done with regard to writing off the loss of £52,989 on the Hopewell estate, as the special resolution passed in July last for the reduction of the capital was not confirmed by the Court. The directors explain that a decision recently given by the House of Lords makes it necessary that the company's reserve of £10,958 should be put to the credit of the Hopewell account before writing off the loss on that transaction, and that they consider it necessary to obtain the shareholders' consent before adopting this course. Apart from that the estates stand at the old figure of £169,139, new machinery is valued at £1,070 and £6,863 has been spent on rubber cultivation, of which there are now 664 acres and 350 acres interplanted in the tea. Bills payable are £8,536 higher at £17,839 and outstanding charges on tea stocks are a little up at £1,369, but sundry creditors have been reduced to £4,657. On the other hand, stocks have risen by £4,807 to £19,626, but cash is down by £4,596 to £4,910, while sundry debtors, including £816 for garden advances, come to £1,877. Coast advances seem unduly heavy at £3,458, and altogether the financial position is none too strong.

Borneo Rubber and Trading Co., Limited.

This is merely an explanatory report as the company depends entirely upon the Dutch Wilhelmina Company for its earnings. That company's accounts have not yet been received and are not expected till towards the end of the year. The board, however, thought it well to close the Borneo Rubber Company's books on April 30 last, the period to that date being purely one of construction. In future the reports and meetings will appear and be held in the autumn when the Wilhelmina Company's accounts are expected to be available. Nothing is to be learned from the balance-sheet, but as a record it may be mentioned that the cost of the property is entered at £60,000 and that the company is under advances to the Dutch Wilhelmina Company to the amount of £33,800. Expenses of the London office to date were £1,665 including £944 for directors' fees, which was a good deal more than the office rent, salaries and general expenses taken together. The company also owed the London Joint Stock Bank £181 for accrued interest, and preliminary expenses to the amount of £8,101 are carried in the balance-sheet as an asset.

Straits Settlements (Bertam) Rubber Co., Limited.

The accounts now presented to the shareholders cover the period from April 4, 1906, to March 31, 1907, but the revenue shown is from May 1 only. During the eleven months 16,782 trees were tapped for a yield of 19,781 lbs. of dry rubber, on which an average of about 5s. 2d. per lb. was realised. Gross receipts, including rents and proceeds of sales of cocoanuts and rubber seeds were £6,827, and expenses came to £5,083, leaving a balance of £1,744, which is carried forward. Shareholders will have to exercise a good deal of patience before they can get much of a return on their money, as the annual increase in the number of trees available for tapping will be small until 1911, when 99,203 will, it is expected, be added to those already yielding rubber. In the meantime, incorporation expenses and stamp duties, &c., amounting to £20,326, are being carried as assets, and these will have to receive attention with the view to extinguish them at the earliest possible moment. If, however, the present level of prices is maintained after the company is in full working order, the profits should be substantial enough to permit of the items being wiped out without appreciably affecting the dividends.

United States Mortgage Company of Scotland, Limited.

The demand for loans in the States, where this company does business is said to have been good during the twelve months ended May 31, and satisfactory rates of interest were obtained on new loans granted. Gross receipts from all sources, including £4,943 brought forward, amounted to £30,218, and after providing for administration charges and the expense of issuing and renewing debentures a surplus of £27,979 was left. Of this the dividend on the preferred stock at the rate of 4½ per cent. per annum took £6,345, and the deferred stock and ordinary shares receive dividends and bonus aggregating 7 per cent. for the year at a cost of £5,250, after which £4,000 is put to reserve and £6,427 is carried forward, subject to directors' remuneration. The amount which the company can borrow must not exceed the uncalled capital, and as the process of paying up the shares in full and having them divided into preferred and deferred stocks progresses this total is being gradually reduced. Owing to this operation the preferred stock was increased during the year from £138,456 to £145,572, and the sum borrowed on debenture showed a reduction of £7,120 at £154,421. Investments in America were valued at £388,409, or an increase of £8,762, and other investments on account of the reserve fund of £40,000 amounted to £22,530, while the company had £10,072 in cash. The company's position seems to be eminently sound, as the American auditors certify that the value of the properties held is considerably in excess of the money advanced with the exception of a few items under the head of "real estate," which are at least equal in value to the amount invested.

Third Scottish American Trust Co., Limited.

In the financial year ended July 1 this company's revenue was £36,292 and after providing management expenses and income-tax £32,644 was left. This is increased to £37,774 by the balance brought forward and the directors are in a position to provide dividends aggregating 7¾ per cent. on the company's stock adding £3,000 to reserve and carrying forward £5,130. No detailed list of investments is published, which is a pity with so good an undertaking, but the directors tell us that a few changes have been made during the year, there being now 107 different securities having an average duration of fully 32 years. These appear in the balance-sheet at £521,464, but their valuation on July 1 was no less than £728,408, equal to £182 2s. per £100 stock, a wonderfully fine position. The company has a reserve fund of £84,000 and the directors will probably not increase the present amount of the investments until the temporary loan of £17,932 is paid off.

New Investment Co., Limited.

This trust company, which publishes a list of its investments, gathered a total revenue of £16,198 during the year ended July 1, and after providing administration charges and interest on bank overdraft the balance over is £13,954. Sum brought in was £1,548, making £15,493, from which the ordinary stock receives 6 per cent., and £3,396 is applied in writing down cost of certain securities, in addition to £1,610 derived from the sales of investments. A credit of £837 then remains to be carried forward. Issued capital of the company is £197,744, including £196 in forty-nine £4 deferred shares, the reserve fund is £50,000, and £34,407 has been borrowed from bankers. On the other side investments at cost or under appear at £228,824 apart from those held on account of reserve, and by adopting the usual methods the directors bring out a value of £134 2s. 10d. per £100 stock, meaning that the reserve is quite intact.

South of England Dairies, Limited.

Gross profits for the year were £710 down at £12,931, a shrinkage not sufficient to affect the dividend which, including the interim, is 7 per cent. per annum. The reserve fund, which is in the business, is increased to £5,000 by an addition of £1,500, trading accounts were in the company's favour, and the balance forward is £2,345 against £2,127 brought in. In the balance-sheet goodwill of dairies, freehold property, plant, live and rolling stock are lumped together into one sum £113,478, and a subdivision of this item would be an improvement. There is apparently no attempt being made to write down goodwill, but as it stands the reserve fund is a book entry against this asset, and is certainly not available for any other purpose. Cash in hand is respectable at £5,984, and a 10 per cent. allowance is made for doubtful debts.

MINING RETURNS.

Abbontiakoon Block.—Treated by dry process 750 tons; crushed, wet, 3,919 tons, of which 2,199 tons treated; yield 1,340 ozs.

Akrokerri.—Crushed 2,750 tons, yielded by amalgamation 1,095 ozs.; 1,170 tons tailings, 73 ozs.; total, 1,168 ozs.

Alaska Mexican.—Crushed 19,987 tons ore, value $31,038; saved 380 tons sulphurets, $24,662.

Alaska Treadwell.—Crushed 81,004 tons ore, value $87,680; saved 1,538 tons sulphurets, value $82,600.

Angelo Gold.—Milled 29,500 tons, 9,246 ozs.; sands 19,095 tons, 3,490 ozs.; slimes 10,405 tons, 1,154 ozs.; total, 13,890 ozs.

Antenior (Matabele).—Crushed 614 tons, 205 ozs.; cyanide 425 tons, 43 ozs.

Ashanti.—Recovered 380 ozs.

Battlefields (Rhodesia).—Crushed 1,565 tons, 997 ozs.; cyanide 1,120 tons, 507 ozs.

Brilliant Extended.—Crushed 3,781 tons for £7,714.

British Broken Hill Proprietary.—3,013 tons crude ore produced 413 tons concentrates containing 260 tons lead and 11,151 ozs. silver, and 105 tons carbonates.

Broken Hill Proprietary, Block 10.—Treated 12,075 tons crude ore, producing 2,024 tons concentrates containing 1,255 tons lead and 64,768 ozs. silver.

Broken Hill Proprietary, Block 14.—Treated 6,699 tons crude ore, producing 778 tons concentrates containing 473 tons lead and 22,004 ozs. silver. Carbonates despatched, 1,773 tons.

Cason Gold.—Milled 33,000 tons, 9,539 ozs.; sands 22,889 tons, 4,519 ozs.; slimes 10,111 tons, 1,480 ozs.; total, 15,538 ozs.

Chinese Engineering.—Output, 25,500 tons; sales, 21,000 tons; consumption, 1,950 tons.

City and Suburban.—Crushed 25,600 tons, 9,622 ozs.

Clitters United.—Ore treated, 1,848 tons; mineral sold or on hand—tin and wolfram 14 tons 14 cwt. approx. value £2,163; arsenic and copper-iron product £650.

Consolidated Goldfields of N. Z.—Progress: Crushed 5,097 tons ore, value, £9,569. Golden Fleece: Crushed 1,209 tons ore, value, £2,081. Wealth of Nations: Crushed 1,155 tons ore, value, £2,029.

Consolidated Main Reef.—Crushed 18,750 tons, 3,759 ozs.; sands and concentrates 18,750 tons, 2,285 ozs.; total, 6,044 ozs.

De Lamar.—2,900 tons, yielding $27,800.

Driefontein Cons.—Milled 24,500 tons, 5,705 ozs.; sands 17,660 tons, 2,624 ozs.; slimes 6,840 tons, 611 ozs.; total 8,940 ozs.

Duff Development.—Prospecting dredge 47 ozs.; No. 1 dredge 88 ozs.; No. 3 dredge 90 ozs.; total, 733 ozs.

East Gwanda.—Crushed 9,202 tons, 2,537 ozs.; concentrates 292 tons, 766 ozs.; total, 3,591 ozs.; smelter, 66 tons matte produced.

Etruscan.—Smelted 2,196 tons, value £3,000.

Forbes Rhodesia. — Veracity — Crushed 589 tons, 533 ozs.; cyanide 400 tons, 88 ozs. Dumbleton—Crushed 520 tons, 172 ozs.

Geldenhuis Estate.—Crushed 17,950 tons, 4,391 ozs.; tailings 1,845 ozs.; slimes 454 ozs.; total, 6,690 ozs.

Great Boulder Perseverance.—Sulphide plant treated 16,931 tons, for 6,859 ozs. fine gold and 897 ozs. fine silver.

Great Boulder Proprietary Gold.—Treated, sulphide mill, 12,138 tons, 11,136 ozs.; tailings, old, 9,901 tons, 1,310 ozs.; total, 12,446 ozs.

Gwalia Consolidated.—Crushed 1,976 tons, 152 ozs.; sands, 1,175 tons, 252 ozs.; slimes 2,106 tons, 316 ozs.; assay value of residues 4s. 6d. per ton.

Hainault Gold.—Crushed 1,161 tons, 283 ozs.

Hannan's Reward.—Crushed 2,425 tons, 868 ozs.

Jubilee.—Crushed 5,266 tons, 1,239 ozs.; cyanide, 616 ozs. from 4,026 tons,

Jumpers' Gold.—Crushed 11,250 tons, 3,564 ozs.; tailings, by cyanide, 1,578 ozs.; current slimes, 365 ozs.; accumulated slimes, 266 ozs.; total, 5,773 ozs.

Kalgurli.—Treated 9,415 short tons, 6,317 ozs.

Knight's Deep.—38,100 tons, 11,142 ozs.

Luipaards Vlei.—Crushed 15,375 tons, 2,688 ozs.; tube mills, 469 ozs.; cyanide, 1,597 ozs.; slimes, 251 ozs.

Langlaagte Estate.—Crushed 32,447 tons, 6,612 ozs.; concentrates 585 tons, 894 ozs.; tailings 20,670 tons, 2,417 ozs.; slimes 15,714 tons, 432 ozs.; total 11,355 ozs.

Le Roi.—Shipped 8,400 tons, containing 2,144 ozs. gold, 3,950 ozs. silver, and 216,800 lbs. copper.

Matabele Reefs.—Blanket crushed 2,038 tons, 525 ozs.

Mills' Dav Dawn. — Crushed 1,974 tons, value, including residues, £8,600.

Montana.—Drumlummon—6,290 tons tailings and fines realised gold, 360 ozs.; silver, 6,350 ozs. Lucky Girl Group -Crushed 1,650 tons ore, yielding 620 ozs. gold and 710 ozs. silver.

Mount Cattlin Copper.—Ore shipped 762 tons, containing 3,615 units copper, 128 ozs. gold.

Mount Zeehan.—360 tons silver-lead ore, containing 174 tons lead and 24,200 ozs. silver.

New Comet Gold.—Milled 20,500 tons, 4,499 ozs.; sands 14,356 tons, 2,121 ozs.; slimes 6,144 tons, 619 ozs.; total, 7,239 ozs.

Kew Kleinfontein.—Milled 32,525 tons, 8,555 ozs.; sands 22,569 tons, 3,144 ozs.; slimes 9,903 tons, 610 ozs.; total, 12,309 ozs.

New Ravenswood.—Crushed 1,255 tons ore, value £5,089; concentrates 131 tons, value £1,460; concentrates 120 tons, value £1,300.

Nigel Deep.—5,020 tons, 2,442 ozs.

North Broken Hill.—Treated 2,370 tons crude ore, producing 422 tons concentrates containing 285 tons 18 cwt. lead and 7,216 ozs. silver.

North Randfontein—Crushed 17,013 tons ore, 3,483 ozs.; tailings 11,280 tons, 2,268 ozs.; slimes 5,853 tons, 650 ozs.; total, 6,401 ozs.

Penhalonga Proprietary.—Crushed 8,000 tons ore, 841 ozs.; concentrates 190 tons, 741 ozs; total, 1,582 ozs.

Porges Randfontein.—Crushed 14,800 tons, 3,622 ozs; concentrates 1,435 tons, 446 ozs.; tailings 10,980 tons, 1,594 ozs.; slimes 3,600 tons, 447 ozs.; total, 6,109 ozs.

Rezende.—Crushed 4,000 tons ore, 918 ozs.; sands, 3,475 tons, 375 ozs.; concentrates, 18 tons, 189 ozs.; total, 1,477 ozs.

Rhodesia Consolidated.—Nelly: Crushed 2,000 tons, 1,027 ozs.; cyanided, 841 tons, 328 ozs.; total, 1,355 ozs.

Rice Hamilton Syndicate.—Sabiwa: Crushed 4,085 tons, 567 ozs.; cyanide, 1,410 tons, 444 ozs.; slimes, 3,900 tons, 600 ozs.

Robinson Deep.—40,339 tons, 18,078 ozs.

Robinson Randfontein.—Crushed 15,010 tons, 3,189 ozs.; concentrates, 1,450 tons, 409 ozs.; tailings, 9,450 tons, 1,625 ozs.; slimes, 4,248 tons, 509 ozs.; total, 5,732 ozs.

St. John Del Rey.—Gold produce, £8,240; yield per ton, ·55 oz. troy.

Willoughby's.—Queens: Crushed 1,495 tons, 783 ozs.; cyanide, 1,560 tons, 283 ozs.

Simmer and Jack East.—37,010 tons, 9,530 ozs.

Simmer and Jack Proprietary.—60,700 tons, 22,435 ozs.

South Randfontein.—Crushed 15,560 tons, 3,527 ozs.; concentrates, 1,575 tons, 419 ozs.; tailings, 9,650 tons, 1,386 ozs.; slimes, 1,574 tons, 486 ozs.; total, 5,818 ozs.

Surprise Gold.—Crushed 3,190 tons, 998 ozs., equivalent to 6 25 dwts. per ton; cyanide 412 ozs, from 3,435 tons.

Tasmanian Copper.—Treated 3,777 tons ore, producing 153 tons matte and metallics.

Treasury Gold.—Crushed 8,500 tons, 1,591 ozs.; sands and concentrates 8,565 tons, 1,172 ozs. Total, 2,763 ozs.

Vogelstruis Estates.—Quartz milled 7,830 tons, 2,088 ozs.; tailings 5,685 tons, 574 ozs.

West Rand Central.—Crushed 2,675 tons, 447 ozs.; cyanided 2,050 tons, 334 ozs.; slimes 1,150 tons, 152 ozs.; total, 933 ozs.

Westralia Mount Morgans.—Crushed 4,900 tons, 745 ozs. gold; cyanided 3,125 tons, 1,000 ozs.; slimes treated 1,870 tons, 378 ozs.; total value, £7,000.

Wolhuter.—Crushed 18,680 tons; sands and slimes 18,680 tons; from mill 3,652 ozs.; from sands 2,205 ozs.; total, 5,857 ozs.

Witwatersrand Deep.—Crushed 33,170 tons, 8,817 ozs.; sands and concentrates 33,242 tons, 4,702 ozs.; total, 13,519 ozs.

Zeehan Montana.—Silver-lead ore 350 tons, containing 190 tons lead and 22,400 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAY.

Canadian Pacific.—On the preference stock 2 per cent., and on the common stock 3 per cent., and a further sum equal to one-half of 1 per cent. from the interest on the proceeds of land sales.

MINES.

Great Cobar.—15 per cent. (15s. per share), payable Sept. 16.

Mount Molloy.—6d. per share, payable Sept. 2.

Penhalonga Proprietary.—Interim for year ending Dec. 31, 1907, of 6d. per share.

MISCELLANEOUS.

A. Vedrine and Company.—Interim of 5 per cent. on the ordinary shares.

Australian Cities Investment.—At the rate of 2s. per share nett.

Bagots Hutton and Co.—Interim of 2 per cent.

Bank of North Queensland.—At the rate of 4 per cent. per annum, placing £4,000 to a contingency account, and carrying £428 forward.

Bradford Dyers.—On the ordinary shares for half-year to June 30 last at the rate of 7 per cent. per annum.

Bristol Water Works.—Intermediate for half-year to June 30 at the rate of £7 15s. per cent. per annum on the ordinary shares, and at the rate of £5 8s. 6d. per cent. per annum on the 3 per cent. maximum consolidated ordinary stock.

City of Glasgow Life Assurance.—Interim for first half of 1907 at the rate of 2s. per share.

Dublin Granaries.—Interim of 2s. per share.

Fletcher, Russell, and Company.—Interim at the rate of 10 per cent. per annum.

Fodens.—Further of 6¼ per cent., making 12½ per cent. for year, carrying forward £585.

"Freeman's Journal."—Interim of 3½ per cent.

Fremantle Smelter.—10s. per share.

Gloucester Railway Carriage and Wagon.—10 per cent. for past half-year, making 7½ per cent. for year ended June 30.

Law Land. Interim of 3 per cent.

Lofthouse Colliery. Interim of 3s. per share.

Maple and Co.—Usual interim at the rate of 10 per cent. per annum on the ordinary shares, payable Sept. 1.

New Zealand Insurance.—Interim at the rate of 10 per cent. per annum.

Rosario Nitrate.—Interim of 3 per cent. for year ending Sept. 30, 1907, payable 19th inst.

Shrewsbury Gas Light.—3 per cent. for half-year to June 30, making 5¾ per cent. for year.

Stock Conversion and Investment Trust.—Dividend declared by the London and North-Western Railway for the half-year ended June 30 will, after payment of the fixed dividends on the 3 per cent. first charge preferred stock and the 3 per cent. second charge preferred stock (London and North-Western Railway ordinary stocks, permit of a payment on the 3½ per cent. guaranteed stock (London and North-Western Railway ordinary stock) of 15s. per cent. for the year to June 30.

W. T. Henley's Telegraph Works.—Interim on the ordinary shares of 10 per cent. per annum for half-year ended June 30.

Watford Gas and Coke.—At the rate of 14½ and 11½ per cent. per annum on the "A" and "B" stocks respectively, carrying forward £3,047.

Wakefield Gas Light.—Usual for half-year ended June 30 at the rates of 11½, 9 and 8½ per cent. per annum on the original, "B" and new shares respectively.

West Surrey Water.—Maximum, at the rate of 7 per cent. per annum on the shares issued under the Acts of 1877-8 and 1901, and at the rate of 10 per cent. per annum on the shares issued under the Act of 1889.

Wigan Coal and Iron.—At the rate of 5 per cent. per annum for six months ended June 30.

Wilson Brothers Bobbin.—For past year of 8 per cent., plus a bonus of 2 per cent., carrying £5,000 to reserve and £3,150 forward.

Ye Mecca.—Interim of 1½ per cent.

NEXT WEEK'S MEETINGS.

MONDAY, AUGUST 19.

Selukwe Gold Mining.—Salisbury House, noon.

TUESDAY, AUGUST 20.

Forth and Clyde Junction Railway.—Stirling, 3 p.m.
Friswell (1906).—1, Albany Street, N.W., 11 a.m.
Richard Hill and Co. (1899).—Cannon Street Hotel, 11.30 a.m.

WEDNESDAY, AUGUST 21.

British Transvaal Mines.—Winchester House, 12,30 p.m.
Klerksdorp Gold Mine.—Salisbury House, noon.
Maryport and Carlisle Railway.—Maryport, noon.
Port Talbot Docks and Railway.—Port Talbot, noon.
Thomas Salt and Co.—Cannon Street Hotel, 2 p.m.

THURSDAY, AUGUST 22.

Dublin and Lucan Electric Railway.—Dublin, noon.
Leopold Schwabacher.—Winchester House, noon.
Milford Docks.—63, Cornhill, E.C., noon.
Old Albion Brewery.—Sheffield, noon.

FRIDAY, AUGUST 23.

Chatham and District Light Railways.—83, Cannon Street, E.C., 2.30 p.m.
Espirito Santo and Caravellas Railway.—Winchester House, noon.
Lanarkshire Tramways.—83, Cannon Street, E.C., 2.45 p.m.
North Borneo Trading.—Winchester House, 12.30.

A story comes from Berlin which accounts for the Babbitness of Russian bonds. It is said that a large Russian loan is being arranged for there on the understanding that the money will be spent in Germany on Russian contracts to be given out. Presumably the reconstruction of the Russian Navy is pointed to for one thing.

MATHIESON'S PUBLICATIONS, AND OTHERS.—Quite a number of them have reached us lately, and although their quality and contents are well known, they always deserve at least a passing mention. Nothing could well be more useful than Mathieson's "Highest and Lowest Prices of Securities Dealt in on the London Stock Exchange," and its companion, the "Highest and Lowest Prices on Provincial Stock Exchanges." For the London market this year's issue is the twenty-second as a "complete record," and of the provincial it is the fifteenth. No habitual dealer in public securities can well be without these two reference works, and among other useful things of this kind we have from the same firm the various traffic tables, English and American, "The Highest and Lowest Prices and Dividends, &c., of Mining Shares for the Past Six Years," which takes the form of a supplement to the "Mining Handbook," together with a little volume called "Mathieson's Handbook for Investors," which contains a variety of condensed useful information about public securities of all descriptions. Along with these we have also to acknowledge the eighteenth annual issue for 1907 of the "Stock Exchange Handbook," compiled and published by Spottiswoode and Co., Limited, of 54, Gracechurch-street. This gives the highest and lowest prices of a number of securities, together with the dividends paid and the dates when dividends are due, with useful statistical notes dealing with points in the history of many of the undertakings or companies included in the work. Prices, it ought to be added, are as at close. For F. C. Mathieson and Son's two "Highest and Lowest" publications, 2s. 6d. each, and for their "Handbook for Investors" 2s 6d., and for the half-yearly traffic tables 2d. each. The price of the mining one is 1s. Messrs. Spottiswoode's "Handbook" costs 1s.

TRADE AND PRODUCE.

Wheat.—The week has been a quiet one, and business more or less difficult to do, owing to the unsettled condition of the American markets. Spot wheat dropped about ½ per cental on the week, and trade in futures has been very limited. English wheat alone has secured full prices, and it has been very scarce, only a few small parcels being offered. Farmers' deliveries come to 18,510 qrs., averaging 33s. 5d., against 6,924 qrs., averaging 30s. 5d. in the same week of last year, the average for the season being still 1s. 3¼d. below that of last. Imports came to 421,003 qrs., against 537,623 in the same week last year, and the quantities of wheat and flour on passage to the United Kingdom is estimated at 2,345,000 or 165,000 qrs. less than last week. American business was generally interfered with by the telegraph operators' strike, and this, coupled with the depressed state of the Stock Exchange, caused poor markets for the greater part of the week. The visible supply shows an increase of 373,000 bushels.

Wool.—Local markets are firm, and contrary to expectations, prices for coarser grade crossbreds are stronger instead of weaker, and in home fleeces also a good demand from America has caused staplers to hold their wools for better prices, and business done this week has been about ¼d. higher all round than last. Whether the downward tendency has been altogether checked it would be difficult to say. Large quantities of wool are still held by farmers, and with a probably heavy increase in Australian supplies it seems scarcely possible that the lowest has yet been touched. But, on the other hand, this year's Australian clip, it is thought by many, will not exceed 100,000 bales, less than half that of last year, when the whole of it was absorbed at very high prices, and consumption at the present time seems heavy enough to outweigh all adverse influences.

Cotton (from our Manchester correspondent):—The general condition of our market shows very little change as compared with a week ago. Buyers of yarn and cloth lack confidence in the present prices of the raw material, and until there is more certainty as to the output of the American crop, it seems probable that we shall have a dragging market. It is understood that the hot weather in Texas has made against the plant in that section, but, on the whole, the prospects are fairly encouraging. The trade, at the moment, is passing through a quiet period, and order lists for both spinners and manufacturers tend to run down. The business offering in piece goods has been a little more extensive than last week, but transactions are very difficult to arrange, and many of the offers are out of the question. Light cloths have been in fair request for India, and Bombay buyers have bought odd lots. China business at the moment is not important, although occasional orders have been mentioned chiefly in fancy goods. All sellers have not experienced more inquiry for the Levant, but in some quarters a little better demand has shown itself with odd transactions. The financial situation in Egypt still causes anxiety, and new business is practically impossible at the moment. Home trade cloths have moved off slowly, the month of August being a quiet time. Shirting makers have found very few practicable bids. Burnley manufacturers complain of the poor offers, and the turnover has been quite small. Heavy goods, such as T-cloths and Mexicans, only meet with a dragging demand. Certain producers are in need of fresh orders, but very little new business is available. Home trade American yarns have been easier in price when tested. Users, however, have not been in the mood to purchase more than small lots. It is said that coarse numbers in weft are not at all remunerative to sell to-day. A moderate demand for shipping counts has been dealt with, and a fair business has transpired for India. Producers of doubled descriptions are strong, owing to engagements. Egyptian yarns have shown very little change, and remain firm. The business passing at the moment is generally unimportant.

Coal.—Foreign demands from Hull seem to be greatly on the increase, last month's returns showing an advance of 215,864 tons, as compared with July, 1906, and for the seven months of the year an advance of 809,704 tons. Holland was the largest customer, with Germany ranking second. The coastwise trade is also responsible for a large proportion, much of which is taken by London, for out of the month's total of 120,577 tons no less than 108,950 tons went to the capital. The same state of things occurs in the North of England, and in Wales, where the boom is expected to last well over the autumn. Best steams are up to 16s. 3d. f.o.b., and best gas to 15s., and coke also has improved, if not to the same extent. The average selling price in Wales shows an average increase of 10d. for large coals and 8d. for small. But Admiralty contract prices were up 3s. 6d. to 3s. 9d. per ton.

Copper.—Another break occurred in the prices at the opening sales this week, the markets for a time being demoralised by the gloomy condition of Wall Street and the Stock Exchange. Prices rallied a little on Wednesday under better New York conditions and an active market, but the improvement did not last long. Heavy pressure to sell set in, and sent values down to £76 5s. for cash and £73 15s. for three months, but to-day the market hardened again, and final quotations were firm at £77 12s. 6d. for cash and £74 17s. 6d. for three months.

Tin.—Eastern cables showed decided weakness with business on Thursday reported at £167 5s., c.i.f., and markets here were further depressed by the fall in copper. Demand was poor, forward metal being much neglected, and with heavy selling forward, prices for all positions fell as low as £162. They rallied a little later, on a better demand and restricted offerings, and to-night close strong at £169 5s. for spot and £168 15s. for future metal.

Iron and Steel.—Barrow hematite trade shows further indications of improvement. Demand for forward delivery is better not only in mixed Bessemer numbers but in higher grades, and if there is less required on American account, Continental and home orders will then make up for any such decrease. Makers find it almost impossible to sell iron for prompt delivery, and with the warrant stocks now only amounting to 13,233 tons they cannot have much influence on the markets, and of makers' stocks there are none. Neither does the East Coast metal show any signs of cheapening, and the cessation of American demand, so far at any rate, has not affected the market at all. Producers of pig-iron are turning out about 6,000 tons per week, and exports and home consumption amount to about 72,000 tons, with the result that stocks in Connal's Stores are down to 196,646 tons of No. 3, none of No. 1, and about 8,962 tons of other pig-iron. Buying is slow in most of the manufactured iron and steel branches. Shipbuilders' requirements are disappointing, and but that orders on hand are still considerable prices would have to come down a little.

Tea.—Market re-opened without special change in quotations. Teas up to 7d. continue in good demand, while the very good value now obtainable in teas just above that price has, according to Messrs. Gow, Wilson, and Stanton, Limited, so far failed to attract the attention it deserves, and they suggest that buyers for export might well avail themselves of the present opportunity for pushing these grades in foreign markets. This week's Indian auction was the largest so far this season, and came to 30,410 packages, of which 29,203 packages were sold on garden account, averaging 7.86d., against 21,539 packages averaging 7.70d. last year. Bidding was strongest for common and better-class teas, medium between 8d. and 10d. showing a tendency to easier prices. Ceylon offerings were also heavy, 35,674 packages, and here also bidding was good for the lower grades, and for medium rather irregular. No change in price can be quoted, the average for the week coming to 7.52d., against 6.46d. in 1906, and the quality in some instances shows a slight improvement. Java importers brought forward 4,168 packages, and with a steady demand prices kept firm, and very little had to be withdrawn from the auction.

Sugar.—Mr. Czarnikow's weekly report states that the more favourable weather experienced abroad during the week, coupled with a little more liquidation of the August "bull" account, caused quotations for new crop beet to ease slightly, though the tone was never really flat, a fair trade being done at the decline. The lowest prices reached were 9s. 8¾d. for August, 9s. 6½d. October-December, 9s. 7¾d. January-March, and 9s. 9¾d. for May, at which figure, however, the tide turned slightly on Wednesday, causing an improvement of about ¼d. for old and ¼d. to ½d. for next crop's deliveries. Tendered sugar was offered more freely, and easily absorbed by our refiners at 9s. 10d. to 9s. 9¾d. to 9s. 10d., though the demand for refined sugar, which was expected to improve after the holidays, has been rather disappointing. Prices of both British and foreign white sugars have, however, been well maintained. The news about the growing crops on the whole still indicate great irregularity, especially in France. In some districts in Germany there seems to have been a decided improvement. Austrian reports continue favourable, except, perhaps, from Hungary, where they are less satisfactory. The statistical position, now that the July figures are complete, shows no special feature. The consumption remained satisfactory in all statistical countries during last month, but in America there seems to have been a decided pause in the demand during the last two weeks, as meltings only reached 85,000 tons against 94,000 tons for the two corresponding weeks of last year. Figures, however, continue to improve on the other side of the Atlantic, and it is reasonable to expect more inquiry from that quarter unless the consumption during the next few months proves disappointing. Our refiners bought some 88 per cent. at 9s. 9¾d. to 9s. 10d., and seconds at 8s. 4½d. Tate's cubes are unchanged at 19s. 10½d., standard granulated 17s. 10½d., Lyle's No. 2 17s. 4½d. Hamburg granulated, prompt, moved from 11s. 3¾d. to 11s. 4½d., August from 11s. 3¾d. to 11s. 4½d., October-December from 11s. 3¾d. to 11s. 4½d.; Paris, August, from fcs. 26.37 to fcs. 26.62 to fcs. 26.50 (10s. 11¾d. f.o.b.), October-January from fcs. 27.62 to fcs. 27.81 to fcs. 27.68 (11s. 5¼d. f.o.b.); Hamburg beet, August, from 9s 8¾d. to 9s. 9d. to 9s. 8¾d., October-December from 9s. 7d. to 9s. 7¾d. to 9s. 6½d. to 9s. 7d., January-March from 9s. 8¼d. to 9s. 7¾d. to 9s. 8d., May from 9s. 10d. to 9s. 9¾d. to 9s. 10d. The American market was steady until Wednesday, when a decline of 1/8 cent was established by the forced sale of a small parcel of arrived sugar at 3.87½ cents. Meltings were again reduced, and only amounted to 39,000 tons, but as landings were only 28,000 tons stocks were reduced to 273,000 tons.

A branch of the United Counties Bank, Limited, will be opened at No. 137, Southgate Street, Gloucester, on the 19th instant, under the management of Mr. W. A. Telfer.

We are informed that Mr. D. R. W. Huie, the cashier and general manager of the Royal Bank of Scotland, has retired after nearly fifty years of valuable service. The court of directors have appointed Mr. Adam Tait, the secretary, to succeed Mr. Huie, and Mr. A. K. Wright, the joint-superintendent of branches, to the office of secretary.

COMPANY MEETINGS.

LONDON ROAD-CAR.

The 49th half-yearly meeting of the shareholders of the London Road-Car Company, Limited, was held on Tuesday at Cannon Street Hotel, E.C., Mr. John Howard Moore, J.P. (chairman of the company), presiding.

The Secretary (Mr. John C. Mitchell, F.C.I.S.) having read the usual notice,

The Chairman said the inclement weather experienced had had a most disastrous effect upon traffic receipts. In addition, very low fares had been in existence during recent years, and had been charged by all the London passenger-carrying concerns. In connection with this matter he had read with no little astonishment some of the remarks made by Sir Henry Oakley the other day at the Central Railway Company's meeting. He stated that there were at least 20 per cent. more omnibuses and motor-cars running between Holborn and the Marble Arch than a year and a-half ago. The fact was, however, that the pinch of the shoe had been brought about, not so much by reason of the increase of omnibuses as by the abnormal increase in tube railways, with their introduction of unnecessarily low fares, far below those which they were authorised to charge under their Parliamentary powers, for at the end of 1905 the Central, the City and South London and the Great Northern and City Railways had between them about 8½ millions invested in their undertakings, whereas at the present moment not only had the City and South London Railway Company incurred a considerable increase of capital in connection with its extension to Euston, but several other tube railways had been opened during the period to which Sir Henry Oakley referred, so that the increase in the amount invested in the tube railways of London was not 20 per cent., but very nearly 75 per cent. Those new and additional tube railways were taking from the public pockets in the shape of fares about £400,000 per annum, and it was not possible that this large volume of traffic could have been created during so short a period without trenching upon the preserves of the different railway and omnibus companies which were already engaged in passenger transport. Having annexed many of the passengers who for years travelled by omnibus, Sir Henry Oakley now found fault with the omnibus proprietors for introducing still lower fares, and took comfort in the statement that "those who had promoted these absurdly low fares had found out that it did not pay," the fact being that the omnibus proprietors, not intending to take the tube competition "lying down," were endeavouring by lower fares still to re-transfer their passengers from the tubes to the omnibuses. Steps were being taken by all the omnibus proprietors, in conference with the competing railway companies, to endeavour to place the fares upon a more reasonable basis without unduly mulcting the travelling public. With regard to motor traction, they had now had some experience of its working. At the outset they regarded the motor merely from the mechanical point of view, their aim being to acquire a machine capable of performing the necessary work at a profit, and did not fully realise the large part to be played by human agency in working the machines. They had not pinned their faith to one particular type, but had experimented with several, and they had two types which had shown good working profit from the commencement. The difficulty with the police had been overcome, and had practically disappeared. They had not a single motor ready for licensing which had been rejected. Under all the circumstances he thought shareholders would consider that the directors and management were emerging from their unavoidable difficulties in as satisfactory a manner as could have been expected.

Mr. Paul Henwood seconded the resolution, which was carried with four dissentients, and the meeting terminated with a vote of thanks to the chairman.

WARING AND GILLOW, LIMITED.

REPORT OF THE TENTH ANNUAL MEETING.

The tenth annual meeting of the shareholders in Waring and Gillow, Limited, was held in the Georgian Hall of the company's new premises in Oxford Street, on Friday, August 16, 1907.

The chair was taken by Mr. S. J. Waring, who, after referring to the death of Mr. S. J. Waring, senior, went on to congratulate the shareholders upon the very satisfactory nature of the report, which covered a year of exceptional importance in the history of the company. The fact that the nett profit amounted to £153,740, after charging against the year's revenue the entire special expenditure in connection with the opening and establishment of the new premises, was a gratifying proof of the successful nature of the expansion, notwithstanding circumstances within the knowledge of all, which, had the company not had the resources to cope with them, might have been expected to exercise an injurious influence on its trading prosperity. It was gratifying to be able to state that, so far from the business having sustained any injury by these irresponsible criticisms, the turnover was largely increased at the very time when they might have been supposed to be most effective, if effective at all. (Applause.) This net profit of £153,740, made after paying out of balance all the expenses of advertising in connection with the opening, enabled them to add £20,000 to the reserve fund, making it £165,000, to write off £10,000 from the preliminary expenses and to carry forward about the same amount as for 1905, in addition to paying debenture interest, the dividend on the 6 per cent. preference, and also that on the 7 per cent. preferred ordinary shares. He trusted this would be regarded as a good showing, more especially as it was coupled with a continued steady growth in the company's business. They were extending the scope of their activity and securing important contracts, while the amount of increase of general trade done at the new premises during the present year was showing a satisfactory expansion. (Applause.) In deference to suggestions made at previous annual meetings, the directors had caused an independent valuation to be made of the company's properties, which had enabled them to arrive at the actual cost of the goodwill of the business. The figure at which this stood was £579,549, little more than three and a-half years' purchase on the basis of last year's profits, and only equal to the amount of the deferred ordinary capital, which was mainly held by the Waring family and in trust for the employees. The company's properties were valued by Sir Wm. Dunn, of the firm of Dunn, Stevens and Coverdale, at £743,115 in excess of the amount charged upon them. Mr. Waring went on to explain the exceptional causes which had depreciated the market value of the shares. In addition to these special circumstances, it was at least reasonable to conclude that a recovery had been retarded by the generally adverse financial conditions, and that as soon as these passed away there would be a marked improvement, in which home industrials would have their share. After some remarks dealing with the hostility and unfounded rumours which the company had had to endure, the Chairman explained the ideals and policy of the company, which were to carry the principles of sound artistic and inexpensive furnishing and decoration into every home in the country; to extend its usefulness not only to the Continent, but to Asia, Africa, America, and Australasia; and to show not only our own people, but other nations as well, that it would pay them better to come to us, notwithstanding tariffs, freights, and distances. The company claimed an effective capacity, not merely to deal with every class of home, from the cottage to the mansion and the palace, but also to apply the highest principles of decorative art in directions and to a degree hitherto unattempted, such as warships, liners, yachts, railway trains, and other vehicles of travel. The resources of the business were unique. Studios of technical and highly-trained talent, and of wide comprehensiveness of range; factories not only equipped with the most modern machinery, but supported by the finest body of furniture craftsmen in the world; galleries which were unequalled in Europe, displaying models of every grade at strictly competitive prices; ideal conditions of trading, and ability to supply everything required in the building, decoration, furnishing and equipment of the home at the maximum of value for expenditure were the factors which had produced an expansion in their London business alone of a hundred-fold within ten years. The report and accounts having been adopted, and some formal business having been transacted, the meeting concluded with a hearty vote of thanks to the Chairman.

Books Received.

Le Marché Financier, by Arthur Raffalovich. (Paris: Felix Alcan editeur, 108, Boulevard St. Germain. 6e. an.)

Imperial Japanese Government 6 per cent. Sterling Loans of 1904.—In conformity with the notice issued March 7, 1907, it is further announced that the repayment of these Bonds, at par, with accrued interest up to September 10, will be made at the office of the Yokohama Specie Bank, Limited, 120, Bishopsgate Street Within, E.C.

Fairburn, Lawson, Combe, Barbour.—Interim for six months ending June on the preference and ordinary shares at the rate of 5 per cent. per annum.

Peruvian Pacific Railway, Limited.—Letters accepting offers to purchase the debentures have been posted.

The balance-sheet of the Banco de la Nacion Argentina on July 31 showed general deposits amounting to $216,930 gold and $189,257,142 paper or £17,088,404 sterling, of which £2,793,018 are judicial. Discounts and advances were $1,207,808 gold and $178,170,650 paper or £15,020,528 sterling, and the cash reserves $10,454,102 gold and $76,80[illegible]61 paper or £10,580,726 sterling. The conversion fund deposited in the Bank was $18,762,406 and in the Conversion Office $114,[illegible]5,200 gold or £26,707,540 sterling. This fund guarantees legal currency to the extent of $544,000,000, which at the rate of 44 gold cents to 100 cents paper or 18 6d is equal to £47,8[illegible],000, and the fund therefore represents nearly 56 per cent. The Senate has approved project in reference to the railways in national territories of Patagonia and Chaco, with a view to the opening and developing of same. The Finance Minister Dr Ezeiza stated that, in his opinion, it would be possible to carry out the works without recurring to the emission of Government bonds or loans. The harvest prospects are very good, and general commercial situation is sound.

The British South Africa Company have received from Messrs Kelsall and Kemp, Limited, of Rhodesia, in addition to the company's exhibition of Rhodesian products at 2, London Wall Buildings, E.C., in the form of cloth made almost entirely from Rhodesian wool, a consignment of which was recently sold on the London Wool Exchange at prices ranging from 9d to 1s. 6½d. per lb. The wool came from some of the farms of the Ivanga district of Rhodesia, where there are large flocks of merino sheep. Messrs. Cox Brothers, of Dundee, Scotland, have sent samples of yarn spun from Rhodesian jute, grown near the Victoria Falls; there is little, if any, difference between the Rhodesian yarn and yarn spun from Indian jute.

BANK RATE NOTICES.

THE UNION OF LONDON & SMITHS BANK, LIMITED.

NOTICE IS HEREBY GIVEN that the RATE OF INTEREST allowed on Deposits at the Head Office and Metropolitan Branches repayable on seven days' notice will be THREE per Cent. per annum from this date until further notice, which will be given by advertisement only.

J. E. W. HOULDING, Manager.

No. 2, Princes Street, E.C.,
15th August, 1907.

THE CLYDESDALE BANK, LIMITED (LONDON OFFICE).

NOTICE IS HEREBY GIVEN that the RATE OF INTEREST allowed on Deposits at this Office will be THREE per Cent. per annum until further notice.

BANKS AND BANKERS.

By W. de B. Herbert, M.A., LL.M., Barrister-at-Law.

"THE INVESTORS' REVIEW" Office,
NORFOLK HOUSE, NORFOLK STREET, STRAND, W.C.

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London W.C., and Published by Clement Wilson at Norfolk House, Norfolk Street, Strand, W.C.—August 17, 1907.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 503. New Series. SATURDAY, AUGUST 24, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question—**One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Japanese Budget.

It is perhaps somewhat of a disadvantage to statistical completeness that the Japanese budget estimate for the coming year should be made up before the accounts of the current year have been completed. At the same time, the rulers of Japan are so rigidly careful and methodical in their proceedings that they are probably able to put down estimates they can more or less guarantee, at any rate so far as peace expenditure goes. So much money is assigned to a particular purpose, and that money and no more is spent. With the revenue, however, it must be more difficult to reach accuracy, unless the estimates of the yield of various sources of income are always framed well within probabilities. For two years back Japan has suffered from indifferent or bad harvests, but this does not seem to have in any way affected the outcome of budget estimates, and nothing is more calculated to astonish the inquirer than the way in which the Japanese people appear to be able to carry obligations which have increased during the last decade or less to an extent unparalleled in the history of nations. Some analogy may be found between the present condition of Japan and that of the United Kingdom at the close of the long struggle with the first Napoleon. After Waterloo the population of the United Kingdom found its burdens of debt and taxation augmented to an extent which appeared to threaten not only the solvency of the national Treasury but the very existence of the State as a coherent and well-organised community. And not only did England surmount all the embarrassments the wars had placed upon her, but gradually emerged from every difficulty, and reached a position which is to-day the envy of the world. So may it be with Japan, although at the present time her population, which as recently as 1800 had only to find about £22,000,000, is in the current financial year ending March 31 next compelled to provide the Central Government with about £62,000,000. If, however, success is to be attained, and the laudably ambitious determination of the Japanese Government to wipe off the country's war debts in about thirty years' time fulfilled, something more than the internal resources of the empire will have to be relied upon. Japan will be driven to annex foreign territories, and to push her trade on the Asiatic mainland, on the continent of America, in Europe, everywhere, to an extent that will enable her people to draw help from all quarters so as to stand up under the burdens they have assumed. In this respect, also, there may be an analogy between the history of Japan in the near future and that of the United Kingdom. Be this as the Fates arrange, there is plenty of evidence now that the necessities of the young empire imposed by her onerous debts and enormous military and naval outlays are driving her into a career of conquest and imperial expansion just as we were driven.

For the fiscal year ended March 31 last the total revenue from all sources was about £51,000,000, and the expenditure was made to balance at the same figure. For the current year, as has been stated, a revenue of about £62,000,000 is looked for, and of this amount some £43,000,000 is expected to come from the various sources of taxation, and from the profits

upon State monopolies, including the railways originally owned or bought up by the Imperial Government. Away back in 1895 the total revenue from taxation and the monopolies then existing was, say, £9,000,000. Now it is expected to be nearly seven times as much, and all the war taxes—as we explained last year, in dealing with the then budget, as exhibited in the "Financial and Economic Annual of Japan," an official publication the seventh issue of which has now come to hand—which were originally intended to cease a year after the war had closed, have had to be continued and made permanent. Furthermore, the Customs tariff has had to be augmented, until, instead of yielding £643,000, as it did under the old *régime*, its yield is expected to exceed £3,600,000. A consumption tax on textile fabrics was imposed in 1894, and in the fiscal year ended March 31, 1905, yielded less than £450,000. This year it is expected to give £1,600,000. An income-tax of a kind has existed in Japan for many years, but down to 1898 it gave barely £300,000. In the current year it is expected to furnish about £2,350,000. Succession taxes, travelling taxes, taxes on the Stock Exchanges, a sugar excise, a business tax, and so on, have all now to be paid by the people. Such is the strain put upon the nation by its war with Russia.

Where does the money go? About £14,549,000 is absorbed in debt charges and pensions, another £8,094,000 goes to meet the cost of repairing the waste of war, and the upkeep of enlarged garrisons abroad. Current expenditure upon the army and navy is also onerous, and in spite of the most rigid economy the cost of administration necessarily mounts up owing to the larger army of people required to collect the revenue, and to administer the acquisitions on the Asiatic mainland and in Saghalien. Hence, as mentioned above, the total expenditure is much in excess of the available revenue, even at its present high level. There is a shortage of well on to £20,000,000, which has to be provided in other ways. Half the amount will be part of the proceeds of war loans transferred from the "surplus" of such to be applied in meeting extraordinary war expenses. There was also upwards of £3,500,000 of such money left over unspent at the end of the past financial year, and that is to be utilised in the same way, with about £1,100,000 transferred from war ships and torpedo boats' replenishing funds; but the amount to be directly borrowed by the Government this year is, we judge, little more than £3,000,000. The Chinese indemnity receipts furnish upwards of £200,000, and rather more than £250,000 is expected to come from the proceeds of the sale of State property, as compared with £1,425,000 in the year just closed. Soon, however, the unspent remainder of loans, and the reserves of various kinds set aside out of unspecified receipts in the past, will be exceeded, and in order to meet her obligations Japan will be compelled to rely entirely upon current resources. It would neither be prudent nor possible for her Government to continue to lean upon the help supplied by European or North American money-lenders. Therefore, expenditure will have to be reduced at no distant day to a figure much lower than is now estimated for. Either that or Japan will be compelled to draw every year a larger revenue from Manchuria and Korea. As it is now, finance plays a most important, a much too important part in the maintenance of the stability of the Japanese Government balance-sheet.

Some significant and valuable information is contained in the "Annual" regarding the manner in which banking has developed within the Empire, and it makes a fascinating story, the most immediately interesting point in which is the extent to which credit has been utilised during the past year in the initiation and development of new industries. No greater experts are to be found in the world in the management of the delicate mechanism of finance than the Japanese, and they are apparently able to perform the most daring feats without danger to their credit stability. In the matter of the note circulation, the fluctuation last year was comparatively insignificant, the highest figure being £34,939,000 and the lowest £26,639,000, a difference of only £8,300,000, but the loans granted by Japanese banks to their customers rose from £50,512,000 in February of last year to £102,049,000 in October, thanks to the enormous demand for the help of credit by industrial undertakings of all kinds. This was an increase of 102.3 per cent., but a subsidence set in after October which brought the figure at the end of the year back to less than £74,000,000. Even this was an increase of £21,619,000 upon the total at the end of December, 1905. Deposits as a matter of course went up in a corresponding fashion, and reached a total of £127,049,180 in October, having been only £55,328,000 in the previous January. At the end of the year the total was back to £82,992,000, but that, again, showed an advance almost exactly corresponding in amount to the increase in the loans. All the time rates of interest appear to have been moderate, and the feverish activity in industrial expansion and speculation displayed by the population appears to have thus far developed no evil consequences. Presumably the new industries started have proved successful, and the foreign trade of the country certainly implies a degree of expansive prosperity such as no other Asiatic country can parallel. The total foreign trade out and in for the past year was about £84,300,000, and as recently as 1897 it was only about £38,500,000. Going back to 1887 it was under £10,000,000, back still further to 1877 little more than £5,000,000, and in 1872 it was under £4,500,000. Taking the per head test last year it was 17.24 yen as against 8.85 yen ten years back, and 1.30 yen at the beginning of the period for which we have statistics. Last year, moreover, as the intelligent compilers of this "Annual" point out, the balance of trade was in favour of the Empire to the amount of £422,131. That seems a very small amount, but to a country which is so heavily indebted abroad it is absolutely essential that the exports should, one year with another, exceed the imports in value, otherwise the means wherewith to discharge the recurring foreign obligations could not be found. Hitherto, thanks no doubt to the profusion with which loans raised abroad have also been spent abroad, imports have exceeded exports. It is consequently a healthy sign that, in spite of the still continued effect of this loan expenditure in other countries, the export trade of the Empire should have been so excellent last year as to outpace the import trade. At least, we presume it to have been excellent.

All the activity and flush of new money, however, as well as the resort to credit, have had a tendency to make living more difficult for the mass of the Japanese people. Prices have risen for all articles of consumption, and wages, although higher, have not expanded to the same degree. Taking the average price of the principal commodities in October, 1903, as 100, it is found, the Japanese statisticians say, that by the end of 1905 the figure had risen to 116.41, and it rose to 116.76 in the following March, falling back again, however, to 114.44 in May, only to go up once more owing to an advance in the price of salt (now a monopoly), cement, copper, soja and red beans, until by November last it was 119.11, an increase of 19.11 per cent. upon the average figure of 1903 taken as the standard. Adopting the same data for wages, and taking the average for October, 1903, at 100, it is found that the figure fell to 92 in the following year, but gradually rose after that until in December, 1905, it was 113. This higher figure, however, was not maintained, and after the war it fell back to between 106-107. The tendency has again been upward it seems, and a barometer of this kind plainly indicates that wages have not risen to an extent corresponding with the advance in prices. It is consequently legitimate to infer that the masses in Japan are finding the struggle for existence much more severe than it was in the pre-war days. This does not necessarily imply that the country is going to sink beneath its

burden, it merely indicates how much greater the exertions are which the workers are compelled to make in order to cope with the severe strain put upon the nation.

For all this the Government of Japan is determined to maintain the sinking fund with which to redeem its heavy debt. In the aggregate that debt now amounts to about £220,000,000, most of it having been raised abroad. Nearly half is nominally internal debt, but a good deal of that portion has probably found its way into foreign markets. Be this as it may, the Government has set aside £11,270,000 as the annuity to be rigidly applied year after year to meet the charges upon this debt and reduce its amount. At an average of 5 per cent., however, the debt of Japan would take about this amount in interest, and therefore effective redemption, it seems to us, must depend to a large extent upon the ability of the Government to gradually lower the average rate of interest paid upon the debt. Some step in this direction was made by the issue of the 5 per cent. redemption loan out of which the two series of short-term 6 per cent. bonds are to be officially redeemed on September 10 next, and as years slip past and prosperity continues to attend the efforts of the Japanese to extend their Empire and expand their trade other opportunities will doubtless occur and be seized to effect further reductions in the same way; but it will be well, indeed, for Japan should she be able during these years to avoid any such further increase in her debt as would neutralise economies of this and other descriptions.

Rhodesia Goldfields, Limited.

A further study of the valuable report issued on the affairs of this African bubble company by Mr. H. R. Burgess, the Senior Assistant Official Receiver, excites many reflections which we have space barely to indicate. Perhaps the most salient aspect of the miserable story is the mock-serious character of the business done by the company. We cannot find anywhere in the report a single allusion to genuine mining business. It seems to have been all an affair of dealing in shares, of playing upon the Stock Exchange, a kind of joint-stock "bucket-shop" business limited to a few counters. Let us go through the incidents as they arise and see. At first the company made profits, great profits of a sort now and then. Its earliest accounts for the year ended January 31, 1896, showed a nett realised profit of £56,107. This arose principally from sales of shares at enhanced prices over cost. The money seems to have been reasonably enough dealt with, for £5,000 was written off preliminary expenses, £30,000 carried to a reserve, while the preference and ordinary shares got dividends of respectively 6 per cent. and 1s. per share. And the realised profits were apparently understated to the extent of £30,000 at least, and this hidden money was utilised to create an internal reserve not disclosed to the shareholders. There was prudence in this also, since the investments, so called, held at the date of the balance-sheet, had depreciated by £31,560, and the company had £96,625 lent out on the Stock Exchange, presumably, that is to say, on contango business, since £95,375 of it had been advanced to the firm of Partridge and Jarvis, who doubtless re-lent the money in the ordinary way of business.

The next report covered eleven months to December 31, 1896, and showed a working profit of only £3,661, but this was really no profit at all, since investments had shrunk in value by £66,075, a sum that absorbed the acknowledged reserve of £30,000, the secret reserve, and £6,075 drawn from the "profit balance." A dividend of a shilling per share had been paid on June 30 and took £12,750, so that when everything was adjusted the profit and loss account was £10,686 to the bad. A final dividend, therefore, could not be paid. Next year the profits again amounted to £43,208, according to the books, but this figure was reached by transferring to the credit of profit and loss £46,075 of the internal reserve. Actually the operations of 1897 had realised a loss of £2,867, but the securities dabbled in had risen on the market and released the internal reserve, so that skilful book-keeping wiped out the debit brought forward, and from the balance still left the ordinary shares got a 5 per cent. dividend. In 1898 luck again hesitatingly gave a leg-up to this share-speculating company and the nominal profit rose to £18,351, but that, as Mr. Burgess points out, was not the realised profit of the year's dealings, for the purchases and sales of securities had resulted in an ascertained loss of £35,[illegible], reduced to £27,841 by dividends and interest received. The financial skill, however, of the managers and book-keepers of the company converted this into a profit for the year by transferring £20,000 from the internal reserve and by taking credit in the 1898 accounts for £20,192 realised by sales of shares effected in March, 1899. By this means the board was able to pay 7½ per cent. on the ordinary shares for the year 1898. But had it not been for the large profits realised in the first year of the company's existence it would not have been possible to show any profits for the three succeeding years.

At this stage there was a pause for refreshment and the zeal of the financier was requisitioned to issue £200,000 of 5 per cent. debenture stock, part of an authorised £355,000. But applications were received for only £46,925 of this. Another £75,000 of the stock was issued to the shareholders of the Rhodesia Agency in part payment for that company's business, and a good deal of that stock was subsequently converted by the holders into shares of the Goldfields company, such was their simplicity. Another £25,000 of the stock was also handed to the all-consuming Chartered Company in settlement of debts due to it, and at the date of the winding up there was only £82,447 of its debenture stock outstanding. What the Chartered Company did with this £25,000 we are not told. During 1899 the Agency business was absorbed and a nett profit of £82,460 was exhibited, profits on the sales of securities having reached £90,166, while the Agency business brought £13,639 gross. This by no means implied profit nett. On the contrary, although no separate accounts were kept, Mr. Burgess is of opinion that the expenditure of the Agency exceeded the revenue. Still a dividend of 10 per cent. and a bonus of 2½ per cent. were paid on the ordinary shares, sweeping away £41,250—a most heroic feat on the part of the directors surely, and all things weighed. Out of the balance still exhibited in the books the reserve was built up to £43,000, and £5,046 was left to carry forward. This accomplished with success, the directors tried to refresh the company with an issue of 115,955 shares offered at £2 2s. 6d. per share, but only 44,887 shares were taken up. The premiums on these, though, amounted to £50,498, which was added to the reserve, so that if the public was not quite so eager as the board would have liked it did pretty well and enabled the game to go on. Out of the premium money and premiums received through the conversion of debenture stock into shares, the reserve was built up to £127,175—not, of course, "separately invested"—and the profit for 1900 was brought out at a mere £23,460, arising principally from sales of securities. The absorbed Rhodesia Agency does not seem to have made any profit in that year, and the ordinary shares got nothing. Then in 1901 came a loss of £6,301, expenses having exceeded the gains. The Agency fees in that year came to £10,381, and the profits on securities realised to £6,376, but in neither instance was current expenditure covered, stock-punting being such a costly business. The market prices of securities held, moreover, showed a depreciation of £61,132, and the reserve was brought down to £125,030 by debiting the loss of the previous year to it. For all that the preference shares got their dividend out of the balance brought forward from 1900.

In 1902 the realised profit was put at £12,776, but that was without taking account of the loss through

depreciation on investments. Again the expenses of the Agency branch exceeded the revenue. Investments bravely taken into the balance-sheet at cost had now depreciated by £147,092, and again the dividend was paid on the preference shares, although the auditors reported to the shareholders that there were no funds in hand to pay it from. Why should the board heed a triviality of that sort? Appearances had to be kept up, and prices. By 1903 the speed at which the company was slipping into an abyss showed disagreeable acceleration, a realised loss of £6,701 being again sadly revealed in the accounts, and through excessive current expenditure, not through losses actually incurred in the play. But the depreciation of investments had risen to £385,651 over and above, and the reserve was brought down to less than £105,000 by charging various past losses against it. It was like the moves in a badly played game of chess—"check" at every turn. So in 1904 the accounts showed a loss of £27,078, of which £21,086 came from the loss on sales of securities, and in addition market depreciation had risen to £396,502. It was beyond the skill of any financial genius to pay dividends for that year. In 1905 a nett profit of £333 was exhibited, but without taking into account nearly £50,000 lost through the realisation of securities. The game had about reached checkmate.

But how was all this play in finance kept going? Principally by dabbling in the shares of three companies. There was the Matabele Mines, Limited, the Matabele Gold Reefs and Estate Company, Limited, and the West Nicholson Gold Mining Company, Limited. The two Matabele companies seem to have been adventures of Major Maurice Heany, whose name first became known to the British public after the Jameson Raid—he was only captain then, and woke up Isaacs the storekeeper at Mafeking to buy top boots and other things on his way to join the valiant Jameson—and Messrs. Partridge and Jarvis were "actively engaged in the promotion," at all events of the Reefs company, which was registered in 1894, Major Heany having fixed the price at which he sold that property at £60,000. In these shares the Rhodesia Goldfields Company dabbled more or less as long as it was possible to find a market in which to play. It did the same with the Matabele Mines, Limited, bought from Major Heany for £130,000, of which £50,000 was payable to him in cash. An issue of 100,000 of its shares was made for cash, and one-half of this issue was taken by the Goldfields and the other half by the Agency company. That was in 1895. The Goldfields company bought another 16,935 shares, and when it absorbed the Agency it took 38,375 more, so that it held altogether 105,310 shares at a cost of £176,005, but it sold 28,742 shares at a profit of £41,972, leaving 76,568 on hand on December 31, 1904, standing in the books at £128,980. In due season came reconstruction, and both these Matabele companies went through the mill in 1905, new shares being issued with 14s. paid, and shareholders in the old Reefs company received one such share for each two shares surrendered, while those in the Matabele Mine, Limited, got only one new share for four shares surrendered. This transmogrification and wipe out involved the payment of calls, and at the end, when the winding-up day came, the Rhodesia Goldfields Company held 22,046 shares, which stood in the books at £151,366. These shares are valued in the statement of affairs at £8,267, and are probably worth nothing at all.

The West Nicholson Gold Mining Company was a subsidiary of the Matabele Reefs Company, and paid it £170,000 for the property in shares. Dabblings by the Goldfields company went on in this concern also until it held altogether 26,073 shares therein at a cost of £64,707, but it sold nearly 9,000 of them at a profit of £16,860, so that only 16,187 shares remained on the books at December 31, 1904, at a cost of £47,680. The "mine" did no good, and it was amalgamated with the others in 1905 in the usual way, 1½ new shares being given for every five old surrendered, these new shares carrying a liability of 6s. each. At the final wind-up, therefore, this adventure represented £49,137 of the nominal assets and the value is brought into the statement of affairs at £971. At the end of the whole gamble the Goldfields company had lost £240,896 nett in these flimsies alone.

Other brilliant operations there were, and a final effort at amalgamation, but it seems inadvisable to pursue the story further lest too many details should obscure the meaning of it all to the public. It is a history of shadowy, unreal markets created in "securities" which at no time had substantial existence, never meant anything solid. The companies were called into existence and the shares put upon the market and played with there to fill vendors' pockets, in answer to the excitement of the public mind, to feed the avidity of the speculatively insane for something to buy "likely to go up in price." Nobody seems to have thought about mining in any serious sense; the whole attention of all concerned was given to the market. "The shares are bound to rise." "Good buying, price up 2s. 6d." "Knowing ones on the feed"—you know the jargon and how it was repeated in all quarters whence money might be drawn, in all "kept" newspapers. And the directors of this forlorn wreck jobbed and prophesied, and met sharks and were swallowed up, they and their "company"; and accounts of "investments," of contangoes and sales, profits and depreciations, were solemnly kept, and "profits" appeared and vanished like Banquo's ghost, and the busy brokers busily executed orders and earned commissions, and the boards transferred and reconstructed and amalgamated all in the most solemn and businesslike fashion, and it was all paper, only paper, worthless paper which the dupes bought for gold.

Economic and Financial Notes.

President Roosevelt's Sermon.

It dealt primarily with the Pilgrim Fathers, a memorial to whom the President unveiled at Princetown, on Tuesday, and was therefore appropriately of a hortatory description. The speech seems to have been chopped about a good deal between the time when the original draft was settled or communicated to the Press, and its delivery. Some minatory passages are stated to have been left out or modified, but, on the other hand, a new passage was inserted that the zeal of reporters has scattered all over the world. As it is a characteristic utterance we give it here:—

During the present trouble with the Stock market (continued Mr. Roosevelt) I have received countless requests and suggestions, both public and private, that I do or say something to ease the situation. There is a world-wide financial disturbance. It is felt on the bourses of Paris and Berlin, and British Consols are lower, while the prices of railroad securities are also depreciated. On the New York Stock Exchange the disturbance is particularly severe. Most of it I believe to be due to matters not particularly confined to the United States—matters wholly unconnected with any governmental action; but it may well be that the determination of the Government—in which it will not waver—to punish certain malefactors of great wealth has been responsible for something of the troubles, at least to the extent of having caused these men to combine to bring about as much financial stress as they possibly can in order to discredit the policy of the Government, and thereby to secure the reversal of that policy, so that they may enjoy the fruits of their own evil-doing. That they have misled many good people into believing that there should be such a reversal of policy is possible. If so, I am sorry; but it will not alter my attitude. Once and for all, let me say that, as far as I am concerned, and for the eighteen months of my administration that remain, there will be no change in the policy we have steadfastly pursued.

It is idle to ask me not to prosecute criminals, rich or poor; but I desire no less emphatically to have it understood that we have undertaken, and will undertake, no action of a vindictive type, and, above all, no action which shall inflict great or unmerited suffering upon innocent stockholders and upon the public as a whole. Our purpose is to act with the minimum of harshness compatible with obtaining our ends. In the man of great wealth, who has earned his wealth honestly and used it wisely, we recognise a good citizen, worthy of all praise and respect. Business can only be done, under modern conditions, through corporations; and our purpose is heartily to favour cor-

porations that do well. The Administration appreciates the fact that liberal but honest profits for legitimate promoters and generous dividends for capital employed either in founding or continuing an honest business venture are factors necessary for successful corporate activity, and therefore for generally prosperous business conditions. All these are compatible with fair dealing as between man and man and with rigid obedience to the law. Our aim is to help every honest man and every honest corporation, and our policy means, in its ultimate analysis, healthy and prosperous expansion of the business activities of honest business men and honest corporations.

Financial correspondents say that the first effect of this utterance was to depress prices on the Stock Exchange, but that when members had had time to think it over they came to the conclusion that the President, after all, was harmless, and immediately put prices up again. If the market followed this course it exhibited its usual keenness of perception, for there is really nothing alarming in this deliverance. It will not strike a moment's terror into the soul of Mr. Harriman, still less is it likely to induce Mr. John D. Rockefeller to abate his golfing exercise. Mr. Roosevelt says that for the eighteen months that remain of his administration, there will be no change in the policy he and his Cabinet have steadfastly pursued. What is that policy? Merely worrying. All the fuss and declamation bestowed upon the big trusts, the harassing actions at law, the investigations and threats, do not appear to us to have really weakened the position of any one of them in a perceptible degree. If Mr. Rockefeller could afford to finish his game of golf undisturbed after hearing that Judge Landis had fined his company about £6,000,000, Mr. Harriman may well pursue his schemes of railroad aggrandisement in all serenity, notwithstanding the President's discourse, because he can surely assert that he is acting honestly. All that he is doing is to gather the railroads of the Union into one autocratic management, or as many of them as he can lay hold of by stock manœuvres on Wall Street, and through this consolidation he will doubtless be able to contend that he has cheapened, or means to cheapen, the railway service to the community, that he will give increased facilities, and in all ways contribute to the advancement of the people. And who shall gainsay the great jobber?

The truth appears to be that Mr. Roosevelt is tied hand and foot to the Protectionists, and dare not attack the evil at the root. Probably enough there would be trusts and combinations in the United States whatever fiscal policy had been pursued. The country is a new one, filling up rapidly, and offering, therefore, unheard of facilities to those who find their life's pleasure in building up monopolies. Had there been no Dingley Tariff, however, and if instead of that tariff the liberating policy initiated by the democratic party under Mr. Cleveland had been continued and developed, we may be quite sure that healthy and open competition would long ago have checked many of the worst evils by which the people of the United States are now cursed through the unquestioned domination of certain privileged trusts. It would never have been possible for the enterprising Andrew Carnegie to gather together that Steel Trust, out of which he made more millions than any conquering hero ever amassed by ruining the communities over which he swept in his career of devastation. Nor would it have been possible even for the Standard Oil Trust to have maintained its monopoly had refined oils produced in other parts of the world been free to come in and compete with it. Many mischievous inventions of the wealth-hunter would have doubtless arisen and pursued their course, but it would have been far less difficult for the American people to put an end to wrong-doing under a Free Trade policy than it can be now. We therefore must continue to insist that it is all waste of wind on the part of the President to bang away at trusts and corporations, to repudiate in one breath socialism and national control, to exalt the beneficence of corporate ownership, and deny that anything like municipal ownership would be a beneficial change. Still less to the purpose is it to preach honesty when a high tariff breeds dishonesty as a dead carcase breeds maggots. Tub-thump as he may, the President remains helpless against the trusts that control his administration so long as he refuses to attack the abuse that lies at the root of all—the blight-spreading tariff.

The Debt of China.

So seldom is it that anything approaching a full statement of the public obligations of China is to be had that the following extract from the Financial Supplement of the *Times* possesses much more than a one-day interest. We therefore reprint it here. It is from the paper's Shanghai correspondent, and needs only to be supplemented by an equally circumstantial and trustworthy summary of China's resources and revenues to place the creditors of that vast amorphous empire in possession of all they require to know. Unhappily the income of China is much more difficult to get at than the catalogue of her foreign debts. Actually the inquirer can only be sure of the figures presented by the Imperial maritime customs service, all other Chinese resources being matters of guessing—mere darkness for the most part. Europe trusts China because it believes in the probity and efficiency of the international Customs service, and on no other ground. This may be unjust to the Chinese Government, we think it is, but it is the fact none the less, and yet the debt charges as here exhibited much exceed the annual amount of the Customs receipts, or did so until increased duties were imposed and additional taxes given to the foreign service for collection. We speak rather in the dark, last year's report of the Customs Department not having reached us. Several, however, of the loans enumerated below enjoy special securities in the form of railways, and there is no good ground for doubting the adequacy of the security at any point, provided China enjoys internal peace and has no quarrels with her neighbours. Another "Boxer" episode would probably sweep away the Manchu dynasty and might rend the loosely-knit empire in pieces with consequences disastrous to the foreign creditor. A possibility of such danger must never be put out of sight, but it seems a possibility only. China has begun to wake up, to adopt new ideas, to imitate Japan in seeking economic development along Western lines, and, left to themselves, the rulers and people are much more likely to strive to accelerate the redemption of their foreign debts than to interfere with the due payment of the charges these involve. Only thus, they will think, can they secure their freedom, dispense with the interference of the foreigner. It is in the said foreigner accordingly that the real danger lies. If China be provoked or plundered, treated with insolent, aggressive injustice by the powers always jostling each other in Peking, always jealous lest one should reap while the others merely provide or sharpen the sickles, a few years may bring another upheaval that would ruin all. And some of these Powers must be in evil odour now. In a cold-blooded way they agreed to load China with a debt called indemnity, weighty enough to hold her at their mercy for 40 years, and already China is on her feet again, asserting her right to exist as an unfettered empire, and her temper is rising as her reorganisation goes on. The diplomacy of the next generation will have to be more prudent than that of the last if disastrous mistakes are to be avoided :—

Of the debts of most of the countries of the world [illegible] statements are made from time to time, and the authorities of debtor nations are most careful in presenting to the public the state of their finances. China does not [illegible] this way. The Government being as averse to publicity as the Chinese business, and the public is left to find out for itself the [illegible] of the Empire. The result is a wonderful amount of [illegible] knowledge; and most of the publications to which we [illegible] information give the same figures from year to year, with no account taken of [illegible] during the year, and not always any account of new debt incurred.

Before the outbreak of the war with Japan, 1894-5, the foreign debt incurred by China was [illegible] in amount, the latest loan of which any [illegible] existing being a small one of £115,850 [illegible] per cent., issued in 1885, of which £61,980 has been [illegible] to December 31, 1906. £53,100 still to be redeemed. The Government had [illegible]

ledge of the financial history of Turkey and of Egypt, and had no intention of having that history repeated on its own soil, and it steadily resisted all blandishments to "improve its estate" on borrowed money; it was encouraged in this attitude by the long-continued peace of 30 years from 1864, and by its daily habit of resisting what appeared to it always to be foreign aggression. Besides this, it was in the position of the merchant who keeps no bank account, as were the Governments of Europe down to 200 years ago, and had not acquired the borrowing habit.

Japanese War Loans.

China formerly always fought her wars, even the disastrous Taiping rebellion, on a cash basis, the only credit she obtained being from her own troops and her own purveyors. Her idea of the sinews of war is the *Kriegschatz* and not national credit. The Japanese War, fought to some extent on modern lines, introduced new ideas, and she was compelled to resort to loans. There were a few unsuccessful attempts to float domestic loans, and one domestic loan for 5,000,000 taels (£750,000) which, issued at 7 per mil. *per mensem* (about 8¼ per cent. per annum), succeeded only because it was managed directly by the Commissioner of Customs at Canton; this was a short term loan, and was wholly paid off by 1902. There were also four foreign loans, for a total of £6,635,000. One, a silver loan for 10,900,000 taels (£1,635,000) issued in 1894 at 7 per cent., has been redeemed to the extent of £490,500, leaving £1,144,500 outstanding. The other three were gold loans, issued in 1895 at 6 per cent., and of them £2,200,000 has been redeemed, leaving £2,800,000 outstanding on December 31, 1906. Then came the settlement of the bill to Japan of 230,000,000 taels (£34,500,000) for war indemnity, and with it the scramble of the European Powers for politico-financial influence. During the three years following the conclusion of peace three loans were issued for a total of £47,820,000, to pay the indemnity, to clear off floating debt, to provide for rearmament, and to cover expenses of flotation and underwriting. The first, issued in 1895, for 400,000,000 francs (£15,820,000) at 4 per cent., and guaranteed by the Russian Government "in case of need," was issued by a combination of French bankers; the second, for £16,000,000 at 5 per cent., was issued in 1896, and the third, for £16,000,000 at 4½ per cent., was issued at 90 in 1898, by a combination of English and German bankers, the Hongkong and Shanghai Banking Corporation for England, and the Deutsch-Asiatische Bank for Germany. Of these three loans, with a total face value of £47,820,000, there had been paid off by December 31, 1906, the sum of £5,932,835, leaving £41,887,165 outstanding. Of these loans the first will be entirely paid off in 1931, the second in 1932, and the third in 1943; and all are secured upon the Maritime Customs revenue and on certain additional taxes placed under the supervision of the Maritime Customs.

The next historic event for which China had to pay was the midsummer madness of 1900. A careful inquisition was made into the amount which the Empire could pay, warranted sufficient to keep it quiet for 40 years to come, and, in the International Protocol of September 7, 1901, it was settled at £67,500,000. This was the total of the amounts claimed by the several Powers for compensation for injuries suffered by their nationals, and for the cost of military operations in restoring order in North China, and the amounts were subjected to no audit or examination. Approximately the amounts claimed by each Power were as follows:—

	£		£
Russia	19,575,000	United States	4,725,000
Germany	13,500,000	Italy	4,050,000
France	10,600,000	Belgium	1,350,000
Great Britain	7,425,000	Austria-Hungary	675,000
Japan	5,400,000	Holland and Spain	200,000

It was decided that the Empire could stand an annual charge of £6,364,500; and, with an existing annual charge of about £3,540,000 for ante-1900 loans, there remained a sum of £2,824,500, which was assigned to the present service of the indemnities, principal and interest at 4 per cent. In order to provide for a progressive increase in payment of the principal of the indemnities in proportion as prior debt charges were liquidated, and to keep the annual charge for existing obligations at about the same amount of £6,364,500, the annuities for the indemnity were divided into five series:—

(*a*) £11,250,000, amortisation began in 1902, and £673,926 paid off to December 31, 1906.
(*b*) £9,000,000, amortisation begins in 1911.
(*c*) £22,500,000, amortisation begins in 1915.
(*d*) £7,500,000, amortisation begins in 1916.
(*e*) £17,250,000, amortisation begins in 1932.

All five series culminate and are finally to be paid off on December 31, 1940.

The Russo-Japanese War for the redemption of Manchuria (1904-5) was fought without direct cost to the Chinese Government, but one loan was issued in 1905 for £1,000,000 at 5 per cent. Of this loan £500,000 was paid off in January, 1907, and the balance is redeemed by equal instalments up to 1929.

Outstanding Obligations.

Of the Government loans and indemnities now outstanding in whole or in part, the original face value was £123,070,080. Of this amount, £9,350,241 had been redeemed by December 31, 1906, leaving £113,710,839 then outstanding. The last of the loans will be redeemed in 1944, and the last of the indemnities paid off in 1940.

There remain the railway loans secured each on its line of railway and all with a Government guarantee. These are:—

(1) Imperial Chinese Railway, £2,500,000 at 5 per cent., of which £115,000 has been paid off.
(2) Peking-Hankow Railway, 112,500,000 francs (£4,500,000) at 5 per cent., of which redemption begins in 1909.
(3) Shanghai-Nanking Railway, £2,900,000 (out of an authorised issue of £3,250,000) at 5 per cent.
(4) Canton-Hankow Railway, £1,000,000 lent by the Government of Hong Kong at 4 per cent.
(5) Canton-Kowloon Railway, £1,500,000 in course of issue (June, 1907) at 5 per cent.

The total amount of the foreign debt constituting an obligation of the Imperial Government and secured on its revenues, including Government loans not yet paid off, indemnity (1901) and railway loans, is as follows:—

Total amount of original issue, £135,270,080.
Charge in 1906 for interest and sinking fund (including one redemption in January, 1907), £7,433,749.
Paid off to January 31, 1907, £9,974,241.
Outstanding January 31, 1907, £125,295,839.

Interesting Bank Figures.

Many suggestive facts are gathered together by Mr. Harry W. Birks in his half-yearly tabular exhibit of the balance-sheets of our leading joint-stock banks. There are only 10 of these banks that half-year by half-year publish their balance-sheets, but these 10 possessed on June 30 last total working resources amounting to £305,203,520. At the same date in 1904 the total of these working resources was only £272,140,461, so that our banks progress in available wealth in spite of the bad times through which we have been passing in the interval. All their available money, moreover, finds ample employment, and it is interesting to note that the average cash in hand held by 22 banks whose figures are embraced in the principal and supplementary exhibit compiled by Mr. Birks amounted to only 14.49 per cent. of the liabilities on deposits and acceptances at the end of June, against 14.56 per cent. at the same date in 1904. Cash lent at call, however, has risen from 13.32 per cent. at the earlier date to 15.40 per cent. last June. On the other hand, investments are now only 20.90 per cent. of the liabilities, against 23.28 per cent. on June 30, 1904. These averages in the main illustrate such changes as the interval has brought about in the position of the banks. They have suffered in the direction of their investments, but in other respects appear to be as strong as ever. Coming back to the 10 banks whose half-yearly exhibits are in these tables so lucidly analysed, we find that their paid-up capital is £18,806,135, and that their reserve funds amount to £13,461,530, or 71.58 per cent. of the paid-up capital. Several of the banks, however, have reserves equal in amount to the paid-up capital, these being the London City and Midland, the London and South-Western, and Parr's, while the London and Provincial has a reserve of £1,435,180 against a paid-up capital of only £800,000, so that its proportion of reserve to capital is actually 179.40 per cent. In its case, however, the uncalled capital is only equal in amount to the paid-up capital, whereas in the case of all the other banks this liability much exceeds the amount paid up. The Union of London and Smiths Bank, for instance, has an uncalled liability of £19,379,315, compared with a paid-up capital of £3,554,785 and a reserve of only £1,150,000, or 32.35 per cent. of the paid-up capital. The amount of capital in reserve doubtless justifies, in the minds of its directors, the smallness of the reserve.

Coming to the liabilities, we find that on deposit and current accounts the aggregate obligation of these ten banks was at the date of their last half-yearly balance-sheets £258,702,029, which is about £28,000,000 more than the total liability three years ago. We should like much to know how much of this great figure is the product of credit creating. They also show a liability of £14,233,808 on acceptances and foreign bills endorsed, which is nearly £4,000,000 more than the total three years back, and these changes also illustrate the movements which have been going on in the interval. None of these banks, however, show individually such commitments, in the way of deposits at least, as Lloyds, whose accounts are published only once a year, at June 30. The highest liability on deposits and current accounts shown by any one of the 10 banks that publish half-yearly accounts is £50,955,873, which is the amount due to its customers by the London City and Midland. Lloyds Bank, however, shows a liability of this description amounting to £65,754,457

and it also had a contingent liability on acceptances and foreign bills endorsed to the amount of £1,799,933, but here it was nearly £1,000,000 behind the commitments in like kind of the London City and Midland, which were £2,764,112, and the Union of London and Smiths came close behind the Midland with a contingent liability on acceptances of £2,712,318. None the less were the total working resources of Lloyds Bank, including the paid-up capital and reserves, the highest shown by any English bank of them all, at £74,355,990, against £60,240,260 displayed by the National Provincial Bank of England in its balance-sheet for the year ended December 31, 1906, and £60,705,685 at the command of the London City and Midland on June 30 last. No other bank reaches such aggregates by nearly £10,000,000, the next largest being the London and County, with total working resources amounting to £50,571,097, closely followed by Barclay and Company with £50,244,273, the Union of London and Smiths coming next with £44,388,490. No other bank has resources aggregating £40,000,000, but the London and Westminster comes near that figure with £39,873,738. Taking all the 22 banks together, the total working resources they possess sum up at £585,296,692, and their total assets, including buildings, exceed this amount by nearly £2,500,000 at £587,751,678. It is a most impressive display, and one wonders sometimes how the banks contrive to keep such masses of capital in a fructifying state, how also they contrive to steer clear of entanglements dangerous to their stability. That they mostly do so is the weightiest possible testimony to the vigilance and circumspection with which their business is conducted.

The Bankruptcy Record for 1906.

There is not much satisfaction in dealing with statistics presented annually by the Bankruptcy Department of the Board of Trade. For the past year, however, it would seem that the quality of the business done was sufficient to prevent any swelling out of the loss inflicted upon creditors, both the number of insolvents and the amount they took from those who trust them being much the same as in 1905. No less than 4,436 bankruptcies occurred in England and Wales, causing an estimated loss of £5,133,325, and in addition deeds of arrangement to the number of 3,641 brought in sight losses of £2,792,886. Altogether, therefore, the failures in England and Wales numbered 8,077, and caused creditors a probable loss of £7,926,211, the number being smaller by 328 than in 1905, and the estimated loss £1,330 less. We may say that it was "even running," therefore, and all that good trade and rising prices have done to bring prosperity only suffices to prevent the bankruptcy disease from eating deeper than usual into the resources of the trading community. Figures relating to Scotland and Ireland are also bestowed upon us, but are of no consequence, either in magnitude or number. Moreover, they are incomplete, so we need not linger over them. It is more interesting to see which class of people in England and Wales yielded the largest number of failures, and this would seem to be grocers and provision dealers, who head the list with 971 failures and £567,793 of liabilities; but although their numbers were larger than in the building trade, that trade contrived to get deeper into debt than the grocers. In number, builders and people connected with the building trade who failed came to 858, but their liabilities reached £789,408. Then came beer, wines, and spirit dealers, 438 of whom went under with liabilities of £524,755, but this was less than the figure of the previous year, whereas both the builders and the grocers showed increases in the amount of their liabilities. The people who came best off on the comparative show were accountants, only 20 of whom suspended payment, with liabilities of less than £41,000, or nearly £579,000 less than in 1905. Here, however, the difference may be quite accidental, as in the case of bankers, two of whom are said to have stopped payment, against none in the previous year, with liabilities of £505,155. Farmers are another class that helped to swell the list, 318 of them having failed for £339,000, but here also the product was less disastrous to creditors by almost £60,000 than in the preceding year. Bakers failed numerously, there being 222 of them in the list, but they only owed about £107,000, and only 20 solicitors disappeared with liabilities of £168,333, but that was almost £28,000 more than in 1905.

This analysis need not be pursued further, because it tells us very little. Indeed, the whole return has always borne to us an aspect of unreality, because we doubt the completeness of the figures. Our own experience of insolvents has happily been small, and yet it is suggestive of much that goes on throughout the country. It leads us to infer that the bankruptcy officials never get a chance to overhaul the affairs of a considerable proportion of those who are either unable or unwilling to pay their debts. In our limited experience we have never been able to extract any money from a defaulting debtor. He, or it for "limited" is often used, stops payment, and there is, apparently, nothing to be done. One humorous fellow of a debtor, who stopped payment recently, and owed The Investors' Review a little money, has made a proposal to convert himself into a limited company, with preference shares to be consigned and held in trust for behoof of his creditors until they were paid. There is an ingenious audacity about this proposal which mildly excites our admiration, though it does not command adhesion. This debtor, however, deserves prominence from the mere fact that he has condescended to make a proposal of some description; most of those in his position appear to do nothing at all. Some completely disappear, others, when processed, keep cool and pay nothing. We judge from this brief recital, and from inquiries that have arisen in connection with our own experience, that a considerable proportion of the insolvencies continually occurring never reach the officials of the Board of Trade in any shape. The law does not encourage those who are creditors for small amounts to take the trouble to put it in motion. It is throwing good money after bad in quite 99 cases out of every 100. We know because we have tried, and, therefore, these nicely put together tables issued annually by the Bankruptcy Department of the Board of Trade seem to us but an imperfect record, and fail altogether to furnish an adequate test of the degree to which over-trading, speculation, extravagant living, and other influences eat up the resources of the honest and careful man of business. And there is a class of debtor that may be described as the "quick changing artist" class.

A Victorian Megalomania.

What possesses the Government of Victoria to cling with such apparent desperation to its Australian mail contract project? Have its politicians any connection with the "All Red" route gentlemen who are keeping the flame of self-interested Imperial patriotism glowing at Ottawa? Is Lord Strathcona behind the politicians of Victoria in this scheme in order that he may be able to claim Australian support when he comes to try and bully our meek Home Government into pledging the British taxpayer to support his Canadian-Pacific project? We cannot conjecture, but the facts seem to be plain enough, and so is the madness, particulars of which are given in the June issue of the *Australasian Insurance and Banking Record*. Other members of the Australian Commonwealth appear to have done their best to sit upon Victoria and its Government, but, nothing daunted, in the middle of June it came forward once more with a scheme by which a subsidy of £125,000 is to be given by Victoria for ten years in order that eight vessels costing £380,000 each might be built and devoted to this peculiar mail service. The share capital of £1,800,000 is to be provided by a syndicate and £1,750,000 is to be borrowed on debentures. We have no fear whatever that this daft enterprise will materialise in present circumstances, but one never knows what might happen a year or two hence, and it is just as well to point out once more the hopelessness of it. This has been very well done by the *Record*, which shows that the new service would have to earn about £200,000 per annum more than the Orient company now does in

order to meet the charges this heavy capitalisation would lay upon it. The Orient company itself puts aside 4 per cent. for depreciation, which is certainly none too much, and that took £50,832 in 1906. But on the same basis the new mail service would require to put aside £121,600 per annum, or £71,000 more than the Orient company. It would also require to earn very much more in order to pay interest on its debentures and something on its share capital. The debentures could not be issued to yield less than 5 per cent. to the buyers, and probably could not be sold at present even on a 5½ per cent. basis, while the share capital of £1,800,000 would require nearly six times as much to give it a dividend of 3 per cent. as the capital of the Orient company does. And what is to be gained by this project, assuming it carried through? Victoria apparently hopes to gain a good deal, since the proposal its Government puts forward contains a clause to the effect that the colony is to have a first call on 1,200 tons of refrigerated space to each vessel during the butter and fruit seasons. It also seeks to prevent any advance in freight or passenger rates, and the other Australian colonies are to be graciously permitted to adhere to the contract within six months. There is just one little touch of prudence shown, the guarantee is not to come into force until the eight vessels are completely built and fully equipped ready for use and a first mortgage over them given to the Government with the approval of the debenture holders to secure the guarantee. In other words, these debenture holders would appear to come in second in the procession. Well, the money is not going to be raised here on any such terms, but if the good Victorians like to put it up themselves there might be no difficulty in providing them with the steamers for cash down. Payment in paper is not now popular.

Bolckow, Vaughan and Co., Limited.

Another splendid year's business is indicated in the report and accounts of this old company for the year ended June 30 last. The free revenue from all sources after providing for depreciation is £607,323, or including the balance of £80,952 brought forward, £688,275, which is almost £299,000 more than in the previous year and over £393,500 more than the profit two years ago. Leaving out the amounts brought in the profit is up £262,188. No wonder, therefore, that the directors are able to make liberal provision in various directions, including writings off to a total of £210,000, and to pay 10 per cent. dividend on the ordinary shares, both the fully paid and the partly paid, with £158,054 left to carry forward. No weak spot is visible in this fine exhibit or in the balance-sheet unless it be the steady and continuous expenditure on capital account. Last year the total amount laid out on new collieries and plant, electric installations, machinery, extensions, &c., was £284,526, and of this £224,479 was debited to capital, the balance, together with £150,000 taken from profits and written off the general capital account, being provided from revenue. Even so, the total of land, buildings, coal and ironstone mines, rolling mills, &c., &c., now amounts to £4,038,865, and a great deal of this must be wasting property. The capital representing it ought surely to be constantly and severely written down. New expenditure during the past year seems to have been £36,607 more than in the previous year. In other respects, however, the balance-sheet looks decidedly more healthy than it has done hitherto. Borrowings from the company's bankers, for instance, have disappeared altogether, and although sundry creditors are owed £43,225 more at £299,937, the current liabilities as a whole are not materially increased. Royalties on minerals are naturally higher with the bigger business done, but at £78,710 the increase is less than £11,000. Debtors owe the company £14,171 more at £228,285, and stocks in hand have gone up by £26,146 to £612,332, but neither of these changes is anything out of the way considering the magnitude of the business done. The company, moreover, is much better off in the matter of cash and bills on hand than it was a year ago, when the aggregate was quite insignificant, for the total of this entry is now £93,613, or say £90,000 better. Altogether the exhibit is good, and indicative of extraordinary prosperity.

The New Australian Tariff.

It does not seem to be getting to work in a smooth fashion. At home, manufacturers interested in the Australian trade are up in arms, and the Birmingham Chamber of Commerce has led the way with a protest. This is all right, although we are sorry to see that a certain number of the discontented seek to blame our Government on the grounds that it rejected the undefined and undefinable reciprocity proposals of the much-talking delegates who came here to represent the Commonwealth. That is a senseless contention, because nothing we could have offered—even if it had been in our power to offer anything, which it is not—would have altered the underlying circumstances now forcing the Commonwealth Government to try and avert insolvency by the help of excessive indirect taxation. The true source of the tariff is well enough expressed in an incidental way by the Sydney correspondent of the *Financial News*, who, in a letter published by it on Thursday, says: "Year by year both Federal and State expenditure is growing at a rate out of proportion to our average revenue over fat and lean years." This is the whole secret, and we may go further and hint that should the latest efforts of Federal politicians to prop up a flimsy structure end in failure, default will follow. For many years this Review has maintained that only by constant additions to the public debt were these Australasian settlements able to maintain an appearance of solvency. Of late years, however, they have found it increasingly difficult to add to their debts due to the Mother Country, and at the present time loan raising by any one of them or by the Commonwealth itself would be an exceedingly costly operation. Were it attempted on any large scale it would become an impossible operation, therefore the needy States, or the loosely knit and hastily knocked together Commonwealth that represents them and forms an additional incubus upon their resources, now find it necessary to fall back upon the expedient of a high Customs tariff, which is rendered palatable to the electors by much rhetoric about the development of home industries. It is none the less a weapon, destined to wound those who wield it, and already something like conflict appears to have arisen between the Commonwealth officials and those of the State of New South Wales. The Supreme Court of the Commonwealth, it seems, has decided that State Government imports are not liable to pay duty, and this decision has not been appealed against by the Commonwealth Government. In spite of it, however, the Federal Director of Customs has seized a quantity of wire netting consigned to the Government of New South Wales, and holds it in defiance of law court and State. Sir William Lyne, the Federal Treasurer, wires: "I have instructed the collector to maintain possession of the goods at all hazards, and obtain the necessary assistance. I hope your Government will not persist in an illegal act which must result in serious consequences." And Mr. Carruthers, the New South Wales Premier, answers in heat and with resolution: "Any attempt to impose a customs duty on State property or the King's goods is unlawful. I will continue to act under the law laid down by the Supreme Court of New South Wales until that law is declared to be otherwise." This might be the beginning of a very interesting quarrel, and we can well imagine that free trade New South Wales is bitterly galled by the new tariff, quite as much hurt by it as manufacturers in the United Kingdom, who find consolation in cursing the Home Government.

Mr. Taft on Monopolies.

To those who are in no way swayed by their interests in or connected with the railways of the United States, or who are free from any taint of implication in the operations of monopoly trusts, Mr. Taft's speech will

seem a sensible one enough. It was delivered to the Buckeye Republican Club at Columbus, Ohio, on Monday evening, and dealt with the railway problem as well as with the trusts. The interest of his speech so far as the railways went centres in the proposals sketched out by him, which were to the effect that railways engaged in inter-State commerce should not be allowed to issue stocks or bonds except after a certificate had been issued by the Inter-State Commission. He thought that such a certificate would tend to make the proposed issues more marketable throughout the world. Probably this is a correct view, and if it is we are not sure that the ultimate consequences would be altogether advantageous to the world. Much would depend upon the discretion of the Commission, anything in the shape of an official imprimatur being liable to abuse. For the rest, Mr. Taft indicated very plainly that the Government is disposed to obey the expressed wish of the people, and to put an end to the system of combination whereby such huge monopolies as that of the Union Pacific Company have been built up. The history of the union of the Southern Pacific and Union Pacific systems with the Illinois Central appears to have impressed not only the people but the Government as a sinister omen, and Mr Taft merely gave voice to the general sentiment when he said that no one could view without trembling the enormous power thus conveyed to one man. Some means must be found of remedying the dangerous tendency thus disclosed, and it must be found under penalty of seeing an agitation commence and grow formidable, irresistible for State ownership of the railways. Were that to come about, whatever became of the railway shareholder, the last position of the community might be worse than the first.

And as regards the mercantile or manufacturing trusts, Mr. Taft's utterances were also based on reasonable lines. Although agreeing with Mr. Bryan that it might be wholesome to see one or two managers of unlawful trusts in jail, Mr. Taft doubted whether conviction could be obtained under the present jury system, and joined issue with Mr. Bryan when it became a question of abolishing trusts root and branch. He quite justly said that trusts lawfully conducted may cheapen goods, and thus benefit the people as well as the stock-holders. That view, however, is as we say above, only applicable to trusts not bolstered up by unwholesome, unjust, or corrupt tariffs. In a Free Trade country it is conceivable enough that combinations amongst manufacturers in certain lines of business may conduce to economy, and to the benefit of the consumer by lessening useless competition, but where trusts exist in a country whose industries are sheltered by more or less severe protective tariffs, the result invariably is to create a system of doing business hurtful to the interests of the community at large. It is made to pay for all manner of corruptions, robberies, and doubtful enterprises. But Mr. Taft is a "safe" man, one obviously well fitted to occupy the post of Republican candidate for the Presidency in next year's electoral campaign, the first moves and skirmishes in which have already taken place.

Guest, Keen and Nettlefolds, Limited.

A year ago the solid results shown by the directors of this great business seemed almost beyond surpassing. The year ended June 30 last shows a further advance, even more marked than that of the preceding year, for the nett profits of £470,511 are £43,355 up, whereas a year ago the increase upon 1905 was less than £20,000. As the balance brought forward was also upwards of £24,000 higher at £107,146, it follows that the disposable balance of £637,657 these two amounts give is nearly £68,000 better than that of a year back. So fine is this exhibit that the directors are no longer able to limit the dividend paid upon the ordinary shares to 10 per cent. They pay that amount, but add a bonus of a 1s. per share or 5 per cent., tax free, like the dividend, making the total distribution 15 per cent. for the past year. Even so £150,000 is again put aside, but only £100,000 of it to the ordinary reserve, the other £50,000 being placed to an accident and fire insurance fund, forming the beginning doubtless of a new accumulation. With the £100,000 now added, the reserve will amount to £1,000,000, and there is still £186,555 left to be carried forward, or £19,442 more than was brought in. It is said to be our habit to grumble, and we still could wish for a fuller balance-sheet, but it is explicit enough so far as it goes, and continues to maintain a position of impregnable strength. Freehold and leasehold property, buildings, machinery, rolling stock, and plant continue at £2,821,200, no additions or improvements being added to capital account. The stock of finished and unfinished goods is £710,319 as at £544,596, sundry debtors, after due allowance for bad and doubtful debts, are £99,590 more at £509,815, but the current debts owed by the company are at £309,305, £203,213 less than this. Investments have risen by £143,038 to £2,131,615. Cash and bills at bankers and in hand are £10,582 down, but still at the comfortable figure of £210,673. No change whatever has taken place in the capital account, and the total of the balance-sheet is £6,217,803. Of its kind this must be one of the finest businesses in the world, and we trust it will long continue to be so.

American Business Notes.

Again the New York Banks showed an improvement in their position for the past week, but it is unfortunately of little avail in present circumstances, indeed, it implies growing weakness in one direction, since currency, both metallic and paper, was absorbed in the circulation, the specie average having taken £472,000 and the greenbacks on hand £94,000, and since that return appeared gold has again begun to leave for Europe. On Monday it was reported at first that £200,000 was going, and in actual fact £220,000 has gone, but it was sent in three parcels, and the incident by itself would be of trivial importance but for the tension of finance markets. As a symptom, therefore, it should warn all credit widders that New York seems to be approaching another period of difficulty in the supply of credit. The utmost effort is being made to relieve the threatened tension by discounting bills on this side and arrangements are said to have been made in virtue of which large amounts of American paper are being taken up by German financiers. They also, however, will soon reach their limit, because the German market is in quite as tickle a position as that of New York, and our own market is more and more determined to have as little of this finance paper to carry as possible. New York is thus likely to be thrown back on its own resources, and although bankers' loans were reduced there in the past week by £2,800,000 on the average through the contraction in prices and the reduction of credits, the market was not thereby relieved, rather was the reduction an indication of the strain being put upon it, and thanks to this decline in loans and to the absorption of currency in the active circulation, deposits fell off by £3,480,000, a very serious reduction in the resources of the banks, the time of year considered.

It requires no small courage at the present time to stand up for the Standard Oil Company of New Jersey, the champion monster of American corporate finance. This courage, however, is exhibited by the New York *Commercial Chronicle* in a remarkable article published by it upon the judgment of Mr. Landis, who inflicted upon the company a fine of $29,240,000, or about £6,000,000. His deliverance has been appealed against, and a writ of error granted, so it by no means follows that the judgment will be ultimately enforced. This is not the question raised by the *Chronicle*; it boldly attacks the ground upon which judgment was given, and a careful perusal of the article obliges us to admit that its objections are well founded. However notorious it may be that the Standard Oil Company has built up its monopoly by methods of business the most nefarious, in which rebates against its rivals

played a principal part, it does not seem to be established that in the case brought before Judge Landis the law was violated, that rebating existed. Briefly, the judge contended that the 6 cent rate charged on the oil shipped by the Indiana subsidiary of the Standard Oil Company was illegal because the proper authorised rate was 18 cents, or, in the case of shipments to St. Louis, 19½ cents. Had that been really the fact there would have been no answer at all to the case submitted to the Court in Chicago, but apparently the 6 cents rate was really in force, was therefore not a secret or preferential rate in the sense alleged if at all. It had been in existence for many years, and was available over two other roads besides the Chicago and Alton—viz., the Chicago and Eastern Illinois and the Chicago, Burlington and Quincy. It was placed in the lists of the companies as a car or truck rate, and unless the Government or the State authorities are able to prove that rivals of the Standard Oil Company were charged higher rates for car loads than it had to pay, the case as adjudged upon would seem to fall to the ground. Are there any rivals, however, to whose books a reference can be made? President Moffett, of the Standard Oil Company of Indiana, has issued a statement which does not throw any light upon this question, but he seems to establish beyond controversy that the 18 cents class rate was never applied, and never intended to apply, to oil; that the 6 cents rate has been in force between Chicago and East St. Louis *viâ* the Alton Railway for over 14 years; that it was as open public rate known to everyone concerned in the shipment of oil and in all railroad circles. Should this be the case, and the article before us appears to demonstrate that it is so, the whole of the pleadings on which Judge Landis's judgment was based must fall to the ground and the monopoly of the Standard Oil Company will have to be attacked upon other contentions or facts if its maleficent sway on the railroads is to be demolished. Perhaps it does not pay 6 cents and gets a rebate thereon?

Some interesting figures relating to the profits of this Standard Oil Corporation have been published by the United States Commissioner of Corporations, Mr. Herbert Knox Smith. Among other things, he gives a table illustrative of the approximate earnings of the New Jersey, or controlling company over a series of years. This exhibit is not complete, because the company does not let the public into its secrets, but the amount distributed in dividends can be calculated, and is available as well as the prices, and from the table Mr. Smith has drawn up we learn that the dividends rose from 5¼ per cent. in 1882, first to 6 per cent., then to 10½ and 10 per cent., and so gradually upward until for the two years 1905 and 1906 the dividends were 40 per cent. per annum. A dividend of 40 per cent. involved the distribution of nearly £8,000,000 per annum to the shareholders, and in 1900 and 1901 the dividends were 48 per cent. each year, falling in 1902 to 45 per cent., in 1903 to 44 per cent., and in 1904 to 36 per cent. But in the last two years the surplus remaining after the dividends were paid was estimated at about £7,700,000 for 1903, and £5,220,000 for 1904. Throughout the whole of this period the company got monopoly prices for its products, the margin per gallon being sometimes as high as 6.29 cents, and never lower than 4 cents since 1894 until 1905, when it fell to 3.90 cents per gallon. In order to maintain this margin, the surplus products of the company have been exported and sold upon foreign markets at prices often much below those charged to the domestic consumer. What the surplus or margin may have been for the past year Mr. Smith's figures do not reveal, but it would seem a fair inference that the competition abroad has been so costly during the last few years as to somewhat impinge upon the free revenue obtained by fining the home consumer. Between 1900 and 1906, inclusive, the company has distributed about £60,000,000 in dividends.

No less than nine ports in the United States at which Custom Houses are maintained, yielded last year not one dollar of revenue to the Washington Treasury. This is one of the results of Protection, and means that exports are blocked at these ports almost as effectively as imports. An obstructive policy of this kind may be good for New York, and two or three other northern ports, towards which the traffic of the interior is forced to converge, but it is stifling for the remainder of the Republic.

The figures have been made public of the New York Central Company's earnings for the first half of the current year, and they are the reverse of comforting. Gross receipts have gone up by rather more than 9 per cent., or $4,052,000, but expenses rose by $6,625,000, or upwards of 20 per cent. The nett revenue for the half-year accordingly dropped back $2,573,000 behind the figures for the first half of 1906, reached, that is to say, $9,530,000 compared with $12,103,000. The company got a rather larger income from the subsidiaries, in which it is so deeply interested, but, notwithstanding the higher dividend it received on its Lake Shore and Michigan Central stock, it was $2,412,000 short of the amount required to earn the 3 per cent. paid on its common stock for the half-year, and all the while the fixed charges not only of the New York Central, but of its dependencies like the Lake Shore, Michigan Central, and others, go up. The Lake Shore saved a little in working expenses last half-year, a gain of $982,000 gross being accompanied by a decrease of $98,000 in working expenses, but it had an additional $777,000 to pay away in fixed charges and taxes for the half-year, so that it did little more than earn the 6 per cent. paid on its stock. It cost the Michigan Central $998,000 more in expenses to earn the $1,215,000 additional gross revenue, and of the C.C.C. and South Louis Company's gross increase of $1,077,000, $867,000 was swept away in additional working costs. It therefore failed to earn its 2 per cent. dividend on the common shares for the six months by no less than $650,000. That is to say, only about $291,000 was earned for the common stock, whereas $941,000 was required to pay the dividend. This story is precisely the same as that of the Pennsylvania system dealt with last week.

In a suggestive letter from its Washington correspondent the *Financial Times* gives some particulars of the great capital expenditure recently lavished or now projected on railways in the Southern States. Apparently Atlanta, Georgia, is to be raised to the position of a great railroad centre, whence lines will radiate in all directions, and on the extension of existing lines, as well as the building of new roads over £4,000,000 is being sunk. The Louisville Company has recently built a direct road from Cincinnati to Atlanta, making another line to the West and North-West. It has cost the company £800,000 to construct the eighty miles of road necessary, together with its lines inside the city and the stations. Then the Southern Railway has spent nearly £600,000 on improvements, including a doubling of the line for eighteen miles to connect Atlanta with the main line, this road involving the construction of the largest bridge in the south at a cost of £200,000. The company is also going to spend another £200,000 to enlarge its freight yards in the suburbs of Atlanta, and still another £200,000 in building warehouses, including an office ten storeys high. Then the Atlanta, Birmingham, and Atlantic Railroad Company is busy building a line which will give this part of Georgia a seaport on the Atlantic coast at Brunswick. Ultimately when completed this will mean an additional 300 miles of line, and the total outlay on the work is put at £400,000. It is said that the harbour of Brunswick is one of the largest and deepest on the coast, and already of importance as a cotton shipping port. And this does not exhaust the story of railroad expansion in that part of the Union. Much of the money, too, appears to have been found in the South, and in time it is possible enough that these railroad extensions may not only have important economic, but also political consequences. What if the South should

say to the North, "Your tariff must be knocked down"?

Crop reports and harvest estimates are this year of rather unusual importance in the United States. The latest estimate of the Agricultural Department with reference to the maize crop is cheerful. It is said to have improved during the month of July, and to be now, at 82.8 of a standard crop, almost up to the ten-year average of 83.2. As there is a larger acreage planted, viz., 98,099,000 against 96,738,000 acres last year, a crop exceeding in bulk the aggregate for 1906 is now looked for. It is otherwise with wheat, and the harvest of winter wheat now in progress has induced the department to estimate the total crop of this cereal at 409,500,000 bushels, against 492,888,000 bushels reaped last year and 428,462,834 bushels harvested in 1905. Throughout most of the winter wheat-growing States the yield per acre is decidedly lower than it was a year ago, not one single State of them all yielding as much as 20 bushels to the acre. In Kansas the yield is estimated at 11.3 bushels against 15.3. In Nebraska 19 bushels against 23.2, in Ohio 16.3 bushels against 20.4, in California 15 bushels against 17.1, and in Illinois 18 bushels against 19.5. Michigan and Pennsylvania alone show better returns in the estimates than those of a year back, but in neither instance is a 20 bushel yield counted on. Spring wheat deteriorated considerably during the month of July, and the average is expected to be only 79.4 against 86.9 at the same date last year. The condition of oats has also declined during the month, and a yield of 75.6 only is looked for compared with an average of 84.9 for the past ten years.

Passing Events.

Affairs are looking anything but comfortable Morocco way, and we cannot but be sorry that the French Government should have become involved in what promises to be a vexatious and prolonged struggle. Reinforcements have had to be sent to Casa Blanca, and at present the prospect is that a long drawn out and harassing campaign against the Moors is about to be undertaken. The French Republic cannot afford a costly and profitless war of this or any description, and the sooner it patches up the quarrel and withdraws the better will it be for the Budget and for the French people. As usual, too, the ally who went hand-in-hand with France in the first steps taken is now backing out, just as France backed out of the Egyptian enterprise undertaken by England five and twenty years ago. Spain is not going to become involved in a struggle with the Moors that may end in the occupation of a large part of their territory, in garrisons and punitive expeditions without number, in complications with other Powers perhaps, for the Minister in charge at Madrid has announced that no reinforcements are being sent to Morocco, and that the Spanish officer in command at Casa Blanca has been forbidden to engage in operations outside the town. The troops are there for garrison purposes alone in order to protect the European inhabitants and their property. France should take the hint, and limit the ambitions of her fighting men likewise.

Mr. Horatio Bottomley has condescended to amend the new company law, and his suggestion has been graciously accepted by the President of the Board of Trade. This information ought to revive the hopes of those who, like Mr. Alfred Mosely, have been complaining that the Bill was not perfect and labouring to have it better coopered up. And what did Mr. Bottomley, the man of wide experience in limited liability, suggest? He suggested that "if any person or persons trade or carry on business under any name or title of which 'limited' is the last word, such person or persons shall, unless duly incorporated with limited liability, be liable to a penalty not exceeding £5 for every day upon which such name or title has been used." What does an amendment of this kind, which as we have said Mr. Lloyd George accepted as "a very desirable improvement on the present system," mean? We fear it means nothing at all unless automatic machinery be also supplied for the enforcement of the penalty. There are plenty of penalties in our company laws already, one in particular designed to oblige the officials of joint-stock companies to file their share lists and accounts with the Registrar of Joint-Stock Companies at Somerset House. They mostly do, but should they fail in this respect to obey the law and incur the penalties they are safe enough, because it is not the business of the Board of Trade or the Public Prosecutor or anybody in particular to set the law in motion. The common informer is needed for this purpose, and that class of person is not numerous in society at the present time. We are sorry, therefore, to dash the hopes of Mr. Mosely and his friends; but the expert and experienced Mr. Horatio Bottomley has not yet succeeded in making our company law perfect.

"If our National Debt of 775 millions could only be purchased by the Chancellor of the Exchequer at the present low market price of £81 10s. for £100 stock, and reconverted from a 2½ per cent. stock to new 3 per cent. Consols, under perhaps a title inviting renewed confidence, although the annual interest to be paid by the State would remain the same, our National Debt would, by a stroke of the pen, as it were, at once be reduced by some 130 millions, or to under 650 millions (approaching the figures at which it stood before the South African War), and some at least of the popularity and glamour of 'the sweet simplicity of the Three per Cents.' might thereby be restored." Thus wrote Lord Blyth a week ago at the close of his interesting letter dealing with "the declining popularity of Consols." It would indeed be a "sweet simplicity" this mode of dealing with the National Debt, and a first-rate encouragement to improvidence. Debt reduction by depreciation of credit, if practicable, should, going together, enable all nations who prosper and build up empires by borrowing to go ahead with a light heart. They would have but to reconvert on a depreciated basis each time their extravagance brings the prices of their securities low enough to render the operation profitable and *voilà* the recent borrowings are wiped out. A more honest way would be to turn our entire debt into a terminable annuity without Government responsibility for the reinvestment of the capital.

Will some enterprising M.P. not yet too limp from long service in the vitiated atmosphere of the House of Commons be kind enough to muster energy sufficient to put a question to the Government about the harbour works at Dover. The taxpayers whose money—or credit—has been flung away in millions on that great enterprise, would like to be reassured, to learn definitely whether or not the money spent is to be written off as dead loss. Is it not the case that work upon the dykes, moles, or breakwater has been stopped for months?

Some quite interesting observations were made by Lord Stalbridge at the half-yearly meeting of the London and North-Western Railway Company last week. It was a legitimate boast he made about the relations between the company and its staff—a boast feudal in its spirit, perhaps, but yet indicative of a friendliness not usual in the modern relations between employers and employed. The company, he said, has "many cases in which the same family took service with them from generation to generation." That is perfectly true, and still it may not be wisdom to refuse a hearing to chosen representatives of large numbers of workmen, for an attitude like that is usually interpreted invidiously. "The board knows it is in the wrong," the men say, "therefore it can't face our delegates."

His lordship was still more cheerful on the subject of the depreciation in the prices of railway stock, his own company's among others, but his attitude is not particularly reassuring. What stock-holders want information upon is not the percentages of decline which they already understand only too fully, but the causes underlying the flabbiness of the whole railway market, and how far the slip-slop disbursements of capital, still apparently proceeding more or less loosely, will have the effect of preventing a recovery when the general influences now operating to cause universal depression have been eliminated. Lord Stalbridge cannot be said

to show a trace of a suspicion that any danger of this kind exists, and the way he talked about "hopes of an improvement" is far from helpful to the proprietors. They are all heartily tired of the serenity of railway chairmen, and would like to see some of them doing something to make their words good.

Mr. Andrew Macdonald, of Glasgow, is pushing on with his Scottish Railways Shareholders' Association, and we wish him every success. If he does manage to inspire the great body of railway proprietors with something like an intelligent interest in the business they own he will have done a deed that should make his name memorable. So far as our experience goes we should say that the proportion of such people who really take the trouble to understand railway accounts, or who have mastered the usages governing railway policy would be extravagantly estimated at one in ten thousand. Perhaps the "empty belly" stimulus may awaken their interest and stir their intelligence. We shall wait and see—wait in curiosity and scepticism. If shareholders had throughout our railway history looked after their property they probably would not to-day have to complain of decreasing profits side by side with expanding business. But what they all cared for and clamoured for was larger dividends and frequent refreshers in the form of market premiums to be netted on new issues of stock.

Platonic peace seems to have been advocated by our representatives at the Hague Conference, and we are disposed to agree with Mr. J. F. Green, the Secretary to the International Arbitration and Peace Association, that what took place at the meeting where Sir Edward Fry held forth on the blessings of limitation of armaments is only of academic value. The delegates, he said, had not really discussed the question of armaments, but merely expressed the opinion that it is worth study. That is also true, and they never will study the question of armaments until they are compelled to do so either by impending or actual bankruptcy. We do not believe in disarmament as a policy to be deliberately adopted by modern nations cursed with empires. Parodying Hans Breitmann, with them all it is "Gling, glang, gloria, We spend until we boost."

So after all De Beers is to be taxed, at least the De Beers Ministry in Cape Colony through the mouth of its Treasurer told the House of Assembly that it was now proposed to place a profit tax of 10 per cent. on diamond and copper mining companies earning over £50,000 per annum. There are not many of these companies in Cape Colony, but De Beers at least is safe to have this tax to pay, and it will presumably mean about £250,000 to the revenue of the State—a sum most helpful to it in present circumstances. On the other hand, the tax of 1s. 9d. in the £ on incomes of corporations or individuals exceeding £100,000 is to be abandoned, and as that would not come to 5 per cent. upon the revenue of the De Beers Company, allowing for the 7½ per cent. it will presumably still have to pay, it will be a considerable loser by the substitution. But it can afford the extra impost. The general profit tax of 8¾ per cent. is, however, also to be given up, but the tax of 1s. 3d. in the £ on incomes of from £10,000 to £20,000 and of 1s. 6d. on incomes above £20,000 will be retained, and presumably De Beers will have to pay that 1s. 6d. as well as the 10 per cent. So that powerful corporation will at last begin to contribute something to the good of the community where its mines are situated, provided, that is, the new tax becomes law.

Is it true that the De Beers Company is going to absorb the Premier Diamond Company of the Transvaal? It has been a kind of deadlock between the two, the De Beers Diamond Buying Syndicate or the Diamond Buying Syndicate which stands behind De Beers having closed the market against the Premier Company when it tried to sell its diamonds. There is but one wholesale buyer of diamonds in the world, and that buyer is the De Beers Syndicate. However free to mine the Premier Company might be, it has been unable to sell, thanks to this monopoly, or able to sell only on unfavourable terms. So negotiations have been going on between the rivals, and we have heard that they are, if not already agreed, on the point of agreeing, and the fact that General Botha has decided to hand over the Cullinan diamond to King Edward would seem to indicate that a transaction of this nature is about to be completed. That diamond has proved to be perfectly unsaleable, and nobody is ever likely to buy it at anything approaching the price asked. It is therefore at once a graceful and an expedient move to present this diamond to the King as some acknowledgment of his undoubted earnestness and assiduity in promoting peace and goodwill between Dutch and British, between all parts of this heterogeneous empire of ours. The gift will really cost the Transvaal very little, too, because three-fifths of the value of the diamond, whatever it be, is already the Transvaal Government's own property. All the more amazing is it to find the reactionary party which calls itself "progressive," the mine boss party, grumbling and fulminating against the gift. A suggestive light is thus thrown upon the character of their "Imperial" patriotism, and, as Mr. Winston Churchill drily observed, the pity and sympathy they now express so profusely for the suffering poor who have to pay taxes, who must pay for the jewel, never crossed their minds when they were conditionally underwriting that £30,000,000 loan which they coolly proposed the Transvaal should take upon its back as part payment to us of the cost of the war. Then they thought of the commission to be earned.

It would be unkind, however, to rub in this sort of criticism too hard or to be severely denunciatory of the Opposition at home and its language with regard to the £5,000,000 Transvaal loan. We must never forget that our Opposition speaks in great measure for classes of society who have been more or less bereft of their all, at any rate of all their available money, by their dealings in the Kaffir market. These distressed classes have allowed themselves to be played with, to have their pockets emptied, and to be deluded at every turn by the masters of that market. Hence their clinging to the Chinese labour as the one hope of a boom left for them. They were told that without Chinese labour dividends would disappear, the mines prove unworkable at a profit and so on. The whole yarn has proved as false as the tales in the "Arabian Nights"; but it laid hold of the minds of those unhappy people amid whom Mr. Lyttelton, Mr. Bonar Law and other Opposition orators move, and therefore they have become as rabid as the most zealous supporter of the evicted tenants of an Irish estate. Nothing the Government can do is good or praiseworthy. As long as they are gratified by their speaking there is no need to emphasise the painful analogies of past history. The Kaffir circus slides into the abyss just the same.

The amended estimates of the wheat crop in Western Australia for the season ended February 28 last show that although some progress is being made in the cultivation of wheat, the colony has a very long way to go before it can take an important place amongst producers. During the year 1906-7 250,283 acres were planted, from which a crop of 2,758,567 bushels, or 11 bushels per acre, was reaped, compared with 195,071 acres and 2,308,305 bushels, or 11.8 bushels per acre, in the previous year. Of this quantity it is estimated that 2,093,500 bushels will be required for home consumption and another 500,000 bushels for seed during the current year, but investigations showed that on January 1 there were stores of wheat and flour amounting to 706,851 bushels, leaving 871,918 bushels available for export.

Whisky did better for its holders—we hope also for its swallowers—last year than in 1905, but the stock held, principally by the Scotch banks, is still the magnificent one of 161,648,409 gallons. This is 1,871,548 gallons less than the stock at March 31, 1906, although the consumption would appear to have been but about 24,358 gallons larger. Of the formidable stock carried, 118,977,707 gallons are in Scot-

land, 31,773,593 gallons in Ireland, and only 10,897,109 gallons in England, but then England has only 8 distilleries, compared with 150 in Scotland and 28 in Ireland. The Scotch "stills" have fitfully slipped back from a maximum of 161 in 1899, and the highest Irish number within the past eleven years was 30, while the highest English was 11. It remains the fact that Scotch whisky is mainly made in Scotland, but allowed, like the people, to "gang sooth." The remaining Scotch, for all that, are reputed famous drunkards, and last fiscal year appear to have consumed about 6,852,000 gallons of their raw spirits, as compared with a thirst requiring only 3,633,000 gallons in Ireland. These figures are much below the exalted total of the "Mafficking" year, and England makes the worst show of all, drinking last year only 22,020,732 gallons, compared with 25,623,177 gallons in 1899-1900. We speak, of course, from the point of view of the arch tax-gatherer.

Are not the financial critics too severe upon the worthy gentlemen who have once more played funeral furnishers to the Klerksdorp Gold Mines, Limited? They should consider what the true use of the company has been, and avoid hard words. "Klerksdorps" have been in existence as a "mine" for promoters, boards, staffs, &c., during a term of years extending now to nearly two cats' lives, and its shareholders have been most dutiful all that time in providing dividends and salaries to its directors and officials. Each time the funds showed signs of becoming exhausted reconstruction replenished the purse. For six times or thereby this replenishing process has been successfully carried through, the contributing shareholders, as it were, valiantly paying dividends to the directors, &c., &c. Now once more their generosity demands recognition at the hands of the recipients of their bounty. "We feel for you with our emptying pockets," quoth the board, and "therefore we have found, or founded, a new company to buy you up. Pay 6d. per share for the privilege of making the exchange into this new company, and we shall again be as happy as an Abe Bailey unloading while the money lasts." And the shareholders have done as they were told, fulfilling thus the function for which they were created. Well, if they like to do that, what business is it of yours, carping critic? "It is a world upside down." Quite so, but you need not enter it to spoil sport. Properly managed, the art of reconstructing beats ordinary gold mining all to shucks.

The Rand Water Board's balance-sheet does not call for much notice at our hands. It rather overpowers the student by the magnitude of the figures representing the property in its possession, and as this property depends for its value upon the continuance of prosperity at the mines, one would like to see full provision made for the extinction of the debt. Rand Water Board 4 per cent. inscribed stock outstanding amounts to £3,400,000, and constitutes practically the only debt of the undertaking. It is redeemable on March 31, 1935, and so far £171,225 of a redemption fund has been accumulated. Is this enough? Another question. What provision is being made for the depreciation upon the temporary investments held by the board? These are taken into the balance-sheet at £545,059, and their market value, on March 30 last, ex dividend, was £524,215, so that the depreciation was nearly £21,000. There is no danger of a grave kind in that fact, but it may offer a good excuse for accumulations at an accelerated pace.

The *Finance Chronicle* issued last week a summary of the fire insurance business for 1906-7, and its table is well worth filing. It deals with the figures of 55 British fire offices, including a number of non-tariff offices, as many of them as publish accounts. We dealt some time ago with the San Francisco fire losses, and there is an interesting point raised by a German correspondent of the *Chronicle* with regard to that matter. This gentleman writes to say that the £10,000,000 odd loss shown by the English companies does not represent the entire amount taken from them by that disaster. A further £2,000,000 ought to be added, he contends, bringing the entire loss up to £12,000,000. This seems to be a matter of account, so far as we can judge from the terms of the letter, because the writer says more than £2,000,000 of the total loss has been borne by "the treaty reassurers" of the English companies. Did these other companies, then, find the £2,000,000, or any portion of it? If they did, the statements published by the British companies may be perfectly accurate so far as their own losses go. We have no doubt they are accurate.

It is pleasant to see that whatever the amount lost may have been, British fire insurance offices still have large reserves. The tariff offices show a surplus of £10,770,244 over and above the standard of safe reserve, being 50 per cent. of the year's premiums, said standard being £11,702,192 over and above the fire total. The addition of the non-tariff offices does not make much difference, for although there are a dozen of them, the total surplus of the entire 55 offices is only £17,193,783, in addition to the standard reserve of £11,910,397. Of the strength of the tariff offices, however, there can be no doubt, although a few of them show distressing temporary diminutions in their surpluses. But great companies like the Alliance, the Commercial Union, the Royal, the Northern, the Liverpool and London and Globe, the Sun, and smaller ones like the Guardian, the London and Lancashire, and the Norwich Union, all exhibit comfortable nest-eggs over and above the ordinary reserves and everything else.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

W. G.—(1) We are doubtful about this company's future, and think you should wait a little before buying. (2) Rather a speculative holding. The increase in traffics is not large so far, and as fixed charges have been increased we do not as yet see much scope for the improvement in dividend and price you anticipate. (3) So far as we know, no fresh arrangement has yet been made, and the debentures still seem rather unpromising as a lock-up. (4) Prospects are rather clouded. We cannot, of course, say what is likely to happen during the next few years, but at present the price looks like going down rather than up. The balance to your credit on deposit is as you state.

J. S. H.—On the whole Nos. 1, 2, and 6 seem the most suitable.

Virginia.—As the concern is a struggling one, working under entirely new conditions, the bonds can only be regarded as a none too promising speculation.

S. T.—(1) Yes. They may be worth buying presently, but we hardly think the time has come yet. (2) These ought to be good enough as an investment.

W. A. P.—The stock hardly comes under our definition, and although it may rise by-and-bye, the price just now is more likely to go down than up.

E. H.—(1) You have bought on the whole well, all things considered, and should keep. The bond is good. (2) This also is a good bond, quite safe, and bound to recover some day. Don't sell now.

S. A. G.—Not yet. Price may go very much lower.

H. H.—We see no particular objection to the proposed substitution, and the shares look cheaper. You lose, however, on the dividend meantime.

S. H. M. J.—(1) Tolerably so, good second rank. (2) Yes, we regret to say, for a turn in the tide appears to be coming, and the company is not strong. (3) No, not just now; we hear excellent reports about the business. (4) There is no particular urgency to sell these either, although no recovery is to be looked for just now.

White.—(1) Why should you buy more now? There is no immediate prospect of an improvement. (2) Keep these for the present nevertheless, for this is not the time to sell. (3) Antofagasta (Chili) and Bolivia Five per Cent. Debenture stock. (4) Equally good, we should say, but better not buy more now.

J. S.—Both stocks are excellent, but it is a poor policy to buy on borrowed money at a time like the present. We cannot hold out the hope either that prices will not fall further, but if you can stick to the stocks and gradually pay up your shares do so, as they will advance again some day.

The Agent-General for Victoria, Australia (the Hon. J. W. Taverner), has received a cablegram from his Government advising him that the gold yield of the State for the last seven months was 417,141 ozs., of the value of £1,668,564.

The Investors' Review.

The Week's Money Market.

BANK RATE 4½ PER CENT. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

By its action throughout the early part of the week our discount market seemed determined to force the Bank of England rate up to 5 per cent. At the end of last week it was still possible to place choice three months' remitted bills at ⅛ or so over 4½ per cent., but the market soon abandoned that, and most days this week has quoted ¼ to ⅜ per cent. more than Bank rate for such paper. Even 60-day bills rose to 4¾ per cent. in the beginning of the week, and the full three months' rate hovered between 4¾ and 4⅞ per cent., with a tendency to settle on the higher quotation. This had the effect of driving holders of bills direct to the Bank, and it worked so freely both for its own customers and for the market that its other securities show an increase of £3,640,000 on the week, all of which has gone on to the other deposits, these being £3,754,000 up. The market has, therefore, had plenty of short money, although by no means anything like an excessive supply, and seven-day loans have accordingly been obtainable at 3 per cent. all week, while call money has most days been procurable at from 2½ to 3 per cent. The India Council has only been getting 3¼ per cent. for month-to-month money, or just what the outside market is getting on money lent for more than a week.

We should not have been surprised if the tactics of the discount market had driven the Bank up, but at the same time welcome the decision of the directors to remain for at least another week at 4½ per cent. No harm should come of this inertia, and the interval until next Thursday may enable dealers in credit to estimate the outlook with more calmness than they have sometimes this week exhibited. The discount market, indeed, has acted at times as if it expected a panic somewhere, and by refusing to work has done not a little to spread uneasiness, not only throughout the City, but over all great money markets. It was natural for every credit user to infer that if the London market was resolutely closed to remitted paper in the manner described, credit houses there must know something that the rest of the world was ignorant of, something sinister, calculated to upset all markets. If the Bank had gone up this week this impression would have been deepened, and events might have been hurried to a crisis both in Berlin and New York.

Mention of these places recalls at once the cause of the tremors among our bill brokers. It is not trouble at home they are afraid of, but trouble abroad. They believe that if we can keep the gold coming in from the mines, or most of it, we shall be all right here, in spite of the probability of a formidable demand for the metal on Egyptian account. They also think that commercially and financially the position of the London market is, on the whole, healthy, and if they had not been compelled to examine the condition of other markets they would have been quite ready to take most of the bills they have sent to the Bank by their partial strike.

One prominent cause impelling our dealers in credit to quote excessive rates of discount so as to deflect the business on to the Bank is dread of American finance paper. They cannot forget what occurred last autumn and winter when the unusual amounts of such paper placed upon the London market brought us a 6 per cent. rate which endured much too long to be convenient. And they do not want that experience to be repeated, knowing well the danger it would bring. Hence American accommodation bills are not finding lodgment here to anything like the amounts readily enough discounted last autumn. They are going to the Continent, it is said, to Germany principally, or they are not finding buyers anywhere in Europe.

But Germany is in no condition to absorb the masses of paper Wall Street bankers require to be turned into cash in order that they may at one and the same time sustain their own market stock gambles and finance the harvest. German banks, on the contrary, are exhibiting signs of distress in ways suggestive of hidden trouble, and our market is still quite as apprehensive of disagreeable surprises amongst them as of an excess of American "kites." A curious indication of the strain endured has been given in a direction where the German banks seemed likely to have established for themselves an impregnable position. Most people are probably unaware of the diligence, we might even say the unscrupulousness, with which the London agencies of these banks have worked to capture the business of our old accepting houses. They often did the business for nothing in order to draw it away from its old channels, and have been remarkably successful in ousting many London houses from the exchange market. But the customers of these houses are now coming back to them, and paper is reaching them again which they have not seen for years. Why is this? There seems to be but one explanation; the German banks are so tied up by their industrial speculations, by their commitments with public loans, domestic and foreign, that have not floated, as to be unable to finance this merchant banking business as they have been wont to do. To our own discount market this fact is most significant, and

because of such influences it is just as little disposed now as it was in the beginning of the week to work freely. It still quotes the three months' bank bill rate to its general customers at 4⅞-¾ per cent., and will not take a six months' bank bill of the class at less than 5¼ per cent.

Some weakness of resolution, perhaps, if not in rates, was noticeable to-day, in spite of the fact that the Bank has thrown bills falling due beyond next month back upon the outside market. It took this step yesterday, at the same time that the decision was come to not to raise its minimum rate. For its own customers it, of course, still discounts usances up to three months, but the market can only take its short bills to the Bank to be discounted at 4½ per cent. Business there has accordingly fallen off much both yesterday and to-day, but in the open market a keen competition is felt for October bills and for shorter-dated paper, so keen as to make rates paid on such often a matter of negotiation. The full three months' rate has also weakened a little since yesterday, although no house quotes less than 4 11/16 per cent., and even that is a decidedly rare rate.

The feeling, however, is unquestionably better, although there will be no real slackening of the tension so far as we can see until either the atmosphere of foreign markets is cleared of storms, or until the Bank of England has accumulated another £5,000,000 or £6,000,000 of gold. It is not at present getting on very well in this task. In its week ended on Wednesday afternoon the nett imports of the metal amounted to only £225,000, but the reserve improved by £1,057,000, because £757,000 in coin and £75,000 in notes came back from the active circulation. Not very much more, however, can be expected to return from the circulation, and unless the Bank is able to buy the gold coming from the mines it will be in no position to meet comfortably either the Egyptian or any other heavy demand for the metal arising later in the year. So far its 4½ per cent. rate has done good in that it lifted foreign exchanges above the point that would have permitted either France, Germany, or Holland to take away gold from it. Competition even in the open market has been warded off for the time being by the 4½ per cent. rate, or perhaps we should rather say by the apprehension that a 5 per cent. rate was imminent, for since the decision was announced that no such rate was to be established this week, Continental exchanges have slipped back. New York, furthermore, is sending small parcels of gold to the Continent; some of it may, indeed, come here, if we care to commandeer it, and there is to all appearance little danger of trouble from that quarter this autumn. For all that, the Bank is in no position yet to sustain a large foreign demand from Egypt or South America, and naturally rates of discount must keep firm, and tend upwards, no matter how cheap short loans may be. They are cheap now merely through fear of dear money in October or sooner, and through the liberality with which the Bank has supplied the market with credit by discounting its bills.

The French cheque receded to-day to 25.18, but this does not indicate any disposition on the part of French banks to compete for the supply of gold available in our open market on Monday. There will be about £800,000 of it, and no competition is at present looked for if the price be maintained. A little business in the metal was done to-day at 77s. 9⅞d. per oz., and it would be a pity to let it fall below that lest a competitor might spring up from somewhere. If the Bank gets all the gold the fact will sensibly add to the comfort of the market.

Calls due next week do not amount to much more than £900,000, of which about £535,000 is payable on Tuesday, viz., £400,000 on East Indian Railway 3½ per cent. debenture stock, and £134,500 upon Bristol Corporation 3½ per cent. stock. The only other largish call falls due next Friday, and amounts to £208,000 then payable on United Railways of the Havana new debenture stock. To-morrow nearly £2,000,000 will be distributed in dividends by the Midland Railway, but the collection of this credit has not been felt by the market, perhaps because it has not been called in by the company's bankers. They "run it on short loans" against the return of the dividend warrants, and as all railway dividends are not paid on the same day they can generally afford to do this, trusting to money coming in from various quarters as it is wanted.

Silver.

Selling on Chinese account was resumed this week, and although the Indian bazaars showed a disposition to buy, the demand from that quarter was not sufficient to absorb the almost daily offerings from the Far East. At the same time, according to Messrs. Samuel Montagu and Co.'s report, the Indian Government is believed to have purchased between 3½ and 4 millions sterling of the metal since the beginning of the financial year, and now holds enough for its present needs. No help, therefore, can be expected from it, and in the absence of any other inquiry quotations fell steadily by ⅛d. per oz. each day until the 20th, when the decline reached ¼d. A recovery of ⅛d. took place the following day, but on the 22nd the downward movement was resumed, and closing prices showed a loss of 1/16d. on the week at 31⅛d. per oz. for cash and 31¼d. per oz. for future delivery. Applications for the Rs. 30,00,000 of Council drafts on India offered this week were again moderate at Rs. 1,64,32,000. The whole amount was asked for in bills, tenders for which at 1s. 4d. per rupee received 17 per cent. Next Wednesday another Rs. 30,00,000 will be offered.

The Stock Markets.

A better feeling came over our Stock markets on Thursday when it was made known that the Bank of England had abstained from raising its rate. Earlier in the week, however, the liquidation was persistent in nearly all parts of the market, and bears often assisted in depressing prices by selling for the fall. Liquidation came from Germany and, in the Kaffir market at any rate, from France, much more than from home sources. At the same time some of the wreckage at the last Stock Exchange settlement was getting distributed, and firms who found themselves overburdened with their share have been reducing their liabilities wherever possible. One large firm is said to have quietly withdrawn from business altogether, and amongst leading houses of the market there are many no longer able to continue their establishments on the old scale. Changes of this description are painful and a source of regret, of hardship also, but at the same time wholesome, and from the way our markets rallied when the fear of a higher Bank rate was removed, it seems reasonable to assume that their general position is not unsound. Consols, for instance, have been one of the most stable stocks of all this week, and other classes of Home securities have now and then betrayed a welcome tendency to advance.

Like the Money market, however, our Stock Exchange continues to be haunted by the fear of what may happen abroad, by the dread of excessive demands for gold that may deplete the Bank's small stock and bring upon us higher rates of interest than many of the already exhausted credit users could stand. Above all, accounts from Germany are unpleasantly suggestive of a deadlock in credit there, and the position of the Paris market is really not much more satisfactory, as is proved by the rapidity with which operators there seize at every chance to unload on London. Utter disgust with the Kaffir Circus would seem to have taken hold of the minds of French operators, and they just shovel out the shares.

And there remains always the Yankee market, where the losses already realised are stupendous, and whose outlook is clouded by the expected short harvest and the pressing necessities of the great corporations for money. In short, nothing has really been altered for the better on any market this week, and we can only regard the present pause and rally as a welcome interlude, a time to take breath and look round. The longer it lasts the better pleased we shall be, but we are not yet out of our troubles, and postponement of insolvencies unfortunately rarely implies recovery of strength. If, therefore, you have speculative stocks, the holding of which worries you, good reader, either sell them out entirely or reduce your commitments in them on every recovery. This may be a time to buy prudently in tried securities, but it is not a time to carry stocks on borrowed money, for that is going to be dearer, whatever happens.

Consols and Other Trustee Stocks.

As we have just said, Consols have been strong and have steadied other British Government Funds or Imperial Funds such as India stocks and the various loans guaranteed by the British Government. These Municipal securities have also remained untouched, and the only characteristic to be noted about them is the evidence of public neglect. Nothing goes on in most of them from one week's end to the other, but as long as our municipalities contrive to keep away from the loan market we are not likely to see any material further relapse in the prices of their existing stocks. This week has been rather a distressing one in the market for Colonial Government issues, and the squabble which has broken out between New South Wales and the Federal Ministry has depressed New South Wales stocks as well as one or two others. The market for Australian securities, in fact, is out of heart at the moment, and Cape stocks have been heavy on the disclosure of the budget deficit and the feebleness of the Ministry in dealing with taxation. Among other securities of this description Rand Water Board stock has shown a decidedly flabby tendency, the views of the board being apparently disliked. People remark upon the large amount of the money raised for the water undertakings which is invested in other securities.

Foreign Government Stocks.

Foreign Government stocks are influenced by the depression of Continental Bourses and this market failed to rally along with those for home securities. The Paris Bourse is naturally influenced unfavourably by the trouble in Morocco, and the state of German markets requires no further description. Evidence enough of the temper or distress prevalent on these markets is found in the weakness of prices, which has extended to most South American stocks comparing week with week, although last Wednesday a feeble rally occurred, but all week Argentine bonds have been back, and now and then weakened, mainly on Berlin influences, and Brazilian securities are likewise out of favour, while Japanese, in spite of skilful management, cannot be kept firm for two days running. Manchurian Railway bonds, for instance, have slipped back to ¾ discount. Portuguese bonds have shown depression and liquidation has been again prominent in the stocks of the Peruvian Corporation. Uruguay bonds, too, have given ground and the Central American group is naturally flabby. German 3 per cents. were dealt in yesterday as low as 80, but French issues have not fallen.

Home Railway Stocks.

These have rallied in the end of the week to a quite cheering extent, scarcely any stock failing to respond to the better mood, and some, such as Brighton "A," rising quite briskly. We cannot discover that there has been much additional investment going on, but no doubt many holders have followed their usual habit and reinvested some of their dividend money, while the sentiment so adverse to Home Railways is showing a tendency to pass away. Mostly, however, the improvement comes from "bear" repurchases, and the volume of business, investment or other, remains small, yet the prospects are by no means amiss, in spite of dear coal and bad weather, for the traffic analysis in the *Railway News* shows that last week nearly £70,000 was added to the previous increases, bringing the total up to £411,537, and the *Times* money article mentions a "bull" point of a quite unsuspected description. The abolition of the privileged cab system at the London termini is, it seems, expected to increase the small earnings of the railways by inducing more people to hire railway omnibuses and to send their luggage on in

advance. This would only be accelerating a tendency already well developed, and we do not think there is much in that consideration. Still, the outlook is fair, and were it not for the position of markets in general, and of the Money market in particular, there might be hope yet this half-year for the perplexed holders of Home Railway ordinary stocks.

As for the privileged stocks, the market for them reveals more than anything else the depth of the distress which now causes prices to melt away. Debenture stocks have suffered this week more acutely and generally than in any week of this half-year. The trouble is not confined either to stocks of companies whose financial position is weak like Great Central, the Southern lines, or North London, for Midland 2½ per cent. debenture stock has dropped to 72 or less, and North-Western 3 per cent. debenture stock has hung around 87, while the three lowest debenture stocks of the Great Western Company are all 1 lower on the week. Preference and guaranteed stocks have followed the lead thus given, quite a number of Caledonian preferences being 1 to 2 down, while Glasgow and South-Western 3 per cent. debenture stock has dropped 3 to 79, and several North British preferences 1½ each to the wide price of 104-107. North-Western 4 per cent. preference stock has been dealt in under 113, and Midland 2½ per cent. preference has touched 68¾. There is no other reason for this depression than that to be found in the general financial distress.

Canadian, Yankee and Other Railroad Securities.

Much the same influence has been exerted upon the Wall Street market by the absence of any advance in the Bank of England rate as was felt here. Prices rallied, "bears" were induced to cover, and the market seemed to breathe more freely. None the less is this a market to continue to avoid since it is full of pitfalls and of rotten spots. Any prolonged steadiness in prices would immediately revive the demands of the various railway companies for more money and bring the depression back again in a more acute form than ever. Happily business in these counters here as well as in the States has shrunk to trifling dimensions, and it has not always been easy to deal readily in some of the best known and most favoured shares. Prices, however, show here and there some improvement or steadiness on the week, with a few exceptions, and that is a welcome fact to those who are holding in the hope of finding a chance to escape. They should take that chance if and when it comes. This remark we must also repeat in relation to Canadian Railway stocks, which have been out of favour all the week, in spite of the torrent of bargains in Canadian Pacific shares. These are thrown out by German houses most days, and operators and Grand Trunk stocks share in the depression thus caused, although to no very severe extent. The immediate future of this part of the market depends on the outturn of the harvest in the North-West and that is not very promising, for even if the crops reaped come up to the much modified estimates recently put out by the Government officials and the railways, it is very doubtful whether the quality of the grain will be anything like up to the average. A season such as we have had in this country has a disastrous influence upon the weight of the ears. They do not fill well, or ripen before they are full. Until therefore we get at the truth it will be wise to abstain from listening to sanguine anticipations about the prices of Canadian Railway stocks. Somebody sold Mashonaland Railway 5 per cent. debentures yesterday at 69, and we are looking for revelations in that quarter too. How long is the Chartered Company going to find the interest on this and other obligations so boldly assumed by it? Its big contango business on the Stock Exchange cannot have been too prosperous of late.

Argentine Railway stocks have been not exactly depressed, but rather neglected, in spite of some buying in Great Southern Extension shares. They suffer from a variety of influences unfavourable to better prices, and the slight tendency to rally shown at times by some of them, as well as in Antofagasta and United Railways of the Havana stock, and in Argentine superior stocks cannot be trusted to last; does not usually last. Antofagasta deferred, in fact, has been sold at 115. Brazilian Railways are adversely influenced by the threatened complications in connection with Brazilian State and Federal finance, and the "bull" campaign which was thought to be well forward in the stocks of the Mexican Railway Company some little time ago seems to have fizzled out. But there are many securities in this large and miscellaneous group which ought to be worth the attention of investors even now, because the adverse influences, even the worst of them, seem likely to be but temporary, and the far view of South American affairs appears to be favourable to enterprises of all kinds in that great continent. There has been an odd rally in Paraguay Central debenture stock to 68, and Royal Trans-African Railway debentures have been shoved up to about 91 from inside.

Banks, Commercial Securities and Others.

A little more business has been doing in the Commercial and Industrial Department, and some recovery has taken place in several Motor shares, but there has been no favourable movement worth mentioning in Bank shares. On the contrary, prices are nearly all down when changed. Standard of South Africa shares have touched 65. The Electric group is still looked askance at by the public, while the market itself does next to nothing therein, though prices seem steadier except for the issues of the group controlled from Canada, which have risen sometimes and sometimes fallen. Quite a firmness, indeed, has been shown in Canadian Electric common shares, and Mexican Light and Power common, but we do not gather that the buying is local. Brewery securities have attracted a little buying now and then, just enough to keep them from slipping further back, yet losses predominate in that quarter and the acceptance of the scheme for Salt's Brewery has done nothing to revive interest or steady prices in that particular group of debentures. Among those noticeably weak at the end are Watney, Combe's preferred. Portland Cement shares have flinched, Nobel Dynamite shares are weaker, and Underground Electric profit-sharing notes have sunk to 62. Hudson's Bay shares have strengthened during the week, and are on the whole well supported. Insurance shares have been left alone as usual, and very little has been done either in Financial Trusts or in Gas stocks. The market for Iron, Coal, and Steel stocks, however, has been weak and the feeling gains ground that the top of the wave has for the present been reached in that quarter. The high price of coal may benefit coal companies, but cannot be good for iron and steel companies, and even where such are owners of their own collieries a recoil in business is not improbable because of the growing difficulty anticipated in marketing products at a profit. Waring and Gillow's shares have improved during the week, and there has been a better tendency here and there shown in the Tramway and Omnibus group. Tea shares, too, have as a rule kept their prices well, and very little has happened in the Telegraph and Telephone departments beyond continued weakness in Anglo-American and a relapse in Eastern Telegraph ordinary and preferred stocks. San Paulo Tramway shares have risen 8.

Friday Evening's Markets.

Having a holiday to-morrow members of the Stock Exchange endeavoured this morning to make things look cheerful and prices went up for Home Railway ordinary stocks, Consols, and some other things as if they meant to stay up. Consols touched 82 1/16 but relapsed to 82, North-Western Railway stock was 141 in the morning and fell back to 140. Great Western at 118¼ also finished 1 below the best. Some rally occurred in Uruguay 3½ per cent. stock, which has been as low as 65⅝ this week, and finished to-night at 67, but it has been on offer all week. Durban scrip

hangs at 1⅜ discount, and Manchurian scrip leaves off at 1 discount.

The City of Copenhagen is offering a considerable amount of one-year £1,000 bills, or rather the face amount of each bill is £1,055, but the price asked for it is £1,000, so that the buyer really gets 5½ per cent. discount on his purchase. We have not heard with what success the bills or bonds are going off, but such a tempting offer made by a city so capable of meeting its obligations does not point to cheap money for many a day to come.

A curious and suggestive transaction has been entered into this week in Rio Tinto shares, some speculator or speculators having paid £6 10s. per share for a September double option in 5,000 shares. As the sellers of the option are alleged to have followed the usual course of buying half the number contracted for, this helps to explain the hardness in the price. Who the buyers are does not seem to be clearly known, but report points in the direction of one of the more daring of the South African houses, as also to a rather notable American plunger in the Copper and other markets.

For reasons explained in our review of the Money market, it seems probable that Stock Exchange loans may be arranged for on Tuesday to the middle of September on easy terms. Nobody has talked of asking more than 4 per cent., and shrewd dealers think it quite probable that rates may be no better than 3½ to 3¾ per cent. unless efforts are made to discriminate against Yankees. The fact is the account is too small to give the banks freedom to charge what they please.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: 2½ p.c. Annuities, 1905, and A/c. both ½, to 80-80½, Irish Land Stock A/c. ½, to 82½-82⅝, India 3½ p.c. A/c. ½, to 97½-98½. **Fall:** Greek Guar. 1, to 84-86.

WATERWORKS.—Rise: Tarapaca ¼, to 11¼-11½.

Critical Index to New Investments.

British North Borneo Company.

An issue of £100,000 5 per cent. bonds was offered by this chartered company for subscription at par, £20,000 of the amount being for the extension of the State railway and £80,000 for general purposes of the Government. The bonds have a first charge over the nett proceeds of land sales after the existing debentures and bonds have been redeemed, and may be redeemed at any time after January 1, 1908, at 105 per cent. on six months' notice. Since the first issue of debentures in 1901 the surplus revenue of the company has steadily increased from £14,197 to £52,726 and the surplus of assets over liabilities at the date of the last balance-sheet was £138,734. The security is ample enough and the bond should be a fair investment.

Alianza Company.—The board has accepted an offer of the plaintiffs in the Novoa lawsuit to compromise this suit in return for a payment of £45,000.

German Shipping Enterprises.

Some very interesting particulars on this subject are contained in the report of our Consul-General at Hamburg, Sir William Ward. He writes so well and so lucidly that it seems best to give his own words instead of attempting to summarise them. His review indicates with great suggestiveness the strenuous and world-wide character of German efforts to secure a prominent share in the ocean-carrying trade of the world. Subsidies from the Government, favoured railway freights on goods for export, liberal supplies of capital by the people, all are bestowed freely in order that German oversea commerce may advance. Losses appear to be borne without complaint, and yet on many of the routes business is obviously conducted at no small sacrifice, a sacrifice likely enough to increase on some of them in proportion as the restrictive influence of the new Imperial tariff begins to tell on German importing power. Most formidable of all is the struggle maintained for dominance in the trade of South America, and it might be worth while for our Board of Trade authorities to consider whether that help which a prudent conservatism demands has been bestowed upon those British lines of steamers which, without Government help of any kind, have hitherto held their own, though not without difficulty, against subsidised German, and, in less degree, French competition.

Hamburg Leading Steamship Companies.

The total tonnage owned at the end of 1906 respectively by the leading Hamburg steamship companies, and the dividend paid by each company for the past year as compared with the two preceding years, will be seen from the following table:—

Hamburg Steamship Companies.	Total Registered Tonnage at the End of 1906.	Dividends Paid for—		
		1904.	1905.	1906.
		Per cent	Per cent	Per cent.
Hamburg-American	926,493	9	11	10
Hamburg-South American	150,770	8	10	10
German Kosmos.....	142,050	10	14	14
German Australian	116,222	7	8	8
German East African	75,431	Nil	4	Nil
German Levant	66,234	Nil	Nil	Nil
Hamburg Union.....	47,911	Nil	2½	8

Hamburg-American Line.

The aggregate registered tonnage of the entire steamer fleet owned by the Hamburg-American Line at the end of 1906 is stated to have been 926,493 tons, which was an increase of 114,550 tons upon the figures of 1905. The total tonnage employed by this company in the North American trade alone was (last autumn) 246,000 tons as compared with 205,000 tons in the previous year, the total tonnage employed in the West Indian, Mexican and South American trade was 178,000 tons as against 164,000 tons in 1905, and in the East Asiatic trade 145,000 tons—that is to say about the same as in 1905 but as against 113,000 tons in 1904. The average age of this company's steamers at the end of last year was seven and a-half years, the same figure as in the previous year.

During the year 1906 the share capital of the Hamburg-American Line was increased from £5,000,000 to £6,000,000, that of the North German Lloyd Company of Bremen being increased at the same time from £5,000,000 to £6,250,000. With regard to the financial results of the past year's business of the Hamburg-American Line, it may be stated that the gross receipts amounted to about £1,723,791 and the nett receipts to £500,250, the total sum written off from the value of its steamers as well as that reserved for insurance and renovations being £1,089,110. The annual report of the company states that in forming a judgment of the financial results of the year 1906 it should be borne in mind that there were no extraordinary profits last year like those of 1905 (owing to the sale of a number of its steamers), but that the receipts in 1906 were derived solely from the profits of the ordinary carrying trade realised on the different lines belonging to the company. From this point of view the fact that it has been possible, after making ample provision for the reserve fund, insurance, &c., after writing off (as above-mentioned) a considerable sum from the book value of the steamer fleet, to pay a dividend of 10 per cent. as against 11 per cent. in 1905, must, the company considers, be regarded as a very favourable result. Though the total receipts experienced a large increase the profits derived from the different services of the company varied considerably in extent. The traffic results of the Hamburg-New York, as well as the Hamburg-Baltimore and Philadelphia Lines, were very favourable owing to a large increase in the passenger traffic (particularly in consequence of the great popularity enjoyed by the two new large express steamers and to the increase in the number of emigrants from Hamburg to the United States of America). The [illegible] was less satisfactory and did not reach the [illegible] of some former years, but the company hopes for an improvement from the expected commercial [illegible] between Germany and the United States of America. The [illegible] traffic between Hamburg and Montreal, and also between Hamburg and New Orleans, were not satisfactory. The [illegible] in the goods traffic between this port and [illegible] Asia and also the Chinese coastal services of the Hamburg [illegible] experienced an unfavourable reaction after the [illegible] decrease in 1905 owing to the low freights and [illegible] as well as to the rise in the silver exchange in China. On the other hand, the Line between New York and [illegible] showed better results than in 1905. The results of the [illegible] Hamburg and the West Indies and also of that between this port and Mexico were satisfactory, in [illegible] the difficulty of obtaining homeward cargo. The [illegible] between Hamburg and the River Plate again yielded very fair profits, as did likewise the Lines between Hamburg and Brazil. The traffic results of the Line to the west coast of South America carried on in conjunction with the German Kosmos Company, were again satisfactory. The service between New York and Brazil will in future be carried on jointly with the Hamburg-Union Company; on the other hand, [illegible] of the Hamburg-American Line and the Italian Steamship Line "Italia" between Italy and the River Plate were given up last year. The new direct monthly steamer service established last year between Hamburg and the Persian Gulf ports and also certain ports of Arabia and the Soudan is stated to have been, so far, attended with considerable success; but the company in its report expresses the hope that the [illegible] will in course of time prove to have been warranted by the benefits which will arise from this line for German commercial and industrial interests.

The winter service arranged by the Hamburg-American Line between Naples and Alexandria, as well as the [illegible] between Hamburg and the various North Sea bathing resorts, and likewise the sea-lighter service between Hamburg and ports on the River Rhine, yielded fair profits.

Hamburg-South American Line.

The Hamburg-South American Company, which runs steamers between this port and Brazil and the River Plate, likewise experienced favourable business results for the past year, and, as in 1905, paid a dividend of 10 per cent. to its shareholders. The vessels of this company are stated to have secured full cargoes both on their outward and homeward voyages throughout the year, and at certain periods additional steamers had to be chartered for the outward trade to meet the demand of shippers. The increase in the North Brazilian caoutchouc or rubber export trade, the favourable coffee harvest in Central Brazil, and the general development of trade and industry in the Argentine Republic, all largely contributed towards the favourable results of this company's business in 1906. The company owns at present a fleet of 37 steamers, measuring together 103,500 tons register, which will shortly be increased by the addition of several new vessels to [illegible].

German Kosmos Line.

The German Kosmos Company, according to its annual report, had a very satisfactory business year in 1906 and realised a nett profit of £255,847, which, after writing off £115,222 from the book value of its steamer fleet, permitted of the payment of a dividend of 14 per cent. The [illegible] is considered the more noteworthy in view of the [illegible] which occurred last year at San Francisco and at Valparaiso, the two prominent ports visited by the Kosmos Company's steamers, though none of the company's vessels which were [illegible] these ports at the time of the earthquakes suffered any damage, the catastrophes in question naturally had a very prejudicial effect upon the passenger and goods traffic for a [illegible] time, and especially upon the loading and discharging arrangements at both ports owing to the destruction of wharfage, &c. The favourable results of last year's business were, it is stated, chiefly due to the large increase in the export trade from Germany to the west coast of South America, more especially to Chile, and also to a general increase in the number of passengers carried last year by the Kosmos Line steamers.

German Australian Line.

In spite of serious competition during a [illegible] part of the year on the part of sailing vessels in the cheap outward trade from Hamburg to Australia, the German Australian Line was in 1906, in consequence of the very satisfactory results of the homeward traffic, again able to pay a dividend of 8 per cent. to its shareholders. In order to deal with the large amount of homeward cargo, the company was obliged to charter several additional vessels, which were put on to Australian berths. The results of the trade with Cape Town were, however, not favourable, less so indeed than during the preceding year, owing principally to very low rates of freight. [illegible] the Dutch Indies was again of a [illegible] character, and it is stated that the company intends starting a steamer line between the Suez Canal between Hamburg and those ports. The results of the company's direct service between Sydney and Melbourne were satisfactory. Four new steamers are now being built for the German-Australian Line, and it is also proposed that the [illegible] purposes to increase its capital to £[illegible]. The gross receipts of the company for 1906 are stated to have been about £[illegible],100 and the net profits £[illegible],[illegible]

German East African Line.

According to the recently published annual report of the German East African Line the results of its business for the year 1906 were not satisfactory. The gross receipts amounted to about £83,325, which allowed, it is true, of an adequate sum to be written off from the total book value of its steamers for deterioration, but did not admit of the payment of a dividend. This result, it may be observed, is noteworthy when it is borne in mind that the German East African Line enjoys an annual subsidy of £75,000 from the German Government, and that, moreover, with the aid of the Government in the form of reduced railway rates, it is able to offer to the German export trade from inland manufacturing centres the attraction of largely reduced through rates of freight to East African and certain South African ports. The unfavourable results of last year's carrying trade are ascribed by the report of this company partly to the depressed condition of trade in South Africa and to the serious competition of British steamer lines to that part of the world, and partly also to the recent increase in the differential rates of import duties on German and other non-British goods imported into the South African Customs Union, which, it is declared, has a prohibitive effect upon the import trade of many articles of German industry. The onerous conditions imposed upon the mail steamers of the company by the contract with the German Government are likewise considered to act prejudicially upon the interests of the East African Line.

The outward traffic, on the other hand, of this company's line to German East Africa, as also the homeward trade, was, it is stated, very active last year, and yielded good results, as did also the service between East Africa and India. A considerable increase took place last year also, more particularly in the homeward traffic from Mombassa, which was due to the recent development of the export trade of that port consequent upon the completion of the Uganda Railway.

German Levant Line.

The results of last year's business of the German Levant Line were very much the same as those of 1905, the nett receipts—viz., £28,362, as against £30,781 in the previous year—leaving sufficient for writing off an adequate sum from the book value of the company's steamer fleet, but no balance for distribution in the form of a dividend. This unfavourable result is stated to have again been mainly due to the serious competition in the Antwerp trade, which likewise caused considerable loss to the Belgian Compagnie Nationale Steamship Company, in which the German Levant Line is largely interested. The export traffic from Hamburg to the Levant and Black Sea ports, however, experienced a further satisfactory development, it having been found possible for the first time to ship also considerable quantities of sugar from Hamburg. As is well known, this traffic is greatly aided by the system of reduced through rates of freight for goods sent to the Levant and Black Sea from inland German towns *vid* Hamburg. The results of the homeward traffic from the Levant to Hamburg were also satisfactory last year. In addition to the regular steamers employed in the trade between this port and the Levant 20 other steamers were chartered in the course of the year for the same purpose. The German Mediterranean-Levant Line, which is run by the German Levant Line in conjunction with the North German Lloyd of Bremen, yielded no profits in 1906, but the prospects of this service for the current year are regarded as more hopeful.

Hamburg Union Line.

The Hamburg Union Line, which was established only about four years ago, though able to pay a dividend of 8 per cent. to its shareholders for the year 1906, states in its annual report that the keen competition now met with in all parts of the world in the ocean-carrying trade, combined with the present high prices of fuel and shipbuilding materials and the high rates of wages, prevented the results of last year's business of the company from being still more favourable considering the generally flourishing condition of trade in North America as well as in Europe. This company runs cargo steamers between Hamburg and New York, between New York and Brazil and between New York and Eastern Asia, and it possesses at present 12 vessels measuring together 47,911 tons register.

New Steamship Companies Started in 1906.

The more important new steamship companies formed at Hamburg in the year 1906 were the following, viz.: (1) The Hamburg-Bremen African Line. This company was established with a capital of £450,000, with the purpose of running monthly steamers between Hamburg-Bremen *vid* Rotterdam and Antwerp and the west and south-west coast of Africa, in competition more especially with the Hamburg-Woermann Line; and the consequence has already been a serious freight war between the two companies, the first steamer of the new Hamburg-Bremen African Line having commenced running on February 25, 1907.

(2) The Sea Transport Company, which was formed with a capital of £450,000 last year, and which intends running cargo steamers to any part of the world when freight may offer. The company has, it is said, already purchased 13 steamers for this purpose. It is stated that the company is being worked in connection with the German Coaling Depôt Company, which likewise has its seat at Hamburg.

(3) The Oceana Steamship Company, started last year at this port with a capital of £17,500, intends acquiring a number of steamers of the turret deck type and employing the same in the carrying trade from Hamburg to all parts of the world.

The formation of two other steamship companies, viz., one for running vessels between Hamburg and Chile and another between Hamburg and the Far East, was projected here last year, but, owing to the want of sufficient capital, which it was expected would be found in the United Kingdom and in France, these two projects were again abandoned.

The establishment of an express steamer service between Buenos Ayres and Europe, for which the Argentine Government is stated to have offered a subsidy, has not yet taken place. At Hamburg the project has not found favour in view of the onerous conditions which, it is considered, are attached to the grant of the subsidy; there are, moreover, already several Hamburg lines running steamers to the River Plate which perform the voyage in question at a very fair speed.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The week began with all sections of the mining markets in the dumps, owing to persistent liquidation both here and in Paris, and a good deal was heard of difficulties in the latter centre. Heavy selling on this side by a prominent firm of foreign brokers helped to increase the depression in the Kaffir Circus, but the stream of selling orders then gradually slackened, and for a time markets became almost cheerful. One small failure was announced early in the week, but it was said that the bulk of the account had already been arranged in the usual fashion, and the announcement had no effect. Prices began to move up, and business was said to be a little more general, but it is obvious that the public is still having very little to do with mines, and in spite of all the market efforts the top figures touched each day could not be maintained. Very little attention was given to Kaffir shares as a whole, but a demonstration of activity was made with Rand Mines and one or two others, which sufficed to prevent the market being described as dead. Movements, however, even in these rarely exceeded ⅛ one way or the other, and it would therefore be waste of time and space to enter into any detailed description of this section. Rhodesian things give just as little to comment upon, and may be passed over with the remark that the general tendency was downwards. Amongst diamonds, De Beers went back, in spite of the decision of the Cape Legislative Council not to reaffirm the resolution in favour of a tax on minerals and precious stones. The drop, however, brought some support from Paris, and although a fresh reaction followed, French buying again proved sufficient to turn the market upwards, and the final price showed a fair gain on the week. Premier deferred lost ground, in spite of the proposal to relieve it of that white elephant, the Cullinan diamond. Jagers were supported in spasmodic fashion, and Roberts Victors hardened on the declaration of another 5s. dividend.

West Africans moved to lower levels where they altered at all, but for the most part they were left alone, and the same may be said of Egyptians. West Australians too have been extremely quiet. Horseshoes were offered from Paris, and dropped to 5½, but recovered a trifle of the loss. Great Fingalls were weak throughout, and Lake Views likewise relapsed, but Kalgurli, on the contrary, showed a slight improvement. Of other Australian things, the Broken Hill group was depressed by liquidations and a resumption of the bear attack. Colonial support, however, was strong, especially for North and South Boulders, but the rally in Proprietary was checked by the publication of the summary of the half-yearly report.

The heaviness displayed by the leading copper shares in the end of last week was even more pronounced during the first few days, but in common with the rest of these markets, the mood changed, and an all-round recovery took place. Tintos at one time dropped to 70¾ on heavy selling from the Continent, and then jumped rapidly until they were up to 75½, partly on buying in connection with options. Rumours were circulated that all was not well at the mines and that 1,000 men were idle through the failure of the water supply, and some lively movements followed. Buying, however, predominated, and the final price showed a nett gain on balance of ¼. Tharsis were unaltered until near the end, when they rose ½, but Capes, after advancing to 9¼, lost the fraction on the further decline in the metal. Mount Lyells and Great Cobars marked fair improvements, but Anacondas relapsed. Tin shares, in spite of the drop in the metal, were steady round about last week's figures.

The decline in Siberians has been checked for the present, and the market seemed deserted. Indians were also left very much to themselves, but Mysore exceptionally put on a trifle, and amongst New Zealand things Waihi and Grand Junction were both harder. In American gold shares Camp Birds were sold down to 18s. 3d. and El Oros were dull, but in both cases the early losses were wiped out. Le Rois were heavy, especially the No. II. company, but several of the Alaska group recovered part of last week's declines.

It is announced in the *Zoutpansberg Review* that the New Belgium (Transvaal) Land and Development Co., Limited, have decided to throw open the whole of their property of 380,000 acres in one block in the Waterberg district to capable prospectors. The terms under which portions of same will be leased are said to be the most liberal yet offered by any land company. Full particulars may be had from the local managers, Messrs. Geo. F. Hughes and Co.

North Broken Hill Mining Company.—In the six months ended December 31 44,576 tons of ore were treated, which pro-

duced 7,974 tons of concentrates containing 7,371 tons lead, 236,456 ozs. silver and 5,648 tons zinc. Gross receipts were £90,828, of which working expenses took £41,114, or 17s. 11d. per ton of ore, leaving a profit of £49,714. Adding £17,093 from the previous account, £6,250 from sales of tailings, £19,500 from premiums on sale of reserved shares and £420 from interest, the total income was £92,977, and after providing for administration charges, writing off £5,986 for depreciation and £1,335 for balance of cost of fire extinction, the balance available was £81,299, **out of which two dividends and a bonus aggregating 6s. per share have been paid.** Liquid assets on December 31, consisting of £34,452 in cash on current account, £33,482 in fixed deposits and concentrates in hand, and sundry debtors, &c., totalled £85,318, against which liabilities including £5,000 for De Bavay deposit account only amounted to £14,091. A readjustment of the contract with the De Bavay Treatment Company was effected during the half-year, and under the new arrangement the accumulated dumps of tailings have been sold, as well as the current production for a period of 11 years on terms considered favourable. **Development work was totally suspended between February and the middle of August owing to the fire in the Junction Company's mine, and progress has therefore been slow, but the general manager reports that as the result of fresh surveys and careful calculations the ore reserves above the 800 ft. level are estimated at 492,000 tons.**

Dolcoath Mine.—In the June half-year this prosperous Cornish tin mine made a gross income of £105,815 at an expenditure of £58,976. The nett revenue was therefore £46,839 or £1,703 **more than in the first half of 1907. But this advantage more** than disappeared in an increase of £2,039 in "lords' royalties," **and the final product was £336 down at £41,421. It was a fine** result all the same, the product of the high price of tin. In **actual fact the quality of the ore was poorer, 998 tons more ore treated yielding 30 tons 8 cwts. less black tin, but the price of the metal averaged £7 3s. more per ton than in the previous half-year, and made the gross revenue larger by £2,720. The company's profit was 16s. 2d. per ton, after meeting all costs, and this was 5½d. per ton less than for the previous half-year,** but otherwise the highest shown in a table covering 12 years. **From the profits £3,679 was utilised in writings-off, leaving the free revenue at £53,551, including £15,808 brought forward. A dividend at the rate of 20 per cent. per annum as recommended by the directors will take £33,804, leaving £19,747, of which £15,000 is placed to reserve and the remaining £4,747 carried forward. The profits thus appear to have been very sensibly dealt with.**

Carn Brea and Tincroft Mines.—The quantity of tin stuff crushed during the six months ended June 30 was again smaller at 28,820 tons compared with 29,999 tons in the previous half-year and 30,055 tons in the first half of 1906. Not only was this the case, but the produce per ton decreased from 30 lbs. to 26.42 lbs., and the black tin sold dropped **from 402 tons to 340 tons. The average price realised, including** slime tin, however, rose from £94 18s. 4d. a year ago and £102 3s. in the December half-year to £111 11s. 5d., and the amount realised therefore was only £262 smaller at £37,924. **At the same time better prices were realised for other metals produced and the gross receipts from all sources were £1,853 up** at £46,295, but against this working costs increased by £5,107 to £39,387, and a new charge for lord's royalties amounting to £2,390 is now brought into the accounts. Nett profits consequently were only £3,254 compared with £10,162, but this time a balance of £5,069 was brought forward in place of a debit **balance, giving a total of £9,587 to be dealt with, and the directors feel justified in paying a dividend of 2s. per share on the priority shares, which leaves £5,726 to be carried to the new account. Probably they were influenced in coming to this decision by the fact that the priority shares have never received a dividend since the company was formed in 1896, as the step taken does not seem altogether a wise one.** All development costs, it is true, have been charged to profit and loss account since 1904, but there is a big item of £32,686 in the balance-sheet which should be wiped out, while the cost of the mines, buildings, plant, &c., now valued at £85,385 should also be written down. Current liabilities are small at £5,951, while **debtors owe £3,948, cash stands at £18,618, bills receivable at** £5,768, and there is also an investment in £5,000 War Stock taken at £4,999. With regard to the future, the manager reports that the results of development work at Highburrow East have proved far from satisfactory, but that at Downright one of the richest and largest lodes seen in the mines for many years has been revealed, and at North Tincroft highly satisfactory results have been obtained. At Downright the lode at the 300 fathom level was proved rich for about 24 fathoms driving before operations had to be suspended through lack of ventilation. Driving will shortly be resumed, when it is expected that the increase in the returns of tin will amply compensate for the considerable cost incurred, and will more than make up for the disappointment experienced at Highburrow East.

Mexican Light and Power Company.—Gross earnings for July $401,204, increase $96,368; nett earnings $237,007, increase $72,748; surplus $87,000, increase $17,531. Ratio of expenses to receipts, 40.95 per cent., against 40.11.

Mr. W. S. Rossolowski, legal representative of the English Siberian Estates Co., Limited, informs the board that the company has been granted the right to work in Russia on conditions consented by the Act of the Council of Ministers, and confirmed by His Majesty the Emperor July 6.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

Royal Bank of Queensland, Limited.

Gross profits for the six months ended June 30 again showed a moderate increase of £2,658 at £36,335, but the balance brought forward was £730 less at £690 and the total income was therefore only £1,928 better at £37,024. Of this, expenses took £11,319 or £822 more and interest, rebate and exchange required an additional £600 at £13,789, leaving the net profit at £11,930 compared with £11,430 a year ago. The dividend, however, is **maintained at the rate of 4 per cent. per annum, to** which it was raised at the end of the previous six months, or **½ per cent. per annum more than for the corresponding half** of 1906, and £1,000 is again added to reserve, but in order to do this the sum carried out is reduced by £522 to £1,140. Deposits and other liabilities have gone up by £81,557 to £1,008,704 and bills payable are £16,249 higher at £25,470, while on the other hand cash has been increased by £87,205 to £272,409 and Treasury notes by £7,812 to £43,707 against a decrease of £2,625 in bullion held. Investments in Government stock remain at the old figure of £70,077, but bills discounted and other debts due to the bank are £48,072 more at £1,191,195.

Brooks and Doxey, Limited.

Good times in the iron trade seem to have helped this company in its past year ended June 30, for its trading resulted in a gross profit of £29,633, and after paying the reduced directors' fees and debenture interest, besides providing for income-tax, the nett profit was £23,633, so that the directors were able to reduce the adverse balance of £26,702 brought forward to £3,224. If prosperity continues throughout the current year there ought **to be a good balance on the right side, and some dividend for** at least the preference shareholders. Probably the ordinary shareholders do not look for any dividend: at any rate, they have not received one since 1900, when they got 2½ per cent. **What makes us a little doubtful, however, about the future is** the way that capital outlay continues to add to the cost of the property. **Thus land, buildings, power, machinery, &c., &c., were entered at £173,508 a year ago, and the total is now raised** to £199,599, owing to the cost of additions "in excess of the **allowance for depreciation," which have amounted to £26,091. The company owes £134,939 to sundry creditors, and its total** debts, loans, and investments come to £142,154, besides which it has cash and bills to the amount of £25,805, and the stock-in-trade, &c., figures for £97,250. As a current business, therefore, the position seems to be good enough, but we do not like that continued outlay of capital. It is deadly in the long run.

Walter Scott, Limited.

Here we have another steel business which did well for its shareholders in the twelve months ended June 30 last. The profits on the steel works, collieries, brick and cement works, &c., having been £64,747, exclusive of £617 brought forward. Adding this £65,354 is available for distribution, out of which **the dividend upon the ordinary shares is made up to 7½ per** cent. for the year by the payment of a final distribution at the rate of 10 per cent. per annum. After paying this dividend, the **debenture and preference charges being,** of course, fully met, and carrying £10,419 to reserves of various kinds, £2,450 is left to carry forward. Altogether the company's reserves, as exhibited in the balance-sheet amount to £129,000, the special reserve having been increased by £8,002 last year. This is perhaps a fair offset to a business whose present capitalisation is £730,021, exclusive of movable stocks, debts due to the company, cash, &c., which, added in, bring the total of the balance-sheet up to £1,081,856. **The share capital is £375,000, and there is a debenture debt of £300,000, besides which the floating debt** of the company is only £52,125, while debts due to it have provision for discounts, &c., and loans made by it stand at £98,653, movable stocks being entered at £148,508. Cash and bills receivable amount to £48,078, and sundry loans, debentures, shares, &c., held are entered at £57,866.

United Indigo and Chemical Co., Limited.

It is six years since the ordinary shareholders in this concern **received a dividend and the report for the year ended June 30** is not of a character to inspire hopes that their period of waiting **is yet near its end. Trading profits and income from investments,** after providing for depreciation, bad debts, and remuneration of the directors as managers of the subsidiary companies, are given as £6,737, of which general charges at home office, chairman's remuneration, &c., took £2,161 and income-tax £430. With £1,175 from the previous year the available total was £5,334, and out of this £312 is paid to Waste Land Consols held to £43, the preference shares receive a dividend for six months to June 30, 10%, leaving nine years' dividends still **in arrears, and £1,602 is carried forward. Land,** buildings, water rights, machinery, goodwill, book debts, stock, cash, and advances to and shares in subsidiary companies together give a total of £230,470, of which stocks represent £26,754, debts £22,090, and cash £17,201. These items, however, include the amounts belonging to the various subsidiaries, and the method of setting them forth tells little of the true position. What really shows the poverty-stricken condition of the company is the fact that after eight years of existence it is still obliged to carry as an asset £2,340 spent on formation expenses.

Gloucester Railway Carriage and Wagon Co., Limited.

This company now repairs and maintains 22,584 wagons, including those belonging to it, or 806 more than a year ago, but the increase in numbers has not brought much material benefit. Wagon rents and balance of profit and loss for the year ended June 30 showed a decrease of £2,712 at £55,920, and as only £43 was received from transfer fees against £335 from interest and fees, the total revenue was £3,004 lower at £55,963. On the other hand, debenture interest required an extra £537 at £14,194, while £100 more at £8,686 was allowed for depreciation, and after providing for directors' and auditors' fees the balance came to £31,433 or £3,642 less. A small part of this decrease was offset by the large sum from the previous account, but the disposable surplus nevertheless was £3,159 down at £42,476, and in order to maintain the dividend at 7½ per cent. the contribution to reserve is cut down from £5,000 to £3,848, leaving £11,036 to be carried forward. Additions to land, buildings, &c., during the year cost £6,378, so that after deducting the depreciation allowance, this item has only been reduced by £300 to £227,130, while the wagons let on simple hire are valued at £112,170 or £1,585 more, after deducting £2,007 written off. Balance due for rolling stock on deferred purchase is £17,600 up at £380,765 and stock-in-trade, &c., has risen by £17,219 to £147,133. These additions mean that the company has to depend very much on credit, and in addition to £373,084 borrowed on debentures the company is indebted to its bankers for £64,753 against £4,073 a year ago. Creditors, too, are £8,199 larger at £39,750, while debtors owe £88,410 or £6,322 less and cash has dwindled to a trifle of £551. The reserve with the present addition will stand at £125,000, and a beginning has been made in the investment of this fund outside the business, with a purchase of the Port Talbot Steel Company's securities to an amount of £43,747.

Mason and Mason, Limited.

Business was if anything worse for this printing-ink business during the twelve months ended June 30 than in the previous year, and with a smaller trade profits fell off by £1,289 to £15,156. This result was bad enough, but the directors without entering into explanations state that a large loss was incurred in connection with the Paris business, and in order to provide for this and for depreciation the reserves have been drawn upon for £1,500. With this help the revenue, including £242 or £43 less brought in and £207 from registration fees, was raised to £17,105 compared with £17,439. Salaries, travellers' commissions, and sundry expenses were reduced by £569 to £5,395, rents, rates, taxes, &c., took £132 less at £7,310, and the sum written off for bad debts was £35 down at £288, while £620 was allowed for repairs and maintenance against £763. Nothing had to be paid to the Borough Council against £403 a year ago, but the above-mentioned loss in Paris took £822, and after meeting the managing director's salary, paying directors' fees £250, and debenture interest £1,145, a nett surplus of £382 was left to be carried forward. No provision is made for depreciation of plant, machinery, &c., valued at £39,500, and new engines, buildings, and plant have increased by £76 to £5,115, making with the cost of electric lighting a total of £44,936 against which the reserves of various kinds amount to no more than £3,950, all but £878 being in the business. Creditors are a trifle up at £2,789, but the loan from bankers is £300 less at £4,700, and on the other hand decreases of £1,807 to £9,849 in stocks and £767 to £15,444 in sundry debtors are largely offset by an increase of £1,233 to £3,456 in cash and bills.

Sheffield United Gas Light Company.

All things seemed to work for the good of this company during the six months ended June 30 and the directors report that the combination of good trade in the City, gloomy and cold weather, and lastly the very low price charged for the gas resulted in an increase of 133,811,000 cubic feet in the sales. Prices are undoubtedly very low—so low that householders in London might well feel envious, the charges having been from January to March 1s. 5d., 1s. 3d. and 1s. 1d. per 1,000 cubic feet according to consumption, and from April to June 1s. 4d., 1s. 2d. and 1s. or an average for the half-year of 1s. 3.49d. per 1,000 cubic feet. Gross receipts from sales were £100,204, meter rents gave £8,757, residual products £67,941 and miscellaneous items £1,051 making a total revenue of £177,953. Costs of manufacture, including £21,540 for repairs and maintenance amounted to £96,092, distributing expenses took £14,921 and after providing for administration and other charges, rates, &c., the nett profits were £50,084. With £95,794 brought in and £1,800 from interest, the available balance was £147,677, of which debenture interest required £1,000 only, £5,019 was applied in writing down investments, and dividends of 5 per cent. for the half-year on the three classes of stocks absorbed £43,424 leaving £98,234 to be carried forward. The capital account shows a debit balance of £29,109 at £967,302, and against this the reserve fund stands at £86,848, of which £81,829 is separately invested. Liabilities to tradesmen and others are heavy at £102,117, but debtors owe £91,127, stocks of various kinds are valued at £26,779 and the company has no less than £105,804 in cash, so that the position is comfortable enough.

Liverpool United Gas Light Company.

The ground lost by this company a year ago was nearly all recovered during the twelve months ended June 30, when receipts from sales of gas, including public lighting, improved by £12,836 to £505,334. Residual products yielded £10,902 more at £98,130, and with small gains in meter and stove rents the revenue from all sources amounted to £619,021 against £594,830. Expenses, however, owing to the heavier cost of coal and to the larger amount spent on meter repairs and renewals, rose by £19,397 to £506,952, and the nett income was therefore only £4,794 up at £112,069. Including £11,192 brought in the amount available after providing debenture interest was £124,861, out of which dividends are paid of 10 per cent. on the ordinary "A" stock, and 7 per cent. on the "B" stock. As usual, nothing is transferred to the reserve out of revenue, but the fund is increased by £3,110 from interest on investments, and now stands at £121,507, of which £100,373 is invested in high-class securities, including £28,477 in Consols taken at 84½. Sundry creditors amount to £59,745, and there is a liability of £15,000 for renewals in progress, but on the other hand stores are valued at £58,576, debtors owe £101,197 and cash stands at £56,650.

Ulster Steamship Co., Limited.

No balance-sheet is issued by the directors of this company, and the shabby-looking document sent out as the annual report leaves much to be desired in the way of information. We are told that freights continued disappointing throughout the year and that labour troubles at home and abroad seriously affected the earnings, while the continued advance in the price of bunker coals and the increased charges consequent upon recent legislation also contribute very materially to the cost of working expenses. A grain of comfort, however, is thrown down to the shareholders in the information that the Canadian Government has renewed the subsidy for the winter service from Canada to Belfast and Dublin. Nett earnings for the year ended July 31 amounted to £32,478, and after paying interest on deposits, income-tax, &c., the surplus was £26,778, out of which £15,340 is written off for depreciation, and after paying dividends making 5 per cent. for the year £1,679 is carried forward. A balance of £2,338 on underwriting account has been added to the insurance fund, bringing it up to £26,937, but what proportion this bears to the value of the fleet or whether it is the only reserve fund possessed by the company we do not know.

Capitol Freehold Land and Investment Co., Limited.

Owing, it was explained at the meeting, to pressure of work, the officials in America were unable to prepare the accounts for 1905 within a reasonable time, and the directors therefore thought it better to wait and present a report for the two years to December 31, 1906. For the past 15 years the company's property has been leased to an American syndicate, which undertook to provide sufficient funds to meet the annual charge for debenture interest, and under this agreement paid £23,195 in 1905 and £18,809 last year. Expenditure on the ranch in the meantime has been regularly charged to profit and loss, and including £9,194 for the company's proportion of loss of cattle caused through the severe winter of 1904-5, the debit to that account is now £73,093. Sales of land in 1905 were small at about 7,000 acres, and realised an average nett price of 17s. 6d. per acre; but in 1906 there was a decided revival in the demand, and sales rose to over 355,000 acres, with an increase to 21s. per acre in the price, while up to May, 1907, a further improvement to 23s. 3d. per acre has been realised. The cash proceeds of these sales have been devoted to the redemption of the debentures, a policy which should tend to the ultimate benefit of the shareholders, and since April, 1902, no less than £690,000 out of a total of £998,028 has been paid off. Under the terms of issue the balance should be redeemed by the end of this year, but while the directors expect to have funds available for further drawings, there are not sufficient land sale notes maturing in time to repay the whole of the outstanding amount, and part of it is to be renewed. The freehold land remaining in the company's possession is valued at the original cost of 17s. 4d. per acre, of which 13s. 4d. was paid by the issue of shares, and on December 31, 1906, stood at £1,681,508. Land improvements are valued at £60,771, and in connection with this item it is explained that no depreciation has been allowed, as the lessees were bound to maintain all buildings, fences, &c., in a proper state of repair and efficiency. Another big item, which will require adjustment on the termination of the lease in December next, is the ranch suspense account of £286,718, and until these matters have been cleared up no very accurate estimate can be made of the company's position. Bills receivable secured by lien on land sold amounted to £365,510, and the trustees for the debenture-holders had £149,292 in cash, part of which has since been utilised, as above noted, for redemeption of debentures.

TRADE AND PRODUCE.

Wheat.—Many things have tended towards stronger markets this week, the unsettled weather, the rise in America, lighter shipments, and an improved demand for flour, and both spot and futures have received considerable attention. Prices for the former have risen from 2d. to 4d. per cental, and though futures have been subjected to some fluctuations, they also have improved in position. English wheat has been in small supply, and has advanced from 3d. to 6d. over last week's prices, and for 14,258 qrs. farmers received an average of 33s. 6d. compared with 8,583 qrs. averaging 29s. a year ago, but as it is only within the last few weeks that these high prices have been obtained, the average for the season is still 1s. 1½d. below that of last. Supplies on passage to the United Kingdom of both wheat and flour are estimated at 2,210,000 qrs. against 2,345,000 last week, while the Continent receives 1,115,000 against 1,105,000. Imports from abroad came to 524,440 qrs. against 498,633 in the same week of last year. Harvesting has begun in some parts of the country under very unfavourable conditions. The grain as a whole, does not promise as well, though better almost than it was at one time expected. Continental crops vary

siderably, and further afield one tells against another. West Canada advices are good, but damaging rains are reported from Manitoba. Argentina has a promising outlook, and severe frosts have done much mischief in Australia.

Wool.—All talk for the present of lower prices seems to have disappeared, and many who had calculated to buy at a lower rate by waiting have been disappointed. The markets are all well attended. Colonial wools of the finer sorts have moved upwards, and top makers declare that the increased business justifies the rise. Staplers of English wool also seem to think that demand is good enough for a rise, and the higher level of quotations established last week seems more than likely to go higher still. Spinners are now working full time, and those employed in cashmere yarns are declining to renew contracts except at 1d. to 2d. above old ones. Export business for the moment is quiet, particularly with regard to the Continent, but inquiry for autumn goods is increasing. In the flannel market, manufacturers will not take orders except at advanced quotations equivalent to the rise in wool.

Cotton (from our Manchester correspondent).—Very little life has shown itself in our market during the past week, and we have again to report only a small business in both yarn and cloth. The holidays are rather interfering with the trade generally, and many mills and weaving sheds are closed for the annual "wakes." The production is being somewhat restricted, but after the end of this month all spindles and looms will be at full work, and there is some fear that before long machinery will have to stand idle, especially in the weaving section, for want of orders. Engagements vary to a considerable extent. There is no uniformity in the position of producers in any section. Quotations are irregular, and sellers ask for prices which they consider practicable according to their order-lists. The American cotton crop is very uncertain, and no particular news of moment has come through this week. Buyers hardly seem prepared to operate freely until something more definite is known. Our markets abroad are not likely to be easily reconciled to the present high range of prices. In certain light goods odd sales have occurred for India, and manufacturers have added to their engagements, but in many instances low rates have been taken in order to secure work. The advices from Calcutta are discouraging. Bombay shows the most life of our Indian outlets. China buyers have continued to look on, and although the situation in Shanghai is improving, no free buying has occurred. The near Eastern markets are somewhat dull, but during the last few days the inquiry for the Levant has shown some improvement. The financial situation in Egypt is still causing anxiety. Another creditors' meeting of a shipping house has been held this week. It is said that certain firms interested in the affairs of those houses which have had to call their creditors together are not agreeable to the proposals made and some difficulty may be experienced in arranging a settlement. Home trade goods have not commanded much attention. Printing cloths in the poorer qualities have dragged in demand. T-cloths and Mexicans have not met with much new business. In American yarns for home use spinners have rather lost ground. Rates are irregular, and engagements vary to a considerable extent. Ring beams are in larger supply. Prices obtainable for coarse weft give very little satisfaction, the margin being decidedly poor. Export yarns have been in fair request, but the question of delivery has not been easily settled. India buyers have been prepared to purchase where reasonable transactions can be secured. Egyptian yarns have been rather quiet, but spinners are in a fairly strong position and hold for full rates.

Sir Jacob Behrens and Sons report that holders of American cotton in the South present a very bold front, and seem determined to maintain values until there are good reasons for a reduction. Reports from Texas are rather more favourable, but the telegraphists' strike makes it difficult to obtain reliable information. Some covering by shorts and a better demand from the trade lifted prices a few points yesterday, but the stringency of the money market prevents any material advance.

Coal.—It is now definitely stated that house coal prices are to go up 1s. per ton on September 1, instead of waiting as usual till October 1, and merchants have intimated that after this week they cannot take on contracts except at the higher figure. Steam demands continue in excess of supply, with the result that prices for them are hardening, and to show how much they have risen, the *Enquirer* quotes a Durham firm who have just finished a contract for bunker coal at 8s. 6d. per ton, and have renewed it at 15s. As to the railway companies they are forced to buy what they require in the open market, as they cannot come to terms with the owners. In Wales it is nothing but increase everywhere in exports and in prices, though the actual new business of the week has perhaps been rather quieter.

Copper.—The market opened very quietly, but with the absence of selling pressure, and in spite of the continued declines in America prices did not give way any more. On the contrary later on they improved a little. A fair amount of activity set in, and with an increasing disposition to lower short rates, prices for near delivery rose to £80. Forward metal also rose in sympathy, though demand was small, and later renewed pressure to sell, under apprehension concerning America's position, sent it down again. A very fair business was done at the lower level, and as the market met with good support from large operators final quotations were steady at £77 17s. 6d. for cash, and £75 10s. for three months.

Tin.—A fairly active business was done at the commencement, but at lower prices, and further advices from the East, where markets came down to £169, c.i.f., London, did not tend to raise them. Later the volume of business was more restricted, values fluctuated, and then, on still weaker reports from the Eastern markets, they slipped back still further. Prices eventually rallied a little from the worst, and to-night close at £167 10s. for cash, and £167 for three months.

Iron and Steel.—It is tolerably certain that Barrow's hematite will be in short supply ere long. Warrant stocks are lower than they have been for many years, and though there is to be some effort at increased production, the production is limited of coal and coke deliveries will mean those difficulties. In the meantime, the position is strong, makers are quoting 56s. 6d. per ton f.o.b. for mixed Bessemer numbers, and warrants are at 58s. 9d. cash. The East Coast trade is reported to be very good, or rather does not profess to be, as a shortage in the shipbuilding trade will have a bad effect some day, but the ordinary pig-iron prospects are more encouraging. But the same requirements have been less owing to local causes, but stocks in public stores have not increased and remain lower than they have been since January 1, 1905. Shipments this August have been exceptionally good. America is still reported to be a buyer, though generally it is for special sizes, and a good many are of the opinion that the practical cessation of buying from there must weaken the market. Buyers of finished iron and steel are slow in coming forward with new orders, but a very fair number of contracts are on hand.

Tea.—Importers brought forward 32,849 packages of Indian, of which 30,582 packages sold on garden account at an average of 17d. against 30,151 packages averaging 7.93d. a year ago, and it is worth noting, says Messrs. Gow, Wilson, and Stanton, Limited, that the season's average to date is not a little above what it was at this time last year, in spite of the fact that common teas are 50 per cent. higher, and they account for it to a considerable extent by the comparatively very low price of medium teas. These, according to Messrs. W. J. and H. Thompson's circular, dropped in value again this week as much as ½d. in some cases, and common leaf, though comparatively steady, was quoted ½d. to ¼d. down. The close of the auctions, in fact, was marked by an easier tone for all except the best liquoring and bright tippy descriptions. Ceylon offerings also were fairly large at 31,076 packages, and these also showed considerable irregularity in medium grades. Quotations for common did not give way to any extent, and fine grades kept firm, the average for the week coming to 7.46d. against 7.52d. last week and 6.60d. in 1906. The tone of the Java market was quiet. 2,482 packages were put up, and sold principally in favour of buyers.

Sugar.—The market has been firmer, and Mr. Czarnikow, in his circular, puts the improvement down to better trade demands and also to some covering of August "bears." Reports from America are quieter; the demand for refined there is said to be slack compared to the last two years, when the trade profits were specially good, but meltings of 37,000 tons a week are less than in March-April, when there is no fruit about, and they may not remain at this level very long. New York has not recovered last week's decline, but holders are not pressing sales; in any case, Europe seems independent of America, and may even have to import some Javas originally intended for United States. It then depends on American meltings whether refiners there will have to compete with Europe. Stocks in United States and Cuba on October 1 may be only slightly over last year's, when beet had to be imported, and though there are more Javas, it seems that the Cuban crop will be later and smaller. According to Willett, New Orleans imported 100,000 tons more cane, but melted only 17,000 tons more, keeping 83,000 against 66,000 in store on August 3. This seems to require an explanation, as more sugars (even Javas) are ordered there, and New Orleans really ought to be included in the American statistics. Mr. Czarnikow also gives a table showing the movement in certain countries, which show a remarkable increase in consumption for the last two years. In the coming season the United States beet crop will be barely up to last year's, but Europe may yield 100,000 tons more, whilst Cuba is expected to give several hundred thousand tons less. Thus the principal areas should total at least 100,000 tons less, and if Europe yields 200,000 hundred thousand tons less it is evident that even with the help of Russian stocks supplies will not be abundant next summer unless consumers buy more sparingly. Looking at variations in consumption during the last seven years, it is difficult to forecast its movements, but it seems evident that we shall have to pay fair prices for roots next spring to keep up with requirements. If the Convention had been abolished, it is quite possible that syndicates and cartels would have encouraged sowings, and the fear of this was the principal cause of the decline in July. Now a protocol has been signed by all but Austria before February 1 next, prolonging the Convention, subject to unrestricted imports into United Kingdom after September 1, 1908 (our exports being limited to Convention sugars), and it is hoped that this will be ratified, otherwise this country may still give notice of withdrawal on March 1 next to take effect September. Meantime Russia would like to enter the Convention on her own terms, said to be 14s. surtax instead of 25s. 6d., and though her exports to Finland may require more protection than the Convention surtax, it seems hardly likely that Germany and Austria will admit Russian sugars on unequal terms. But this need not interfere with the above proposal. The American market remained quiet at a slight improvement to 3.80½ cents centrifugals, equal to 10s. 2½d. c.i.f. for 96 per cent. Landings for the week in the three ports were 48,000 tons and meltings 37,000 tons, increasing stocks to 284,000 tons.

Letters to the Editor.

Sir,—I read in your last week's issue what you call (under Home Railway Stocks) "the fulminations of railway chairmen against their workmen and agitators, &c." I have read carefully every speech of the chairmen at all the chief railway meetings, and, as an honest man, I ask you if such a description as yours is either fair or true? Every chairman spoke most highly of their men, and even under the great provocation of Mr. Bell in his speeches they did not retaliate in the language of the latter. Such statements in a paper of your standing might do a lot of harm. If you would only stick to finance, yours would be the finest financial paper in the world. But mixing up politics and your unpleasant remarks, not always true, of different classes of men spoil it. I do not mean do not expose swindlers and suchlike, but our English railway chairmen and directors will hold comparison with any similar body of men in the world.

Yours truly,
Bernard E. Cammell.

Folly Court, Wokingham,
August 22, 1907.

MINING RETURNS.

Alaska United.—Crushed 20,410 tons, value $19,496; sulphurets 326 tons, value $11,319.

Brilliant Gold.—Crushed 305 tons, £995; 38 tons bottom level, £190.

Brilliant Central.—600 tons, value, including concentrates, £1,800.

British Broken Hill.—2,966 tons produced 409 tons concentrates, containing 253 tons lead and 11,043 ozs. silver.

Camp Bird.—Crushed 6,592 tons for 7,448 ozs. and 586 tons concentrates; profit £23,756.

Chinese Engineering.—Output 25,500 tons; sales 23,000 tons; consumption 975 tons.

Clydesdale (Trans.) Collieries.—Springs Mine, 9,889 tons; Taaiboschspruit Mine, 8,131 tons.

Dolcoath,—Crushed 7,900 tons; black tin sold, 130 tons; slimes, 10 tons; amount £16,417.

Dolores.—Production, $78,000; profit, $46,000.

Duff Development.—Prospecting dredge 42 oz., No. 1 dredge 51 ozs., No. 3 dredge 106 ozs.

El Oro.—Crushed 21,023 tons, producing $187,655.

Esperanza.—Crushed 13,950 tons; concentrates shipped, 525 tons; profit, £42,851.

Esperanza Copper.—Shipped 1,089 tons cupreous pyrites.

Indarama.—Butterfly Mine: Milled 1,100 tons, 305 ozs. cyanide, 900 tons, 123 ozs.; total, 428 ozs.; profit, £328.

Jumbo Gold.—Crushed 1,750 tons, 901 ozs.; concentrates, 1,025 tons, 408 ozs.; slimes, 925 tons, 184 ozs.; total, 1,493 ozs.; profit, £2,400.

Kluchi Gold.—339 ozs. from 641 tons. Tailing assays averaged 8 dwts. per ton.

Komati Reefs.—Crushed 2,150 tons; £3,325.

Mount Lyell.—29,433 tons treated. In addition 764 tons of purchased ore and metal-bearing fluxes. Converters produced 615 tons of blister copper, containing:—Copper, 606 tons; silver, 52,856 ozs.; gold, 1,486 ozs.

Mount Molloy.—Smelted 1,184 tons; also quantity of matte from stock, containing 1 ton copper, producing 48 tons blister copper.

New Queen.—Cyanide, 144 tons treated for £82.

North Broken Hill.—Treated 2,360 tons, producing 420 tons concentrates, containing 287 tons 1 cwt. lead and 7,560 ozs. silver.

"O.K." Copper.—Smelted 770 tons, producing 68 tons fine copper.

Ouro Preto.—5,872 tons, 1,998 ozs.

Rhodesia Matabeleland Development.—Crushed 1,114 tons, 379 ozs.

Salisbury.—Crushed 5,850 tons, 1,720 ozs.; profit, £1,410.

Spassky Copper.—Production of bar copper 4,600 poods, equal 73·93 tons.

Stratton's Independence.—Net loss at the mine for July, £697, from 485 tons shipping ore, averaging 1 oz. 12 dwts. per ton.

Tasmanian Copper.—Rosebery: shipments, 992 tons.

Troitzk Goldfields.—1,840 tons of company's ore, 300 ozs.; 536 tons of tributor's ore, 122 ozs.; alluvial gold obtained by tributors, 155 ozs.; 7,300 tons of tailings treated, 649 ozs.; total, 1,253 ozs.

Tyee Copper.—Treated 1,053 tons Tyee ore, value $8,993, and 4,693 tons customs ore; total, 5,746 tons for 478 tons matte.

Victoria Proprietary.—Crushed 420 tons, 392 ozs.

Witbank Colliery.—Output 40,000 tons.

DIVIDENDS ANNOUNCED.

BANKS.

Anglo-Californian.—Interim of 6s. per share for half-year ended June 30, at the rate of 6 per cent. per annum.

London Bank of Mexico.—Interim for the half-year ended June 30 of 5s. per share.

London Paris and American.—Interim of 8 per cent. per annum for the half-year ended June 30.

BREWERIES.

Boddingtons'.—Interim at the rate of 6 per cent. per annum.

J. G. Mooney and Co.—Interim of 6 per cent. per annum.

William Younger and Co.—10 per cent. per annum, with a bonus of 2½ per cent., on the ordinary shares, leaving £28,594 to be carried forward, after providing for depreciation, &c.

Craigellachie Glenlivet Distillery.—Final on the ordinary shares, making 10 per cent. for the year ended July 31.

MINES.

Brilliant Central Gold Mining.—6d. per share, payable Sept. 21.

Oroville Dredging.—10 per cent. per annum.

Oroya-Brownhill.—2/6 per share, payable Sept. 25.

Roberts Victor Diamonds.—Interim of 25 per cent.

MISCELLANEOUS.

Barlow and Jones.—Interim at the rate of 10 per cent. per annum.

British and African Steam Navigation.—Interim of 2½ per cent. per annum on the ordinary shares for the half-year ended June 30.

Canadian and American Mortgage and Trust.—Interim of 2½ per cent.

Chigwell Loughton and Woodford Gas.—Interim at the rate of 2¾ per cent. per annum.

City of St. Petersburg New Waterworks.—Interim of 5s. per share.

Dolphin Hotel and Restaurant.—Interim of 4 per cent. per annum.

Electric Landaulet.—Interim for the first half of the current year at the rate of 5 per cent. per annum.

Fairbairn, Lawson, Combe, Barbour.—Interim for six months ended June 30 at the rate of 5 per cent. per annum.

Farncombe and Co.—Interim for the half-year 4 per cent.

H. Williams and Co.—Interim of 2½ per cent.

Hadfield's Steel Foundry.—Interim of 1s. per share.

Henry Street Warehouse.—Interim of 10 per cent. per annum.

Heritable Securities and Mortgage Investment.—Interim of 3 per cent.

International Investment Trust.—Interim for half-year ended July 31 at the rate of 4½ per cent. per annum on preferred stock.

Ipswich Gas Light.—Interim of 13, 10½, and 10 per cent. on the "A," "B," and "C" per annum for the half-year.

Liverpool District Lighting.—Interim of 2½ per cent. for the half-year ended June 30.

M'Birney and Co.—Interim of 6 per cent. per annum.

Oldham, Ashton and Hyde Electric Tramway.—Interim of 2½ per cent.

Pyle and Blaina Works.—Final of 5 per cent., and a bonus of 10 per cent., making 20 per cent. for the year, also further bonus of 33 1-3 per cent., payable in shares or cash.

Smedley's Hydropathic.—Final on the ordinary shares of 11s. 3d. per £9 paid share, making 12½ per cent. for the year ended July 31 last.

Tyne-Tees Steam Shipping.—7½ per cent. for half-year, making 10 per cent. for year.

Tynemouth Gas.—Interim of 2½ per cent. on the consolidated and new stocks.

NEXT WEEK'S MEETINGS.

Monday August 26.

Eastbourne Gas.—Eastbourne, 3 p.m.
Glossop Gas.—Glossop, 12.30 p.m.
Plymouth Breweries.—Plymouth, 2.15 p.m.
Sligo, Leitrim and N. Counties Railways.—Dublin, 3 p.m.
South Essex Water.—Cannon Street Hotel, 3.30 p.m.
Ulster Steamship.—Belfast.

Tuesday, August 27.

Buenos Ayres-Lacroze Trams.—Cannon Street Hotel, 2.30 p.m.
Lea Bridge District Gas.—Dashwood House, E.C., 2.30 p.m.
Russian Petroleum and Liquid Fuel.—Winchester House, 12.30 p.m.
Workington Iron.—Workington, 11.30 a.m.
Yorkshire Guarantee and Securities.—Huddersfield, 4 p.m.

Wednesday, August 28.

Bath Gas Light and Coke.—Bath, noon.
Crays Gas.—St. Mary Cray, 6.30 p.m.
Gloucester Railway Carriage and Wagon.—Gloucester, 12.30 p.m.
Grenville United Mines.—Camborne, 12.30 p.m.
Inverell Diamond Fields.—Winchester House, 11 a.m.
Isle of Wight Central Railway.—11, Ironmonger Lane, 12.30 p.m.
Moss Bay Hematite Iron and Steel.—Workington, 11.30 a.m.
N. Middlesex Gas.—5, Great Winchester Street, E.C., 2.30 p.m.
Otago and Southland Investment.—Winchester House, E.C., noon.
Sondage Syndicate.—Cannon Street Hotel, 2 p.m.
Walter Scott.—Newcastle-on-Tyne, noon.
Wright, Bindley, and Gell.—Birmingham, 4 p.m.

Thursday, August 29.

Anglo-Mexican Oilfields.—Winchester House, E.C., noon.
Brierley Hill District Gas Light.—Brierley Hill, 3.30 p.m.
Cranbrook District Water.—Goudhurst, 3 p.m.
East Worcestershire Water.—Birmingham, 3 p.m.
Geo. Whitechurch.—66, Coleman Street, 2 p.m.
Guest, Keen and Nettlefolds,—Birmingham, 2.15 p.m.
Hartlepool Gas and Water.—West Hartlepool, noon.
Sheffield Forge and Rolling Mills.—Sheffield, noon.
South Staffs Water.—Birmingham, 1 p.m.

Friday, August 30.

Barnet District Gas and Water.—Holborn Restaurant, 12.30 p.m.
Carn Brea and Tincroft Mines.—Carn Brea, 1 p.m.
City of York Trams.—York, noon.
Cleator and Workington Junction Railway.—Workington, 11 a.m.
Mersey Railway.—Worcester House, noon.
Mount Lyell Comstock Copper.—Winchester House, 3 p.m.
South Hetton Coal.—39, Lombard Street, E.C., 1 p.m.

Saturday, August 31.

Dolcoath Mine.—Camborne, 1 p.m.
Stourbridge Water.—Stourbridge, 3 p.m.

COMPANY MEETING.

CAPITOL FREEHOLD LAND AND INVESTMENT.

The twentieth annual general meeting of the Capitol Freehold Land and Investment Co., Limited, was held on Wednesday at the Cannon Street Hotel, Cannon Street, E.C., the Right Hon. John Young (chairman of the company) presiding.

The Secretary (Mr. H. Milner Willis) having read the usual notice,

The Chairman said: As you are aware, for the last 15 years the Capitol Estate has been under lease to Messrs. Farwell, of Chicago, who are very large shareholders in the company. During the currency of the lease the Messrs. Farwell undertook the responsibility of providing cash for the interest on the debentures, and, as you know, at the beginning of the lease the debentures amounted to a very large sum—almost a million of money. Messrs. Farwell have faithfully fulfilled their contract, and by their assistance in providing the cash for the interest on the debentures the company were relieved from responsibility at a very important and critical time of its existence. I am happy to say that that time is past. During the last few years a very large amount of the debentures has been paid off, and the obligations of the company have been reduced to a very reasonable sum—an amount with which we are quite able to cope. The property of the company is situated in the Panhandle of Texas, the total acreage originally owned amounting to three million acres, of which we have sold nearly two-thirds. In the year 1901 some 436,000 acres were sold at an average price of 7s. 2d. per acre. In 1902 the sales increased to 657,000 acres at an average price of 7s. 6d. per acre. In 1903 251,000 acres were sold at an average price of 9s. per acre, again an increase. In 1904 and 1905 the sales diminished, but the price increased. In 1904 8,000 acres were sold at an average price of 12s. 5d. per acre, while in 1905 7,000 acres were sold at an average price of 17s. 6d. In this last year 355,000 acres were sold at an average price of 21s. per acre. In this present year 1907 116,000 acres have been sold at about 28s. per acre. You will therefore observe that the price realised per acre has gone up from 7s. 2d. in 1901 to 28s. per acre in the present year. The proceeds from sales of land have been employed in reducing the debenture debt of the company, which originally stood at £908,028. The land sales are made largely on the instalment principle, the purchase price being payable by a cash payment down with the balance maturing over a given number of years, the company retaining a lien on the land sold until full payment has been made by the purchasers. The company has been able out of the actual cash proceeds so far received to reduce the debenture debt to £308,028, and we expect to be able to hold further drawings and pay off a further large sum prior to the end of this year. At December 31, 1906, our bills in hand amounted to £365,510. The cash in hands of the trustees, with Consols held, amounted to £151,640, making together £517,150. Since that date land has been sold realising some £162,400, giving a total amount of £679,550. The debentures outstanding shown in the balance-sheet at December 31, 1906, were £544,068, and these have been reduced since by £236,040, and the position now is that we have debentures outstanding to the extent of £308,028, whilst the company's asset of bills receivable and cash in hands of trustees, which form part of the security covering these debentures, amounts to considerably over £400,000. Add to this the value of the cattle on hand and also the value of the lands still unsold, one million acres, and it will be seen that the security for the debentures is covered many times over. It is some compensation for being asked to take the report for two years together to know that this is the most prosperous report that we have been able to put before the shareholders since the inception of the company. Everything looks as if the results to the shareholders will be very satisfactory. It is with confidence that I now beg to move: "That the report and statement of accounts be received and adopted."

Mr. William Findlay seconded the motion, which was carried unanimously.

The National Provincial Bank of England, Limited, notifies that the transfer books of the Stock Conversion and Investment Trust, Limited, for their issues of London and North-Western Railway first charge 3½ per cent., second charge 4 per cent., and deferred charge stocks are closed for preparation of dividend warrants until the 31st inst., the dividends being payable on September 2.

European Petroleum Company, Limited.—Production week ending August 4, 1907, 129,936 poods = 2,005 tons.

In answer to Mr. Rees, Mr. Runciman stated, on the authority of the British Consul-General in Brazil, that the entire coffee crop of that Republic for the year 1907-8 is estimated at 15,000,000 bags.

An injunction has been granted by Mr. Justice Neville in the High Court of Justice perpetually restraining the promoters of the "Queen Assurance Company, Limited," recently registered under the Companies Acts, from using this title, or any name so nearly resembling the name of the Queen Insurance Company as to lead to the belief that the company is carrying on the business now being carried on by the Royal Insurance Company under the name of the Queen Insurance Company, or is a branch of or is in any way connected with that business, and ordering them to have the name removed from the Register of Joint Stock Companies. It will be remembered that the "Royal" took over the "Queen" in 1891, and still retains the right to carry on business in this name.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and August 17, 1907:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Aug. 17, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Aug. 18, 1906.
	£	£	£
Balances, April 1:

MEM.—Treasury Bills outstanding on August 17, 1907:—

Bills issued by Public Tender	£11,300,000
Bills otherwise issued	2,500,000
Total	£13,800,000

Treasury, August 20, 1907.

The Geological Survey of Canada has just issued at Ottawa a special report on the higher level gravels of the Klondike. It is estimated that the Upper Bonanza Hills, the Klondike River Hill gravels, the Hunter Creek Hills, and the Eldorado, Bonanza, Bear, and Hunter Creeks are still capable of yielding gold to the value of £10,730,000, though they have already produced £18,050,000. The gold remaining in the Indian River slope, which has yielded £4,850,000, is estimated at £1,000,000 to £2,000,000.

Mr. Bryce McMaster, at present manager of the Alresford branch, has been appointed manager of the branch of the Union of London and Smiths Bank, to be opened at 91, High Street, Oxford, as soon as the necessary alterations have been made.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended August 14, $4,118, increase $1,116; aggregate from July 1, $29,283.

Argentine North Eastern. — Traffic receipts for week ended July 19, £2,979, decrease £501; aggregate from July 1, £7,988, decrease £106.

or Eightpence post free, or 6s. and 8s. per annum, post free, and its publishers are

SIMPKIN, MARSHALL, HAMILTON, KENT & CO., LIMITED.

*** *Kindly order it of your bookseller, and judge for yourself.*

"'Public Opinion' was very much prized by Thomas Carlyle, and was one of the last journals he read," said Dr. W. R. Nicoll in *British Weekly*, May 2, 1907.

"PUBLIC OPINION,"

Twopence Weekly.

Edited by PERCY L. PARKER.

The purpose of "PUBLIC OPINION" is to provide a weekly review of current thought and activity as they are expressed in the world's newspapers, magazines, and books, and to put on record the ideas and activities which make for Religious, Intellectual, Political, and Social Progress.

It seeks to provide the busy man with a lucid summary of what is happening in the different fields of human activity, and to focus within readable compass something of that teeming interest which comes from being in touch with many phases of life.

This object has been achieved with considerable success ever since "PUBLIC OPINION" was started in 1860. In the 47 years since then it has consistently carried out its policy.

The need for a paper like "PUBLIC OPINION" increases with the years, for life becomes more complex and the busy man, though anxious to keep in touch with new developments of thought and activity, has not the time to read the many papers which would give him the needed facts. "PUBLIC OPINION" seeks to do this for him, and to present just that *précis* of life and thought which will enable him to quickly understand what is going on in the world.

"PUBLIC OPINION" (published every Friday, Price Twopence, 32 pages) can be obtained from any Newsagent or Bookstall, or will be sent post free for one year to any address in the United Kingdom for 10s. 10d., and to any place abroad for 13s. per annum. Orders should be addressed to—

"PUBLIC OPINION,"

30 and 31, Temple House, Tallis Street, London, E.C.

"I know of two Prime Ministers who have read regularly 'PUBLIC OPINION,'" said the *Daily News*, May 15, 1907.

"We know of at least one who has misread it," added *Punch*, May 29, 1907.

Specimens sent free on application.

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London W.C., and Published by Clement Wilson at Norfolk House, Norfolk Street, Strand, W.C.—August 24, 1907.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 504. New Series. SATURDAY, AUGUST 31, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Inland Revenue.

Many interesting facts are gathered together in the annual report of the Commissioners of his Majesty's Inland Revenue, the 50th issue of which was recently published, covering the year ended March 31 last. In that period the total amount cashed by this department and paid into the Exchequer was £101,498,193. Of this amount £92,973,835 was the yield of the Inland Revenue pure and simple, the aggregate being made up by £5,871,441 collected by the Inland Revenue Department on behalf of the Customs Department and £2,652,917 received from the Post Office. These figures, however, do not embrace the whole of the Inland Revenue, as the return obtained by Mr. Gibson Bowles some years ago demonstrated, for there are many odds and ends of receipts which never come into the Exchequer at all, but are utilised by various spending departments, apparently on their own account. Comparing the past year with the previous one on the basis of the figures given, there was an increase of £2,170,076 in the total revenue, including the portion assigned to local taxation, and comparing 1896-7 with the past year the nett increase in the duties collected under the administration of this branch of the tax-gathering services was £24,331,455 or 33.4 per cent. Of this increase Excise gave £3,420,017, estate and other death duties £5,080,489, stamps £652,282, inhabited house duty £387,589, and income-tax £14,990,608. There was a reduction of £199,530 in the amount yielded by the land tax, which is attributed to reductions and changes in the law, and the total nett amount of this tax collectable for the past fiscal year was only £716,007, the gross amount of £956,640 having been subject to reductions amounting to £240,633. It is in a sense the oldest tax we have, and in the year 1798 its amount was fixed for Great Britain at £1,905,077, which amount has been gradually reduced to the figure given above through redemptions that prudent finance should never have allowed.

Coming to the various branches of revenue, the first class of imposts we strike are the Excise duties. These in the last year yielded £35,713,239, of which amount £5,397,292 was assigned to relief of local taxation, most of the licence duties going over to this destination, together with 3d. per barrel on beer and 6d. per gallon on spirits, the one yielding £421,642 and the other £812,702. Apparently a little more beer was drunk last year than in the preceding one: at any rate, the amount paid over to the Exchequer was slightly higher, although still quite £50,000 below the budget estimate for that year. Altogether the beer duty gave £13,071,000 in the past year, or an increase of fully £88,000 on the return for the previous year. But the total was much less—for England, at any rate—than in 1900-1, and the yield of the tax is certainly the reverse of elastic. In 1900 the duty was raised by 1s. per barrel to 7s. 9d., but there has not been a corresponding increase in the yield of the tax, although last fiscal year it was about £1,000,000 above the figure for 1808-9. England is naturally the largest consumer of beer, and Ireland comes next, Scotland making rather a poor and a declining third; in fact, the beer duty paid in Scotland amounted last fiscal year to only £589,000 against £697,400 in

1900-1. Our export trade in this drink appears to continue good, but its expansion is by no means remarkable, and the total export was only 551,564 barrels in the past year, which, however, was upwards of 91,000 barrels more than in 1896-7. From the point of view of the social economist, the figures relating to the spirit tax are equally encouraging. We gave some of these last week, and shall not now go further into the subject than to point out that the consumption both of home-made spirits and of colonial and foreign spirits appears to be on the decline. In 1899-1900, for example, the consumption of home-made spirits per head of the estimated population reached .95 of a gallon, and the total consumption, including foreign spirits, was reckoned at 1.18 gallons. It fell next year to 1.10 gallons, and for the last two fiscal years it has been only .91 gallon. The past year showed a slight increase in the absorption of colonial and foreign spirits, else the per head consumption would have been smaller than in 1905-6, for the per head consumption of home-made spirits in the past year was only .74 per cent. against .75 per cent. in the previous year and .80 per cent. as recently as 1903-4. Some compensation has been found by the producer in the increased export trade, but not sufficient to relieve the holders of their enormous stocks, stocks still so high in Scotland as to lock up a very important proportion of the country's banking resources. Sooner or later there must come a credit crisis in Scotland through the whisky trade alone. In the meantime, we have to note that the yield of the spirit duty collected by the Inland Revenue for the past year was £17,745,125, of which the already mentioned 6d. per gallon or £812,762 was paid over to local taxation. These figures, it must be remembered, take no account of the spirit and beer duties collected by the Customs Department.

The next great branch of Inland Revenue consists of the death duties, as they are called, or estate, probate, succession, legacy and other taxes on capital left by deceased persons. As readers know well, the yield of this branch of the revenue has been abundant in recent years, and in the past budget year amounted to £18,958,763, of which £4,695,939 was handed over in relief of local taxation to mitigate the burdens of taxes upon clergymen and the owners of land, as well as to help borough councils and the corporations of towns and cities to meet their swelling expenditure. The payment in mitigation of rates on agricultural land alone swept away £1,508,298 last year, and the payment of half-rates under the Tithe Rent Charge Act of 1899 required £136,827. These and other payments to local taxation represent contributions from capital in relief either of current taxation of other kinds or in support of outlay which should be borne by rates. Estate duty, including the settlement estate duty, yielded last year £15,236,843 as against £13,524,647 in the preceding year, and the whole of this money, as well as the proceeds of the legacy duty, temporary estate duty, succession duty, and probate and inventory duty represents a deduction from capital utilised for purposes of revenue, not, as it ought to be, wholly for the redemption of debt. Most of it comes from personalty—that is to say, from interest-bearing marketable securities, furniture—anything that a man has other than land and houses—and the total capital of this character struck by these taxes in the past fiscal year was £239,192,000 against only £60,230,000 of realty. Of personalty, in spite of the decline in the prices of securities, last year's total was the highest ever brought within the grasp of the Inland Revenue Commissioners in any one year; but it was otherwise with realty, the total of which, though higher than in either of the two years just preceding, was less than in either of the three years ended with March 31, 1904. Including Scotland and Ireland, the gross value of the estates or portions of estates liable to duty by the passing of death duties during the year ended March 31 last was £328,344,499 gross and £298,460,180 nett. Of the nett amount England contributed £257,543,202, Scotland £28,501,021, and Ireland £12,415,957, proportions fairly representative of the different degrees of wealth in these several portions of the United Kingdom. Less foreign property than might have been expected came under the harrow of the tax-gatherer, and we fear some portion of the possessions of British subjects beyond the limits of the Empire escape this capital-shearing taxation.

Be this as it may, the particulars relating to the gross capital value of personalty stated in the United Kingdom shows a decrease in recent years compared with the figures previous to March 31, 1901. Of stocks or funds in the United Kingdom the total amount becoming liable to duty in 1899-1900 was £12,236,456, and last year it was only £9,898,551, although this figure was fully £800,000 higher than that for the year just preceding. Stocks and funds or bonds of foreign countries and British possessions have, on the other hand, gone up, although by no means steadily. The total was only £8,755,000 in 1898-9, and last year it was over £12,052,000, or very nearly the highest figure ever shown. Shares and debentures of public companies form the largest item of all, and their total value for the past year came to £100,173,144, the highest shown in the whole period since and including 1896-7. No other items require particular mention, and we have only one remark to make, to the effect that the decrease in the value of stocks and funds of the United Kingdom accords with the decline in prices on the market. Indeed, we should not have been surprised if the diminution had been more marked than it is. In the past year capital to the amount of £4,332,279 represented estates whose debts exceeded the amount of the assets, and it accordingly paid no duty. Estates to an aggregate value of nearly £876,000 were also exempt from duty, because they in no individual instance exceeded £100 in value. No particular inference of a general kind is to be drawn from the elaborate tables exhibited by the Commissioners. They must have required much labour, intelligence, and judgment in their compilation, but they are not even so of much use in enabling the student of domestic economics to measure the realised wealth of the community. All we see is that during the past eleven years personalty of the gross value of £1,891,000,000 has passed through the hands of the Commissioners of Inland Revenue, and suffered more or less severe diminution at their hands, according as the property went to near or distant relatives or strangers. During the same period the gross value of the real estate becoming subject to duty has been about £92,000,000. Generally speaking, the aggregates relating to personalty have shown a tendency to increase, dipping sometimes, rising abruptly at others—as, for example, in 1899-1900, when the total reached nearly £201,000,000, dipping in 1902-3 to £182,452,000, only to rise in the past year to the highest figure of all. Real estate has not shown the same elasticity, although it likewise has fluctuated considerably from the lowest figure of 1896-7, which was under £66,000,000, to the highest in 1901-2, which was almost £106,000,000. Since then, however, the total has never reached £85,000,000, and was in 1903-4 under £81,000,000.

A great deal of information is supplied with regard to other branches of revenue—inhabited house duty, licences, and so on—but we must not linger over these further than to remark upon the startling variety of duties that people have to pay in this country in the form of licences or stamps. The man of business is hit at every turn. We are sometimes apt to point at the French as being peculiarly subject to this form of impost, but a survey of the table of stamp and other duties exhibited by the Commissioners in their report should prevent us from casting reproach upon our neighbours for submitting to so many imposts of this description. At the same time, the display indicates a certain measure of chaos. Duties have been arbitrarily imposed, often without any apparent attempt at co-ordinance, and there ought to be great room for reform in this branch of the revenue, which, it may be added, is, although comparatively insignifi-

cant, apart from the mere stamp duties—whose yield for the past year, although poor by comparison with previous years, was still £7,964,000—easily collected perhaps, but far from prolific. On the new capital of joint-stock companies, for instance, the duty received last year was only £537,049, and on bills of exchange less than £827,000. Patent medicines, too, yielded only £327,000, and marine insurance £251,000, while the income derived from life insurance policies was little more than £90,000. We use minimising adverbs in this relation simply because the totals look so small compared to those of the great branches of the revenue, but it must not be forgotten that in our present circumstances our Chancellor of the Exchequer has reason to be thankful for every pound he can lay hands on.

But one great branch of Inland Revenue now remains to be noticed, and that is the income-tax, which last year, on the basis of 1s. in the £, with many exemptions and reductions, yielded no less than £31,891,949 or £597,197 more than in the previous year. Such a splendid product surely indicates a high degree of prosperity. In 1897-8 the income-tax at 8d. in the £ gave us only £17,507,000, and the yield per penny was then no more than £2,188,380 against no less than an estimated £2,650,000 per penny for the past year and a realised £2,633,436 per penny in the year immediately preceding. There is no doubt that the country has been prosperous in many ways, but we fear something of this growing fertility of the most unpopular tax we have is due to the greater skill exercised in ferreting out sources of taxation and the greater assiduity in applying the machinery for its collection. Take, for example, the large amount of money collected by bankers and other purchasers of coupons of foreign securities. They are now compelled to deduct the tax from this money without any reference whatever to the provisions of the law. The totals may comprise many a mere £5 or less received by some humble investor, but the tax is deducted just the same, although the total income of the owner may be much under £160. In order to get the money back a troublesome process has to be gone through, and there can be no doubt at all that a great many people never bother to apply for it. They allow the tax to go by default. So is it with the payment of taxes upon dividends declared by joint-stock companies. When this tax is paid in a lump sum before distribution of the dividend, as it now frequently is, it none the less comes in their proportion out of the pockets of the small shareholders, many of whom should go tax free. It is part of their profits which ought to have been given to them under any equitable distribution of the impost, but it now goes to swell the receipts of the Treasury. These are but two examples of what goes on, but against them may be placed the fact that many holders of foreign securities undoubtedly contrive to escape payment of the impost. They have their coupons cashed abroad, and the money is remitted to them in ways which it is impossible for the tax collector to follow. In spite of this, the total amount of income originating out of the United Kingdom coming under the cognisance of the assessors of income-tax was last year £73,899,265 or £7,800,000 more than in the preceding year. Such an increase does not correspond with a like expansion in the income from foreign investments, and we must, therefore, infer that closer supervision has been exercised.

The Debt of Portugal.

We cannot quite agree with the view of the *Times'* special correspondent at Lisbon when he says that the financial situation of this little State must be described as unsatisfactory, but it is not necessary to conclude that the foreign creditors have any cause for alarm. In one sense there is never any cause for alarm about the financial position of Portugal because it is so uniformly bad, and every now and again the State creditors abroad and at home, but especially abroad, have to submit to a reduction in the capital amount of their obligations. They have got used to it, like the eel to skinning. Of late years, thanks to the last drastic operation of this description, Portugal has apparently gone on paying its way more smoothly than heretofore, the debt interest having been met when due just as if Portugal could spare the money, and market and investing public have all begun to forget the old days when fortunes were made by sundry financiers out of the misfortunes and touch-and-goes of the Portuguese Government. In those happy days for the few almost every recurring coupon date gave rise to terrors and rumours that the money to pay could not be found. "Bears" revelled in knocking down the price of the bonds, and on some occasions the payment of the coupon was in doubt until the very night before it was due. Sums necessary to complete the amount were said to have been borrowed at 25 per cent. the afternoon before. Then the coupon was triumphantly paid to the immense profit of those who had bought against the "bears."

Nowadays Portuguese finance is much more decently conducted. Everything is in order and regular up to date, but Portugal is bankrupt all the same, and the mere fact that the 3 per cent. now regularly paid upon the uncancelled half of the foreign debt is secured upon Customs revenue, "which exceeds the annual interest payable by more than £2,000,000," does not in the least alter the general situation. Debts are accumulated in other directions, the two sides of the Budget never balance, and the deficits swell like the vanitous frog. This very correspondent tells us that the floating debt, which was £5,956,080 on December 31, 1804, had risen to £15,995,320 on May 16, 1906. Within the same period of time the internal funded debt has also increased from £76,250,000 to £109,827,000, allowance made for some apparent reduction within the past year ended June 30. How that reduction was brought about we are not told, but the internal funded debt at June 30, 1906, was put at £112,200,000. It seems to be smaller just at the moment, but the fact remains that Portugal is never able to pay off debt out of revenue, and never has any Budget surplus of a genuine description; that its Government is always hard up, and more than hard up, and that by and by when the accumulating load becomes too great to be borne or the inconvenience of paying interest on the debt too irksome, we shall have another season of distress, ending in all probability in one more slicing down of the country's obligations to the foreigner. At present Portugal is ruled by a dictatorship, and the patriotic oligarchs who have constituted themselves the despots are busy effecting reforms. Taxation is to be readjusted and all manner of changes made intended to make the revenue more prolific and to restrain the inveterate habit of the Parliament—now blotted out, but probably enough destined to reappear again one of these days—to vote away money without regard to income. There is certainly room for a reduction of taxation, and many taxes might probably be made more prolific if something approaching to science were applied to their collection. But even so Portugal is in the mire of insolvency and likely to remain there for as long as Josh Billings was insured.

Since the above was in type the appended interesting communication has reached us from a resident in Portugal. It fits in well with what we had already said, and deserves to be carefully read, because, in our opinion, the time is not distant when another distressing crisis will arise in Portuguese finance. It will be noted that the steadiness of the exchange puzzles the writer of this note, and that it should be so is a proof of the art with which facts are concealed from the people of the country. There are but two ways in which the mystery is capable of solution—either exports are much understated or the exchange is being sustained at the expense of the floating debt, and we suspect that the abiding cause of the startling increase of the total of that debt will be found in this very nursing of the exchange. It is necessary for the financiers to make lenders in Northern Europe believe

that Portugal is prosperous, and accordingly the exchange must be sustained at no matter what cost to the country, or in spite of the adverse trade balance. All the more ominous, if this be the explanation, is the prospect, and in other directions the *haute finance* which has "bled Portugal white" during at least two generations has much to answer for. It is the force behind the protective tariff from which the people of the country suffer so cruelly, and it does nothing at all in any direction by starting and nourishing new industries, by developing the mineral wealth, or by vivifying agriculture, to mitigate the deadly effects of the high Customs duties :—

"It was only in 1892 that Portugal entered upon the present policy of Protection. Before that date the fiscal system varied, but Customs dues were in no way prohibitive and imports were only very slightly taxed. Then occurred the financial crisis of 1891 and the consequent rise of the gold premium (*i.e.*, the depreciation of the milreis), which until this event had always been kept down by repeated borrowings abroad. The bankruptcy of 1891 rendered further borrowings impossible, and it was then that recourse was had to the present almost prohibitive tariffs, the idea being that such a measure would naturally reduce the imports, and as a consequence reduce also the remittances of gold abroad to pay for them, while, on the other hand, it was anticipated that it would promote and stimulate home industries. The effect of this system is shown first in the subsequent course of the gold premium, which seemed in no way influenced by the new departure :—

"It reached, in 1891, 23 per cent. ; in 1892, 30 per cent. ; in 1893, 26 per cent. ; in 1894, 28 per cent. ; in 1895, 27 per cent. ; in 1896, 31 per cent. ; in 1897, 48 per cent. ; in 1898, 85 per cent. ; in 1899, 41 per cent. ; in 1900, 42 per cent. ; in 1901, 40 per cent. ; in 1902, 27 per cent ; in 1903, 27 per cent. ; in 1904, 21 per cent. ; in 1905, 9 per cent. ; in 1906, 3 per cent. ; and in 1907, 2½ per cent.

"The excessive depreciation which culminated in 1898 appears, however, to have been due in a great measure to the increase in the circulation of banknotes without any corresponding metallic reserves. The circulation of banknotes rose successively as follows :—1891 (October 17), 31,500 contos ; 1891 (December 4), 40,500 contos ; 1892, 54,000 contos ; 1895, 63,000 contos ; 1898, 72,000 contos (the present figures).

"During the same period the metallic reserve, which was 50 per cent. before the crisis, fell to 12 per cent. in 1891, but rose again to 20 per cent. in 1894, the latter increase consisting mainly of depreciated silver coins taken at their face value. Before the financial crisis of 1891 the balance against the State in its current account with the Bank of Portugal was 4,000 contos ; in 1895 it rose to 21,000 contos, and in 1898 to 27,000 contos. This also undoubtedly had an adverse influence on the gold premium. From 1898 the exchange gradually recovered ; but here, again, this recovery is evidently not connected with the effects of the fiscal policy of protection inaugurated in 1891, as a reference to the figures quoted below will show, as the balance of trade was more and more against Portugal. The remarkable downward course of the gold premium during the last nine years has been the subject of much comment, but a completely satisfactory explanation has yet to be found. The explanation generally accepted is the increased remittances from Brazil. Yet this increase is denied in well-informed quarters, and, even taking the most optimistic estimates as correct, they still fail to set off the large adverse balance of trade and to account for the disappearance of the gold premium.

"The paper milreis, with an altogether inadequate metallic backing, and only passing under forced currency, seems, however, to be practically worth its face value in gold ; in other words, for a small consideration of 2½ per cent. Rs. 4$500 in Portuguese paper will purchase to-day in the open market its face value in gold—*i.e.*, an English sovereign. Yet it may be said that there is no gold whatever left in Portugal, if the million (sterling) or so which forms part of the metallic reserve is excepted. Many theories have been put forward to explain this apparent anomaly, but, as already stated, none seems to do so satisfactorily. However, it seems plain from the above that the fiscal policy inaugurated in 1892 to check the rise in the gold premium had not the desired effect, and this is made plainer still by a reference to the returns of imports and exports both before and after the change was made, taking both the previous ten years and the decade following 1892 :—

	Imports. Contos.		Exports. Contos.
1882	33,625	.....	22,555
1883	31,187	.....	22,790
1884	32,554	.....	22,648
1885	32,731	.....	22,647
1886	37,251	.....	26,108
1887	37,156	.....	21,239
1888	38,082	.....	23,443
1889	41,812	.....	23,343
1890	44,305	.....	21,538
1891	39,509	.....	21,379
	368,212	.....	227,690

"The yearly average was, therefore, 36,821 contos for the imports, and 22,769 contos for the exports. The average yearly excess of the former over the latter was, therefore, 14,052 contos previous to 1892 :—

	Imports. Contos.		Exports. Contos.
1893	38,306	.....	23,408
1894	35,666	.....	23,923
1895	39,841	.....	26,960
1896	39,530	.....	26,138
1897	40,424	.....	27,311
1898	48,606	.....	31,124
1899	50,640	.....	28,803
1900	59,724	.....	30,930
1901	57,823	.....	28,281
1902	55,596	.....	28,435
	466,156	.....	275,313

or an average excess of imports over exports of 19,084 contos :—

Later returns are as follows :—

	Imports. Contos.		Exports. Contos.
1903	58,806	.....	30,603
1904	62,042	.....	30,711
1905	60,690	.....	29,071

"They show more strikingly still how ineffective was the barrier set up against the introduction of foreign goods into the country, as the average excess of imports for these three years is no less than 30,381 contos. Portugal imports now twice as much as she exports.

"The effect of the change of 1892 upon the community was that the cost of living, especially for the humbler classes, rose to a level hitherto unknown, and great hardship was, and is being, inflicted upon those least able to bear it. The country, however, is pledged to the present system, as, according to the Convention with the Foreign Bondholders in 1902, the Portuguese Government assigned the Customs receipts of the kingdom for the service of the debt.

"It is impossible without going to great length to deal exhaustively with a question of such magnitude, but take an example at random : It might be inferred, for instance, from the geographical position of Portugal and from its sea-faring population that a heavy duty on fish would have stimulated the fishing industry. Yet, comparing the imports of codfish during the two decades under review, the reverse appears to have taken place :—

In	Contos	In	Contos.
1882	1,455	1893	1,833
1883	1,361	1894	1,906
1884	1,576	1895	1,960
1885	1,720	1896	2,270
1886	1,796	1897	2,307
1887	1,625	1898	1,918
1888	1,682	1899	1,931
1889	1,978	1900	2 821
1890	1,747	1901	3,448
1891	1,607	1902	3,458
	16,547		23,852

"Speaking generally, it may be said that very few indeed are the industrial concerns in Portugal which have flourished under this system of protection. This unsatisfactory state of things would appear, however, to come also in some measure from the lack of technical knowledge, as it has frequently been remarked that practically all industrial concerns that are thriving are those under foreign management. At all events, the duties imposed upon all imports weigh very heavily upon the poorer classes who are, and have been for years, on the verge of starvation, wages remaining almost stationary, while the cost of necessaries increased. But this is not all. Beyond being taxed on all goods imported from abroad, and having to pay a correspondingly enhanced price for articles manufactured or produced within the kingdom, the inhabitants of large towns have also to bear the burden of the *imposto de consumo* or Octroi dues levied on all food products at their entering the boundaries of the city. This form of taxation amounted in Lisbon for the year 1902-3 to 2,320 contos, or about 25s. per head. Results also condemn this form of taxation, as it is computed that the cost of collecting these dues amounted last year to 70 per cent. of the receipts. In other words, out of 25s. paid per head 17s. 6d. went towards the expenses of collecting them."

Economic and Financial Notes.

Still Concealing the Savings Banks' Muddle.

It would appear from answers given by Mr. Asquith to Mr. Myer that the only fixed policy of the Chancellor of the Exchequer in relation to the Savings Banks is to carry still further the attempt to conceal from the public the working of these institutions. On August 14 Mr. Myer asked for details of the purchase of Consols for the Post Office Savings Bank in the year 1897, the year when the price of Consols, then bearing interest at 2¾ per cent., to fall in 1903 to 2½ per cent., touched close on 114. The information was refused by the Chancellor, on the ground that "no purpose of public utility would be served by setting out in detail each separate transaction." In a later question Mr. Myer pointed out that such particulars are given, as to the Trustee Savings Banks, in an annual return. He asked whether there is any reason why the same particulars should not be given in respect of transactions entered into on behalf of the Post Office Savings Bank, and, if no reason existed, would the Chancellor take measures to secure that details should in future be given.

There can, of course, be no valid reason why particulars given in the one case should not be given in the other. But not only did the Chancellor refuse the additional information, he went so far as to threaten to suppress the particulars given in the case of the Trustee Banks. "I doubt," he said, "whether the details of the separate transactions are of sufficient public interest or importance to justify the labour and expense of preparing and publishing the account, and I think it will be well, when an opportunity offers, to amend the law requiring its presentation." This zeal for saving to the public the expense of preparing and publishing one or two pages of statistics relating to the treatment of enormous sums for which the public is liable appears to us misplaced. The public is now being taxed to make good an old deficiency of £3,500,000 in the funds of the Trustee Savings Banks. The public is also aware that there is a new deficiency, probably exceeding £3,000,000, which will have to be dealt with sooner or later. We venture, therefore, to say that this long-suffering public has a clear right to the fullest information as to the working of an institution so conducted as to be not only doubly insolvent as to what is called its capital account, but to require in addition an annual vote to meet current working expenses. We should hardly have supposed that the suppression of the balance-sheets of the Savings Banks had proved to be a success so brilliant as to invite further enterprises in the policy of concealment.

London General Omnibus Co., Limited.

The key to the position of this unfortunate company is to be found in the writings up of its property. Last half-year to June 30 was a disastrous one, producing, as it did, a deficit of £52,413 on the mere working of the business, the gross income from all sources having been £550,150 and the current expenditure £602,590. But in addition to this the company spent £13,355 of its motor fund money, leaving only £1,987 in hand, and its properties were written up by £5,795 to £666,685, of which £388,092 is assigned to leasehold property, the quality of which may be judged by the fact that a great deal of this property is held on the usual seven, fourteen, and twenty-one years' repairing lease. It was that, at least, some ten or twelve years ago, and in any case the item includes the unwritten-off value of "times" or goodwill of routes acquired by the company in former years. In addition, the stock of omnibuses, including motors, horses, harness, and yard stock, increased during the twelve months by £74,679 to a total of £598,473, including £513 set down to office furniture. What the real position of the business may be it is thus impossible to determine, but if we go back to the days before motors and make some comparisons, striking results appear.

Eleven years ago, on June 30, 1896, the total capital involved in the business of the company was £850,000, of which £700,000 was in ordinary stock and the remaining £150,000 in 4 per cent. first mortgage debentures. The total capital on June 30 last was over £1,450,000. In the interval the debenture debt has been increased to £300,000, ordinary capital has been issued to the amount of £73,592, and £243,474 worth of 5 per cent. cumulative preference shares has also been issued. At the earlier date the company had no power to issue either more stock or any preference shares, but the issuing power in ordinary capital is now raised to £1,500,000, and the board can emit another £250,000 in preference shares. Altogether the directors in this interval of time have added fully £467,000 to the actual capital of the company, and the result for the past half-year was a loss of £58,113, including debenture interest paid, which took £5,700. By the help of the balance of £7,536 brought forward, and of £968 returned by the Commissioners of Inland Revenue, this deficiency was brought down to £49,609, but it is a curious outcome of such an enormous additional expenditure of capital.

Naturally the question arises where has the money gone? It has disappeared in all directions, leaving not a trace behind. Freehold property has been increased by nearly £214,000 to a total of £278,593 within the eleven years, and leaseholds have been added to or written up during the same interval by no less than £140,603, so that in these two important directions alone the increase has been £354,477. In like manner stocks, consisting of omnibuses, including motors, horses, &c., &c., have been augmented by nearly £117,000, allowing for £8,000 set against "times" in the earlier report, and presumably since then added to the valuation of leaseholds. And the strange thing about the comparison is that, in spite of the coming of the motor, the cost of maintaining the horse stock appears to have been about £21,000 more in the past half-year than in the June half-year of 1896, while omnibuses, harness, yard stock, and fixtures have at £101,305 nearly doubled compared with the June half of the previous year, while as against the June half of 1896 the contrast is £103,850 now against £41,533 then. Whether the same items are included in the presentments at dates so far apart is more than we can say, because the changes made from time to time in the entries have the not unnatural effect of obscuring the meaning of the totals. Compared with eleven years ago, however, drivers' and conductors' wages have gone up from £119,000 to more than £100,000, although last half-year was nearly £8,500 less than in the first half of 1906. Horse-keepers' wages are also higher by about £9,000 than they were eleven years ago, and the directors'

fees have risen by £1,000 to £4,000 per annum against £3,000.

What conclusion can be drawn from statements like these other than that the company has been sustaining its position by liberal outlays of capital, and is now in a perfectly helpless state because of its inability to raise more money? Nominally, there is a reserve of £130,000, that being all that is left of a debenture issue aggregating £300,000, and it includes the £10,000 of "horse stock reserve" which has figured in the accounts half-yearly for a long time back. In the interval, however, the debenture debt has been doubled, and ten years ago the "reserve," all borrowed, was £135,000. At that time, moreover, the investments in marketable securities amounted to £142,572, and it is now £160,228. This is exclusive of cash to the amount of £54,081 against £78,266 eleven years ago and £133,986 at June 30, 1906. Practically, therefore, the whole of the additional debenture issue has already disappeared, and in the matter of available resources the company, with nearly £500,000 more capital to provide for, is in the same position as it was on June 30, 1896, and to keep going it will have still further to deplete its investments during the current half-year. A raising of fares will not bring salvation to a business thus situated. It may be added that during the eleven years its average number of omnibuses running has risen by less than 10½ per cent., while the increase in the capital sunk has been upwards of 70 per cent. Why are no particulars now given of "horse renewals" or of "sales of carcases"? Why are the prices suppressed at which the various descriptions of fodder were bought, and why are the motor accounts buried in those relating to horse-hauled vehicles? Does the company possess as many horses now, when shoeing and veterinary service cost it £13,741 in the half-year, as it did eleven years ago, when the cost was only £10,988? We could ask many more questions, but what do stockholders care? They are likely to pay sharply for their indifference.

The Australian Wool Crop of 1906-7.

Many interesting facts about this important crop are contained in the annual review of Messrs. Dalgety and Co., Limited. Perhaps the most suggestive portion thereof is the conclusion, which offers an estimate of business prospects in the woollen trade. Apparently the compilers look for a continuance of high prices, because stocks of wool have never been replenished since their exhaustion by the five years' drought. In the course of that drought the stock of sheep in Australia was brought down to 53,423,000, and although it has now gone up, or did last year, to about 83,440,000, the consumption of wool has in the interval risen so decidedly as to prevent any accumulation of stocks. Prices have, therefore, ruled high. In 1903-4 the average value realised per bale was £12, for the season 1906-7 it was £14 3s. 11d., and the total value of the Australian clip of that season, that is to say both the Australian and New Zealand output, was nearly £30,250,000, the largest ever obtained in any one flock year. New Zealand figures seem to indicate that the sheep-feeding capacity of that colony has about reached its maximum; at any rate, the total stock of sheep in New Zealand last year was smaller than in either 1901 or 1902, when the stimulus of Australian drought was applied to the extension of the New Zealand pastoral industry. Last year's total, however, gave a million more sheep than in 1905, so perhaps a further expansion may be possible in the colony, although the policy of close settlement, as it is called, whereby much borrowed money is employed in giving fictitious values to the land of New Zealand, may act injuriously in the direction of increases in the stocks of sheep. And are Australians leaving out of reckoning the effect of both South African and South American competition? They are prone to forget that other parts of the earth are developing faster even than they are—portions, too, where the drought scourge and the foxes and rabbits are not so hurtful to pastoral wealth.

The Nigeria Railway.

The Royal Niger Company made a first-rate bargain when it sold its political rights and sundry other assets to the Government for the sum of £562,000, and expansion of empire by purchase has, as usual, proved a costly business to the purchaser. We arrive at this conclusion from a study of the speeches made by Mr. Runciman and Mr. Winston Churchill in the House of Commons on August 22. It was a curious and suggestive speech, that of Mr. Runciman's. He was moving the second reading of the Public Works Loans Bill, and in the course of his observations informed the House that the powers of the Local Loans Act were to be utilised to enable a loan of £800,000 to be made to Jamaica, in addition to a grant of £150,000 already provided for. We do not object to the loan, but dislike the extension of the Local Loans Act to the colonies. It only needs a beginning, and through this same agency a railway in Northern Nigeria is to be financed by help of the National Debt Commissioners. The ultimate cost of this railway no one knew, but Mr. Churchill assured the House that it was a very important thing that any railway opened to Northern Nigeria should be "a cheap one." We quite agree, but with the example of the Uganda Railway to enlighten us, entertain the gravest doubts upon that point. Meanwhile, Northern Nigeria is costing us something like £300,000 per annum to keep it going. We did not buy it from the Royal Niger Company; it came to us as a necessary consequence of the taking over of that company's political rights and of the establishment of a military governor with ambitions in that part of the empire. Troops had to be marched northwards to the borders of the French West African territory; great stretches of territory teeming with people had to be annexed, and, as it yielded nothing, the rulers established by those who conquered it had to be provided for out of the Imperial Exchequer. Southern Nigeria, it seems, has a surplus; it has, at least, been paying about £70,000 per annum towards the cost of governing and improving the Northern territory; but even so, the Imperial Exchequer has had to find most of the deficiency. This railway is, therefore, put forward as an expedient for reducing the cost of administration. The railway is absolutely necessary to get across the territory quickly, or, as Mr. Runciman expressed it, not only for traffic, but also for strategic purposes. It is, therefore, to be begun, and the National Debt Commissioners are going to provide the money—Post Office Savings Bank money, no doubt, if other funds should not prove too available.

What will the railway cost? It is to be a line of 3 ft. 6 in gauge, and Mr. Churchill says that after a careful investigation had been made of the figures presented by Sir F. Lugard, who seems to have declared that a mere narrow gauge thread could be built at £1,500 per mile, friendly expert criticism had put the cost at £2,500 per mile; but as the line is now to be of the medium gauge just mentioned, the estimate is now distended to £3,000 per mile. It will probably cost £5,000 per mile before all is over, but we must live in hopes meantime that Northern Nigeria will be rendered a productive possession by this enterprise, and we are assured by Mr. Runciman that "the ultimate aim" is to make the debt created for the railway a debt on the colony. We distrust "ultimate aims" in this kind of enterprise, and can only express the wish that official anticipations will not be falsified as usual. Affairs, however, will have to be better managed in Nigeria than they have been in British East Africa, also a purchased addition to the empire, if disappointment is not to be in store for the country. After all, we are so rich, are we not?—have such abundant resources, and have such a splendid surplus in the Savings Bank that we need not bother if a few millions should disappear in the wilds of Central Africa. They will never be missed. "Eh? What is the total length of the line going to be?" Neither statesman condescended to say, but it is to be a gradual affair, and may not reach Kano until 1911.

From Kano it will have to be extended to Sokoto in due time; in fact, many branches will be required, what with cotton-growing, expansion and administrative needs, so that if we get out of the pit for £10,000,000 we may congratulate ourselves.

Commercial Banking Company of Sydney.

By far the most interesting portion of the statements put before the shareholders of this company by the chairman, Mr. G. J. Cohen, at their half-yearly meeting, held in Sydney, New South Wales, on July 19 last, relates to Mr. T. A. Dibbs, the general manager of the bank. This gentleman's name has been familiar to all interested in Australian banking for many years past, and he last month completed his "diamond jubilee" of 60 years in the service of the Commercial Bank of Sydney. On March 20 last he attained his fortieth year as general manager. The occasion was, therefore, a fitting one to recall the progress made by this, in some respects, the most solidly based and powerful of all Australian banks. When Mr. Dibbs became general manager, the aggregate of the dividends up to that date paid to the shareholders of the bank had been under £704,000; during his management they have received £4,392,000 in dividends. In 1867 the reserve funds amounted to less than £118,000; they now reach £1,240,373. The total of the balance-sheet in 1867 was only £2,393,000, and it is now £18,948,000. It had only 37 branches at the earlier date, and has now 162, and as illustrative of the strength of the bank, it is further noted that the coin and cash balances, including British Consols, Government debentures, &c., now stand at £8,605,000, while in 1867 the total was only £329,000. These items and others afford most striking testimony to the remarkable care and acumen with which the affairs of this bank have been conducted, and the directors did well to move that a portrait of their general manager, to whom they and the bank owe so much, should be painted and hung in the banking room along with those of Richard Jones and Edward Knox, distinguished former directors of the bank. We trust they will not limit their appreciation of Mr. Dibbs's great services to this graceful token of respect.

Coming to the figures of the bank for the June half-year, we note that the directors are able to pay the same dividend as usual, viz., 10 per cent. per annum, and to add £20,000 to the reserve, leaving £27,660 to carry forward, against £25,860 brought in. A year ago £15,000 was placed to reserve. Changes in the balance-sheet, though in the main suggestive of progress, are not impressive in any direction, but its total is £1,434,421 higher than it was a year ago, and amongst the liabilities, that on deposits, &c., has increased by £1,281,000 to £14,851,561. The note circulation is also higher by £66,000 at £558,328, but bills in circulation are £209,000 less at £1,047,073. The aggregate divisible profit is £105,050. Amongst the assets we note an increase of £18,754 in the cash at bankers, but the total is only £117,308 now. Coin and bullion in hand, however, is up by £548,000 compared with twelve months ago to £3,454,680, and the investments in British Consols and Government securities is higher by £466,000 at £2,095,000 in round figures. The holding of Queensland Government notes is also £11,569 up at £65,901, and bills receivable show an increase of nearly £267,000 at £1,915,256. The bills discounted and all other debts due to the bank, put in one item, show an expansion of £1,130,151 at £9,875,819. Bank premises are also nearly £7,000 up at £467,375. Against the various increases amongst the assets we have to put a notable, and we are disposed to think a welcome, decline in the money lent at short call on the London market. A year ago the total thus entered in the balance-sheet was £1,917,034. It is now £897,400, or a decrease of £1,019,634. Presumably the figure of a year ago, which itself showed an advance of nearly £500,000 on that of two years back, was the product of exceptional circumstances. Anyway, the bank is plainly able now to make better use of the money nearer home.

Russian Petroleum and Liquid Fuel Company.

A good deal is to be said for the preference shareholders who on short notice got up such a vigorous opposition to the board of this company. The directors themselves, indeed, by the mouth of their chairman, Mr. Evelyn Hubbard, admitted that a real grievance had been created by their action, and made the *amende* by withdrawing the proposed scheme before submitting it, if such an Irishism may be permitted. The preference shareholders were summoned to have the details of a proposal submitted to them, but only the faintest outlines of these proposals were hinted at, and most of the chairman's speech was devoted to a description of the company's prospects and a disquisition upon the troubles it has had to go through. About its afflictions there can be no two opinions, and here we are on the side of the board rather than on that of the preference shareholders so ably led by Mr. A. Levy Lever, M.P. It may be that the board has not always acted with the highest wisdom, but we do not think it can be blamed in the sweeping fashion of Mr. Lever and other speakers for having first tried the experiment of being its own distributor, and then when that failed entered into contracts with other distributors in order to try and prevent its products from being sacrificed on the market. The oil industry of Russia has been passing through a series of crises, some of which have arisen through the internal condition of the country, and the anarchic state of labour in the oil regions, and others of which are the product of that straining after monopoly in every industry, the fashion in which has been set by the Standard Oil Company and other American corporations. At present the board of the Russian Petroleum Company is accused of having placed its life in the hands of the Nobel Trust, but no evidence in support of that allegation was adduced at the meeting, and the only thing which seems to be established is that the directors, in the scheme they have been endeavouring to bring to completion, have rather striven to emancipate the company from the tyranny of the distributor. In that endeavour they surely deserve the sympathy and support of all shareholders, and we trust that by the time the next meeting is held in the middle of October a better spirit will have come to prevail—a spirit of concord rather than of jealousy and opposition prompting to bitter accusations. Probably the small committee which is to be selected from the principal shareholders in order to advise with the board will contribute to the smoothing away of difficulties, and in helping the board to effect such arrangements as may bring the undertaking back to something like its early prosperity. Whatever happens, profit will not accrue through the spirit that begins always by ascribing the worst of motives and by exciting suspicion.

Porto Alegre and New Hamburg Railway.

The secretary of this Brazilian Railway Company has issued a circular to the shareholders setting forth the particulars of the disappropriation of the line by the Government, from which it would appear that the Government of the State of Rio Grande do Sul has acted in a most high-handed fashion. Under the original concession the Government guaranteed for 60 years 7 per cent. on a capital of £202,500, but reserved the right to purchase the line at the expiration of 30 years from the opening—that is, in 1900—for such an amount of Government stock as would yield an income equal to the average dividend of the previous five years, but in any case not less than 7 per cent. More than double the sum named in the guarantee has been spent by the company, which naturally claimed that the amount to be paid in the event of the purchase being carried through was the actual outlay; but the provincial Government thought otherwise, and in May, 1906, obtained a judgment of the Court empowering it to take possession on payment into Court of £202,500 in 7 per cent. State bonds. No such bonds had at that time been created, or even had the authorisation of the Chamber of Deputies; but the Government could not

wait for formalities, as it wanted the line in order to lease it to a Belgian syndicate. It therefore induced the judge to allow it to deposit a "provisional obligation," and seize the property forthwith. An appeal was promptly lodged, but the company was hampered by the shortness of the time allowed, which rendered it impossible to carry on the necessary correspondence between the Brazilian advocate in Porto Alegre and the company's legal advisers in London. The appeal, naturally, was lost, and final judgment was given against the company on October 26 last. One of the contentions of the company was that, whether or not it was entitled to more than the amount named in the concession, the sum must be paid in "fundos publicos" or Government stock, and that this term meant stock of the Federal Government, no bonds other than National Government obligations being known by that description. The State Government, however, maintained, and got the Court to agree, that any bonds it chose to issue were "Government stock" or public funds within the meaning of the concession. Yet seven months after the company's refusal to accept these bonds and the seizure of the railway the President himself found it necessary to obtain from the Chamber an authorisation for the issue of £202,500 7 per cent. State bonds in payment, thereby proving that the company's contention that the provisional obligation and the bonds originally proposed were alike illegal, and could have been repudiated by the State.

Another cause of complaint by the company lies in the subsequent disposition made of the line. In the concession it was stipulated that if the undertaking were expropriated, and the State desired to lease it, the company had a preferential right to the lease; but the property has been sold to the Federal Government, and by it leased to a Belgian syndicate until March 15, 1958. The premium paid by the syndicate for this and the New Hamburg to Taquara Railway, which is an extension of the Porto Alegre Railway, lately built and owned by a local company, is 3,500 contos or £233,000, that being the figure paid by the Federal Government to the State Government. In marked contrast to the treatment of the Porto Alegre Company are the terms given to the above-mentioned Taquara Railway. That line is badly constructed and poorly equipped, and had up to the time of its purchase showed a loss on working, while, being only a branch, its receipts are not likely to be augmented by incorporation in the unified railway scheme which is at the bottom of all the trouble. It, however, is a native venture, and although its shares were much depreciated the whole of the share capital was paid in full, together with amounts due to hypothecation creditors. All legal means having been tried to secure fair treatment from the Government, the assistance of the Foreign Office has been invoked by the company.

Goldsbrough, Mort, and Co., Limited.

The remarkable change in this company's fortunes which took place a year ago has been followed by a still greater measure of prosperity during the twelve months ended March 31 last. Its wool-selling business continued on a large scale, the number of bales handled being only 1,169 less than in 1905-6 at 129,872, and trading in other directions seems to have been exceedingly lucrative, as the gross profits increased by £47,122 to £332,508. Management expenses rose by £9,337 to £66,452, owing mainly to heavier income-tax payments in the various Australian States in which the company carries on business, although advertising and travelling expenses were also heavier. Debenture interest, on the other hand, required £1,820 less, through the cancellation of £67,720 of the "A" debenture stock, and the repayment of the mortgage of £115,000 has reduced the charge for other interest by £1,966 to £6,445. A year ago £38,043 was written off premises, plant, and machinery, including a special provision of £35,000, and this year £36,679 is applied to the same purpose. Then £60,404 is transferred to the secondary reserve compared with £14,596 to that fund and £45,607 to the primary reserve, and with £6,303 brought forward the sum to be dealt with is £92,827, out of which the shareholders receive a dividend of 5 per cent. and a bonus of 5 per cent., giving the "B" debenture-holders an extra 1 per cent., and £29,651 is carried to the new account, subject to a bonus to the staff. The share capital remains at £558,995 and the "B" debenture stock is also unaltered at £727,695, and freehold and leasehold business premises are £2,053 down at £308,000, but plant and machinery at £12,366 are much about the same as a year ago. From these figures it will be seen that the directors are endeavouring to strengthen the company's position as much as possible during a period of prosperity, and in this they show wisdom. At the meeting held in Melbourne on June 21 the chairman showed that they were quite aware that the well-being of the company in the future depends very largely on careful management, as the unusual combination of good seasons and high prices, which has now lasted for three years, cannot continue indefinitely.

Steel Co. of Scotland, Limited.

The realised prices of finished products remained steady during the twelve months ended June 30, but raw materials advanced out of all proportion to the selling prices of steel, and in the second half of the year profits were further affected by the abnormally high price of fuel. Under these circumstances, the company has done exceedingly well in earning a manufacturing profit of £117,745 or only £10,747 less than those for 1905-6. Expenditure on reconstruction of and additions to plant, amounting to £33,785 compared with £34,359, is charged, as usual, against this total, leaving £83,960, and with £1,066 from rents and £8,699 brought forward the total available came to £93,726 or a decrease of £5,688. General expenses, rates and taxes, &c., took an extra £1,311 at £17,284, debenture and other interest came to £345 more at £13,158, and £172 was written off for bad debts. The nett surplus, after providing for other charges, was £60,609, out of which £20,000 or £5,000 less is put to reserve, and the shareholders again receive 7½ per cent., leaving the slightly reduced balance of £7,156 to be carried forward. The transfer to reserve brought the total up to £111,257, but the company is employing part of this fund to develop coal properties at Garthamlock and Queenslie, and last year spent £22,736, leaving the reserve at £88,522. Another £4,000 of the "A" first mortgage debenture stock was redeemed during the year, and after deducting the £3,500 in Consols held by the trustees, the outstanding debt is £204,940. Land and property at Hallside, including £20,000 for dwelling-houses, stand at £297,251, and at Blochairn at £227,244, while feus at the latter place are valued at £20,181. Loose plant and tools have risen by £2,497 to £59,965, and floating stocks of materials and stores are £5,823 larger at £119,504. Sundry creditors come to £170,455 or £60,334 more, while debtors have only increased by £42,796 to £214,710, and cash is £944 lower at £14,327. Bills receivable amount to £62,095 or an increase of £2,654, but these have already been discounted, and consequently appear also on the opposite side of the balance-sheet.

Mexican Development.

It is considerable in many directions, but not unclouded, as those who care to study the valuable report of Mr. Consul-General Jerome and those of his Vice-Consuls throughout the Republic, will find. Great public works are being carried out in many parts of the country, and civilisation in the modern material sense is rapidly laying hold of it, but we doubt whether the condition of the people is proportionately becoming better. At any rate, they are finding it much more difficult to live than they once did, owing to the steady upward trend of prices. So serious is the rise that it might one day degenerate into something like a reaction against the Diaz *régime* if the hunger got to be chronic and incurable. Everything is up in price,

especially everything foreign. In a general way, Mr. Jerome remarks, if native products are consumed, the cost of living is about the same in gold as in the United States, but if imported products are used it has risen by from 50 to 100 per cent. House rents, amongst other items have risen enormously, so that dear though they are in the United States, abominably dear most people tell us, a house which could be obtained for £20 per month in the Northern Republic, costs £50 per month in Mexico City, and business houses have to pay in proportion. In the suburbs of the city rents are almost as high as inside. But the trade of Mexico expands, and was last year fully £10,500,000 higher than in 1905, imports alone having risen by £4,200,000 in spite of the apparent decline caused by smaller receipts of Mexican coins minted in the United States.

And the country is being opened up by railways in a way we hardly realise in this country. It is, indeed, the complaint of our Consular agents that the attitude of British merchants and manufacturers towards the trade of Mexico is "very pusillanimous." We are allowing the Yankees to grasp it all, or too much of it, and to edge us out. All the Consuls more or less insist that if British merchants and producers would exert themselves they might do a much larger business with Mexico than they do now. They ought to study the wants of the people, to print their catalogues in Spanish, to send out capable travellers, and otherwise make effort to obtain a larger share in the growing business of the Republic. Perhaps when the Royal Mail Service to Mexican ports is re-established in October next, a service that has been discontinued since 1888, a beginning of better things may be seen, particularly if this vigorously managed old steamship company puts, as it is said to be about to do, a type of vessel into the service on a par with those of the French and German companies. It is the generally expressed opinion, says Vice-Consul Nunn, of Vera Cruz, that a fast British line could not fail to secure a very important passenger trade outside of the cargo part of the business, and the cargo trade ought also to increase. Why is it, for example, that nearly all the electrical machinery and appliances, of which Mexico is absorbing enormous quantities, should be procured from the United States? Why are all the towns that have tramways, and nearly every Mexican town has this means of transport in some sort, compelled to go north instead of east for their rails, their motors, their cars, for everything they require? That the British manufacturer should be able to supply these things of as good quality as, and at lower prices than, the Americans, we have no doubt whatever. All that is apparently doubtful is their willingness to try. Look at the great work Messrs. S. Pearson and Son, Limited, are now carrying out at the port of Salina Cruz, the pacific terminus of the Tehuantepec National Railway. This firm has been building there for the past seven years an immense harbour, a dry dock, and other appurtenances of a first-class port. The work is being "most excellently done," Mr. Vice-Consul Buchanan says, and when completed Salina Cruz will have an absolutely safe harbour, with one mile of docks equipped with the most modern electric apparatus for handling cargo rapidly. Its dry dock will be the largest south of San Francisco, capable of accommodating any vessel now in the Pacific trade. Upon this splendid enterprise Mexico is spending about £4,000,000, and there seems to be no doubt at all that when the port is fully open it will do a large business. The Tehuantepec Railway alone, which is to be worked by the Mexican Government in partnership with Messrs. Pearson, is expected to handle through Salina Cruz at least 500,000 tons of freight during this current year.

The Trade of Canton.

One gets some idea of the way things are progressing in China by reading a report like that of Mr. Acting-Consul-General Sly, on the trade of this, the most famous trading city in China, because the one longest known to Europeans, for the past year. It gives the volume of the Canton port trade for 1906 at £15,489,000 nett, and the revenue collected at the port by the Imperial Maritime Customs was £520,352. In spite of the disastrous effects of the typhoon in Hong-Kong, on September 18 last, by which the traffic in the river was seriously hampered through the damage done to shipping, the aggregate business done shows no diminution, and fully 90 per cent. of the piece goods trade of the port consists of British manufactures, the only other country supplying Canton with cotton manufactures being Japan. Canton is still the chief port for opium, and we are sorry to see that the foreign opium imported in 1906 was larger in quantity than in any previous year, reaching 11,145 piculs. Yet it is stated that the consumption of both foreign and native opium in the Canton district has fallen off respectively 20 and 40 per cent., and that is a good sign. Another large article of import is what is called kerosene oil, and the dominant position in this trade is in the hands of the Standard Oil Company of New Jersey, which appears to supply a very cheap oil called the Eagle brand, as well as a much dearer finer quality. Out of a total of 13,003,000 gallons imported at Canton last year, 8,324,000 gallons came from the American company 5,104,000 gallons from Sumatra, and only 454,000 gallons from Borneo. The Standard Oil Company's business was said to be double that of 1905 in the past year, while other producers did a smaller trade. In former days Canton was an important centre of export for China tea, but that trade has now sunk to very small proportions, although last year about 200,000 lbs. more were shipped than in 1905. Unfortunately, says Mr. Sly, this increase does not point to a revival of the trade. There are no indications of a larger consumption in the United Kingdom, but rather the reverse, "although the teas met with a good reception in London." But this trade has fallen off from 9,000,000 lbs. in 1891 to only 850,000 lbs. in 1906. The only hope of improvement lies in a low exchange and low prices, but of low prices there seems to be little prospect. A change may also come in the public taste which is capricious and varies in a mysterious way, and there have been indications of late in this country that the taste for China teas is beginning to revive.

American Business Notes.

In one respect the weekly exhibits of the New York Associated Banks continue to improve; there was again an increase of over £138,000 in the surplus reserve, which was raised last week to £1,995,200, against only £858,000 at the same date last year. Loans and discounts have shrunk by another £1,600,000, and deposits are £2,220,000 less. This last reminds us that the improvement in the proportion of reserve to deposit liabilities is really the outcome of increasing poverty, and during the week the currency possessed by the banks fell off by £417,000, thanks to a further withdrawal of £190,000 in specie and of £227,000 in greenbacks, and if no relief had been given to the market by the Government we fear the immediate outcome of a superficially improved bank display would have been increased stringency in the money market. As it is, call money alone has been easy, for much the same reason that we have had cheap short money rates in London. Holders of credit are quite willing to lend it for a day or two at low figures, because they dread lest a sharp advance in rates might take them by surprise. Time loans, however, have been in keen demand at from 6 to 8 per cent., and there cannot be a doubt that these rates would have bounded up still further but for the action of the Secretary to the Treasury.

Discerning the approach of danger, Mr. Cortelyou announced in the end of the week that Washington Treasury would make deposits of Government money with the Banks week by week for a period of not less than five weeks. These deposits will be handed to the National Banks in New York, Boston, and other points

in exchange for approved State, municipal, and railroad bonds lodged as security, the understanding being that the money may be called back again after January 1 next in instalments to be fixed by the Secretary. We are inclined to think this is a wise step on Mr. Cortelyou's part, provided the liberation of Treasury balances is not made on too liberal a scale. Later reports say that £1,000,000 a week will be let loose weekly for at least six weeks, and that should do no harm. Were money to be poured out too freely the danger of a renewal of shipments of gold to Europe would probably again become prominent and renew the nervousness of the market. So far no evil effects have been produced, although another £200,000 in gold has been withdrawn this week for shipment to the Continent, half of it in spite of the exchange. The New York exchange has been going down these last few days, and it is now impossible to ship metal except at a loss. But some amounts are being taken for Canada.

The Rock Island Company, one of the Standard Oil "holding" companies, is said to have lost £1,000,000 by its sale of the Chicago and Alton line to the Toledo, St. Louis and Western Company, but Mr. Harriman is all right, which is a great comfort, surely! Has he sold out beforehand, or does the Union Pacific now own his stock, or the Oregon line, or the Southern Pacific, or does the Central Pacific now carry his paper as transient owner? Never you mind, inquisitive reader; rest content with the assurance that Mr. Harriman's interests "are safeguarded" in the new deal.

Some extraordinary revelations appear to be attending the investigation under the Public Utilities Act of the State of New York into the formation of that New York tramways combination known as the Inter-Borough Company. It is asserted, for instance, that the cost of the electrification of one short tramway line was £1,200,000 per mile, and that another line, on which horses are still used, involved an expenditure in construction of £400,000 per mile. No official summary of the evidence has yet been made public, but that is the story. The Commissioners engaged in the investigation are said to be encountering extraordinary difficulties, amongst others the loss of the books of the old Metropolitan Company, which are said to have been burned. According to one paper £80,000,000 of "water" has been poured into this combination, and if facts like these are in any measure true, the public indignation against the formation of combines of this description will again be heated to a white heat.

On May 1 next year the Hepburn Act, passed in the last session of the United States Congress, comes into force. The main purpose of this statute is to prohibit the owning of mining and manufacturing businesses by the trunk railroads of the Republic. Such railroads are after May 1, 1908, forbidden to carry any article or commodity other than timber and the manufactured products thereof from one State to another, if said products are manufactured, mined, or produced by the railroads or under their authority. Articles or commodities necessary or intended for their own use may still be carried by the railroads, but in all other respects they are to be put back into the position of mere common carriers. What will happen in consequence of this new law? A fresh crop of holding companies, as they are called, will be brought into existence. Already it seems the Buffalo, Rochester and Pittsburg Railroad has formed the Mahoning Investment Company to take over its coal lands, which have been transferred to that company for a nominal consideration. In all probability the big companies will follow suit.

Take as an example the Pennsylvania Railroad, which has a controlling hold over the Pennsylvania Steel Company and the Cambria Steel Company, two manufacturing concerns still independent of the United States Steel Corporation. The capital of the two together, including debt, comes to about £15,500,000, and quite a big "merger" or holding company may be formed out of such assets as these. The Reading Company is in even a more peculiar position, since it is nothing but a holding company, the whole stock of the Philadelphia and Reading Railroad and of the Philadelphia and Reading Coal and Iron Company being in its possession besides other properties of a similar kind. Will the Reading Company be dissolved altogether, and the property combined under its control be separated up again and forced to stand each upon its own basis? Clearly the Reading Company cannot well form another company to take over its coal properties, and we doubt whether it will be legal for it to remain possessed of the railroad.

Problems of this description promise to afford much scope for the ingenuity of American financiers and corporation builders during the next eight months, and the consequences may be altogether different from what most people now anticipate. As is well known by those who study American railroad affairs these big and other railroad corporations that own or control coal and iron works habitually conduct their business so as to make large profits for the railroad regardless of what may happen to the subsidiaries. This is peculiarly the case with coal mining, and a striking illustration of the effect of this policy is afforded by the report of the Lehigh Valley Railroad Company for its fiscal year ended June 30 last. The railroad company is generally more or less prosperous, and of late years has extended its business in many directions besides mere coal carrying, so that thanks to a liberal expenditure of capital and of money taken from revenue it is now in a strong position and capable of controlling and handling a good deal of through business with the West. For the past year its common stock has been raised from 5 to 5½ per cent., and as 3 per cent. of this is to be paid for the second half of the year the assumption is that the stock is now again to be upon a 6 per cent. basis. After doing this, and assigning $2,069,000 to additions and improvements out of the earnings of the year, there was a surplus of $2,027,000 left over, the largest exhibited for the past three years, before which dividends had been for a time entirely suspended and deficits in possession. But what is the position of the coal company? It puts out a large quantity of coal every year, all of which is carried by the controlling Lehigh Valley Railway Company, and it makes next to no profit. The profit goes into the haulage rates charged, and appears in the nett earnings of the railway company. It is precisely the same with the Reading properties and the New Jersey Central, also controlled by the Reading company, and doubtless with all the other monster corporations of a similar character. Suppose, then, the effect of the Hepburn Act is to compel these railroads to release the coal properties altogether, to sell them outright, will these properties, being put on an independent footing, endeavour to make profits on their own account? And if they do, will not something very like confusion be introduced into this department of United States joint-stock finance, and a very pretty agitation arise against railroad freight charges? All that is possible, but no more. The railroads will be too powerful for the Government, as usual.

Colonel Pope, of the Pope Manufacturing Company, has declared that the quick assets of that corporation are several million dollars more than the liabilities, adding that "the business will go on without interruption." We cannot find warrant for a bold statement of this kind in the balance-sheet exhibit, which, on the contrary, reveals the pinch of poverty and comparatively little in the way of liquid assets. Amongst the assets set forth in the balance-sheet we find no less than $14,433,000 set against goodwill, trade marks, &c., out of a total of about $19,000,000 covering plants in operation, plants not working, and plants under construction, as well as $1,740,000 of "investments" in other concerns, which investments do not seem to be of a very realisable character. None of these items can be described as in any degree liquid, and we cannot trace much that would bear that description elsewhere. Accounts receivable from the public amount to only $544,000, a considerable decrease on the previous year, and $1,793,000 is set down as due by the Pope Motor Car Company, but this fat working total appears to include an item of $1,000,000 representing dividends formerly declared by that company but never paid, and never likely to be, since there are no funds available. Cash in hand and

notes receivable sum up to only about $120,000, and that, together with the accounts receivable, seems to be about all the liquid assets the company possesses. But it owes $1,300,000 to its bankers, and its accounts payable of all descriptions, including customers' deposits, exceed $621,000. Even on the show made for the year ended June 30 last the nett deficit was about $346,000, so we do not understand the grounds upon which Colonel Pope made his statement.

A week or two ago unfavourable rumours arose about the Allis-Chalmers Company, the great manufacturers of mining and other heavy machinery. It was said to be in a position somewhat similar to that of the Pope Manufacturing Company, but its chairman has issued a statement denying that there is any question whatever of appointing a receiver, and characterising the report as libellous. He declares that the quick nett assets of the company in the form of accounts receivable from perfectly solvent corporations "exceed by three times the current liabilities." He adds, however, that when the banks "set down" or restrict loans to companies in a proper position to ask them, there is bound to be some delay in making payments, and he roundly accuses the City of New York of failing to meet its engagements. "It owes us a large amount of money," he says, "and although we have offered to take bonds at par we have yet received no payment." Perhaps now when the Corporation of New York has reluctantly decided to offer 4½ per cent. interest upon the money it seeks to borrow this debt will be paid. Anyway, the fact that money is owing from such a quarter might well excuse the Allis-Chalmers Company for any little delay in meeting its own floating engagements as they fall due.

In their always interesting circular upon the affairs of Wall Street Messrs. Harry Clews and Company mention that the estimated shrinkage on the values of securities dealt in there since the beginning of the present year has been approximately £600,000,000. That beats our market, much though it has suffered, and Messrs. Clews are quite justified in drawing attention to the fact that so far this enormous diminution in the market prices of stocks used as the basis of credit has occurred without producing any serious failures or anything like a destructive panic. They are not, however, sure that the liquidation is over, and neither are we, so that the testing time may be yet to come. And shrinkages like these do not represent wealth lost to the aggregate amount of the decline. Much of it is only gas let out. The inflators have not secured the wealth they hoped to draw from the multitude, that is all.

Two new big trusts are said by a Washington correspondent of the *Manchester Guardian* to have been just formed in the United States. One is to have a capital of £24,000,000, and its purpose is to control all the print paper and sulphite mills in Wisconsin, Minnesota, Michigan, Illinois, and Ohio. The Standard Oil Company is believed to be behind this trust, although nominally the mixture has been prepared by the International Paper Company. It will practically create a monopoly, as every print mill and sulphite plant with any considerable output has been taken in. The other trust is to be known as the General Biscuit Company, and its capital is only £6,000,000, which looks awfully modest in the circumstances. The headquarters is to be at St. Louis, and no less than 100 independent biscuit-making companies have been brought into the combination, which is financed by a private banking house and a trust company in New York. We wait for the day of the trust that shall embrace and combine all other trusts, and "economise" for the consumer by abolishing presidents, legislatures, elections, and campaigns.

The board of the Erie railroad has declared half-yearly dividends at the rate of 4 per cent. per annum on 1st and 2nd preference shares, payable in 4 per cent. warrants, the form and duration of which is to be 10 years. That is to say, the company in spite of a fine display of revenue has no free money, cannot spare cash to pay dividends, because it requires all it can gather to meet its capital expenditure, yet its gross income of $53,915,000 for the year ended on June 30 last showed an increase of $3,912,000, of which $1,618,000 it is claimed remained as addition to the nett income of $15,748,000. The total free income from all sources, however, was $84,000 less at $16,223,000, but there was a surplus on the books, after meeting fixed charges, of $1,706,000 against $534,000 a year ago. And, as we have observed, the company is desperately hard up.

Passing Events.

The Parliamentary session has ended. It has been a long and arduous one, and many times have the members felt that they were wasting their time, for it is an earnest House of Commons this, determined to effect reforms of all descriptions, busy making laws, and there are results to its labours greater than the prominence given to the failures and baulkings might lead people to think. In the 131 days to which the labours of the session extended, 56 public Bills have been elaborated and passed. We have had a Patents Bill, a reform in the Company laws, a Transvaal Loan Act, an Army Bill, a Small Holdings and Allotment Act for England, and many others. Both Houses are, therefore, entitled now to enjoy their well-earned holiday.

Australia is not at all happy over this new tariff sprung upon it by the ultra-Protectionist Federal Ministry of Mr. Deakin. As we said last week it is exciting quite as much hostility in some of the colonies as in the cycle trade here in Birmingham and in Lancashire. Sir John Forrest, ex-Treasurer of the Commonwealth, Sir W. Lyne's predecessor, roundly declares that so far as the proposed preference to Great Britain is concerned "the new tariff is largely illusory," and that "the figures sketched by his successor are inaccurate." Sir John is a West Australian man, and naturally his mind is imbued with the prejudices of that colony. These are so emphatic against the tariff as to raise the question of separation from the Commonwealth, and we are disposed to fear that something very like disruption is likely to be one of the fruits of this injudicious, crude, and altogether unwise measure, a measure not of protection but of foolish exclusiveness, the consequences of which must be immensely beneficial to the rivals of Australia—in the wool trade, for example. South America, in fact, ought to celebrate the establishment of this prohibition tariff by appointing a special annual holiday in commemoration of its imposition, a holiday into which might be gathered some score or more of the partial *chomages* enjoined by Mother Church. How do the Protectionists in Australia expect to be able to keep up, still more to increase, the demand of the world for their raw products if they are going to shut out the world's manufactures? Their ambitions are too ridiculously blind to bear scrutiny, and we can do nothing except remonstrate and try if possible to bring the hot heads in Melbourne back to reason. They are not neglecting their own interests, by the way, these gentlemen, for they have taken care to pass a law doubling their salaries to £600 each per annum. What would be thought of the London County Council, which in an imperfect way rules over a much larger population than that of the entire continent of Australia, were its members to at one and the same time impose a severe *octroi* on citizens and vote themselves handsome annual stipends? The case is nearly enough analagous to afford a suggestive illustration.

Foreign countries continue to enjoy a trade prosperity similar to our own, at least most of them do, and the aggregates for the six months shown in the "Accounts relating to the trade and commerce of certain foreign countries and British possessions," issued by the Board of Trade, show us that the German import trade rose by nearly £12,000,000 in the first half of the current year, and the export trade by nearly £23,000,000. The trade of France also went up nearly £10,000,000 on the import side, and almost as much on the export side, while the increase in the imports of the United States of North America for the same period has been roughly £24,000,000, while no more than £17,000,000 in exports. These summaries correspond fairly well with the details

as given in the accounts of the various countries or the telegraphic summaries sent over by correspondents. Other countries embraced in the fuller returns accompanying the summaries from which the totals just given have been drawn, do not show a like progress, yet the imports of Russia for the first three months of this year are £1,000,000 larger than they were for the same three months of 1906, and nearly £5,000,000 larger than those of two years ago. Russian exports though are declining, or, at any rate, those for the first quarter of 1907 are lower than those for the same quarter of either of the two preceding years. The trade of Spain is also unprogressive on both sides of the account, exports just about maintaining the previous level, and imports showing a slight decline, comparison being made with the first five months of this year and last. The trade of Italy, however, shows expansion on the import, but not on the export side, and much the same may be said of Austro-Hungary. Indeed, the import trade of that empire is down by quite £2,500,000 compared with a year ago, while the decrease in the export trade is only about £1,000,000, the totals covering the five months.

Our Right Hon. Lords Commissioner of His Majesty's Treasury have just published the report of the Commissioners of Customs for the past fiscal year, and from it we learn that, exclusive of Isle of Man and local taxation assignments, this division of the tax-gathering army collected £34,542,133 gross for the Exchequer. Drawbacks and refunds reduced this to £32,804,636, which is still a most respectable total, and £664,636 or 2.6 per cent. more than the budget estimate. But it is £1,590,184, or 4.6 per cent. less than the receipts for the previous year ended March 31, 1906. The lowered tea duty, the abolished export tax on coal, and some slight changes in the tobacco duties account for the reduction. In the amount paid into the Exchequer, which was £32,930,000, the reduction was £1,545,000 on the total for the preceding year. The cost of collecting this revenue is going up as a natural consequence of the greater number of duties levied, and amounted last year to £2 13s. 4d. per cent. on the gross, and £2 15s. 9d. per cent. on the nett amount gathered. For the year 1902-3 the percentage was only £2 8s. 3d. gross and £2 9s. 6d. nett. We shall have more to say next week on this report.

A correspondent in Scotland, who is well qualified to speak, sends us some interesting information about Mr. Alexander Macdonald's Railway Shareholders' Association. From this we learn that, as we should have concluded in any event, the support given to this gentleman has so far been insignificant. He held a meeting in Glasgow recently, which was but poorly attended, with no representative citizen or shareholder present. The stock represented only amounted to about 3 per cent. of the total capital of the Scotch railways. It will take a great deal of threshing to get up any enthusiasm for reforms, even if these reforms are of a practical description, upon which point we have as yet no evidence whatever. Self interest is driving the Scotch railways to reduce competition, to unite for the purpose of saving money, and, as our correspondent points out, the time for agitation was when dividends were high, not when the boards are giving evidence of courage and fair dealing by paying debts first and dividends afterwards. An outcry, however, never arises when boards are paying good dividends, but only when they are studying economy, struggling to cope with the evil inheritance left them by a former generation, an inheritance embracing excessive capital expenditure, waste in working, and many costly assets, whose capital burden and upkeep are not compensated for by the return yielded. When dividends vanish or dwindle to a few shillings per annum the shareholder cries out, and generally in so doing illustrates his perfect incapacity to deal intelligently with the property of which he is part owner.

Chili is not going to issue more paper money. Such was the assurance given to the Council of State by President Montt, and we have not the least doubt he meant what he said. If circumstances permit him to adhere to this resolution and to fulfil the further pledge given, to the effect that the redemption of paper money will certainly take place by the end of 1909, a recovery ought to be seen soon in the rate of exchange. Chili, though, is at present much embarrassed by the consequences of the disastrous earthquake of last year, a calamity of a most crippling description, and no one need be shocked or alarmed should Señor Montt's promise and anticipation fail of exact fulfilment. He and his Government will continue to do their best, and should command more of our sympathy in doing it than they have hitherto received; but they cannot perform miracles, and many years must elapse before the effects of the Valparaiso calamity can be obliterated.

We have not seen any document which more aptly illustrates the difficulty of governing India than the circular issued by the Simla Government and embraced in a series of papers relating to the Imperial Advisory Council and Provincial Advisory Councils of India just issued as a Blue Book. Among the suggestions set forth in this circular is one providing for the enlargement of Indian advisory councils. The Imperial Legislative Council in Calcutta or Simla is to be increased to 54, and out of this total, which includes the Viceroy himself, there are only to be 18 elected members. But these elected members are to be sent to the Council under an extremely narrow franchise, the general idea being that provincial electorates varying in size, say, 100 to 150, should be aimed at, and that the amount of land revenue giving the right to vote should not be less than Rs.10,000 per annum. All the other members of the Council are nominated under one category or another. It does not follow that the Council will not be, as it has been, a useful foil to the Government, but it is in no sense possessed of any real governing function, and as matters stand we do not see how any liberty to interfere in the government of the country can be conceded to natives by the British overlords. We hold the country by the sword, and will to all appearance continue to do so to the end. That is our fate.

One cannot help regretting that Lord Strathcona, marvellous though his vitality is, cannot hope to live to see the year 2000. He probably knows that, and his prophesying is therefore all the more free. By that year, he told some interviewer when leaving New York the other day, the population of Canada will equal that of the United States, and we shall have side by side two of the greatest and most prosperous countries in the world. We have no doubt his lordship believes that, for he is a man of infinite faith in all that concerns the booming of Canadian securities and the selling of Canadian land subject to the tyranny of King Frost, but we hardly think the future will shape itself exactly after this fashion, for the climate still counts.

We think the Mazawattee Tea Company will pull round in time, for many things are in its favour, but the process of recuperation is obviously destined to be slow and painful. Even were the trade done larger and more profitable than it is now, years must elapse before the losses inflicted by the retail shop aberration can be cleared away. Indeed, it seems not improbable, judging from the circular of the board printed on another page, that a more drastic sacrifice of capital than was ever expected will have to be made in order to restore the balance-sheet to a healthy appearance. What the writing-off must amount to cannot be guessed until the loss is measured, and that measuring in turn cannot be done before the appeal in the action of Fred Sage and Co., Limited, has been heard and decided. There should be many interesting things to talk about besides the losses of the Mazawattee Tea Company after the Court of Appeal has given judgment in this action.

An article well calculated to excite uneasiness in the minds of Home Railway stockholders appears in the September issue of the *Financial Review of Reviews*. It is from the pen of Mr. W. R. Lawson, and, like everything written by this experienced journalist, is full of pungency. He takes up the question of railway receipts and expenses, and enforces the lesson conveyed by railway figures in the past half-year. This lesson is that increases in gross receipts are more and more swallowed up by augmented expenses. An extra million of tons of coal exported, says Mr. Lawson, may add £100,000 to

the gross earnings of a half-year, but if it should raise the price of coal in the home market by 3s. per ton the railway companies may find a good deal more than £100,000 added to the working expenses of the succeeding half-year. And it is not only in the matter of coal, but in every direction that the expenses of the railway companies are eating in upon their gross receipts. Railways, too, like the Brighton and other southern lines, are losing revenue by the competition of other methods of travelling, at the same time that their expenses are going up, and at the back of it all is the improvidence of railway boards. Ever since the first iron road was laid down, a policy of blind extravagance has been followed. Capital has been poured out, not only on new lines, but on lines already open for traffic, on working stock, on stations, on changes of all kinds euphemistically described as improvements, until it is to-day probably true that the railway system of this country, if it had to be provided *ab initio*, could be laid down and equipped for something like half the capital now represented in the accounts of the companies. This signal recklessness will bring the holders of the ordinary stocks much sorrow in years to come. And in the matter of current expenditure it is, as Mr. Lawson says, "the ironical fate of railways to be always raising prices against themselves." Drastic remedies are inevitable, but who is to apply them? "When it comes to the point," this ruthless critic sums up, "money will have to be saved anywhere and everywhere, on swagger American expresses, on 3s. excursions to Skegness and back (262 miles), on duplicate and triplicate trains to the North, running most of the time half empty, and on suburban services conducted with a mixture of irregularity and eccentricity." Yes, economy must be established, rigorous economy, and even that will not save some of the companies.

Punch is first-rate on the Australian Tariff this week. An Australian "gum sucker," perched on a wall—the tariff wall—which has been raised by five new courses of dressed stone and a coping, is accosted by "Old Mother Country" with: "Deary me, you've been and raised the wall several feet. I shall never get over it." "That's all right, mother," is the cheeky retort, "I've not forgotten you. I've put an eight-inch footstool there on purpose for you." And a "5 per cent. preference," rickety, unsubstantial footstool it appears to be. But the illustration thus given of the real meaning and effect of "colonial preference" is most apt, and capable of penetrating the least tutored understanding.

A summary of the results for the first half of this year attained by the Swiss Bankverein has been circulated by the directors, but we have to confess that it is too allusive for our comprehension. The board of directors held a meeting at Basle on the 20th inst., and say that the details then submitted to them "indicated the continued satisfactory development of the bank's business," a further improvement being shown as to interest and commission accounts. This is excellent news, and by-and-by, when the year is completed, if not before, the full report will doubtless be supplied. Meanwhile, all we can note is that after meeting expenses and taxes, but without taking into account the balance brought forward, the profits of the half-year came to 3,044,914f. To the half-year's results interest and discount contributed 2,757,086f., commissions 1,222,162f., and syndicates, &c., 376,923f. The profits of the Bank of Basle, in which the Bankverein is largely interested, were approximately 800,000f. for the period from January 1 to June 19.

Mr. J. T. M'Caddon, chairman of Barnum and Bailey, Limited, has issued a circular to the shareholders announcing the "grievous disappointment" of the board that, owing to the backward spring and violent storms of early summer, together with general financial depression, the receipts for the season ended August 3 are approximately £24,000 less than in "corresponding period last year." But rigid economy has reduced this to a nett loss of only £5,730; yet, the best part of the season being already past, with only about 10 weeks remaining of the working year, there is no hope of recouping this deficiency in time. "Therefore the prospects of a dividend being paid this year are exceedingly remote." And Barnum and Bailey are both dead!

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and August 24, 1907:—

Revenue and Other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Aug. 24, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Aug. 25, 1906.

The Investors' Review.

The Week's Money Market.

BANK RATE 4½ PER CENT. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

So sharp has been the turn round in the Money market this week that we begin to fear lest reaction has gone too far. At the end of the week the quotation for three months' bank bills was still 4⅝ and 4¾ per cent., with, however, a weakening tendency and a somewhat greater inclination to work. Short money rates, of course, remained at 2½ to 3 per cent. In the beginning of the week the leading discount house still endeavoured to hold the three months' remitted bill rate at 4½ per cent., but this became impossible on Tuesday when the market found that the Bank had secured about £600,000 of the £740,000 in gold in from the Cape at 77s. 9½d. per oz. It also bought a West African parcel, raising its total purchase to about £700,000, there being no competition whatever. This fact, coupled with greater readiness on the part of the banks to buy, immediately excited a keen competition among the brokers for bills, and it soon became difficult for brokers to get three months' bank paper at anything better than 4½ per cent. Even full six months' bills were taken at 4⅞ per cent. The end of the week has seen some changes, but no hardening in issues up to three months, and to-night's quotations for 30 or 60-day Bank paper are 4-4½ per cent., while for threes the rate is often 4½ and more seldom 4¾ per cent. Six months' bills, too, are weak at 4⅞ per cent., and the market seems to think that buyers of the £1,500,000 renewal Treasury Bills, to be tendered for on Monday, will not do badly if they can get them at 4½ per cent. discount. Short loans eased to-day to 2 to 2½ per cent. on call, 2¾ per cent. on seven days' notice, and 3 per cent. for longer periods. The India Council got that rate for renewals for a month.

An influence that powerfully contributed to the revived confidence was Mr. Cortelyou's action in releasing Government funds to help banks to finance the harvest throughout the United States. This removed the fear of any immediate development of credit distress on the Wall Street market, and not only so, but swept away in great measure the prejudice of credit-dealers here against American bills other than "finance." After all, as they said, we always have great masses of good trade bills in the autumn, drawn in anticipation of crop shipments, and as long as the amounts do not become excessive, or as renewals are not pressed upon us in too great masses, the business is safe enough. Hence American bills have been plentiful and freely taken at the current quotations. In the middle of the week, indeed, three months' bills of this class were bought at 4⅛ to 4 1/16 per cent., and only towards the close of the week did the market show a disposition to settle upon 4¼ per cent. as its minimum working rate. The mood soon passed, as noted above. The rate for four months' bills, which are now a January maturity has, on the other hand, inclined to stiffen a little, and was yesterday quoted at 4⅞-5 per cent., a rate which holds.

Is the prospect one of comparatively easy money throughout the autumn? We fear not. As in the stock markets, the lull this week in Money market fears and the accompanying depression in discount rates can only be looked upon as a passing phase. The Bank return shows undoubtedly improved strength, but the stock of coin and bullion is still nearly £1,000,000 below that of the same date a year ago, and last autumn we drifted on until a 6 per cent. rate became necessary. Much of the strength of the market and of its abundance of short credit is, moreover, due to the increased help given by the Bank of England, the total of other securities being now £2,341,000 higher than it was a year ago. Alongside this we have a decline on the comparison of years of £2,947,000 in the public deposits or Government balances, so that between these two items the market has upwards of £6,000,000 of credit at its disposal which was unavailable last year; and in addition to that we believe the Japanese Government agents have been diligently letting out money over the 10th of next month, and in some instances into October. To a great extent, therefore, the present comfortableness of the market is adventitious, and if discount rates are allowed to sink much below Bank rate we may very well see a renewal of gold exports. At the moment the Egyptian probabilities have been put out of sight, but it none the less remains almost a certainty that large amounts of gold will have to be sent by us to Egypt this autumn and winter, and possibly enough considerable sums to South America. If, in addition, Germany should develop an urgent necessity for fresh supplies of the metal, and if the French cheque should go back to a figure that would permit the Bank of France to strengthen its stock, which could still bear strengthening, then money and discount rates may advance with quite uncomfortable rapidity.

There was a report this afternoon that the French may compete for the gold in the open market on Monday. Altogether about £680,000 will be available, including £124,000 in bars from Australia and India. The price is unchanged, but the French cheque, instead of hardening, as many expected, is weak at 25.15f. It has been depressed by the Stock Exchange and Bourse settlement and the weakness of copper, but whatever the causes at work the door is opened to buyers of gold from Paris. The Germans, too, would compete if they could, but they are too much involved, like the Dutch, in securities they can neither sell nor pawn.

SILVER.

The drop in the spot price to 31⅛d. last Friday put an end to the sales of silver on Chinese account, and, at the same time, the demand from the bazaars became more urgent. Next week's steamer is the latest by which the metal can be despatched to reach Bombay in time for the September settlement, and the buying was on such a large scale that the shipment is said to be a "record" one. The cash price under this pressure was lifted with one small check to 31⅛d. per oz., and the forward quotation advanced to 31⅝d. per oz. in sympathy. After the first rush was over the buying slackened off a little, and quotations dropped back to 31⅛d. and 31 5/16d. respectively, but to-day there was a resumption of buying on the part of China and a recovery followed to 31 7/16d. and 31 9/16d. per oz. Tenders for Rs. 30,00,000 Council drafts on India last Wednesday reached a total of Rs. 1,73,00,000 in bills, and Rs. 15,00,000 in telegraphic transfers. The amounts allotted were Rs. 27,74,000 in bills and Rs. 2,26,000 in transfers, applications at 1s. 3 31-32d., and 1s. 4d. per rupee respectively receiving about 15 per cent. The amount to be offered next week is reduced to Rs. 25,00,000.

The Stock Markets.

When the stock markets opened on Monday after their week-end holiday the firmness shown on the previous Friday was maintained, and for the rest of the week prices have tended to improve—at any rate, until yesterday, when a pause took place. The change is welcome, and is due primarily to the removal of the more immediate causes of dread. Mr. Cortelyou's action in releasing Treasury money to help the banks in the United States has had a world-wide influence in steadying the Stock markets and relieving fears about dear money. Our market was also helped by the fact that the Bank secured about £700,000 of the gold available in the open market on Monday. This gave a signal to the "bears" to cover, and, buyers appearing, jobbers made haste to put prices up. They have done so a little too fast, we fear, in their own interests, because a sharp advance in prices checks buying on the part of investors and outside speculators rendered timid by the bitter experience of recent years. The market accordingly has not had much outside business. Insurance companies have been picking up a few parcels of stocks, and there is a fair amount of small investment business going on; but the buying has never been vigorous or extensive, and it now looks as if such energy as there was has been exhausted.

Another cause which has assisted our market to steady itself and put on a general appearance of revival has been the adjustment of the enormous accounts open on the part of some of the largest firms on the Stock Exchange. They have not failed, and, as far as we can learn, are not likely to fail, but their losses have been so extensive since the beginning of this year, or earlier, that they have been compelled to throw over commitments in all directions. In the process of doing this markets have naturally been demoralised and altogether incapable of standing up to their misfortunes. Now, however, it is believed that the securities parted with have been lodged in strong hands, and as immediate danger in this direction has thus been removed greater confidence exists. Dealers are less afraid to transact business, but an improvement of this kind has reference only to the position of the Stock Exchange itself, and does not immediately exercise any appreciable influence in stimulating business outside. After all, the speculative account exists still; it has only been redistributed, and unless some radical change occurs in the temper of moneyed classes everywhere all we can enjoy is a transitory period of comparative calm. In other words, the liquidation is not by any means ended, either here or abroad, and by-and-by we may be certain that selling will have to be resumed. The monetary position is nowhere massively strong, and as the rates charged for the use of credit again advance, as they are sure to do between now and the end of the year, a further mass of unsaleable securities carried on borrowed money will have to be jettisoned. What, for instance, is the position of the great underwriting account? For years back securities have been underwritten by certain people in the Stock Exchange and their clients outside, and only a small proportion of the commitments thus entered into have been completely liquidated. Now and again we heard that such-and-such an issue had been fully subscribed by the outside investor, but that was the exception, and the rule has been greater or less percentages of the issue left on the hands of the underwriters. Hence the crippling of so many large houses, hence the necessity for periodically redistributing the load. And it is an exhausting load, no matter where held; therefore, we look for a resumption of the liquidation at no distant date. For this reason it is necessary to continue to urge upon outsiders who may be holding stocks on borrowed money or carrying them

on open account inside the Stock Exchange to neglect no opportunity such as the one they now enjoy to lighten their commitments. Wherever interest paid is costing more than interest or dividends received holders of stocks in pawn should disengage themselves, rescue what they can on every rally.

Consols and Other Trustee Securities.

Actually Consols have rebounded to 83, but the price is a little wobbly around that figure, and no one need be surprised to see it again decline. The recovery, however, has had a cheering influence everywhere, but no Municipal stock, except some of those of the metropolis, has altered for the better in consequence during the week. Nor have Colonial stocks displayed any inclination to harden. On the contrary, they either rest at previous quotations, or display a tendency to fall back, Victorian 3½ per cents. being weaker, as well as South Australian and one of the Natal issues. The wonder is that all the hubbub excited in Australia over the new tariff has not alarmed holders of Colonial stocks, and caused selling. Before all is over, it is likely enough to do that, for the new tariff is a deadly thing to Australian finance.

Foreign Government Bonds.

Quite a brisk recovery has occurred in the market for these securities, just because French and German bourses have taken their cue from us, and established an appearance of strength. Argentine and Brazilian bond issues have improved, as well as some of the Chinese loans, Bulgarian bonds, and Japanese issues. Russian bonds, too, have risen on the week, and the 5 per cent. loan of 1906 almost touched 85 yesterday, but the bonds of the Province of San Paulo have not been strong, and in no part of the market has business been extensive. German 3 per cents., however, have benefited by the passing away of alarm about the imminence of dear money, and French stocks have been steady.

Home Railway Stocks.

Selling has almost stopped in the preference issues of our railways, and although several of the Great Central preferences, together with South-Eastern 4½ per cent. guaranteed, have again lost ground, the majority of the other rare changes have been favourable, Brighton and Chatham issues being noticeably strong. It is in the ordinary stocks, however, that the market has shown most elasticity, and the recovery in these has been so brisk that distressed holders are getting a chance to sell, which they ought not to miss where the weaker classes of stocks are concerned. We do not counsel the selling of any of the "heavy" stocks, but the purely speculative counters, deferred stocks, and such like, carried on borrowed money, ought to be parted with when the market is rushing up.

Indian, Colonial, American, and Foreign Railways.

A few improvements are visible in Indian Railway stocks, but there has been next to no business done in them throughout the week, and in the Colonial group the only really active market continues to be in Canadian Pacific shares and Grand Trunk ordinary and third preference stocks. The German price has been well maintained for Canadian Pacific shares, thanks principally to the cessation of German selling, but it has been otherwise with the Grand Trunk stocks, at any rate since the monthly traffic statement appeared. It quite broke the heart of the "bulls" for the time being; and no wonder, since a gross increase of £81,000 or so in the receipts of the combined system has resulted in a nett gain of only £300. The main line shows an increase of £66,700, and only £12,200 of that remained as nett. Even that would have been comfortable enough had it not been swept away by losses on the Canada, Atlantic, and Detroit lines. It was just, indeed, about the sum the least sanguine of the market "bulls" looked for, and now they do not know what to think, but there was something of a stampede to sell when the figures came out. The 5 per cent. debentures of the Rhodesian Railways have also been depressed to 81¼, and Mashonaland Railway 5 per cent. debentures are now only about 70. We keep wondering how the Chartered Company is going to maintain the dividend. Has it benefited much by the help of Mr. Moreton Mandeville?

Yankee and Foreign Railroads.

The rise in American Railroad shares has not been conspicuous this week, for the simple reason that business has been narrow. Neither in America nor here has there been the least inclination on the part of the public to come in and buy. And the actual news coming to hand is not very encouraging, except to the "bears." Towards the end of last week the Southern Railway had to announce a reduction in the dividend on its preferred stock to 3 per cent. per annum, as against the previous 5 per cent., and the directors of the Erie Railway have this week taken the foolish step of declaring a scrip dividend upon the company's first and second preferences. The dividends will be paid in warrants redeemable ten years hence, and they will meanwhile bear 4 per cent. interest. This means, as the *Morning Post* points out, a forced loan of about £600,000 taken from the stockholders, and at a price which the company could not possibly borrow at in the market. Indeed, the scrip of these paper dividends appears to be selling on Wall Street now at from 40 to 50 per cent. discount. Facts like these have anything but a reassuring influence upon the public mind, and we must regard the improvement that has taken place in prices as merely the product of "bear" closing. That has driven up everything a dollar or a few dollars, or mostly everything except the preferred certificates of the Southern Railway and Erie preferreds, but the public is not interested, and those who are holding any of these securities in pawn should promptly take advantage of the rise to clear out. Good American Railroad bonds, it should be noted, continue to lose ground in most instances, and that is more eloquent of the real state of the market than any mere spurt in the prices for speculative shares.

A much more cheerful appearance is presented by the Foreign Railway market. Argentine Railways in particular have shown a welcome elasticity, accompanied by a moderate amount of business, mostly, we hear, investment business. It results that all the leading issues are sensibly better on the week; in fact, some of them have gone up so much that those who thought of buying are again fended off, so to say, and the market in its haste has spoilt its business. Mexican Railway stocks have not rallied in the same fashion, and the securities of the Manila Railway Company have been depressed. Egyptian Delta Light Railway shares have also lost ground, partly because of the indifference of the public, but more because the effects of the Egyptian financial breakdown have by no means been obliterated. There is much concealed mischief there. A sensible recovery has taken place in United Railways of the Havana stock, and it frequently touched 89 yesterday, strengthening all Cuban Railways, although prices of the others have rarely changed.

Banks, Breweries, Commercial and Miscellaneous Securities.

The most noticeable movement amongst Bank shares this week has been a prompt advance in those of the Standard of South Africa to about 69. This is due to the maintenance of the dividend and the rather larger amount carried forward. Mainly because of the rather gloomy anticipations of the chairman at the last half-yearly meeting, the market had made up its mind for a disappointing return, hence the sharp recovery. Other Bank shares have also tended to harden, although by no means uniformly, but the changes are rarely more than a fraction one way or another. Land Bank of Egypt shares, for instance, have been put up ½ with very little doing in them here, and Bank of New South Wales shares are down the same fraction, without more evidence of selling. Brewery securities may be called steady, although the £10 preference shares of the Camden Brewery are now down to 3¾. Some of the American Brewery shares, however, are showing

fractional improvements, and debentures are now and then quoted at rather better prices. Dock securities are firm, with improvements in some of the London Dock issues, and in the preference stocks of the Surrey Commercial Docks.

Commercial and Industrial shares and debenture issues call for little notice, most of the movements, which are a little more numerous than of late, being of slight importance. It may, however, be noted that Mazawattee shares are depressed on the circular issued by the board and printed in another column, and that some weakness has been shown in Shorts' preference, Teetgen's preference, and several of the Nitrate share issues. Motor shares, on the other hand, are rather firmer, with a good deal of business going on in Daimler ordinary and a little in Darracq ordinary. Coats's ordinary shares have also gone up, but the preference have fallen quite as far, and London business in neither is of any weight. Lister and Co.'s shares show a declining tendency, and the debenture stock of the Industrial Dwelling Company has been put down £1. Take it altogether, however, this great mass of stocks and shares has kept fairly steady. Waring and Gillow's shares and debentures, it may be added, have again improved. The worst decline of all, perhaps, is another drop of 5 on the week in the profit-sharing notes of the Underground Electric Railways Company. The cause of the weakness here is not far to seek, we are sorry to say, for although the revenue of the lines controlled by this company is improving, it is still very far from giving promise even of yielding sufficient nett income to pay any appreciable interest on the greater portion of the stocks emitted by the various subsidiaries. Yesterday's *Times* money article contained an interesting analysis of the position of London passenger-carrying organisations, which is only too depressing. Leaving out the London United Tramways Company and the London County Council Tramways, whose accounts are only only published once a year, the result for the others is a weariness to the flesh, as the subjoined table indicates. The nett profit of £23,326 is, as the *Times* points out, equivalent to 4s. per cent. per annum on a capital of about £25,000,000. There will doubtless be some improvement during the current six months, for the first half of the year was peculiarly adverse to London street passenger-carrying companies, but no improvement that can be hoped for is likely to put all of these lines in a steady dividend-paying position.

* Net profit.

Amongst the remainder of the list we need only draw attention to the further sickening relapse in the stock of the London General Omnibus Company, which has lost 14 on the week. An analysis of its accounts for the past half-year will be found on another page, and deserves the earnest attention of stockholders. Those who have been faithful readers of this Review during the fifteen years of its existence must have long ago parted with any investment in this company they may have at one time possessed, for we have never failed to warn the public of what was coming. The end was certain sooner or later, no matter what happened in the interval, and it has now been merely hastened by the new conditions under which omnibus business has to be conducted. The company is wholly without free resources to meet these conditions, and we fear even a drastic reorganisation can hardly now save its stockholders from severe loss. Financial, Land, and Investment stocks have been firm throughout the week, with good rallies in Hudson's Bay shares and in the stocks of the Peruvian Corporation. Financial Trusts, too, are steady, and attract a fair amount of investment business.

Friday Evening's News.

The Consol market tried this morning to get its money for the October account at 3¼ per cent., and a little was lent at that rate. But it soon hardened to 3½ per cent., and a good deal was also lent at 3⅜. "Plenty of stock about," we were told, and holders were "givers" at 3½ this evening.

Markets generally have been quiet enough, but firm, though with less going on than earlier in the week even in Home Rails. These, however, rallied again, especially the "heavies," and the market finished above the worst. Yankees were quite stupid, and Canadians dull, disgust still pervading the minds of jobbers in the Trunk market regarding the monthly figures.

Tintos dropped £1, and Copper things generally were out of heart. The shares of diamond companies are also weak on Continental impulses.

New issues have been almost forgotten amid recent excitement. Manchuria scrip closes ½ discount, and Durban new at 1½ discount.

THE WEEK'S PRICE MOVEMENTS.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The arrangement of the account on Monday was more or less a matter of routine, as the position open is still very small. Contangos on Kaffirs were much the same as a fortnight ago at 6 1/2-7 1/2 per cent. on the general run of things, but on a few of the more speculative, such as Rand Mines, Gold Fields, East Rands and Modders, rates were from 1/2 to 1 per cent. higher. In Diamond shares the charge on De Beers rose from 3 per cent. to 4-5 per cent., but New Vaal Rivers could be carried over at 4 1/2-5 1/2 per cent. against 5 1/2-6 1/2 per cent. last time, and Jagers and Premiers were continued at the old figure of 5 1/2-6 1/2 per cent. On Rhodesians rates were also the same as before at 1/2-1d. on Chartereds and 6-8 per cent. on the rest, West Africans cost 6 1/2-7 1/2 per cent., and that was likewise the charge on most West Australians. Australian Copper shares and the Siberian group were again continued at 6-8 per cent. and the principal Americans were arranged at 6-7 per cent.

The making-up list again showed a great preponderance of losses in the South African market, the largest being declines of 1/2 each in Central Mining, Ferreira, Crown Deep and Robinson. Modders fell nearly as much, Heriots were 3/8 down and falls of 1/4 or so were recorded in a number of others, including Geduld, Robinson Deep, and Village Deep. Diamond shares, on the other hand, were better, De Beers deferred being 5/8, Premier deferred 3/8 and Roberts Victors 1/4 higher. Rhodesians were mostly lower, but the change in no case exceeded 1/16, while Chartereds were unaltered and Tanganyika put on 1/16. West Africans continue to dwindle, and the principal West Australians as a rule were down, the only exception of note being a recovery in Kalgurlis. The Broken Hill group shared in the general tendency with losses of 7-32 in Proprietary and of 2s. 6d. in British and Block 14. In copper shares Tintos were made up with a rise of 1 1/4, Cape Copper ordinary and preferred put on 3/8 and 1/4 and Anacondas were 7/16 up, but Utah Consolidated lost 1 and Bostons fell 3/8. Siberian things were generally easier, but Indians hardened a little.

After the arrangement of the account had been got out of the way the Kaffir Circus became quite active. Most of the support came from the professionals, but brokers were heartened by indications of public interest and were quite ready to believe that the market was on the eve of a revival. The news that the litigation between the officials of the Witwatersrand Native Labour Association and Mr. J. B. Robinson is at an end and that Mr. Robinson is to be received back into the fold had a favourable influence, and strength was also derived from the fact that German operators were once more buying. General Botha's speech at Standerton last Saturday, on the other hand, had no effect. The tone of the market continued good most of the week, but the buying by the public proved after all to be only a flash in the pan and profit taking promptly became the order of the day. Rhodesians shared in the better feeling and Tanganyikas in particular were a lively spot, being lifted at one time to 5 7/8. Eldorado Bankets rose a little on the manager's report, which stated that the ore reserves had been nearly doubled during the past year and were now nearly three years ahead of the mill. Chartereds, too, hardened and Charter Trusts were lifted to 11s. In Diamonds Premiers were hoisted on rumours that the company had come to a definite understanding with De Beers regarding the marketing of its stones and had disposed of over £200,000 worth, but the advance brought out sellers. De Beers went up at first, only to fall back again on profit-taking from Paris, and Jagers after a sharp rise on a story that a big stone of very fine quality had been found also finished below the best.

Even West Africans woke up a little in sympathy, but it was a stirring of dry bones and they soon relapsed into their old sluggish state, while Egyptians did not enjoy even a momentary spurt. Australian issues were mostly left alone, but Horse Shoes and Kalgurlis came in for some attention and the Broken Hill group was supported by both Continental and Colonial operators.

Copper shares seemed disposed to take a rest just at first and prices were allowed to slip back, but Paris then bought Tintos with some freedom and this market was soon in full swing. Further information regarding the position at the mine, which, however, did not come from the company and was unofficially contradicted, stated that the fire, mentioned a week ago, was in a large block of over ten millions of ore and that it could not be subdued and would be allowed to burn itself out. It will destroy all the sulphur in the ore, which is worth 16s. per ton of ore, so that even if the efforts to prevent the fire spreading are successful the company stands to lose a considerable amount. The water trouble is even more serious, as the large dam is said to be quite empty and the smaller dams nearly so, and unless rain comes within the next few weeks there is little hope of relief until the spring. These adverse influences, however, were ignored by the market as strong support was given, and although the price fluctuated pretty widely from day to day the nett result was to leave the shares higher on the week. Other copper things went up on the improvement in the price of the metal and a somewhat improbable story that the leading producers and consumers had come to an arrangement for controlling the market. Tin shares followed the fluctuations in the metal, rising in the beginning of the week and closing below the best. None of the minor sections of this market was sufficiently in evidence to require any extended reference.

Salisbury Gold Mining Company.—During the year ended June 30 the ore crushed amounted to 63,688 tons or a decrease of 5,489 tons, but the yield per ton was rather better at 6.702 dwts. and the gold produced showed a reduction of no more than 639 ozs. at 21,342 ozs. Including miscellaneous receipts of £2,380 the revenue on working account was £91,267 compared with £95,061, but expenses were £5,122 less at £70,086 and the working profits came to £21,181 or about 6s. 8d. per ton against £19,853 or nearly 5s. 9d. per ton a year ago. To this was added £13,548 from the previous account and £120 from interest making a total of £34,849 out of which the customary two dividends of 10 per cent. each have been paid leaving £14,849 to be carried forward. The total development for the year was only 1,676 feet opening up 22,480 tons of ore, but the total tonnage developed, allowing 20 per cent. for waste on June 30 was 169,478 tons. Actual percentage of waste was nearer 25 per cent. and if the extra 5 per cent. is deducted the reserves amount to 161,005 tons, but a very considerable proportion of this is low grade. The general manager states that as in his opinion the heavy expenditure is now at an end he hopes to reduce the working expenses to about 18s. per ton for the current year, and looks for a nett cash profit of £20,000.

Boksburg Gold Mines.—In their report for the year ended December 31, 1905, the directors stated that the Anglo-French Exploration Company and Messrs. Farrar Bros. had agreed to lend jointly to the company a sum not exceeding £35,000, but this has not proved sufficient to put it on its feet and operations were suspended on April 24, 1906. Times have been unfavourable for adjusting the financial position by reconstruction, and a masterly policy of inactivity has been adopted and expenditure has been confined to the payment of licences, rents, &c., necessary to preserve the title and to the caretaker's salary and

administrative charges. Of course, the directors lament this state of affairs, and say it is the more unfortunate because the values of the developments in the No. 1 shaft have been quite satisfactory, the consulting engineer reporting that on the incline in that shaft the average assay value for 273 feet is 29.1 dwts. over 18.3 inches. Other prospecting shafts had reached the contact of the ore bodies, and although no payable ore was developed the reef in several cases had made in the shafts. Expenditure for the year was £15,954, of which £9,528 was on development and other work, £2,567 on licences and £2,689 for interest on loans, and in addition to the above-mentioned loan £2,033 had to be borrowed from the bankers.

Chillagoe Company.—For seven months of the year ended March 31 the company ran a copper and a lead furnace alternately, but the quantities of ore available exceeded the capacity of one furnace, and since August 1 one copper and one lead furnace have been running simultaneously. In addition to this, an additional lead furnace was started in the end of March to cope with the production of lead ores from outside mines, which had been stimulated by the high values ruling and still further extensions are now being made. During the year 34,469 tons of ore were treated for a yield of 1,619 tons copper, 2,261 tons lead and 384,089 ozs. silver, these figures representing increases over the preceding year of 442 tons of copper, 985 tons lead, and 153,827 ozs. silver. Receipts from sales amounted to £237,491 and with £62,625 from the railway, telephone and wharf revenue the total income came to £300,116 or an improvement of £129,170, and as expenses increased by £83,801 to £215,667 the working profits were £45,369 larger at £84,449. Railway receipts for the period under review rose by £23,756 to £87,627, of which £52,066 or £7,454 more was contributed by public traffic, while outgoings were only £2,720 heavier at £26,474, and the nett income from this branch was therefore £61,153 compared with £40,117 a year ago. To the above-mentioned surplus of £84,449 are added £7,500 for difference between book value of 25,000 Mungana shares sold and the price realised, £130 from transfer fees and £533 brought in, making a total of £92,612. Of this mineral lease rents, administration expenses, &c., took £11,963, debenture interest required an additional £7,475 at £24,915, and the depreciation allowance was increased by £2,115 to £12,080, after which £17,108 was written off preliminary expenses and £19,864 off mines development account, leaving £6,683 to be carried forward. Expenditure on new plant and reconstruction rendered necessary through its instalment amounted to £47,000, and with the satisfactory developments of mines within the influence of the railway the directors propose to increase the capacity of the works still further, at an outlay of £25,000 to £30,000. At the same time, the construction of the Etheridge extension has been pushed on and engines are already running over the commencement of the new line. When the Act for the building of this line was assented to funds were provided by an increase in the share capital, and no further addition is at present contemplated. More money than that now in hand would not in any case be required for about 12 or 18 months, and the directors consider it would be imprudent to incur a charge for interest sooner than is actually necessary.

Grenville United Mines.—During the six months ended June 30 this Cornish company treated 19,543 tons, with an average of 31.78 lbs. per ton. Sales of black tin realised £34,759, and with sundry small items the total revenue was brought up to £34,831. Of this expenses took £27,655, and one-fifth share of profits and dues to lessor £1,332, after which £1,000 was written off for depreciation leaving £4,844. Adding £234 brought forward, the disposable balance was £5,078, out of which dividends are paid of 1s. 4d. per share on the fully-paid shares and 4d. per share on the shares 5s. paid, and £578 is carried forward. The manager states that the development in the mine has proved the continuation of the principal chute of tin to the 320 West of Fortescue's, where its length and value have been maintained, the assay values being over 100 lbs. of tin per ton from the end and over 160 lbs. from the rise. No improvement has taken place at the 320 East, where the end is in a section of disordered lode, and no alteration in size or value is expected for at least another 20 fathoms. At the 305 East developments were at first unsatisfactory, but the main portion of the lode has now been discovered standing above and to the south of the level, with an assay value of over 100 lbs. This is now the most productive stope in the mine, and is expected to continue to be a highly payable one for many months to come.

Halkyn District Mines Drainage Company.—The directors of this Chester company indulge in rather quaint language in their report for the half-year to June 30, and tell us that there were decreases of 32 tons of lead and 213 tons of blade gotten, but the price of lead was well maintained, and the company benefited to a corresponding extent. Royalties from the mines within the drainage area amounted to £9,996 against £8,808 in the previous six months, which was brought up to £10,018 by bank interest. Expenses absorbed £1,251 of this, and with £340 from the previous account the disposable surplus was £9,108, out of which a dividend at the rate of 17 per cent. per annum is paid, leaving £2,684 still to be dealt with. Very wisely the directors have resolved to take advantage of the present high price of lead to redeem the debentures of £5,000 in January next. They have therefore placed £2,500 of the above sum to mortgage redemption fund, and intend to provide a similar amount out of the profits of the current half-year. No new discovery was made in the mines during the six months, but the prospects seem favourable enough.

Company Reports and Balance Sheets.

*** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns*

Commercial Bank of Australia, Limited.

Progress of a sort is made in the liquidation of the properties of this unfortunate bank, handled by the Special Assets Trust Company, Limited, but it is not progress that reduces the deficit to any appreciable extent. A year ago the contingent liability of the bank as guarantor for the payment of its old deposits in the Special Assets Trust was £2,920,000, it is now £2,617,000, a reduction of £303,000 in the course of the year, but the deficiency remains much what it was, the remaining assets being estimated at only £1,230,000, which leaves the shortage at £1,387,000, against which there is a Special Assets Trust reserve of £239,000. In the June half-year the bank's gross profits were £138,356, an increase of £10,200 on the corresponding half-year, but nearly £43,000 was absorbed in meeting the deficiency of the Special Assets Trust, and in adding £15,000 to its reserve so that, as working expenses and other charges of the bank itself took about £64,000, there was really very little free profit left. The balance brought forward was £13,825, and thanks to this the visible nett profit was brought up to £88,234, from which the loss of and reserve assignment to the Special Assets Trust were deducted. Out of the balance £5,000 was applied in reduction of bank premises account, and a dividend at the usual rate of 3 per cent. per annum, free of the Victorian income-tax, is paid upon the preference shares. All these assignments leave only £8,488 to be carried forward, or £5,337 less than was brought in. In some fashion though the bank seems to jog along and make a certain kind of progress. Its Government deposits are rather less for although the non-interest-bearing portion thereof is £37,000 up at £107,464, the interest-bearing amount is about £150,000 down at £409,645. Other deposits of the bank, however, are larger at £4,646,232, and the aggregate of the balance-sheet is £8,048,543. Among assets, coin, bullion and cash at bankers has increased by £58,000 to £1,075,143, but money at call and short notice in London is down £415,000 to £435,000, and evidently all Australian banks are finding plenty of local employment for their free balances. Government, municipal, and other stocks, debentures, &c., including £50,000 British Consols at 85, is an item up £17,000 to £145,950, and bills and remittances *in transitu* at £476,607 is also about £55,400 up, the total of what may be called available, liquid or pawnable assets being now £2,517,873. In spite of the writings down of bank premises, real estate has gone up about £6,000 to £451,110, and there is an increase of £504,000 in the confused item "bills discounted and other advances exclusive of provision for bad or doubtful debts," the total of which is now £4,915,663, the contingent liability of the bank figuring on both sides of the account as £163,897.

Bank of Victoria, Limited.

Gross profits for the half-year ended June 30 showed a further improvement of £8,812 at £86,866 at the cost of an increase of £2,045 to £40,223 in current expenses. Bank note and income-tax took an extra £240 at £2,844, and as the sum brought in was £1,122 less at £5,701 the nett balance amounted to £40,440 compared with £44,035. As usual, in this half-year the directors make no addition to the reserve, and they are therefore able to pay a dividend at the rate of 5 per cent. on the ordinary shares, which is the same as for the previous six months, but ½ per cent. per annum more than for the corresponding half of 1906, and to raise the carry forward by £2,752 to £12,400. The note circulation is less than £2,000 up at £126,370, but bills in circulation have risen by £105,785 to £734,414. Government deposits bearing interest have been reduced by £62,071 to £545,267, but those not bearing interest are a trifle higher at £20,604, while of other deposits those carrying interest are £310,674 up at £3,317,503, and those which bear no interest have increased by £47,078 to £1,574,250. Balances due to other banks are £4,065 down at £46,117 and contingent liabilities with their per contra entry are £124,008 larger at £405,030. Cash assets show a drop of £41,822 at £1,030,843, coin, bullion and cash at bankers being £44,825 lower at £1,307,513, investments £3,130 down at £183,040 and balances due by other banks £11,308 down at £40,372 against increases of £10,514 to £248,083 in bills and remittances in transit, £9,038 to £67,087 in notes and bills of other banks and £80 to £2,540 in stamps. A large addition of £472,685 appears in bills discounted and other balances at £5,711,940 and bank premises are valued at £261,750 or £3,883 more, while other real estate is £13,047 lower at £154,383 and the aggregate of the balance-sheet is £545,100 larger at £8,537,018.

Baker Street and Waterloo Railway Co.

The second full half-year of this company's operations shows that it is steadily growing in popular favour as a quick and convenient method of getting across London. Passengers increased from 6,700,805 in the December half-year to 9,030,065, these figures including the estimated journeys of season ticket-holders, which is a pity, although perhaps of small importance as a deranging influence on aggregates. The figures mean 382,192 per week as compared with 261,534 in the previous half-year. Gross receipts were £63,452 and working expenses £42,128 or less than 67 per cent. of the receipts. A nett revenue

of £21,324 thus accrued raised to £23,350 by £1,699 received as interest and £327 as rents of property; but after meeting debenture interest £13,220, general interest £2,000, and rents payable £1,385, there was only £6,745 left to carry forward or little more than enough to pay a dividend at the rate of 2 per cent. per annum on the preference stock, leaving £1,598,488 of ordinary stock a long way out of sight of any dividend from earnings. The amount carried forward to the end of the year will, the directors explain, be available for increasing the dividend on the preference shares from 3 per cent. to 4 "if the nett profits of the next half-year, with the amount so carried forward, are sufficient to pay the higher dividend." The directors have decided to postpone the Paddington Extension, and a new agreement has been made with the Underground Electric Railways Company defining its liabilities for interest and administration expenses "by providing that they shall be deemed to have undertaken and shall undertake to guarantee the payment of debenture interest, and also dividend at the rate of 3 per cent. per annum on the share capital until the postponed works mentioned in the agreement, including the Paddington Extension (unless such works or any of them are meanwhile abandoned by the company) are ready for opening to traffic." Sir George S. Gibb has been made chairman of the company in the room of Mr. Theodore J. Hare, deceased.

Great Northern, Piccadilly, and Brompton Railway Co.

A good start has been made by this tube line, as during the first complete six months of its operations it carried very little short of 12,000,000 passengers, and earned a revenue of £102,836, including £2,268 from season tickets. Advertising, transfer fees, &c., gave another £3,734, or £106,570 in all, of which expenses took £69,731 and rates and taxes £6,063, leaving a nett income of £30,776. Interest and rents received brought the balance up to £31,056, but debenture and general interest required £24,000, and rents £12,326, so that the Underground Electric Railways Company of London had to find £5,270 to make good the deficit in addition to providing the guaranteed dividend of 4 per cent. per annum on the share capital. The Holborn to Strand section is so nearly completed that the directors expect to open it for public traffic in December, and this extension ought to have some effect on the company's fortunes. At present it would seem as if the full earning capacity had been reached almost at once, and if that be the case, the outlook for the guaranteeing company is far from bright. The gross earnings for the six months represent an average of about £3,955 per week, yet the company was not able to meet its fixed charges without help. For the eight weeks of the current half-year the average is slightly lower and works out at about £3,934, not a very great falling off, but significant of much. In the meantime the capital expenditure amounts to £6,717,715, and a further £458,284, it is estimated, will be spent during this and subsequent half-years, while the debit balance already reaches £822,015, of which £554,466 has been obtained from the Underground Electric Railways Company and £265,000 is represented by the contractors' retention fund.

Mersey Railway Company.

This company continues to make headway at a fairly satisfactory rate, and although the train mileage in the past half-year was 1,320 less at 411,313 miles the number of passengers increased by 365,595 to 5,618,462 with a corresponding improvement of £1,865 to £39,898 in receipts. Season tickets yielded £722 more at £6,194, parcels traffic gave an extra £120 at £1,768 and with small increases in other receipts the total revenue came to £49,892 against £47,129. Expenses, on the other hand, only rose by £431 to £35,477 leaving the nett revenue £2,332 up at £14,415, to which was added £53 from general interest giving £14,468 to be dealt with. Fixed charges, however, took £16,958 and the British Westinghouse Company is therefore called upon to provide £2,481 compared with £4,736 a year ago and £10 is again carried forward as a debit. Of these charges the British Westinghouse Company once more disputes two items of £500 each, being the amounts carried to permanent way renewal fund and locomotive and generating power renewal fund, and the total involved under these heads now reaches £6,000. Capital expenditure was only £247 for the half-year, and as the company received £2,500 from debentures issued and £445 from sale of steam rolling stock the credit balance has risen to £13,465.

Cleator and Workington Junction Railway.

Receipts from passenger traffic during the six months ended June 30 were much about the same as in the corresponding half of 1906, but merchandise produced £1,280 more and minerals rose by £2,290, and the total receipts from all sources were £3,559 better at £35,783. Substantial increases, however, took place in locomotive power and traffic expenses and the expenditure came to £2,632 more at £23,057 or 64.43 per cent. of the income against 63.38 per cent. With a much larger balance of £452 brought forward the nett revenue was £1,314 up at £13,178, and as interest and commission required rather less the disposable balance after providing for the dividends on the preference stocks the distribution on the ordinary stock was raised to 5 per cent. against 3½ a year ago and 3 in 1905, leaving £227 or £226 less to be carried forward.

Isle of Wight Central Railway.

Receipts from passengers during the six months ended June 30 fell off by £387 to £8,822 and merchandise and mineral traffic also yielded less, so that the total revenue was £604 lower at £17,143. At the same time the saving in expenses was a mere £5 at £12,164, a drop of £227 in maintenance of way, &c., being counterbalanced by increases in locomotive and traffic expenses and in carriage and wagon repairs, and the nett revenue therefore amounted to £4,980 against £5,578. Balance brought forward, however, was £1,010 larger at £3,156 and with £28 from interest gave a total of £8,164; the total available was £422 larger and after paying rent charges and the minimum guarantee of £227 to the Newport, Godshill and St. Lawrence Railway, the interest for the six months on the A, B and C debenture stocks is met with £1,896 over compared with a surplus of £1,486 a year ago.

Isle of Wight Railway Company.

Gross receipts for the half-year ended June 30 dropped by £127 to £19,597, the decrease being entirely in the passenger service. Expenses at the same time were reduced by £106 to £9,702, and with a rather larger balance brought in the nett revenue was £44 up at £11,744. Out of this the fixed charges are met, together with the preference dividend, and the dividends paid on the preferred and deferred converted ordinary stocks at the rate of 4 and 2½ per cent. per annum respectively are repeated, leaving £224 or £49 more to be carried forward.

Somerset and Dorset Railway Company.

Traffic receipts for the half-year ended April 30 amounted to £91,150 or £38 2s. 1d. per mile per week against £88,266 or £36 18s. per week a year ago, but the proprietors derive no benefit from this increase as the line is leased to the Midland and London and South-Western Railways. Those companies paid the fixed minimum rent of £27,269 for the six months to June 30 and miscellaneous receipts came to another £7, or £27,276 in all, of which rent charges, debenture interest and the dividend of 3½ per cent. on extension ordinary stock took £27,259. Administration charges required £140 and land tax £108, and as the rent received does not cover these a debit of £232 is carried forward.

Maryport and Carlisle Railway.

Gross receipts for the half-year ended June 30 amounted £64,808 or an increase of £5,269, mainly from merchandise and minerals, as passenger traffic only gave £302 more. Working expenses, on the other hand, increased by £2,949 to £33,062 and the ratio to revenue was slightly higher at 51.01 per cent. Nett revenue, including £1,582 brought in and £384 from interest, was £33,712 against £30,948, and after providing debenture interest the ordinary stock receives a dividend at the rate of 7½ per cent. per annum compared with 7 per cent. a year ago, and the sum carried out is raised from £1,571 to £2,390.

Buffalo and Lake Huron Railway Company.

There is no important change in this company's figures for the half-year ended June 30. Its property is leased to the Grand Trunk Railway and the rental of £35,000 for the six months is due on September 1. Interest from investments, &c., yielded £389 and general charges amounted to £555, so the board is able to declare the usual dividend of 5s. 3d. per share and to carry forward £751 against £706 brought in.

F. Steiner and Co., Limited.

The method of rendering the profit and loss account adopted by the directors of this concern would make it appear at first glance as if a slight setback had occurred during the year ended July 31. It would not perhaps have been very surprising if there had been some falling off after the prosperity of the two preceding years when profits jumped by £12,732 and £15,151 respectively, but happily nothing of the kind was experienced. Profits, it is true, were a trifle of £526 lower at £118,070, but this seems to be fully accounted for by the contribution of £500 to the extension fund of the Victoria Hospital, Accrington, which, although not shown in the accounts, is referred to in the report. Repairs and depreciation allowance took an extra £749 at £29,978, so that nett profits were £1,277 down at £88,092, but with £12,290 or £2,112 more brought forward the actual amount available was £100,382 compared with £99,540. Of this debenture interest and preference dividend again absorbed £40,500 and after repeating last year's dividend of 5 per cent. on the ordinary shares the directors put £1,000 less at £22,000 to reserve, but increased the sum carried out by £1,842 to £14,132. In the balance-sheet, land, buildings, machinery, water rights, &c., have been increased by £12,458 to £802,492, and we should like to see this item set out in rather more detailed fashion. On the other hand, the reserve now stands at £72,000, or nearly 9 per cent., a satisfactory enough figure, considering that it has all been accumulated during the past four years, and of this £46,213 or £12,250 more than a year ago is represented by investments outside the business. Liabilities to sundry creditors are £14,065 up at £91,033 and bills payable show a decrease of £2,176 at £12,716 against an increase of £4,897 to £75,999 in sundry debtors and reductions of £3,453 to £1,316 in bills receivable and £21,358 to £25,245 in cash. Stocks, however, have risen by £30,937 and now amount to £627,861.

London and Glasgow Engineering and Iron Shipbuilding Co., Limited.

This company is fully maintaining its reputation for rapid and wide fluctuations in its profits, and the year ended June 30 was one of its lean years. Only one new ship was contracted

for during the twelve months, and although other departments were well employed the profits, which a year ago jumped from £17,000 to £91,197, fell to a lower level than ever at £6,189. Interest on investments, an item which did not appear separately a year ago, yielded £2,678, and with £6 from transfer fees and £28,114 or £26,676 more brought forward, the available total was £36,986 compared with £92,638. Of this directors' fees took a modest £500 and an interim bonus of £1 per share paid in January last absorbed £23,465 leaving £13,021 to be dealt with out of which a dividend of 10s. per £9 share is paid and £1,289 is carried forward. A year ago the shareholders got a dividend of 5 per cent. and a bonus of £1, and in addition to that not only was £30,000 put to reserve, but a considerable sum was carried out so that the present results are not likely to give any great satisfaction. Capital expenditure, including £384 spent on boiler shop alteration and extension, was £4,541, but £4,562 was provided out of revenue for depreciation and the forfeited share account of £450 was written off leaving the property at £209,337 against which the reserve stands at the comfortable enough figure of £170,000. Shares and debentures in other companies, taken at market value, show a decrease of £3,096 at £79,892 and cash has shrunk from £141,402 to £75,923, while on the other hand sundry creditors are £14,375 less at £18,872. Sundry debtors owe £1,558 more at £3,474 and stocks and work in progress less instalments received are £3,546 up at £47,016.

Moss Bay Hematite Iron and Steel Co., Limited.

Profits for the year ended June 30 amounted to £50,521 and with £1,883 brought forward gave a total of £52,403, of which debenture interest took £5,400 and preference dividend £8,218. Out of the balance a dividend of 5 per cent. is paid on the ordinary shares, £7,958 is written off property account, £10,632 off suspense account and £1,000 off the investment in Harrington Harbour and £10,000 is set aside for works improvement leaving £2,346 to be carried forward. The depreciation allowed on property account just covers the expenditure for the year, so that the capital outlay is unchanged at £343,649, but the sum written off suspense account wipes out that item entirely. Investments, including one-third interest in the Harrington Harbour leasehold, are valued at £34,012, and stock and loose plant and tools are taken at £82,071. Floating liabilities including bank overdraft are very heavy at £170,952 and against these sundry debtors owe no more than £125,486 and cash is miserably small at £250, so that the position is none too satisfactory.

Smith's Dock Co., Limited.

This North of England shipbuilding and repairing company found little to complain of in the year ended June 30. Work was brisk in all departments, and the shipbuilding yard and brass foundry in particular were fully employed, with the result that trading profits amounted to £68,262. Debenture and other interest took £8,383 of this and directors' and auditors' fees £1,284, leaving a nett surplus of £58,595, or an increase of over £10,000. Adding £2,028 brought forward the disposable balance was £60,623 out of which £15,000 is written off for depreciation, £10,500 is placed to reserve and after meeting preference dividend the ordinary shares receive 8 per cent., or the same rate as for the past four years, and £2,223 is carried to the new account. An issue of 150,000 ordinary shares was made in July, 1906, in connection with the construction of two new graving docks at Middlesbrough, and these funds, of course, have not yet become revenue earning, but the directors state that they are in every way satisfied with the progress made by the contractors. The premiums received on this issue, amounting after deducting expenses to £13,911, have been put to a separate account and with the addition now made to reserve bring the accumulations up to £38,911 against a capital outlay of £580,268. Trading balances are well in favour of the company, £41,869 being due to sundry creditors against £83,396 to come in from sundry debtors and cash and bills reach the very satisfactory figure of £77,664 while stock and work in progress are valued at £65,946.

Mazawattee Tea Co., Limited.

Under date August 26 the board of this much-injured company has sent out the following depressing circular to the shareholders:—"In sending out the dividend on the £5 5 per cent. cumulative preference shares for the half-year ending June 21 last, I beg to inform you that it will not be possible for the directors to convene the meeting for the proposed reduction of capital of this company for some considerable time. The action of Fredk. Sage and Co. (1905), Limited, against this company for the fitting up of shops and damages for breach of contract has, after a very careful hearing lasting 23 days before the Official Referee, to whom it was referred, resulted in judgment being given in favour of this company, with costs from the day the amount that the company's legal advisers considered sufficient was paid into Court. Messrs. Fredk. Sage and Co. (1905), Limited, have, however, appealed against the Referee's decision, and the appeal cannot be heard until the end of the year. All the shops taken by the late board of directors, with the exception of six, have now been disposed of, and, much to the regret of the directors, the loss sustained by the realisation of the last 22 has been far heavier than was anticipated. Therefore, the estimated minimum figure, given in the directors' report of March last, as to the total losses which would be likely to accrue to the company on this head has been considerably exceeded. The directors are pleased to say that during the last six months the volume of trade done by the company has shown a substantial increase compared with that of the corresponding period of 1906; but they regret that, owing to the exceptionally high prices ruling throughout for the majority of articles in which the company deals, and also for those used for manufacturing purposes, it has not been so profitable, and, so far as the directors can see, it would appear that the present high markets are likely to continue during the year."

United Kingdom Tea Co., Limited.

An exact comparison of this company's report for the twelve months ended June 1 with the preceding one is out of the question as the figures of a year ago were for ten months only, but it may be noted that the gross profits of £8,834 show a small increase per month. This, however, includes £458 for profit on sale of business at Kilburn and compensation at the Harrow Road branch. Adding the balance of £1,903 brought in and deducting management expenses, the amount available was £8,901, and after paying debenture interest and preference dividend £500 is written off for depreciation, leaving £1,848 to be carried forward. Leasehold and other premises, plant, fixtures, and goodwill, all lumped together, were increased by £1,063 during the year, making a total of £130,293, on which the depreciation allowance seems totally inadequate, especially as the company has nothing in the shape of a reserve. Trading balances are slightly in favour of the company, £16,249 being due to creditors against £18,836 to come in, but cash is moderate at £3,971. Stocks are valued at £32,565, and the company hold investments valued at £2,743.

George Whitechurch, Limited.

This English company trading in France as leather merchants and tanners had a very good time in the year ended June 30 and earned a profit of £28,318. After providing for all charges and writing off £1,562 for bad debts and £4,382 for depreciation the nett profits were £11,897 or the largest ever earned by the company, and out of this dividends aggregating 10 per cent. are paid on the ordinary shares and £1,805 is carried forward against £909 brought in. An improvement has been made in the balance-sheet by applying the reserve fund in reduction of the asset of goodwill from £47,000 to £35,000, and it is to be hoped that this commendable policy will be continued as rapidly as possible. Trading balances are against the company to the extent of £29,700, but this is probably accounted for by the large stocks, which are valued at £106,999. Cash is only moderate at £3,580 or about £1,000 less than the amount required to meet the balance dividends now declared. Depreciation allowances on the property seem to be on an ample and even liberal scale.

Dixon and Cardus.

A nett profit of £9,705 for the year ending June 30 is shown by these manufacturers of oil cake at Southampton. Adding the balance brought in £4,451, there is £14,157 to be dealt with. A dividend of 6 per cent. and a bonus of 4 per cent. on the ordinary capital absorb £2,532, the reserve for bad debts is increased by £499 to £1,500, the reserve for redemption of leases by £850 to £2,000, the cost of additional tramways £530 is to be written off, and a new account called reserve for extraordinary repairs and renewals is commenced with £500. All these appropriations require £4,910, leaving £9,246 to be carried forward. This is all very satisfactory, but on turning to the balance-sheet we find that the company is indebted to its bankers for £10,828, and to sundry creditors for £6,148, while cash in hand was only £15. Sundry debtors owe the company £21,950, and if these are rapidly paid by cash the position might be all right. As it is, whence will come the money to pay the dividends, &c.?

Wright, Bindley and Gell, Limited.

This business of umbrella rib, saw, and file manufacturers earned a nett profit during the year ended June 30 of £10,272, which was increased to £18,025 by the balance brought forward. Dividends on the two classes of preference shares having been met, the ordinary shares received 5 per cent. for the year and £3,131 is transferred to reserve, leaving £2,198 or £445 more to be carried forward. Capital expenditure, after deducting the allowance for depreciation, stands at £107,405, while the reserve with the present addition will only amount to £13,500 or little more than 6¼ per cent. Liabilities to sundry creditors are exceedingly light at £7,001 against £24,707 to come in from sundry debtors and £6,881 in cash. Stocks are valued at £30,370 and investments, bought out of capital and taken at cost, amount to £28,795, but on the last-named item we fear there must be a considerable depreciation, although the securities are high-class.

Wheeler's Wycombe Breweries, Limited.

This company continues year after year to pay a fine-looking dividend, but it has mostly been by neglecting to lay aside anything for reserve, and the results for the twelve months ended June 30 show little change in this respect. Gross profits, including rents and interest received, amounted to £31,027, of which expenses took £11,555, repairs and depreciation £3,535, and debenture interest £4,751, leaving £11,186. Adding £736 brought forward, the sum to be dealt with was £11,922, and after providing preference dividend and paying 14 per cent. on the ordinary shares, £1,000 is put to reserve and the balance carried to the new account is reduced to £377. Although the company was established in 1808, the reserve fund with the present addition only stands at £3,000 against freehold and leasehold estates and goodwill valued at £231,805, and it seems to us that it

would have been more prudent to pay attention to this fund, instead of striving after distributions of 15 per cent. The current position, however, seems very strong, as in addition to a loan of £10,000, the company owes no more than £2,626 to sundry creditors, while it has £17,075 to come in from sundry debtors, £7,617 in stocks and £11,267 in cash, apart from a sum of £3,455 in the hands of the trustees for the debenture-holders.

William McEwan and Co.

announce that the nett profits of the business for the year ending June 30 were £76,746, the balance brought forward was £38,874, making a total of £115,620. Preference dividend at the rate of 5 per cent. absorbs £25,000 and ordinary at the rate of 10 per cent. £50,000, leaving £40,620 to carry to the new account. The reserve fund remains at £100,000.

Bulloch, Lade, and Co., Limited.

This Glasgow distillery earned a profit during the year ended July 31 of £53,577, to which was added £9,858 from the previous account, making a total of £63,435. Debenture interest and preference dividend having been met, the ordinary shares receive dividends and a bonus aggregating 15 per cent. for the year, and £5,000 is added to reserve, leaving £7,416 or £2,442 less to be carried forward. Capital expenditure, including goodwill, stands at £271,140 and stocks seem exceedingly heavy at £419,306. Sundry debtors owe £84,668, but debts due by the company, other than debentures and loans, are trifling, and provided these figures are well within the risk of loss the position is a fair one. It would, however, be more satisfactory if some attempt were made to reduce the debenture and loans account, now standing at the high figure of £166,269, and the reserve too could stand being increased at a more rapid rate.

Craigellachie-Glenlivet Distillery Co., Limited.

For a distillery company this modest concern, whose head office is now at 226, St. Vincent Street, Glasgow, seems to be in a tolerably healthy position. It made a profit for the year ended July 31 last of £12,980 and £655 was brought forward, so that altogether £13,635 could be dealt with, and the directors seem to have applied it with circumspection and prudence since £1,267 is written off for depreciation on buildings, goodwill, &c., and £3,000 placed to the reserve, raising that to £20,000. The dividend on the ordinary shares is brought up to 10 per cent. for the year by a final payment at the rate of 12 per cent. per annum, and after meeting both the preference and ordinary dividend as well as making the various other assignments and paying income-tax, £949 remains to be carried forward. The stock of materials, &c., carried by the company looks heavy at £75,417, but it is not of a deadly weight, and the debts due by the company only aggregate about £22,400 including the bond over the property of Stirling House, 226, St. Vincent Street. Cash is extremely thin at £60 and a few shillings.

Eastbourne Gas Company.

During the six months ended June 30 this company sold 196,002,900 cubic feet of gas for £26,149, residual products yielded another £6,793, and with meter rents and miscellaneous receipts the total revenue came to £35,909. The total expenditure was £27,434, leaving nett profits at £8,475, to which were added £17,290 from the previous account and £28 from interest, making £25,793 to be dealt with. Of this, income-tax took £397 and £223 was written off Consols held, and out of the balance dividends are paid at the rate of 15 per cent. on the original capital and "C" shares and at the rate of 12 per cent. per annum on the "B" shares, leaving £17,336 to be carried forward. Expenditure on capital account less depreciation allowances was £1,119, making the debit balance £8,035, against which there are reserves of £5,709, represented by £5,364 in Consols, valued at 84½. Sundry creditors £13,032 and deposits £1,116 exceed debtors by £2,679, but stocks are valued at £10,388 and cash amounts to £9,902. In addition the company appears to have received further capital since the closing of the accounts, as the directors refer to an issue of 400 new £10 "B" shares at an average of £26 5s. 2d. per share, the proceeds of which are not shown in the capital account.

Bournemouth Gas and Water Company.

Sales of gas during the six months ended June 30 produced £47,547, water rentals gave £17,255, and receipts from meter rents, residuals, &c., brought the total income up to £80,948. Expenditure under all heads amounted to £59,220, leaving a nett profit of £21,728 or an improvement of £5,103, to which was added £4,296 brought forward, making £26,024 to be dealt with. Of this, debenture and general interest required £2,409 and the directors declare dividends at the rate of 6, 7, and 14 per cent. per annum on the preference, "B" ordinary, and original shares respectively, carrying forward £6,952. Capital expenditure for the six months was £6,883 and the total outlay is now £729,158, against which the reserve fund amounts to £51,159, nearly half being separately invested. Creditors at £16,734 seem light compared with stocks valued at £24,386 and sundry debtors owing £19,727, while the company has the comfortable sum of £26,300 in cash. The directors refer to the considerable increase which has taken place in the price of coal, but express the hope that it will lead to a greater demand for gas for heating purposes, and that by this means and the better prices for coke they may be able to avoid raising their charges.

TRADE AND PRODUCE.

Wheat.—Stronger and more active markets have been the rule this week. Spot parcels have risen about 2d. per cental, and a brisk trade has taken place in futures at from ¼d. to ¾d. advance. The average prices for this season's English wheat is now only 11½d. below that of last, farmers' deliveries of 17,415 qrs. yielding 33s. 7d. per quarter against 26,545 qrs. at 27s. 9d in the same week of last year. Imports came to 408,520 qrs. against 418,577 qrs. in the same week of last year, and the quantity of wheat and flour on passage to the United Kingdom is estimated at 2,185,000 qrs., to the Continent at 1,145,000 qrs. The prospects of the South Russian crop do not improve, and the yield from the Continent generally is not expected to come up to the average, but Canadian, Indian and South American reports still continue good. American markets have fluctuated under contending influences. Cash demand was at one time considerable, and there was a good deal of speculative buying for distant positions; but business on the whole was quiet. The visible supply shows a decrease of 14,678,000 bushels on the week.

Wool.—August trade has been exceptionally satisfactory, with a much larger turnover than in the same month of last year, and prices have again moved upward. Nor in spite of the increased Australian supply, mostly of merinos, is there any too much in evidence, and buyers complain that they cannot get all they want. Staplers of home-grown wool also find themselves in a much better position than at the same date last year; they are carrying much smaller stocks, and for these consumers are willing to pay a price that allows a margin of profit. Manufactories are quiet, but good for the time of year, with a fair supply of winter and early spring orders of 1908 in hand, but there are complaints that prices do not sufficiently correspond to the cost of raw material.

Cotton (from our Manchester correspondent).—Our market during the past week has been under the influences of dearer American cotton in Liverpool. The fluctuations have been between rather wide limits, but on balance prices are higher than a week ago. Very little fresh news has recently come through relating to the American crop. The trade here is in the dark as to the extent of the growth, and until more definite information is to hand it is probable that operations will be carried on on a small scale. In the meantime, both manufacturers and spinners are much hampered. Only a quiet demand is being experienced, and margins are being reduced in most directions. The all-round inquiry for piece goods from abroad has been of very fair extent. Shippers, however, are not in the mood to purchase freely on the present level of values. Advices generally from India are of a healthy character. Fair sales have been arranged for both Bombay and Calcutta in light goods. Shirtings have not commanded much attention. China buyers seem quite content to look on and wait developments. For the Levant the reports from the other side are a little more encouraging, but no weight of business has been put through. Egypt continues under a cloud pending a more settled financial situation. The demand for South America has been of a rather dragging nature. Home trade cloths have not commanded much attention. The orders received for flannelettes for the autumn are healthy, and makers, for the most part, are well sold. A few more offers for printing cloths have come through, but very little can be done with most of them. Heavy goods such as T-cloths and Mexicans are dragging in demand. Manufacturers all round are doing badly. Some low rates have been taken rather than have looms standing idle. The outlook all round is discouraging for the weaving department. American yarns for home use move off in small lots. No free buying has occurred. Spinners have lost ground in most counts and qualities. There is not now much pressure for delivery, the supply of yarn being larger. Ring beams have been in rather dull request. Shipping yarns have been in fair inquiry for India and the Continent. Business has been stopped, however, by the stiff attitude of producers, especially in most numbers of twofold descriptions. Doublers are very busy indeed. Bolton spinnings do not show very much change, a quiet business being put through. Quotations all round are well held, owing to the extensive engagements of spinners.

The American cotton market is now in the hands of the professional element, says Sir Jacob Behrens and Sons' report, and until the receipts of new cotton become more plentiful there is not much chance of lower prices. The "bull" element is very strong, and purchases are made at every decline, so that with the small amount of cotton offering any serious drop is immediately checked. The reports from Texas are rather conflicting, but matters seem to be improving, at all events in some parts of that important cotton-growing district. The trade is well supplied, and can await further developments. A fair business has been done in Egyptian cotton, and the lower grades are ⅛d. dearer.

Coal.—Not 1s. but 1s. 8d. have the Lancashire and Yorkshire coalmen decided to raise the price of domestic fuel in September, as prices this summer have not dropped as low as usual. All house coals must now be considerably dearer than they have been for many years. So are gas and steams, for which demand continues as strong as ever, particularly for shipment to the Baltic ports, and never, says the *Engineer*, has buying from that region been so aggressive. Gas coals have been largely bought for next year's delivery, and present market rates have advanced another 1s. 6d. over new contract prices. Manufacturing coals, on the other hand, show some signs of irregularity, particularly in districts of the Lancashire cotton manufacturers. Welsh

trade is more animated again, and steam shipments for the week show an increase of 9,446 tons over the corresponding week of last year, while anthracite coalowners find difficulty in supplying demands, and prices have risen to 27s. to 28s. for the best malting, 26s. to 26s 6d. for seconds.

Copper.—An irregular tendency again showed itself at the opening markets this week, and advices from America were disappointing. Later on, however, under restricted offerings, good support from leading houses and more bullish American advices they grew firmer, and prices advanced about £2 10s. Persistent bear pressure then caused the market to give way, and closing values were down to £76 7s. 6d. for cash, and £75 10s. for three months.

Tin.—Good advices from the East, where on Wednesday business was transacted on the basis of £171 10s. c.i.f. London, strengthened the market here. Some good forward buying was in evidence, and with sellers reserved values registered a gain of about 45s. from the lowest. Then with increasing offers and restricted demand they reacted sharply, and closed on Thursday dull and with a loss of from 45s. to 50s. on the day. To-night prices show further declines at £166 for both spot and forward metals.

Iron and Steel.—The market for Cleveland pig-iron is very sanguine as to a good autumn season. It is thought that deliveries will be the largest on record, and it is pretty certain that production will not equal demand. Connal's stocks have decreased about 30,900 this month, the average monthly decrease this year being about 43,000, and at the same rate the stores will be pretty well emptied by the end of the year. Prices, therefore, in this direction are not likely to ease at all. The hematite outlook, on the other hand, is not so encouraging. Barrow hematite makers have still several important foreign orders on hand, but demand has fallen off in the meantime, at any rate, both with regard to America and the Continent. East Coast hematite trade is also adversely affected by the slackness in shipbuilding, and prices are easier than a week or two ago. Very few fresh orders are coming in for finished iron and steel, and manufacturers are beginning to complain that foreign competition is cutting into their prices.

Tea.—The market continues in an unsatisfactory condition, the difference in price between common and medium tea remaining almost infinitesimal. Common whole leaf, according to Messrs. Gow, Wilson, and Stanton's circular, is obtainable at 6½d., really good tea at 7d., and very fair quality at 6¾d. The margin in price has never been less than it is at present, and full knowledge of this fact ought to draw more attention to the exceptional value now obtainable in medium grades. 31,885 packages of Indian were brought forward, and of these 28,074 packages were sold on garden account at an average of 8.01d., the finest teas keeping firm, medium and common sorts weak. The Ceylon market was, if anything, easier all round than last week, particularly in medium broken pekoes, but teas from 8d. upwards were well competed for, especially where the quality shows improvement. The best kinds went slightly up in value, and the average for the week came to 7.36d., against 6.78d. in 1906. In Javas all grades sold at firm prices: 2,877 packages were offered, and met with good general competition, the average price for this season to date coming to 7.30d., against 5.71d. last year.

Sugar.—Mr. Czarnikow's weekly circular states that a further rise of 3d. to 4½d. in refined led to larger purchases of raws at 2d. advance both for old and new crop, when more favourable weather reports and September realisations brought about 1½d. decline, white sugars prompt closing 3d. dearer, raws prompt slightly easier, new crop 1¼d. above last Thursday. The fruit crop in this country seems very good, plums especially being very cheap, and—for want of sunshine—requiring all the more sugar to set off short deliveries for mineral waters, &c. The reports from beetroot fields show not much change, though the weather for a few days has been better. German reports vary much; the heavy rich districts, especially when low-lying, require much dry heat to yield their full capacity, whilst the lighter soils in a year like the present compare less unfavourably. Generally the leaves seem to look well, and occasionally give a wrong impression, though they too begin to flag and turn yellow. In warm autumn weather they may help to improve the roots later on, and it is just on September-October weather that everything depends. We had exceptional heat last September, we can hardly count on it now, and it seems prudent to expect an inferior yield in Northern and North-Western Europe. Austria complains less, though snow was reported end of last week in the mountains on her Silesian border. The American market has been rather firmer, and the meltings are a little better, though still very low for this time of year, when consumption is largest. But fruit is dear or late, and the financial position not good, therefore buyers carry small stocks, and it remains to be seen how long they will last.

The Corporation of Western Egypt, Limited, have received formal notification from the secretary of the Share and Loan Department of the London Stock Exchange that a quotation of the shares of the corporation has been granted in the Stock Exchange Daily Official List.

A recent telegram from Kobe states that owing to the fine weather the latest estimate of the Japanese rice crop is 48,000,000 kolsu, which would be 10 per cent. above the average. It will not, however, be possible to speak definitely until September.

Answers to Correspondents.

Deposits against future queries may be lodged with the Publisher.

Ibis.—It is a pity you bought the first-mentioned security at such a high figure, but we see no reason why you should sell either that or the second stock at present. As for the second part of your question, all three securities are good, and on the whole we would rank them in the order you give.

W. H. E.—The turn, we fear, is only temporary, but at the same time you might be able to pick up some sound securities for at least part of the money, which would give you a better return

Letters to the Editor.

L. G. O. Co.

Sir,—The statement having been made in several newspapers that there will be no dividend paid on the preference shares of this company, I am instructed to inform you that the dividend on the preference shares was duly paid on July 1 last, the date on which it became due.

Yours faithfully,
R. T. Kingham, Secretary,
The London General Omnibus Company, Limited
6, Finsbury Square, E.C.
August 28, 1907.

NEXT WEEK'S MEETINGS.

Monday September 2.

Dover Gas.—Dover, 3 p.m.
Shrewsbury Gas Light.—Shrewsbury, 11 a.m.
Stretford Gas.—Stretford, 3 p.m.

Tuesday, September 3.

Craigellachie-Glenlivet Distillery.—Glasgow, noon.
Keswick Gas.—Keswick, 4.30 p.m.
Lawes Chemical Manure.—58, Mark Lane, noon.
London and Glasgow Engineering.—Glasgow, 11.30 a.m.
Sheffield United Gas Light.—Sheffield, 12.45 p.m.

Wednesday, September 4.

Baker Street and Waterloo Railway.—Hamilton House, noon.
British and Foreign Trust.—Liverpool, 11 a.m.
Buffalo and Lake Huron Railway.—Liverpool, noon.
Burnyeat, Brown and Co.—Hotel Victoria, 12.30 p.m.
F. Steiner and Co.—Church, 12.30 p.m.
Great Northern, Piccadilly and Brompton Railway.—Hamilton House, 12.30 p.m.
Plymouth, Devonport and South-Western Junction Railway.—Devonport, 12.30 p.m.
Porto Alegre (Brazilian) Railway.—Cannon Street Hotel.
Steel Company of Scotland.—Glasgow, 12.30 p.m.
Waterford and Tramore Railway.—Waterford, 12.30 p.m.

Thursday, September 5.

Aylesbury Gas.—Aylesbury, 11.30 a.m.
Cardiff Steam Coal.—Cannon Street Hotel.
London General Omnibus.—Salisbury House, 3 p.m.
Russian Collieries.—Winchester House, 2.30 p.m.

Friday, September 6.

Floating Dock of St. Thomas, Suffolk House, E.C., noon.

Books Received.

Revolution in the Baltic Provinces of Russia. 12s. 6d. nett. I. L. P., 23, Bride Lane, E.C.

American Railways as Investments. By Carl Snyder. 12s. 6d. nett. F. C. Mathieson and Sons, 16, Copthall Avenue, E.C.

Baku Russian Petroleum.—Production of crude oil for week ended 24th inst. was 255,000 poods = 4,111 tons.

The bondholders and shareholders of the Puebla Tramway, Light and Power Company will be interested to learn that the control of the company has been acquired by a strong London syndicate, headed by Sir Weetman Pearson, of S. Pearson and Son, Limited, the well-known firm of contractors. The transaction involves the consolidation of the interests of the Anglo-Mexican Electric Co., Limited, with those of the Puebla Tramway, Light and Power Company, all the properties of the former company, including its developed water power plant near the city of Puebla, having been conveyed to the latter company. Under the terms of the consolidation all the capital necessary for the extension and development of the company's undertaking is provided, and the holders of its shares and securities are to be congratulated upon the arrangement, which, it is considered, will be a very profitable one for the company. Sir Weetman Pearson has been elected president and Dr. F. S. Pearson will remain on the board of directors for some time and give the company the benefit of his advice and experience.

COMPANY MEETINGS.

RUSSIAN PETROLEUM AND LIQUID FUEL.

A meeting of the holders of preference shares of the Russian Petroleum and Liquid Fuel Company, Limited, was held on Tuesday at Winchester House, Old Broad Street, E.C., to consider a resolution authorising the directors to apply the investments of the reserve fund constituted in pursuance of clause 115 of the company's articles in accordance with a scheme to be submitted to the meeting. The Hon. Evelyn Hubbard (chairman) presided.

The Secretary (Mr. A. J. Milne, A.C.A.), having read the usual notice,

The Chairman (the Hon. Evelyn Hubbard), after expressing regret for calling the meeting in the holiday season, said:—The scheme is one which, as to its first part, did not admit of delay, and, involving as it does commercial transactions with a company which would naturally object to details being published, we did not feel ourselves justified in setting the proposals out in extenso by circular, the more so as many points were still unsettled. On the other hand, a draft or résumé would have given but an imperfect idea of them and been liable to be misunderstood, especially having regard to the mistaken impression that some preference shareholders seem to have of their own position. I hope, therefore, that you will acquit the board of any intentional discourtesy in the course that has been adopted. The board themselves are, I think, mainly holders of preference shares, and I much regret the fact that the proposals which we had intended to lay before you should have been prejudiced beforehand by criticism based on certainly erroneous premises. I must also express my sincere regret if the fact of our non-publication of the scheme conduced to misunderstanding. I quite appreciate now that it may have done so, but we preferred that course at the time to sending out an incomplete or imperfect statement. I would point out that from the first we undertook to give ample opportunity for discussion, and I should like to add emphatically that we never contemplated passing the scheme at this meeting unless it met with practically unanimous acceptance. The question at issue is a too important one for that, and the board wish to give due weight to the fact which has taken them rather by surprise—namely, that a large number of preference shareholders evidently are still under the impression that the reserve fund is something secured as their exclusive property. It would obviously be impossible for the board to put forward any proposition dealing with the reserve fund until its legal position is definitely set at rest. Before going further, therefore, I would state that the board have decided not to bring forward the resolution of which you have had notice for to-day. We shall allow sufficient time for shareholders to inform themselves fully as to their legal position in regard to the fund, and we shall defer any proposals to deal with it till some convenient date—probably in October next—when the question must be definitely decided. Having dealt with the position in which, as the directors were advised the preference reserve fund stood, the Chairman continued: The idea that it belongs exclusively to the preference holders is a wholly erroneous one. No reserve of any company can stand as against its creditors. The debenture issues were made primarily for the purposes of consolidating open credits and floating debts, and so far did not affect the amount of charge standing prior to the claims of the preference shareholders on the reserve fund. When the question was raised at the last general meeting I stated specifically in answer to a question that the preference holders' claim to the reserve fund could not stand as against that of the debenture holders, and letters of inquiry have always been replied to in this sense. As we are advised, therefore, the interest of the preference shareholders in the reserve fund is somewhat remote. They can make no present use of it under the article, which has even debarred us from using it for the payment of preference interest, and in case of a liquidation their claims are subordinate to those of the debenture holders, and any other creditors of the company. It is, however, a fund which, if liberated under due restrictions for specific purposes may be of the highest value in tiding the company over a time of stress, and thereby keeping alive the rights of the preference shareholders, which would be inevitably jeopardised should the company fail at any time to meet its obligations. We do not believe that, in asking the preference shareholders to consent to this, we shall be asking them to make anything but a nominal sacrifice and one which it is to their real interests to make. Pending an improvement in production, of which there is at last a distinct, though slight, indication, the best thing is to obtain the control of other supplies of crude oil, which we can refine and distribute, thus carrying off a corresponding amount of standing charges and enabling us to fulfil our obligations. Such an operation goes far to stop the leak which is draining our resources, and it was to effect this object that we entered into the negotiation which formed the first part of our scheme. The proposals, briefly, provided for—(1) the temporary investment of a considerable part of the reserve fund in the debentures of another petroleum company, or, alternatively, an advance upon their security for a fixed term. The consideration to be a contract on their part to deliver to us over the next 12 or 14 months a large supply of oil on specially favourable terms, enabling us to fulfil our running contracts and improving the financial outlook by a very large sum. Unfortunately, as the offer could only be made to us for prompt reply, which under present circumstances cannot be given, the company now risks losing the benefit we had hoped to secure, but we shall do our best to keep it alive and to obtain some offer on similar lines which may be submitted to our next meeting. The second proposal was one to ear-mark a certain definite sum from the reserve fund, to be applied in case of need against our liabilities in respect of redemption of debentures. This part of the proposal, which, though not actually pressing at the moment, may easily become so later on, we expect also to submit to you at our next meeting. I should explain that we think it better to call a fresh meeting in October rather than to adjourn the present one.

Mr A. Levy Lever, M.P., said he was very doubtful whether the meeting would have been abandoned or the resolution not submitted if it had not been for the little opposition which the directors knew perfectly well had been raised. Before taking any part whatever, and immediately he received the notice, he communicated with the secretary and asked him if he would be good enough to furnish particulars of the scheme to be submitted. He met with a point-blank refusal. He thought he would see if he could by any possible means get any information with regard to the scheme, and he therefore instructed his solicitor to negotiate with the company's solicitors with a view to ascertaining what the resolution was which was to be submitted, but again he met with a refusal. Now they had this meeting, which they had attended at great inconvenience, and were told that no resolution was to be submitted. He thought the time had come when the shareholders should have fuller information as to the prospects and the standing of the company at the present moment. He wanted to see if they could restore the company, if not to the halcyon days of years ago, when they paid 30, 40, and 50 per cent., at least to a dividend-paying condition, which he believed, from information supplied to him, could be done with due care and proper management. The first point they had to consider was what was the reason for the downfall of the company, and the second was whether the company could be resuscitated and again made to pay dividends. The chairman, no doubt in the very best of faith, had given plenty of reasons on various occasions for the failure of the company, and had repeatedly thrown out hopes of better times in the near future. That day he had done so, but it was only a repetition of the past—of what had been said over and over again. They all admitted perfectly freely that the unrest in Russia must of necessity have a very adverse influence on this company, but they were not in any different position to any other company. The unrest, the political situation, the strikes and the riots affected other companies in exactly the same way as they had this, but they found that other companies during the past year paid very handsome dividends. What were the reasons that they were asked to believe that this company was not doing better? Personally, he thought it due in a very large measure to the contracts which this company had entered into with the Nobel-Mazoot Company and the Consolidated Company. They changed their manager about that time; he did not know why, but he might have been a very bad manager. The fact remained, however, that during his management the company earned big dividends and always had ample money with which to meet emergencies, and never had the directors come cap in hand begging something from the preference shareholders. The question which shareholders had to ask themselves was, could the company be restored to a dividend-paying concern? He was told on very good authority that the company could be so restored, that the property was one of the biggest oil-producing plots in the world. He had every reason to believe in the truth of that statement, and if such were the case it behoved them all to do what little they could to restore the company to its former position. If necessary, they should revert to the old system of management, and then, perhaps, they could have prosperity restored to them. If this meeting were to be adjourned he would respectfully submit to the directors that they should defer it until the second week in October. At the same time he would suggest to the board that they should forward to all shareholders within three or four days of the present time a full and impartial report of the resolution that was to be submitted and a copy of the scheme. (Hear, hear.) Shareholders would thus be able to thoroughly digest the proposals, and know what they were going to be called together to consider.

Mr. Whittaker said he thought Mr. Lever had covered all that was in the minds of preference shareholders present, and he only wished to point out that it looked as if the old soup were being dished up again. At the meetings of this company that he had attended the chairman had always told them that they were going to have some new scheme for the benefit of the company, but at the next meeting they heard that something had gone wrong. As he read it, their plot would not bring forth sufficient oil to produce what they required, so the board were taking an interest in another company that could produce more oil; but he always understood that the company had plenty of oil. They appeared to be pumping water instead of oil, and the same thing was going on at this end. (Laughter.) Their last sheet-anchor was evidently the reserve fund.

Mr. J. H. Mackay said he objected to see the reserve fund applied to the general purposes of the company, and, as a debenture holder, he did not like the idea of seeing that fund, which might be considered as part of his own security, vanish. If the directors had been more open and more candid, and let the shareholders into their confidence a little more clearly he did not think there would have been the objections raised that had been raised under the circumstances.

The Chairman, in reply, said he had listened with great attention to the various criticisms. He would give every weight to what had been said, and would be prepared to reply fully to all the points raised when they brought forward their proposals at the next meeting. Referring to the position of affairs, he said that what they were really suffering from was the fact that they had undoubtedly incurred heavy expenses, which told very hardly upon them now with their reduced production.

After considerable further discussion, it was agreed that the next meeting should be held in the third week in October, and that a circular containing a full account of the new proposals should be sent to the shareholders three weeks before the meeting. In the event of its being undesirable to publish certain details of the negotiations and the scheme, the chairman undertook that he would meet a committee of three preference shareholders, to be selected by Mr. Lever, M.P., in order to supply them confidentially with the information required.

SONDAGE SYNDICATE.

The ordinary general meeting of the shareholders of the Sondage Syndicate, Limited, was held on Wednesday, at Cannon-street Hotel, E.C., Mr. Arthur Burr (managing director) presiding.

The Secretary (Mr. Raymond Wreford) read the notice convening the meeting.

The Chairman said he did not hesitate to promise that every £50 in the syndicate at par would bring in £500 per annum to begin with, and that within the next two years. After describing the difficulties met with at the start, he went on to say that the Sondage had a very substantial interest in the future of the Tilmanstone Colliery. It had an eighth of the vendors' shares, and he honestly thought that eighth would bring in £10,000 a year. It also had 40,000 ordinary shares, carrying a preferential 10 per cent. dividend, which the majority of the shareholders had decided should be held as an investment. The Sondage had also secured a very considerable interest in both the other collieries. It had £8,000 of profits to come in from the Concessions Company, which were available for dividend, and he proposed at once to pay the balance of the 50 per cent. dividend of last year, and to pass a dividend of 100 per cent. for this year, and he would probably pay that 100 per cent. before the end of the year, but he would not ask the Concessions Company to pay over the £8,000 until it could do so without starving its other operations. At the same time he had not the slightest doubt he would be able to pay that 100 per cent. before the end of the year. He spoke not only to the shareholders but to the public generally when he said that the Sondage Syndicate had proved, within very easy sinking depths from the surface, a 3 ft. 4 in. seam, a 4 ft. 4 in. seam, a 4 ft. 6 in. seam, and a 5 ft. 2 in. seam, the latter of a superlative quality of gas coal, besides other less significant seams. Mr. Griffiths had put down the Tilmanstone Shaft to a depth of 700 ft., and that within a few months, at a cost, including plant, of £20,000. At Dover it took them six years, and an expenditure of £300,000, to get down 700 ft. He did not doubt that Mr. Griffiths would get to the next 600 ft. in six or seven months; and owing to the rise in the strata he would be very near the 5 ft. 2 in. seam. In the North of England, with ground 20 times more difficult and costly to sink through, they were, for the sake of earning at the maximum 1s. a ton profit, putting up their hundreds of thousands of pounds to reach a 4 ft. seam of coal at 900 yards. At Snowdown, in their sidings they had 19 truck loads of pumping machinery bought cheap from the Wigan Coal and Iron Company, which had been for five years sinking on the Duke of Newcastle's estate at Worksop to win a 4 ft. seam of coal. He had not been able to get access to the cost sheet, but he believed it had cost them some £400,000 to sink and equip their shafts. Their machinery and pumps had been bought second hand, they were just as good as new, but were not likely to be wanted as they were equal to delivering 3,000,000 gallons per day, whereas Tilmanstone had never had more than 3,000 gallons per hour. With the Dover experience before the public Kent coal enterprise had been discredited, and it was said that at best they could only have comparatively poor seams. But here they had these rich and thick seams and rich fireclays in conjunction with them. They knew that recently, at the meeting of the London, Chatham, and Dover Railway Company, although the board would not move, shareholders afterwards offered to subscribe for the expense of an independent inquiry. They had written to say that they would not only welcome such an inquiry but would give access to their books as to cost, and let them into the innermost secrets as to the borings. Further they had offered to subscribe 100 guineas so long as the integrity of the inquiry could not be impeached. That was the spirit in which they had met the suggestion. All that they asked for was truth, limelight justice, and accuracy. They were perfectly independent, and had enough money to carry their sinkings down to the coal. The chairman concluded by asking the shareholders to adopt the report, and to give him power to divide profits as recommended in the report.

Mr. Henry Gompertz seconded the resolution, which was unanimously adopted.

The Royal Mail Steam Packet Company are informed by the Colonial Office that the proposed intercolonial contract has now been arranged with the West Indian colonies. The contract will provide for the service being performed by two intercolonial steamers, and preliminary arrangements are already being made by the R.M.S.P. Company for the commencement of the improved service.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending August 25 was 199,000 poods = 3,208 tons.

DIVIDENDS ANNOUNCED.

RAILWAY.

Great North of Scotland.—At the rate of 3 per cent. per annum on the preferred converted ordinary stock and 1 per cent. per annum on the deferred converted ordinary stock, carrying £2,222 forward.

MINES.

Broken Hill Proprietary Block 10.—3s. per share and a bonus of 2s. per share, payable Sept. 25.

Great Boulder Proprietary.—Interim of 9d. per share on account of the current year, payable Sept. 25.

Mills' Day Dawn United.—1s. per share, payable Sept. 28.

Oroya-Brownhill.—2s. 6d. per share, payable Sept. 25.

Pusing Lama Tin.—Interim of 2s. per share.

MISCELLANEOUS.

Artisans' Labourers' and General Dwellings.—Interim of 2½ per cent.

British Bank of South America.—On account, of 4 per cent. (8s. per share), on £500,000, the paid up capital of the bank in respect of 50,000 old shares.

Broken Hill Water Supply.—4½d. per share, payable Oct. 1.

Brooks, Thomas and Co.—Interim of 5 per cent. per annum.

Canadian General Electric.—Usual quarterly of 2½ per cent.

Carthagena and Herrerias Steam Tramways.—Interim of 3 per cent., or 6s. per share.

Ellerman Lines.—Interim of 2 per cent.

Fife Coal.—Interim of 30 per cent. per annum for past half-year.

Financier and Bullionist.—At the rate of 5 per cent. per annum for half-year ended June 30, making 5 per cent. for the year.

Glasgow District Subway.—For past half-year at the rate of 1½ per cent. per annum on the ordinary shares, carrying forward £973.

Hine, Parker and Co.—Interim of 2½ per cent.

Ionian Bank.—Interim of 2s. 6d. per share for half-year ending July 13.

Jersey New Waterworks.—Interim of 3 per cent.

John Moir and Son.—Interim at the rate of 5 per cent. per annum for half-year ended June 30.

Langham Hotel.—Interim of 5 per cent.

Newcastle and District Electric Lighting.—Interim of 2 per cent.

Northampton Electric Light and Power.—Interim of 2 per cent. on the ordinary "B" shares.

Railway Passengers' Assurance.—Interim of 7½ per cent.

Reading Gas.—Interim of 2½ per cent.

S. Hildesheimer and Co.—Interim of 3 per cent.

Standard Bank of S. A.—For half-year ended June 30, at the rate of 16 per cent. per annum, carrying forward £37,000.

Stewarts and Lloyds.—Interim for half-year ended June 30, 1907, at the rate of 9 per cent. per annum on the ordinary shares.

THE

BOOK MONTHLY.

An Illustrated

RECORD, GUIDE, AND MAGAZINE,

for

BOOKSELLERS, LIBRARIANS, & PUBLISHERS,

for

BOOK-BUYERS, READERS, AND WRITERS.

This is **A MAGAZINE *DE LUXE*,** a most tasteful and dainty sample of the typographer's skill, and at the same time one of the most painstaking and useful serials of the kind ever published. Its **ILLUSTRATED ARTICLE** is always packed with interesting Notes and Pictures, its **GENERAL ARTICLES** are both Useful and Entertaining, and its **LIST OF BOOKS ABOUT TO APPEAR** and of **BOOKS THAT HAVE APPEARED** are month by month Complete and Valuable as a **GUIDE** to the Bookbuyer and for **REFERENCE.**

The price is only

SIXPENCE NETT PER MONTH,

or Eightpence post free, or 6s. and 8s. per annum, post free, and its publishers are

SIMPKIN, MARSHALL, HAMILTON, KENT & CO., LIMITED.

*** *Kindly order it of your bookseller, and judge for yourself.*

"'Public Opinion' was very much prized by Thomas Carlyle, and was one of the last journals he read," said Dr. W. R. Nicoll in *British Weekly*, May 2, 1907.

"PUBLIC OPINION,"

Twopence Weekly.

Edited by PERCY L. PARKER.

The purpose of "PUBLIC OPINION" is to provide a weekly review of current thought and activity as they are expressed in the world's newspapers, magazines, and books, and to put on record the ideas and activities which make for Religious, Intellectual, Political, and Social Progress.

It seeks to provide the busy man with a lucid summary of what is happening in the different fields of human activity, and to focus within readable compass something of that teeming interest which comes from being in touch with many phases of life.

This object has been achieved with considerable success ever since "PUBLIC OPINION" was started in 1860. In the 47 years since then it has consistently carried out its policy.

The need for a paper like "PUBLIC OPINION" increases with the years, for life becomes more complex and the busy man, though anxious to keep in touch with new developments of thought and activity, has not the time to read the many papers which would give him the needed facts. "PUBLIC OPINION" seeks to do this for him, and to present just that *précis* of life and thought which will enable him to quickly understand what is going on in the world.

"PUBLIC OPINION" (published every Friday, Price Twopence, 32 pages) can be obtained from any Newsagent or Bookstall, or will be sent post free for one year to any address in the United Kingdom for 10s. 10d., and to any place abroad for 13s. per annum. Orders should be addressed to—

"PUBLIC OPINION,"

30 and 31, Temple House, Tallis Street, London, E.C.

"I know of two Prime Ministers who have read regularly 'PUBLIC OPINION,'" said the *Daily News*, May 15, 1907.

"We know of at least one who has misread it," added *Punch*, May 29, 1907.

Specimens sent free on application.

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London W.C., and Published by Clement Wilson at Norfolk House, Norfolk Street, Strand, W.C.—August 31, 1907.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 505. SATURDAY, SEPTEMBER 7, 1907. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Old Age Pensions.

We cannot honestly say that a perusal of the memorandum and tables issued by the President of the Local Government Board in explanation of the more or less crude schemes for establishing old age pensions, which have been flaunted before the public for years back, is in the least degree convincing. Rather is the impression deepened that in resolving to initiate an out-door relief system of the kind, the Government is making a dangerous leap in the dark. We do not believe it to be the business of the State, the central Government, to pension the aged poor in the manner suggested or in any manner. Provision of this kind for the distress of those no longer able to work is properly the affair of local administrative bodies to whom the circumstances of each candidate can be known. Carried away, however, by the hot-headed and uninstructed advocacy of Mr. Chamberlain, and still more, perhaps, by the reckless examples set in the colonies and in France and Germany—both these two driven by the blight of their militarism—this Government in its benevolence of mind has been betrayed into making promises that compel it to go forward with one old age pension scheme or another. It is not yet too late, we hope, to compel it to pause, for no matter how minute or tentative a beginning of a system of this kind may be, it is going to lead us far and into much mischief—to political corruption among the rest.

Even the payment of five shillings a week to what would be described as the deserving poor—the poor that in their long fight with the adversities of life had not been compelled for 20 years at a stretch to apply for poor relief—would involve the community in an outlay of nearly £8,000,000 per annum. This is on the assumption that only 500,000 individuals of the age of 65 years and upwards would receive this grant. For the whole of England this charge means an addition of 4·8d. in the £ to the rates. This is assuming that only half the charge is put upon these rates, and that the other half is provided out of the imperial taxation in that fashion Mr. Goschen introduced, and which we have always regarded as hurtful to straightforward finance. It is estimated that in 1897 the total number of people aged 65 or more was 2,116,000, and that a pension of five shillings a week to all such persons without distinction would at the start cost £27,508,000 per annum, and that by 1921 the total annual cost would be £30,632,000. It is true we pay as much for the army and a good deal more for the navy, and, in view of these enormous outlays, the working classes may seem to have reasonable claim to consideration at the hands of Governments which by their exactions may be said to debar those whose labour provides the sinews of war from the chance of exercising thrift with a view to comfort in their old age. But the remedy surely is to reduce our naval and military burdens to a reasonable figure, and to open the way for the worker to provide for himself, not to heap still other burdens upon his back with which to weigh the whole community down. No such universal scheme of pensioning, however, is apparently in contemplation by the Government. We do not indeed know what scheme they propose to support, whether it will be an eclectic one, a matter of selected examples, or whether it is to be tried in certain districts and not in others, or whether local authorities will have a voice in determining when or what pension system shall be initiated.

All that seems settled is that a pension scheme of some kind shall be begun without making any attempt reform the Poor Law. It is even seriously suggested that one of the most defective administrative authorities in the country, the Board of Guardians, shall have a charge over the distribution of these pensions, and the workhouse system is to go on just as it does now, is a fabric too holy to be interfered with. The "indoor" relief system will still be quite as costly, this memorandum tells us. Outdoor relief may be in some measure affected so as to reduce its charge, but even that much is not to be counted on at first, because the poor to be endowed will be of another sort than the Poor Law kind. That statement alone is enough to condemn any scheme of pensions for the working man, for there is more waste in our present indoor pauper system, in our poor relief system altogether, than in any other single device, outside the army and navy, for profusely spending money.

We are beginning at the wrong end. Zealous reformers have forgotten that this country is not to be compared with any colony or with France or Germany in the matter of providing by law for the aged poor. Since the days of Elizabeth we have had a Poor Law system as guarantee against too frequent revolutions. It is venerable and encrusted with barnacles, but while it exists it fulfils, or ought to fulfil, all the utilities supposed to be inherent in a system of old age pensions. No such pension scheme, therefore, ought to be for a moment taken into consideration except as an alternative to the inefficient and debasing system which, as we have demonstrated until we are weary of the subject, is excessively wasteful now, and tending to increase in wastefulness every year owing to the weakness, the non-representative character, and in some instances the corruption of the boards of guardians into whose hands its administration has been put. But apart from this the nation is at present in no position to find the £7,000,000 or £5,000,000, or half that amount, for an experiment of this kind. Because our revenue is apparently abounding and yielding more than the Chancellor of the Exchequer in his simplicity knows how to spend, or than the spending departments can make away with, we are going to be asked to assume an additional burden of this indefinite description—a burden which once imposed is certain to develop in dead weight with a rapidity that will startle the reformers and frighten them out of their wits. This must not be. There is no call whatever for a pension system in this country to act as a deterrent of thrift, to encourage wastefulness on the part of the working classes, to cultivate that dependence upon the state for any and every form of help—for work, for medical aid, for relief, for free travelling, for every imaginable socialistic fad, which would end in making the community as slavish in spirit and abject in its political attitude as the mobs of Imperial Rome.

And never forget that in starting old-age pensions we shall be rendering a return to Protectionism a certainty. What are the pension systems of France and Germany but the product of a system of indirect taxation, rendered necessary by their military pestilence, of which Customs duties form the principal support, and by whose operation life is made hard for the great bulk of the people. The sufferings of the masses cry aloud for relief, and ever and anon threaten to upset established order. "Let us soothe the mob with the syrup of old age pensions," said the wise men who ruled, and they do this at the expense of an increase in the nation's distress. Are not the same motives operative here? Our military burdens have grown excessive, and the people complain. "We cannot give you relief from this affliction," answer our rulers, "but we can offer you a palliation in the shape of a dole of 5s. a week if you survive to the age of 65, and do not meanwhile get beastly drunk, or go to gaol for thrashing your wife, or accept poor relief, or otherwise become disqualified." And having quieted down the grumblers for a time with this sop the politicians will go on their way smiling and looking victorious.

Presently the grumbling breaks out louder than before. The classes who have to find the pension money will complain that this thing hurts. "We pay more than ever," they will assert, and speak truly in so doing, "you must give us relief." Again the cloud-compelling statesmen will grope around for a remedy—another sop—and will find none in the old familiar paths. Direct taxpayers will tell them, "We cannot pay more, and won't; we must have something off," and payers of the present indirect taxes will prove little more malleable. There will be no way left but to "broaden the basis of taxation" on the lines suggested by the tariffites, to reimpose the old clogs from which our industries shook themselves free half a century ago, and begin again the old, old round. Old age pension schemes mean much; they herald national decay; they ensure the triumph of the Protectionists!

Other Considerations on Old Age Pensions.

The preceding article contains the views we hold upon this question, so far as the mixing up of the Government with a scheme of old age pensions is concerned, and so far as any such scheme is attempted to be put in force without reference to the existing Poor Law. But there are the considerations of the practical politician, as he is called, the "gentleman subject to propulsion," to be taken into account, and it is plain enough that something will have to be done by whatever Government now guides the nation's affairs. The working men at the Trade Union Congress this week have announced their determination that old age pensions shall be established in no uncertain language. The president for the year, Mr. Gill, M.P., declared the question to be the most pressing one of the hour, and therefore it must be made "the first plank in their platform." And the "plank" is thus composed: "The scheme must be universal, non-contributory and non-discriminating, and should provide not less than 5s. per week at the age of 60 years." The announcement was received with great cheering, and as the speaker had told his audience earlier in his address that they had forced the House of Lords to pass the Trade Disputes Bill against its will, emphasising in so doing the power the workers were thus shown to possess, we may be certain that no Government will be able to ignore the demand thus made. We believe it to be a mistaken demand—nay, a demand impossible to gratify—and would much rather see working men pursuing objects of greater and more durably practicable value, such as the more harmonious co-ordination of the various industrial forces, with a view to the elevation of the worker into the position of a co-partner in business; but Socialism at present has laid hold of the minds of the working classes or of their leaders, and they prefer to abandon the substance in order to follow the delusion of old age pensions for all—for the just and the unjust, the rich and the poor, without regard to age or character.

What then is to be done? A scheme is outlined in a letter printed in Tuesday's issue of the *Times* and signed by Lord Avebury, Sir A. C. Lyall, Sir William Chance and others which is evidently thought by its authors to embody a working plan. Airily dismissing the orders given by the trade unionists that old age pensions must be given to everybody, as being a demand altogether too expensive to gratify, throwing cold water also upon the suggestion that "necessitous" or "deserving" persons should alone be endowed with this State privilege, they fall back upon a third proposal, described as an encouragement to those persons willing to make some sacrifice to entitle themselves to pensions. The State should go into partnership in a sense with the friendly societies, take charge of their money, or such of it as was devoted to the provision of old age pensions, add a more or less high rate of interest to it out of the taxes, and dole out the product of private thrift and State lavishness only to meet the special purpose for which the money is deposited, and they quote a very interesting table calculated for the Government by the late Mr. William Sutton, President of the Institute of Actuaries, to show how much pension a payment of £1 a year from the

age of 20 would ensure at various rates of compound interest. Such a payment is only two-thirds of a 1d. per day, or little more than 4d. per week, and were it made regularly from 20 years onward would ensure the person who made the sacrifice a pension of 7s. 4d. per week at the age of 65 if the accumulation were reckoned to be at the rate of 2¾ per cent. per annum only. Were the compound rate of interest higher then the pension would be higher, thus:—

Amount of Pension that £1 a Year from Age 20 would Ensure.

Rate of Interest per Cent. per Annum.	Beginning at Age 65.		Beginning at Age 70.	
	Annual.	Weekly.	Annual.	Weekly.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
2½	17 10 0	0 6 8	34 18 6	0 13 5
2¾	18 19 0	0 7 4	38 6 7	0 14 9
3	20 15 0	0 8 0	42 0 2	0 16 2
3¼	22 13 0	0 8 8	46 5 0	0 17 11
3½	24 14 0	0 9 6	50 17 2	0 19 6
3¾	26 19 0	0 10 4	55 18 10	1 1 6
4	29 8 0	0 11 4	61 11 3	1 3 8

This is all very well, decidedly ingenious in fact; but it will not satisfy the working man, and it does nothing whatever to mend the position of the friendly societies, not a few of which are, we fear, at the present time more or less insolvent. It is the misfortune of the working classes to have had neither the education nor the trained help that would have enabled them to organise their friendly societies upon a sound basis from the start. Many of them have suffered in consequence, and it is not unnatural that disappointed workmen should turn to the State, finding themselves incapable of managing such intricate affairs as are involved in the investment and accumulation of funds set aside to provide sick allowances or pensions after a certain age has been passed. None the less is there something perhaps in this suggestion of Lord Avebury and his colleagues which might be worth the attention of Mr. Asquith and the Government. We are far from sanguine, but yet ready to welcome any method that will obviate the necessity on the part of the Government to assume responsibilities for an old age pension system, get us out of a bad mess in other words. We, the general body of the people, must lose by the business in any event, but the loss might well become destructive to the Empire and to England were it entered upon in the way the trade unionists demand. We cannot, however, admire much any extension of the machinery designed to bring the savings of the people into the control of the administration. The demand upon the public purse would not be exorbitant, say the signatories of the letter. If as large a sum as £100,000,000 were deposited with the Government, which could not happen for several years if it happened at all, an extra interest of 1 per cent. would only cost £1,000,000, which is not half the amount the Chancellor of the Exchequer hopes to have available for old-age pensions next year. Yes, but what would be done with the capital meanwhile? If the Government were to allow an extra rate of interest would not the taxpayers insist that the money thus taken out of their pockets should be employed somehow and at remunerative rates? What is to be the end of this continual employment of large amounts of trust money by the Treasury? We know what has happened in the case of the Savings Banks. The money has been utilised to carry out financial operations, to assist in the floating of war loans, to enable the Government to build the Uganda Railway, in an infinite variety of ways anything but legitimate or profit-yielding. Would it not be the same with friendly society funds collected in order to provide old age pensions? This money would, to be sure, be held by the Government on an entirely different basis from that on which it holds Savings Bank deposits, for none of it could be called away except in payment of pensions. It would, therefore, form a capital sum more or less great to be played with, to be utilised in an emergency, to be lent at usury, and one day the nation might have to make good a large deficiency.

And would an extra £1,000,000 per annum involved in a 1 per cent. extra interest—assuming the £100,000,000 to be collected—be altogether a light thing for this country? How long is the country going to continue able to meet the present demands of the Exchequer without suffering in its industrial energy, or its power to further develop its great business? We shall not attempt to answer these questions, but in spite of the confident demands of the delegates at the Trade Union Congress and of such advocates of modified schemes as that of Lord Avebury and his friends, are driven back upon the old ground that an affair of this kind is not the proper business of the State. It is the gratification of Socialist aspirations which are dangerous and are leading the educated working man away from the goal he ought to strive for.

We are not blaming the working man for desiring to conquer new privileges, to compensate himself for what he believes to be the economic injustice from which he suffers. It would be a mistake to do so, bad policy as well, and those employers of labour, large capitalists, shareholders in public companies and such-like, who look with dread and alarm upon the uprising of the working man, upon the organisations he is gradually elaborating for the purpose of bringing pressure to bear upon those above him, ought to take a calmer view of the changes undoubtedly taking place or impending. It is perfectly useless fulminating against these working men. We have educated them to an extent sufficient to enable them to judge of their power when united. They see wealth as it seems to them more and more unequally distributed in the community and think they recognise that the methods by which this accumulation of power over labour—for that is what the wealth means—in the hands of the few has been brought about are not always laudable, and sometimes wholly unjustifiable. Is it to be wondered at that new aspirations arise in their minds, that they seek greater comfort in life, more leisure, amenities unknown to their fathers and often unknown to the fathers of those who now flare rapidly acquired riches before their eyes? The "selfishness" of the working man from this point of view is not greater than that of his employer, direct or indirect. He is seeking to get as much as he can for himself just as the man more or less rich does, and knows he can only succeed by combination. It is quite natural that he should be stirred up by such contrasts as that presented, say, in the return of the Commissioners of Inland Revenue with reference to the death duties. This shows us that for the past year there were 62,000 deceased estates that came up for review of a value below £10,000, the aggregate capital involved in which was only about £82,000,000, whereas 66 other estates ranging from £250,000 to £1,000,000 and more represented £68,000,000 of accumulated capital. And what is that "accumulated capital?" It is, as we have said, power over labour. Mere gold is of no value, and the wealth of the millionaire is never expressed in gold. It is in securities, in land, or the greater part of it. But securities would be valueless without the labour of the working man—the skilled artisan, the clerk, the swarm of people whose surplus product goes to provide the dividends or interest paid to the wealthy. If the working man comes forward and says: "You must not take so much, you must give us some better share of the wealth we produce," it is no use raving at him, cursing him for a greedy rogue; he will take all he likes in time if met with too great obstruction. Much better surely would it be to accept him frankly as a partner as enlightened employers of labour are already doing in many places. Were this generally done and the working man treated as a fellow human being, even when he combines and formulates his demands as it were at the head of an army, there would be less cause for anxiety about the future of investments, the tyranny of Socialism and so forth, together with very much less necessity to agitate

about a scheme of old age pensions wholly impracticable, dangerous to the nation's finances and in the end most hurtful to those who toil.

Economic and Financial Notes.

Dear Coal.

Why are the prices of all kinds of coal rising with such rapidity and persistence? The usual explanation is that business has been so good, and, above all, the export demands for coal so enormous, that colliery proprietors had no alternative. Many people proceed from this point to blame the Government for taking off the export duty on coal as if that had anything to do with the rise in prices. They really blame Mr. Chamberlain and his son, for the coal duty was declared by him to be economically bad, and was to be the first war impost taken off by the late Chancellor of the Exchequer. This aside, the only effect that could be produced by the removal of a mistaken and condemned tax of this kind would be a transitory stimulus given to export demands. Directly, however, the dammed-up orders have been satisfied the trade falls back into its normal position, and prices should not at any time be much disturbed. Influences of quite another kind have therefore been at work in producing the present extraordinary advance in the prices of coal, not only for export but for domestic use. One of these influences is unquestionably the much larger consumption caused by the unseasonableness of the year. Domestically fires have been much more in use this misnamed summer than for many a year back, we may say since the middle of May last. There has consequently been no accumulation of stocks, no "lowest summer prices," and as the consumption continues and threatens to be larger than ever in the coming winter, prices are naturally still driven up. They must continue high and rising until a point is reached which brings in coal from foreign countries.

As for the export demand, we hinted some weeks ago that there might be something like manipulation here so far as the phenomenally heavy shipments to Germany are concerned. If so, that can only be a passing influence. The Germans will soon tire of buying our coal at prices which must not only materially augment the cost of working their mercantile navy, cripple them that is to say in fighting this renewed rate war of theirs against the Cunard Company and otherwise imperil dividends, but hurtfully affect the competing power of all German manufacturers. Many of these are collapsing or crying out aleady. The same effect is doubtless being produced at home, and from this point of view the high prices of coal now prevalent threaten to accelerate that industrial reaction which has already begun in some countries, is in full swing in many United States industries and disquietingly evident in the German Empire itself. Thus we have the curious anomaly of an apparently agonised demand for our fuel from various parts of the world, and especially from Germany, coming to a head just at the moment when the industrial activity of the past few years is pausing and giving place to slackness or positive lack of orders. Are we to infer from this that a reaction will come in the coal market as elsewhere? Probably enough, although that reaction is not likely to push quotations back to the old points from which they have risen. Coal never goes back quite to old prices. Every "boom" is followed by a reaction, but the reaction stops short of a return to the prices ruling before the advance began. So it will probably be now, and if we have a severe winter the chances are that we shall see higher prices than those established this week before any reaction at all comes into view. For all that, the present fever warns us of coming prostration, and is a bad event for the general prosperity of the country's trade. The coal boom will surely be followed by bad times in many industries.

Klerksdorp Gold Mines.

We did some of the shareholders in this company an injustice in our recent note. All of them have not been perfectly apathetic, or at least are not now so, for some of them have issued an educative circular which is well worth quoting, at least such extracts from it as we find in the *Times* Money article on Wednesday last. The sum of the matter is, as we hinted pretty broadly in our note, that reconstruction is good business for those who do the underwriting. Assuming the statements here quoted to be correct, within a period of little more than two years something like £11,000 seems to have been netted by those who underwrote the new capital in a concern which had no revenue, no money of any kind, and is never likely to have any. And the amazing thing is that the underwriters do not seem to have had any money either. Have the facts been brought to the notice of the Official Receiver? It does not matter much, for the meeting has been held and the reconstruction once more voted. "What would you do in the circumstances?" Give the diligent Kafoozlums no more of our money.

Doubtless the majority of the shareholders, like ourselves, have to their regret joined previous reconstructions, and are consequently well acquainted with the previous history of the concern. It is therefore unnecessary to do more than remind you of what has occurred within the last few years.

In June, 1904, the company, then known as the "Klerksdorp Gold and Diamond Company, Limited," was reconstructed as the "Klerksdorp Gold and Diamond Company (1904), Limited." This latter company issued a prospectus offering for subscription 1,200,000 shares of 5s. each, 560,000 being underwritten by the Winchester Trust, Limited, of 20, Bucklersbury, London, for a total commission of £6,000, which was paid by the Klerksdorp Company.

It appears from the file at Somerset House that the Winchester Trust, Limited, was registered on June 14, 1904 (obviously, therefore, for the purpose only of underwriting shares in the Klerksdorp Company), with a nominal capital of £1,000, of which seven shares of £1 each only were subscribed by the signatories, though none, according to the file, were allotted.

Having received the underwriting commission before referred to, the Winchester Trust, Limited, went into voluntary liquidation in October of the same year.

Strange, however, as it may appear, it is a fact that a company with apparently no resources underwrote the capital of the Klerksdorp Company (1904) and received no less than £6,000 for so doing. It may be mentioned that as yet no details have been furnished showing how the sum of £47,000 so recently subscribed was expended. These facts, we venture to say, speak for themselves, and alone demand further investigation and inquiry.

In April, 1906, the present company was registered, and on the 21st of the same month a prospectus was issued offering 1,200,000 shares for subscription. On this occasion 800,000 shares were underwritten by the Transvaal Share Corporation, Limited, for a total commission of £5,000, which was duly paid.

As the result of inquiries, it appears that the Transvaal Share Corporation, Limited, was registered in Guernsey (this fact being omitted from the prospectus) on April 14, 1906, with a nominal capital of £10,000, in shares of £1 each. According to the file of that company there is no evidence of any shares having been allotted beyond those taken by the signatories, who all resided in Guernsey.

It is impossible, owing to the ramifications of the various Klerksdorp companies, to state exactly what is the total amount spent on or in connection with the property, but it probably reaches the sum of £1,000,000 sterling.

We have, we think, stated sufficient to show that apart from any other consideration the interests of commercial morality demand that an end be made once and for all of "Klerksdorp reconstructions," and we believe we are voicing the opinion of every independent shareholder in characterising the whole matter as a grave scandal.

Colonial Dairy Produce.

The taste for butter mixtures seems to be growing in this country, and their use was apparently stimulated last year by the high prices which have ruled for both butter and cheese. Such at least is the opinion expressed by Messrs. Weddel and Co. in their *Colonial Dairy Produce Review* for the year ended June 30. Our summer of 1906 was not a good one for the dairy farmer, as it not only was detrimental to the grazing pastures, but reduced the hay crop considerably, and the manufacture of dairy produce in the United Kingdom must have suffered in consequence. Under these

circumstances a large increase in the imports was naturally expected to make good the deficiency, but instead of anything of the sort happening there was actually a small decrease of 688 tons. This decrease was due entirely to the smaller shipments of cheese, as imports of butter were 219,277 tons or 3,784 tons more than in the previous year, and 334 tons over the previous highest total. Russia, or rather Siberia, has come to the front very rapidly since the war as a producer of butter, and last year sent us 32,425 tons or an increase of 7,098 tons, in spite of the long land carriage and consequent difficulty of keeping the temperature sufficiently low. Denmark, which during the previous four years had gone steadily back owing to the severe competition from Russia and Australasia, found her opportunity in the very high values prevailing, and receipts from that country rose by 6,012 tons, while Sweden provided 2,072 tons more.

Supplies from the United States, on the other hand, fell off by 5,078 tons, but the decrease was not unexpected, and when mentioning the larger shipments a year ago we pointed out that the twelve months just ended would probably show a drop equal to the rise then noted. France, owing to the drought, provided 4,089 tons less, and Dutch butter was again sent mostly to Germany, with the result that shipments to this country were reduced by 1,180 tons and other foreign imports were all smaller.

The quantity of colonial butter reaching this market was only 177 tons less at 57,095 tons, a big decline from 15,145 to 8,220 tons in Canadian and a drop of 325 tons in New Zealand being offset by a jump from 26,950 to 34,023 tons in Australian. With regard to this increase, Messrs. Weddel point out that in the Australasian colonies large areas which were formerly devoted to cattle or sheep rearing are being broken up for closer settlement into holdings of one to two hundred acres, and that these are being devoted to butter-making. Not only is this the case, but the various State Governments are helping the farmer to improve his herds, and are giving him facilities for learning the latest scientific methods of making butter and preparing it for market, and are also enabling him to get his produce to British and other markets at the least possible cost and in the best possible conditions. With all these things in his favour, the farmer should be able to meet competition however keen, and Messrs. Weddel look for an enormously increased output in the near future. The transfer of the New Zealand farmers' interest from butter to cheese during the past two years has seemingly had an effect on the quality of the butter produced, and the trade complains that the high quality hitherto recognised in New Zealand butter was not maintained. The regulations for grading seem to be unduly lenient, and over 97 per cent. of the exports last year were branded "first grade," although a good proportion of it was by no means up to standard. With regard to Canadian butter, Messrs. Weddel report that the quality, while slowly improving year by year, does not make the advance it ought to do. The butter has the advantage of a usually rising market for the five months July to November, and the refrigeration facilities that now exist for placing it here in about 14 days after manufacture should enable Canada to compete on very favourable terms with Danish and other Continental produce of choicest quality if the colony made an effort to increase the supply.

Notwithstanding the slackness in grading noted above, New Zealand still holds first place amongst the colonies for the quality of its butter. A few factories in Australia produce butter equal to the finest New Zealand, but they are the exception, and the latter can still obtain from 2s. to 4s. per cwt. more for the bulk of its output. Australia, however, is now waking up to the advantages to be derived from compulsory grading, and have adopted it with satisfactory results, which augur well for the future. Opponents of the policy urge against it that the butter sent here is bought on its intrinsic quality at the time of purchase, and not on the quality before it is shipped; but this argument leaves out of the question the fact that grading tends to bring about a better all-round butter, and so tends to improve the range of prices for the entire output of the colony. For that reason, if for no other, it would be to the advantage of the Australian States to make grading compulsory. One standard for all the States is admittedly impossible owing to the different conditions prevailing, but if each State set up its own standard a more stable market would probably be secured for its produce.

Imports of cheese during the past twelve months were on the down-grade, notwithstanding the higher prices ruling. New Zealand, it is true, sent 2,727 tons more at 8,597 tons, and Australia entered the lists for the first time since 1904 with 160 tons, but Canada contributed 5,205 tons less. Foreign cheese, too, showed a falling off, shipments from the United States especially being 2,038 tons down, while France sent about the same as a year ago, and Dutch supplies were only 127 tons up. The year ended June 30 was notable for the high prices which ruled throughout. At the commencement the top price for Canadian was 58s. 6d. per cwt., but it jumped to 60s. 6d. in August, and gradually improved until 68s. 6d. was touched in May, a sum which has not been equalled since 1878. First grade New Zealand also reached a high level between December and June. It went up steadily from 60s. in December to 67s. in the beginning of March, and after dwindling back to 62s. spurted again in May to 68s., which was the highest level of the season. This high range of values seems to have tempted New Zealand to give more attention to this branch of dairy farming, and a considerable amount of capital has been spent there and in Australia in fitting up cheese factories. So much are these colonies enamoured of the industry that Messrs. Weddel think it advisable to emphasise the lesson to be learned from the statistics of the trade for the past ten years. According to the figures they give the profitable import of cheese has reached a limit which leaves little or no room for expansion, and new competitors, therefore, can only find an outlet by displacing existing supplies. Any big increase in supplies will naturally depress prices to at least their former level, and it is more than doubtful whether Australasian produce could then compete successfully against Canadian when the natural advantages derived from closer proximity to the market are all with the latter.

With regard to the prospects for the next season there is every indication that large supplies of butter will be available for the coming winter, and values consequently are likely to recede. Home producers will probably have larger quantities to market, and in Denmark, Russia, Sweden, Holland and France conditions are favourable for increased outputs. Siberia is suffering at present from hot, dry weather, but not sufficiently to cause any serious falling off in winter butter. Canada is sending less, but receipts from that country during the winter are always insignificant, while in New Zealand weather conditions are very favourable for an increase. Cheese, too, will probably be cheaper, as there are now no signs of the severe competition between English and Canadian merchants which forced prices up during the past year. The Canadian season is late, and it is possible that there may be a deficiency, but against this may be put the very large increase in the United Kingdom and in Europe.

"Tubes," Various.

Sir George Gibb had a busy day at Hamilton House on Wednesday. He had to face no less than three troops of shareholders belonging to three of the Tube railways under his control. These were shareholders in the Charing Cross, Euston and Hampstead Railway, in the Baker Street and Waterloo Railway and in the Great Northern, Piccadilly and Brompton Railway. To each group Sir George had to tell a different story, and yet it was the same story—a rather melancholy one of hope deferred. We have often thought of Sir George Gibb in recent months and of the tremendous responsibilities he has assumed, of the difficulties he has had to encounter, and cannot but

admire the cheerful courage with which he faced the somewhat dispiriting situation. Traffic does grow on all these railways, and as they are all new there is room for hope that some day it may reach a remunerative point, but that day is not at hand for any one of the lines. Take the Hampstead line. It has been bored, Sir George said, mainly to open out the suburbs of Hampstead, Highgate, Golder's Green and beyond, and it is to the development of these districts that the shareholders must look for the success of the venture. But "development" is a matter of years, and meanwhile the trains have to run backwards and forwards every day and all day long, full at certain hours, crowded perhaps for a little time morning and evening, but during the rest of the day more or less poorly charged with human freight. The difficulty, indeed, of all the Tube railways is the congested nature of the traffic at certain hours of the day. To this we must add the absence of any general revenue from other sources than passengers. Then they carry these passengers for too low fares, but that is a thing they can in no way help, and what with one drawback or another unless the public rouses itself to loyally support the undertakings controlled by the Underground Electric Railways Company, the fight for prosperity is bound to be long and arduous.

Sir George Gibb is quite right in saying that no city in the world is so well provided with these Tube railways as London now is. They have altered the whole position of the metropolis in the matter of rapid cross-country travelling, and in facilitating intercommunication between the districts north and south of the Thames they do more than even the electric tramways of the County Council. But they require a full flow of traffic to make them pay. It does not do for a line like the Baker Street and Waterloo whose average fare per passenger is 1.49d. to have to run trains for so many hours half or three parts empty, and although the numbers using the lines are steadily growing, they will have to increase much more than they hitherto have done before dividends are earned on the capital. It will take a great many twopences, for instance—that being the average fare on the Great Northern, Piccadilly and Brompton line—to earn a clear nett profit of nearly £300,000 per annum, and that is what the capital of the line requires. Some people appear to have recommended heavy expenditure on advertising in order to popularise the lines, but we agree with Sir George Gibb in thinking this a waste of money. It is by usage, by familiarity, by a habit of travelling on the Tube lines, that earnings will be made to increase, and it may be that they will have to raise their fares, at any rate their long distance fares, before they can see prospects of much larger revenues. It is pleasant, however, to note that working expenses can be kept at a low figure. Their experience, said Sir George in dealing with the Brompton line, had been that it was possible to maintain a thoroughly good service at a moderate working cost in spite of the burden of lift expenses, always a heavy charge peculiar to the Tube lines. The total working expenses of this line represented £328 per mile per week, and he thought the shareholders should be all very well satisfied if they were able to maintain that figure. The working cost averaged 1.51d. per passenger and the earnings averaged 2d. per passenger, so that the margin of profit was slender; but Sir George faced the situation with wonderful equanimity, and so must the shareholders. They may find some comfort in the failure of 'bus and motor-'bus companies.

The Effects of Canadian Preference.

Some little time ago a pamphlet from the pen of Mr. Thomas H. Haynes, a Fellow of the Royal Statistical Society, entitled, "A Survey of Canadian Imports and the Results of Preference," reached us from the *Daily Chronicle* office. The proprietors of that newspaper publish the essay at the price of twopence, and it is an essay indicating a prodigious amount of labour. We can hardly estimate the time, ingenuity and figuring up that have gone to the production of the tables embodied in the text. Unhappily, Mr. Haynes is not endowed with a faculty of exposition, and the reading of his notes can only be compared to an attempt to masticate plum stones. The facts are there, but as a rule are so clumsily and elusively stated as to be hard indeed to extract and interpret. We do, however, contrive to get a general impression hostile to the policy of preferential tariffs. It does not follow that Mr. Haynes is opposed to these tariffs. We rather think he is not, for he remarks in his penultimate paragraph: "How grievous it is to think that so great a sacrifice should have failed to stay the great rival's advance"—*i.e.*, the advance of the United States. What gives rise to this observation is Mr. Haynes's calculation that Canada lost nearly £1,000,000 on the duties levied in 1906 by the preference given to British manufacturers without benefiting said manufacturers. He, however, candidly admits that the great advantage Americans have in being within a day or two of postal communication with Canada and in having the facility of rapid delivery by rail compared with the length of time required to obtain goods from England gives them a natural preference for all urgent orders. It does more; it tends to neutralise the lower Customs duties given to us, and really if we are going to enter into negotiations with the colonies on a basis of mutual protection and exclusiveness as against the "foreigner," we shall have to insist that duties imposed in these colonies on foreign goods as against British shall be at least equivalent to the natural preference given by proximity to markets. Mr. Haynes deals greatly in index numbers, and they are useful as showing that the ups and downs of aggregate values do not necessarily imply corresponding expansion and contraction in the volume of trade done. In other respects, however, the conclusions drawn from these arbitrary symbols are not of much importance, and the most interesting and valuable part of this paper is the exhibit made in it of the muddle, worry and contention, and often enough, we fear, the bribery, that must surround the administration of preferential tariffs. No wonder Canadian Protectionists are clamouring that the amount of value added to an article imported from the United Kingdom by Canada representing the British labour spent upon it shall be 50 or even 75 per cent. of the whole as against a minimum of 25 per cent. which has been the limit hitherto. It is never a limit easy for Customs officials and importers to settle, and obviously many of the decisions must be quite arbitrary when not corrupt, as witness this tolerably lucid extract from the pamphlet before us:—

> Hides, wool, and tin, of nominally British origin, are exported to Canada as well as some of foreign origin, but to take credit for British produce of articles such as these, the home consumption of which is so largely in excess of the home production, is deceiving, and injures comparisons and conclusions; moreover, the identity of origin rests to a great extent upon wharfingers' office boys who pass the export entries. American wheat milled in Canada becomes Canadian flour, and American hogs killed and cured in Canada become Canadian bacon—to the benefit of Canadian export statistics. Similarly, rolling stock is exported as British, the underframes, wheels and axles, and buffers of which are German, and the superstructure only British. German spectacle-frames and French glasses are put together in England and pass as British, and British workmen go out of employment, and poverty soon destroys the skill of hand and eye.

What nonsensical waste of energy all this seems; but it affords occupation and provides salaries for a large number of people, and appears to gratify the spirit of exclusiveness now dominant in the minds of manufacturers and traders everywhere.

A Scotch Bank Amalgamation.

It is announced that the North of Scotland Bank, Limited, and the Town and County Bank, Limited, both of Aberdeen, have decided to amalgamate. The wonder is they have not come to this conclusion long ago, for much useless expenditure must have been incurred through duplication of country branch offices and other rivalries between the two. Separately, neither bank is conspicuously strong, though both respectable enough. The last issued balance-sheet of the North of Scotland totalled up to £5,281,000. It

was dated September 29, 1906. That of the Town and County Bank comes down to January 31 of the present year, and its total is £3,750,000. Together, therefore, the two banks made an aggregate of about £9,037,000, and of this amount about £995,000 will be represented by capital and reserve. The combined bank is thus quite of the second magnitude. Both the banks now possess a good local or country-side business with farmers and retailers, fishermen and fish curers, small manufacturers, distributers of every description throughout the North of Scotland, distillers, too, but they have also both given a great deal of their money to the London market. How much their balance-sheets do not permit us to see, for that of the Town and County Bank is not by any means frank. It piles together debentures, debenture stocks and shares, presumably owned, and loans on security of stocks, making up an aggregate in this way of rather more than £1,000,000, its other investments being entered at £245,000. A little more information is given by the North of Scotland Bank, whose investments, including Consols and other securities of the British Government, amounted to about £1,100,000 at the date of the balance-sheet writings down not mentioned. In addition to this, £405,000 was lent to London brokers at call and short notice, and £360,543 presumably to stockbrokers on marketable securities. Thus the bank had over £765,000 out on the London money market or the Stock Exchange, besides which it had an unspecified amount of credit at its bankers, Barclay and Co. and the Union of London and Smiths Bank, the balances there being wrapped up with gold and silver coin to make a total of £522,834. Out of resources aggregating £5,281,000, including £477,000 of notes in circulation, the North of Scotland had only £2,571,407 apparently in use locally in current business, that being the amount set against bills discounted, advances on cash credit bonds and on other kinds of securities. The Town and County Bank's commitments in these directions are presumably all found under the entry, cash, credit and other accounts, the total of which was rather over £1,483,000 on January 1 last. In addition to this, however, it held then about £346,000 of bills discounted, an item which the North of Scotland wraps up with advances. The two banks together have upwards of £250,000 sunk in real estate, and some of this ought to be released now that duplicate offices will disappear and help to strengthen free resources. Combined, indeed, the two banks ought to grow into a strong one with time, but their reserve funds are at present much too small, aggregating as they do little more than £342,000.

American Business Notes.

As yet the effect of Mr. Cortelyou's release of Government deposits has not made itself visible in the weekly return of the New York Associated Banks. Perhaps, therefore, the coming return will show an improvement calculated to reassure the market. Last week's figures certainly had the reverse effect, but the changes were so insignificant that nobody seems to have paid any attention to them. The contraction of loans paused, the decrease of the week being only £40,000, but deposits continued to shrink, and were £340,000 lower, thanks to the continued disappearance of specie either into the circulation or by export. The specie average was accordingly down by £430,000 against an increase of about £99,000 in the notes held. Thus the surplus reserve of £1,750,000 is down £246,000, but it is still about three times as much as the total of a year back, and great hopes are entertained on Wall Street that European demands for gold may now be fended off by the creation and sale of bills drawn against the shipments of produce. These, it is also held, may be larger, and sold at better prices than was estimated a short time ago. Thus New York seems to buoy itself up, and to hope for the best. We can as yet see no more than a pause in the liquidation, and in the middle of the week the "bears" were again busy, in spite of cheap loans.

One noticeable comfort, however, has been furnished to the market in the shape of a syndicate constituted in order to buy up the $40,000,000 issue of New York City 4½ per cent. bonds, which the city authorities were unable to sell on either of the two previous occasions when they put them on the market at lower rates of interest. It is now said that some of the great financiers, including the firm of J. P. Morgan and Co., have arranged to stand behind the municipality and take in bonds not subscribed by the public. It is quite possible, however, that a 4½ per cent. bond may go off at par, in which case the syndicate will merely earn a commission by its philanthropy. And whether or not, this incubus would seem to be removed from the market, although the more securities are multiplied the greater are the demands made upon credit.

Much lamentation goes on amongst the financial and other Press organs in the United States regarding the slap-bang method of attacking vested interests indulged in by President Roosevelt. His policy of bringing actions against this and the other trust, of attacking railroads, and threatening destruction to people whom he describes as "certain malefactors of great wealth," has had the effect, so the apologists of the concerns or individuals attacked or threatened allege, of depreciating securities in all directions. A total of over fourteen thousand million dollars of paper "wealth" is kept under a cloud by this action of the President. Capital is timid, we are told, and quick to draw inferences as well as to take flight, and there is a good deal to be advanced for this view of the matter, only we should like these critics of the President to define what they mean by "capital." Is the market price of a railroad security or of a copper combine share like the Amalgamated to be taken as representative of so much genuine capital, or merely of monopolist esurience. When that question is answered it will also be interesting to know how much of the fourteen thousand million dollars of this paper capital now threatened is represented by anything approaching genuine assets. The market, in other words, may be threatened—the players for the rise, combiners, and riggers of every description—but it does not follow because the fabrics they have reared collapse or subside that genuine capital has been struck or wounded in the very least; or, for that matter, genuine enterprise of any description. Critics of the President should, therefore, learn to distinguish. We have no great sympathy with his methods, and do not believe that he is going about his reforming business in a way to effect any permanent good, except perhaps accidentally, but do not let us condemn him on the wrong counts. Genuine capital can always take care of itself, and if it is injured by attacks such as the Washington administration has for some time back been directing in true "rough-rider" spirit against this and the other corporation, we fear there is something wrong with the capital said to be suffering.

A curious dispute has arisen between the banks in the United States and the Express companies. It is not very important to people on this side, but as an illustration of the crude, primitive state of banking in the North American union it has value. Briefly, the banks have for years past been grumbling at the Express companies for competing with them. It is the business of banks to deal in exchange, to transmit money and to arrange for payments in different parts of the country, and this business the Express companies have seriously impinged upon. They issue money orders payable at any place throughout the union where they may have a branch office, and in various other ways act as exchange bankers, pleading that in this way they economise the transmission of metal. To this the banks reply: "You must transmit metal frequently to adjust your balances and you can do this at much less cost than the freight you charge to us when we send parcels of metallic currency: therefore, there is an unfair rebate against us in this

business," and the Banks' Association is bringing an action to put an end to this kind of competition. What the result will be hardly concerns us, but the very fact that such a dispute should have arisen reveals in a striking manner the helplessness of banks in the United States. They cannot spread branches all over the Republic as the banks of Canada can do. Each bank, no matter though its capital be £5,000 or £500,000, stands alone and by itself, so that there is next to no cohesion or union, and the business of banking so far as the transmission of credit from spot to spot is concerned is in an exceedingly primitive condition. Judging, however, by the figures in the report of the United States Express Company the profit to be fought for and alleged to be taken away by the Express companies does not seem to be particularly formidable. This company, which has a monopoly of the express business on the Baltimore and Ohio, and whose total receipts for the half-year ended June 30 last came to nearly $9,000,000, got only $125,000 by these very money order commissions.

Several more of the railroads have issued preliminary statements for their fiscal year to June 30 last, the most notable amongst them being the Southern. Necessarily we have only the skeleton so far, but it is significant of much. Gross receipts, for instance, rose by rather more than $3,000,000 to $56,658,000, but working expenses increased by nearly $5,000,000 to $44,699,000. The consequence was that the nett revenue was actually $1,900,000 less before adding in the receipts from sources outside the working of the lines, and even then there was a decline of nearly $1,700,000, working expenses having risen to almost 79 per cent. of the gross receipts against 70 per cent. in the year immediately preceding. No wonder, therefore, that the dividend on the preferred stock had to be brought down to 3 per cent. per annum, or to 1½ per cent. for the half-year payable on the first of next month. Interest and rentals went up by something like $1,400,000 and the balance over fixed charges was only $2,290,000 against $5,229,000 in the previous year. Thus the surplus, after paying the reduced preferred dividend and appropriating $536,000 to betterments and other charges against income, as against about $1,000,000 in each of the two previous years, was only $254,000, whereas in the year ended June 30, 1906, it was $1,229,000. But what do these figures mean? Are they real? We should very much doubt it, and fear that the receipts are padded as well as expenses in ways that mystify and mislead. The proposed suspension of improvements and extensions may let a little light out upon this question.

Another company which has issued its results is the Louisville and Nashville, and the outcome there is not quite so bad as in the Southern, but of the same character. Gross receipts, for instance, rose by $5,255,000 to $48,264,000, but working expenses went up by nearly $5,000,000 to $35,781,000, so that the gross increase resulted in a nett gain of little more than $400,000, the proportion of expenses to receipts having risen from less than 72 per cent. in the preceding year to 74.14 per cent. for the past year. Four years ago the ratio was little more than 68 per cent., and all the time interest charges have been steadily creeping up until last year they amounted to $5,935,000. Taxes are also growing in magnitude, and altogether the prospects are not particularly satisfactory to the holder for the rise.

We presume the Union Iron and Steel Company, whose failure was announced in New York on Wednesday, is not to be confounded with the Union Steel Company absorbed in the United States Steel Corporation on January 1, 1903. The Union Steel Company is a big affair with a capital of £4,000,000, all held by the Carnegie Trust, whereas this Union Iron and Steel Company appears to be a struggling affair, whose total liabilities are put at only £400,000. It has failed, the report says, because like the Milliken Company and the Pope Company, it has been unable to borrow money to provide for the working capital. That being so, it ought to fail, and there will doubtless be many more such concerns to follow it, for the benefit, possibly enough, of the Carnegie and other monopolist combinations.

Passing Events.

It is said that many people in the United States want to sell the Philippines to Japan. We have often heard that assertion made and as often has it been denied, sometimes even scouted, by American citizens to whom the thing has been mentioned. Now, however, the *New York Herald* comes forward to head in its well-known manner an agitation directed against the retention of these islands, and it makes the assertion that from first to last they have cost the Washington Government £80,000,000, while the annual loss at the present time is something like £6,000,000. This money the *Herald* says would have been sufficient to build forty-five battleships of the most powerful type, or if it had been expended upon coast fortifications it would have been enough to make the Atlantic and Pacific seaboards perfectly impregnable. The enterprising journal admits that it might not seem dignified to do a deal in virtue of which the ownership of the islands would be handed over and the United States' flag hauled down, but, briefly, "business is business," and it would be better to do so. Sentimentalists, however, intervene, and roundly declare that the United States cannot sell human beings. We do not see much in that. It acquired the human beings in the Philippines—as much as it has been able to lay hold of them, which is not saying a great deal—in the Roman manner, and we have yet to learn that the murder method is more moral than the commercial one.

Be this as it may, it is all very well to advocate selling the Philippines, but who is to buy them? "Oh, Japan, offer them to Japan," the advocates of this step answer. That also would be all right if Japan had the means to pay, but where is that enterprising young empire to lay hold of £80,000,000, or half that amount, at the present time? Its people have already debts more than enough to provide for, and also political difficulties enough to steer through, what with mutinous Koreans and Chinese meditating treachery. To add the Philippines to the vexations in Korea, in Manchuria, in Formosa, or even in Saghalien, would be to invite Japan to perpetrate national extinction. The United States have bought the Philippines, and will have to keep them unless the nation is prepared to set the islanders at liberty. But it cannot do that, and we do not know that it can give the islands away. Even our own imperial appetite is satiated for the present.

An interesting correspondence has been going on in the *Times* on gambling and life insurance. At the end of it probably each intervenor will be of the same opinion still, but it once more raises the question, what is gambling? or rather where does speculation end and the more dangerous, if not more immoral, habit of gambling begin? However stated, this question is insoluble. There is no rigid dividing line between speculation of the genuine business kind and gambling, any more than between eating enough for health and gluttony; where the meritorious duty of trading with a view to profit ends and the excess called gambling begins, it is for each individual to judge. In a sense life is a gamble and so is life insurance, but it does not follow that there need be anything immoral in the play. Far otherwise, it may embrace the highest kind of morality—self-denial, forethought and the like.

But where then lies the mischief in gambling? It lies everywhere. Speculation may be accepted as a term applying to dealings restrained within the speculator's resources, designed to secure ordinary gains; gambling is playing for excessive gains to be snatched up without regard to the means of the gambler or the consequences failure may bring upon himself or others. The gambler if not needy when he begins almost invariably ends by becoming needy, and usually involves

many in his ruin. The less he has the more recklessly he engages in hazards—and so forth. One could go on distinguishing and illustrating to the end of many chapters, and yet would be no nearer an all-comprehensive definition than at the start. But you will be all right with the moralists and also with the market, good reader, if you make it a rule never to buy what you cannot pay for, and never to sell what you do not possess. Never give margins to bucket shops, either, because better receptacles can be found for your charity.

Mr. Percy Lindley is a fine fighter. The way he is tackling that Rhodesia Goldfields affair is admirable to behold, and we hope success may attend his outspoken criticisms. He wants to have an independent liquidator appointed at the forthcoming meeting summoned by the Official Receiver, and there ought to be no difficulty in doing so. The admitted loss caused by the directors is upwards of £500,000, he says, of which nearly £250,000 was in share dealings with three other companies promoted by Messrs. Henry Partridge and Weston Jarvis, and the whole of the assets of the company have, on the petition of Mr. Henry Partridge for himself and other debenture-holders, been placed in the hands of a receiver claiming priority to the shareholders. Mr. Lindley contends that the liquidator must look into the grave position of Partridge and Jarvis in relation to this debenture issue, and gives some striking reasons for holding that view. We have already gone over the history of this pitiful business, and must limit the present reference to bidding Mr. Lindley good speed.

Another South African company has been under the harrow, so to say, and seems to have come out better than had been expected. This is the Transvaal Exploring Land and Minerals Company, against whose board grave charges were made by Mr. S. S. Kennedy, the late secretary, and against Mr. Henry Samuel, the managing director. The dispute was referred to a "court of arbitration" constituted by the London Chamber of Commerce, and consisting of Sir Albert K. Rollit together with Messrs. Faithfull Begg and Arthur Serena. These gentlemen have looked into the facts, and made a report which in the main exonerates the managing director and other people implicated in Mr. Kennedy's charges. The committee says that Mr. Kennedy has failed to satisfy it that his allegations and the matters in the said circulars were well founded or true in substance or in fact, and the only censure they can be said to pass has reference to Mr. Samuel's dealing with the company. There have been many monetary and other dealings and transactions involving large amounts between the managing director and the company he controlled, but although the committee realises that "as a matter of principle and upon general grounds this kind of business is open to the very strongest objection, having regard to the fiduciary relations subsisting between a managing director and director and a company and its directors and shareholders," they none the less hold Mr. Samuel blameless. He has not taken advantage of his position to act in such matters to the prejudice of the company, nor did he unduly influence the other members of the board to his own advantage. This being so, we need not labour further at this unpleasant episode.

It is well known that the abnormal weather this year has not been confined to our own country, but has been experienced in many other parts of the world with detrimental results to the grain crops. The Hungarian Minister of Agriculture in his estimates for the current year calculates that in spite of the considerably larger areas sown in the United States, Canada, Argentina, Roumania, Bulgaria and Servia the wheat crop of the world will fall short of that of 1906 by 30,200,000 qrs., and the maize crop by 52,600,000 qrs. Against these there will be small increases in rye, barley and oats, but the decrease in all grains will still be the substantial one of 78,500,000 qrs. Amongst the countries which have to import part of their supplies it is estimated that the wheat crop in the United Kingdom will be fully 1,000,000 qrs. below that of 1906, while Germany, Austria and Spain will also have much smaller crops, but France and Italy are both expected to show increases of 2,000,000 to 3,000,000 qrs. Of the exporting countries Russia, with Siberia and Caucasus, it is thought will have some 6,000,000 qrs. more than last year's estimates, Argentina about 3,200,000 qrs. and Japan 550,000 qrs. more, but the crops of Hungary, Roumania, Bulgaria, the United States and Canada all show heavy reductions, amounting in the case of the United States to 11,500,000 qrs., and the surplus available for export by this group is put at 73,050,000 qrs. compared with 79,904,000 qrs. in 1906. The summary of supplies of all grains, including stocks brought forward, shows a surplus of only 2,500,000 qrs. against 11,000,000 to 12,000,000 qrs. a year ago.

We wish it were possible to see how the shareholders in the Porto Alegre Brazilian Railway Company are to secure justice. The story of the method by which they have been deprived, as they contend, of half the capital value of the line, was told in last week's issue. Since then a meeting has been held at the Cannon Street Hotel, presided over by Mr. T. C. Tatham, at which the whole story was again gone over, and certain resolutions passed censuring the Federal Government of Brazil for its share in the spoliation effected by the State of Rio Grande do Sul, and pointing to demands being formulated upon our own Foreign Office to intervene for the purpose of obtaining justice. The Foreign Office can do little in this direction except remonstrate, but some effect might be produced by vigorous action upon the Stock Exchange, and if the Brazilian Government is not sensible of having done wrong in lending its support to what looks very like a mean trick its moral consciousness might be wakened up to useful activity were the rule enforced, "No more Brazilian loans to be subscribed until this matter is put right." The sum is so paltry, a mere £202,500, that it hardly seems worth impounding. There may, however, be technical grounds upon which the seizure could be justified in the eyes of the Brazilians, and before giving final judgment we should like to hear that side of the story.

An alarming looking heading caught the eye in the *Pall Mall Gazette* the other evening—"De Beers and the Premier." The first impression this phrase conveyed was that De Beers might be going to present an unsaleable diamond to Sir Henry Campbell-Bannerman as a token of respect and admiration, but it bears quite another interpretation. The "Premier" meant is the Premier Diamond Company, and the paragraph went on to say a good deal that meant nothing about the present state of negotiations between these two producers of diamonds. The writer's informant, however, told him that under no consideration is anything in the nature of an amalgamation likely to be discussed. At the present time amalgamation is not the basis of negotiations. What is the basis then? Apparently a monopoly of the sale of the stones. "Premier" is to be free to mine, just as an owner of an oil well in the United States is free to pump, but it is not to be at liberty to dispose of its diamonds to any buyer except the De Beers Syndicate. That we take to be the real meaning of the "negotiations" now going on. The syndicate must have a fine stock on hand, and naturally does not want its market spoilt. And we have no feeling at all for the "victims" of a monopoly of this kind.

Scottish shipbuilding prospects for the coming winter are said to be excellent. The past month has brought about a very considerable change in the situation. At its commencement the yards were very short of work, and the trouble with the boilermakers threatened to paralyse the whole industry. But just when things looked at their blackest the position began to improve, a strike was averted and orders began to roll in. Actual bookings during August reached 90,000 tons, and contractors will be disappointed if another 30,000 tons are not arranged for almost immediately. These are remarkable figures for a single month, and further important inquiries are reported, which will bulge out

the September returns in a highly satisfactory fashion. In fact, there is every prospect of a "boom" in Scottish shipbuilding, and the arrangement arrived at at the Edinburgh Conference ought to put the possibilities of strikes out of sight for a long time. The new orders include one or two ships of war, but nearly all the tonnage is intended for peaceful and we hope profitable pursuits.

What is going to happen to the Guayaquil and Quito Railway Company we are not in the least able to guess. It is a complicated affair altogether, and not least so because of the fact that the company is really a New Jersey one. As we read back the story now, we cannot but regret that any English house ever consented to put the bonds of a flimsily-constituted corporation of this description upon the London market. They cannot be accused of having introduced these bonds on false pretences; all was honest enough and above board, but there was a speciousness in the representations made on behalf of the American company that certainly helped materially to put investors here astray. Much was made of the guarantee of the State of Ecuador, which was really little better than the guarantee of a political Vesuvius that it would abstain from eruptions. Ecuador has no money, and is not likely to have any as long as her system of government is purely revolutionary. But there was ground for hope that the railway itself might pay if it could be completed to the port and worked with economy and regularity. This, however, does not seem to have been done, and the revenue has consequently never been available to protect the bondholders from default. Hence the present confusion and loss. The Council of Foreign Bondholders has appointed a committee of its own members and others interested in the enterprise to see whether any steps can be taken in the interests of the bondholders. This may be all right, but we hope the line adopted will not be one of uncompromising hostility to the feebly constituted authorities of Ecuador. Much better devote attention to expedients for getting round the difficulties for raising money to build the line and develop its traffic.

A firm in Paris, called Gallet and Co., carrying on a business apparently similar in character to that of the outside advertising broker in this country, has stopped payment, and its liabilities are estimated to be about £400,000. This is only one of several such businesses which have recently been obliged to pull up in France owing to the difficult times through which finance of the speculative description has been passing, and we should not be surprised to see similar incidents occurring here. If they do they will probably check the tendency on the part of the public to commit their savings to the care of irresponsible traders, about whose position and qualifications they can usually know nothing whatever beyond what they read in advertisements. Unfortunately, the Stock Exchange does nothing to prevent its business from slipping away in these directions, and until it is prepared as a body to protect clients against defalcations of individual members, we see no particular reason why the outside broker should not flourish, and in active times grow fat.

High rates for money are blamed for causing the numerous failures now taking place in Germany. No doubt dear money long continued has this consequence. Especially is dear money efficient after a long period of more or less low rates for the use of credit, and we are feeling the effects of the change in our own markets. Here, as yet, great failures have not been numerous, and in trade and industry they may not be hanging over us now. But in finance the dryings-up if not the actual suspensions have been already both frequent and disastrous enough to warn the public to expect worse still should money again become very dear this next winter.

We can join sincerely in the congratulations to the paper and to Mr. F. W. Hirst on his appointment to the editorship of the *Economist*, for he is a man of the "three C's"—conscience, culture, and capacity. Add to this indefatigable industry, and in his hands the paper should lose none of the qualities with which its founders endowed it, and which Mr. Edward Johnstone conserved with such judgment during the many years of his editorship. He, indeed, will be a difficult man to follow, but Mr. Hirst is not without experience in City affairs, and has had an academic, legal and economic training which should now stand him in good stead. We wish him a long and successful career.

South Australia enjoys a surplus for its July to June year lately closed of no less than £300,000. All of this and £90,000 "special" besides the Government devotes to the redemption of loans maturing in London, a most meritorious example in self-denial. Unfortunately £390,000 will not go very far to meet £5,000,000 of South Australian debt becoming due here between now and January 1, 1909. A beginning of thrift there is, and that is all. But for the current year ending June 30 next a further surplus of £48,000 is budgeted, the revenue being put at £3,135,000 and the expenditure at this small amount less. In the expenditure though £100,000 is included for new public works and £75,000 for additional railway wants, so the improvement may be greater than it seems, and hope is always to be cherished. With harvest prospects good and trade improving in defiance of the new tariff we should at least dismiss fear, expensive though the renewal borrowings promise to be.

Critical Index to New Investments.

Sambas Rubber and Gutta-Percha Co., Limited.

This company acquires sundry concessions of about 131,525 acres in Sambas, Dutch West Borneo, containing about 200,000 wild rubber trees of from 10 to 20 years of age, and about the same number of mature gutta-percha trees. The Netherlands Indies Syndicate, Limited, has bought these properties from an Amsterdam undertaking for £15,000 in cash and £60,000 in shares, and resells it to the company for a further £5,000 in cash, but as it pays all preliminary expenses, which are estimated at £3,500, its profits are by no means exorbitant. In addition to the native trees the original company has planted 800 acres with 14,501 Para rubber trees, 14,499 Ficus rubber and 35,000 gutta-percha trees, and taking an all-round price of 4s. per lb. for the rubber it is estimated that profits should gradually increase from £18,500 in 1908 to £31,046 in 1912. Out of a total capital of £160,000 in £1 shares 55,000 were offered for subscription and 38,000 of these were underwritten for a commission of 7½ per cent. The company is, therefore, not overloaded with capital, and has sufficiently good prospects to make the shares seem a fair speculative investment.

John Barker and Co., Limited.

This big Kensington drapery business recently acquired the undertaking of its neighbour Ponting Bros., Limited, and now offers £150,000 4½ per cent. debenture stock at par to provide for the repayment of loans raised in connection with that purchase and for additional outlay on the buildings. The new issue is secured by a first specific mortgage on the property taken over which is valued at £142,525, and by a floating charge upon all the other assets of the company subject to the existing debenture stocks for £400,000. Since its incorporation in 1894 the company has been very successful, and during the past five years the profits have risen from £61,873 to £79,442, the average per annum being £68,687. Interest on the present debenture stocks, trustees' remuneration and leasehold redemption funds require £18,255, so that on the basis of last year's profits and without taking into account any profits from the business of Ponting Bros. there is a margin of £61,187 available to meet the new charge. The assets of the company, exclusive of goodwill, show a surplus of

assets over liabilities of £625,872, so that the security is ample and the stock appears to be a good industrial investment.

Notes on Books.

Le Marché Financier. Par Arthur Raffalovich. (Paris: Felix Alcan. Prix 12 francs.)

Mr. Arthur Raffalovich's annual volume, running to nearly 900 pages, always deserves recognition and welcome. It is one of the most systematic and complete surveys of the financial world to be found anywhere, and we presume that the editor's own views are set forth in the preliminary survey called "General Considerations," which displays a breadth of view and familiarity with facts of a most enviable description. The usual individual countries are dealt with in succeeding chapters, beginning with England, whose finance and business affairs are reviewed with fulness and judgment by Mr. Stone, and extending over the leading Continental countries, as well as Japan and the United States. The volume winds up with a valuable paper upon "The Precious Metals and Monetary Questions," from the pen of Mr. Bertrand Nogaro, and our only regret is that space does not permit us to enter at present with any detail into the many subjects so usefully dealt with, but the book is always one to have upon the reference shelf.

La Science Economique. Par Yves Guyot. (Paris: Schleicher Frères. Prix 5 francs.)

We are ashamed to have been so long in noticing this well-packed little volume, which reached us some time ago, and can only plead excessive pressure on our time, and still more on our limited space. M. Yves Guyot, however, scarcely requires any introduction from us to serious readers in this country, for his position as a steadfast Free Trade writer and economist is almost as well known in England as in France. This volume is the third edition of the treatise, and it has been completely recast, so that the book is well up to date. We can vouch for its being most interesting reading. Every subject M. Guyot touches he illuminates with knowledge, wit, and keen observation. His familiarity with the writings of English economists is also great, and his cultured appreciation of the English point of view. Take as a random example his remark about the difference between the Bank of France and the Bank of England. The Bank of France, he points out, struggles always to attain to uniformity in the rate of interest, to have a fixed rate which never varies, and it strives to bring this dead level about by charging premiums more or less high on bullion, as occasion demands. But, says M. Guyot, if discount rates do not vary with the conditions of the market they falsify all exchanges, and he contrasts this artificial elasticity with the Bank of England, whose rate of discount is a barometer of the market, and he thinks the fact that it is so one of the causes of England's commercial greatness. There is nothing factitious in its commercial and financial organisation. This observation is to be found in the chapter following M. Guyot's discussion on the currency principle and the banking principle, where, as throughout the book, equal lucidity and deftness of phrasing are displayed, but into other points we cannot now enter. But we commend the book to students.

Accounting and Banking. By Alfred Nixon, F.C.A., F.S.A.A., F.C.I.S., assisted by J. H. Stagg, A.C.A. (Honours). (London: Longmans, Green, and Co. Price 10s. 6d.)

A better book than this for the man who wishes to keep his accounts in an intelligent form, and to understand the forms and practice of accountancy could hardly be lighted upon. The only grumble of any kind we are disposed to make is that no preliminary statement of the simple principles governing bookkeeping is supplied. To the man who begins first of all to keep a journal of income and outgo, the intimacy of a ledger or the formation of a balance-sheet very often seems a mystery there is no unravelling. He does not know why this particular item should be placed to the debtor, and that other to the creditor side of the account, and because of his ignorance the arrangement of the figures often seems arbitrary. We should have liked to see some simple exposition of the rules underlying all accountancy and book-keeping prefaced to the valuable educative material of which it is composed. All branches of business are dealt with, and the examples seem to be judiciously chosen as well as the illustrations, constituting the book a student's manual of high value.

The Anglo-African Who's Who and Biographical Sketch-Book (1907). Edited by Walter H. Wills. (London: L. Upcott Gill.)

We should not offhand have thought this an enterprise which promised much gain to those who undertook it, but after turning over the 400 odd pages to which it runs, we are by no means sure that the first impression was not founded on prejudice. To be sure a sensible proportion of the people embraced in this catalogue of names appear to be of no account from any point of view, and regarding many of them we are not told anything of the slightest value. Of what use is it, for instance, to tell us that Mr. Henry Fell has represented Umgeni in the Natal Legislative Assembly since 1883? Who is Mr. Fell anyway, and what does he do when he is not "representing"? Plenty of entries of this description are to be found which serve doubtless to fill up the pages of the book, but seem to have no other utility. For all that there is lots of information about a whole squadron, brigade or army of people living in or connected with South Africa which it is handy enough to be able to refer to at need. Some of the facts or autobiographies may become of value in another sense as time goes by and the drama of South Africa works itself out. Not the least valuable part of the compilation is the careful summary attached to the names of so many of the South African cosmopolites whose "enterprise" created the Kaffir Circus and ruined it. But in the book they are heroes still and real empire upholders.

The Life Assurance Agent's Vade-Mecum for 1907-8. Compiled by James Wilkie. (Edinburgh: Andrew Elliot, 17, Princes Street; London: Waterlow and Sons, Limited, London Wall. Price 1s.)

Mr. James Wilkie's little book has now reached its fourteenth issue and well deserves the popularity this fact implies. To the general public it is not a manual of much interest, although even these would find its premium tables most useful as an aid to decision, but to the insurance agent it must be indispensable.

NEXT WEEK'S MEETINGS.

Monday September 9

British Transvaal Mines.—Winchester House, noon.
Buenos Ayres and Belgrano Electric Tramways.—Winchester House, 2.30 p.m.

Tuesday, September 10.

Premier Cycle.—Coventry, noon.

Wednesday, September 11.

Freehold Assets Realisation.—Cannon Street Hotel, 11 a.m.

Thursday, September 12.

Mount Elliot.—Winchester House, noon.
Surrey Commercial Docks.—106, Fenchurch Street, E.C., 1 p.m.

Friday, September 13.

Brighton and Hove General Gas.—5, Great Winchester Street, E.C., 2 p.m.
Price's Patent Candle.—Cannon Street Hotel, noon.

The Government of South Australia have instructed the Bank of Adelaide to give holders the option to surrender the 4 per cent. bonds for £500,000 maturing January 1, 1908, for cash payment, with accrued interest to date of surrender, or of converting the bonds into 3½ per cent inscribed stock, on terms which can be obtained from the Bank of Adelaide, or from Messrs. R. Nivison and Co., 76, Cornhill, E.C.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for ten days ended August 31, $6,078, increase $256; aggregate from July 1, $39,546.

Argentine North Eastern. — Traffic receipts for week ended August 2, £2,858, decrease £573; aggregate from July 1, £13,766, decrease £685.

Assam Bengal.—Traffic receipts for week ended August 3, Rs. 92,126, increase Rs. 19,126; aggregate from July 1, Rs. 4,35,443, increase Rs. 23,715.

Bilbao River and Cantabrian.—Traffic returns for August £10,501, increase £3,933; aggregate from January 1, £75,633, decrease £6,149.

Canadian Northern Railway.—Traffic receipts for 10 days ended Aug. 31, $236,100, increase $43,800; total from July 1, $1,718,800, increase $520,100.

Egyptian Delta.—Traffic receipts for week ended August 17, £4,441, increase £507; aggregate from January 1, £93,963, increase £15,159.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 3, Rs. 19,033, increase Rs. 494; aggregate from July 1, Rs. 1,12,189, increase Rs. 1,675.

Midland Uruguay. — Receipts for month of July, £5,064, increase £175; aggregate from July 1, £5,064, increase £175.

North Western of Uruguay.—Traffic receipts for July, $20,800, decrease $4,408; aggregate from July 1, $20,800, decrease $4,408.

Quebec Central Railway.—Traffic receipts for the 4th week of August, $43,780, increase $3,239; aggregate from January 1, $665,901, increase $42,855.

Quebec and Lake St. John.—Traffic receipts for July $66,401, increase $8,676; aggregate $336,862, increase $44,713.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 3, Rs. 18,319, increase Rs. 2,504; aggregate from July 1, Rs. 102,520, increase Rs. 21,675.

Uruguay Northern.—Gross receipts for month of June, £2,221, increase £642; aggregate from July 1, £22,618, increase £3,445.

White Pass and Yukon Railway.—Traffic receipts for 10 days ended August 31, amounted to $109,031, increase $36,531.

ENGLISH.

Cleator and Workington Junction. — Receipts for week ending August 31, £1,337, increase £52; aggregate from July 1, £11,757, increase £1,098.

Cockermouth and Keswick Railway. — Receipts for week ending August 31, £1,020, decrease £32; aggregate from July 1, £10,130, increase £27.

East London Railway.—Traffic receipts for June, £2,683, decrease £391.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending August 31, £464, increase £85; aggregate from July 1, £3,592, increase £952.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending August 28, £993, decrease £81; aggregate from January 1, £27,760, decrease £1,075.

Blessington and Poulaphouca.—Traffic receipts for week ending August 28, £39, decrease £4; aggregate from July 1, £289, decrease £58.

Bristol Tramways and Carriage.—Traffic receipts for week ending August 30, £5,376; aggregate from July 1, £49,289, decrease £1,183.

British Electric Traction.—Receipts of all the Associated Companies for the week ending August 30, £31,538; 424½ miles.

Burnley Corporation.—Traffic receipts for week ending August 31, £1,251, decrease £30; aggregate from July 1, £11,714, increase £376.

Dublin and Blessington.— Traffic receipts for week ending August 28, £174, decrease £25; aggregate from July 1, £1,557, decrease £98.

Dublin and Lucan.—Traffic receipts for week ending August 30, £163, increase £10; aggregate from July 1, £1,407, increase £84.

Dublin United.—Traffic receipts for week ending August 30, £8,873, increase £961; aggregate from July 1, £67,185, increase £15,827.

Edinburgh and District.—Traffic receipts for week ending August 31, £4,543, decrease £906; aggregate from January 1, 1907, £174,551, increase £1,458.

Hastings and District. — Traffic receipts for week ending August 29, £1,801.

Isle of Thanet.—Traffic receipts for week ending August 31, £1,793, increase £30; aggregate from October 1, £27,054, decrease £692.

London County Council.— Traffic receipts for week ending August 24, £30,718, increase £4,525; aggregate from April 1, £657,632, increase £103,123. Miles 117⅞, against 98.

London General Omnibus.— Traffic receipts for week ending August 31, £20,671, decrease £1,908; aggregate from July 1, £194,535, decrease £19,998.

London Road Car.—Traffic receipts for week ending August 31, £8,424, increase £841; aggregate from July 1, £77,390, increase £4,910.

London United.—Traffic receipts for week ending August 30, £8,217, increase £862; aggregate from January 1, £227,522, increase £7,457.

Provincial Trams.—Traffic receipts for week ending August 31, £2,477, increase £73; aggregate from October 1, £82,473, increase £6,320.

Rossendale Valley.—Traffic receipts for week ending August 30, £211, increase £13.

Sunderland District.—Traffic receipts for week ending August 28, £522, increase £69; aggregate from Jan. 1, £15,784, increase £1,904.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending September 1, £1,269, increase £265; aggregate from January 1, £40,331,

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending September 2, £15,621, increase £146; aggregate from January 1, £575,129, increase £56,949.

Auckland Electric.—Traffic receipts for four weeks ending August 16, £10,063, increase £505; aggregate from January 1, £83,769, increase £3,473.

Brisbane.—Traffic receipts for month of August, 1907, £15,225, increase £1,039.

British Columbia Electric.—Nett earnings for July, $62,432, increase $23,909. Nett earnings, including income from investments, from July 1 to July 31, $73,468, increase $25,409.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for week ending September 2, £6,629.

Calcutta.—Traffic receipts for week ending August 31, Rs. 45,522, increase Rs. 2,514; aggregate from January 1, Rs. 16,90,279, increase Rs. 1,59,903.

Cape Electric.—Traffic revenue for month of July, Cape Town, £9,697; Port Elizabeth, £2,878.

Cartagena (Colombia).—Traffic receipts for September, £10,646.

Carthagena and Herrerias.—Traffic receipts for the month of August, £3,362, decrease £346; total from January 1, £38,847, increase £3,624.

Geneva Trams.— Earnings for July, fr. 221,726; increase fr. 18,276.

Kalgoorlie Electric.—Traffic receipts for July, £3,654; aggregate from January 1, £27,406.

Lisbon Electric.—Earnings for July, milreis 128,811.

Madras Electric.—Traffic receipts for fortnight ended August 31, Rs. 18,728, increase 28½ per cent.; aggregate from January 1, Rs. 2,74,600, increase 20 per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for August, £42,000.

Mexico. — Nett earnings for month of July, $197,500, increase $3,604; aggregate nett earnings from January 1, $1,145,083, increase $46,899.

Perth (W.A.) Electric.—Traffic receipts for week ended August, 30, £1,346, decrease £71; aggregate from January 1, £49,533, decrease £1,666.

Rio de Janeiro.—Nett earnings for July, $189,849; aggregate from Jan. 1, $1,115,650.

Sao Paulo.—Traffic returns for July: nett earnings, $98,452, decrease $7,548; aggregate from Jan. 1, $773,717, increase $16,461.

Twin City Rapid.—Traffic receipts for the month of May, $496,711, increase $48,607; aggregate from January 1, $2,317,873, increase $247,855. Nett traffic receipts, $260,724, increase $21,884; aggregate from January 1, $1,169,500, increase $98,320.

The Investors' Review.

The Week's Money Market.

BANK RATE 4½ PER CENT. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

Why the Money market should have changed its attitude so completely within the past fortnight or less is difficult to explain. No doubt the fears prevalent when the Bank rate was put up to 4½ per cent. were rather exaggerated, but there was ground for them, and the market was fully safer when under their sway than it is now when competition for bills has driven discount rates down to 4 per cent., and sometimes less, for three months' bank paper. It is argued that the Bank has become much stronger than it was when the rate was put up. It has secured a considerable portion of the heavy imports of raw gold, and is otherwise in a much better position. This is only partially true, for the Bank is even now no stronger than it was this time last year when we had 5 and 6 per cent. Bank rates lying immediately ahead of us. The principal change compared with a year ago is in the other deposits, which are about £2,276,000 better now than then. This increase, however, is not due to large accumulations of cash, to augmented stocks of bullion, but to two influences of a quite temporary kind. One is the larger amounts borrowed this autumn from the Bank of England on bills discounted, and the other the notable decrease which has taken place in the Government balances. The market, in other words, owes the Bank £1,475,000 more now than it did a year ago, and the Treasury balances have been depleted by £2,638,000 on a like comparison. Allowing for a repayment of £1,620,000 on Government securities, that being the reduction on the year, the market still possesses credit to the amount of upwards of £2,600,000 which it did not have the use of this time twelve months. And, after all, the increase in the other deposits on comparison of years is only £1,067,000; therefore, nothing in the Bank return warrants credit jobbers in assuming that the worst of the pressure is over, for this year.

Pressure has hardly begun. We have not yet felt the Egyptian demand, although the exchange points to its early appearance. There is no indication that the United States will be in a position this month to take away some millions of gold from the Bank as it did a year ago, but it is well to be prepared for developments there. Not a whisper has arisen about any requirements from South America, but that also must be provided for, and although some of the anticipated demands which so exercised the minds of the market a fortnight ago may never arise we may be sure others must and will. This very week the Bank found a competitor in the open bullion market, and had to advance its buying price to 77s. 10½d. per oz., and even then secured but about half the £600,000 left after Indian and trade demands had been satisfied. Germany was the buyer, and must continue to be a buyer, if it be true that the Berlin market owes a large amount of gold to the Vienna one, which must be refunded at an early date. It cannot be refunded out of the resources of the Reichsbank, for these are much too slender already, as the last return issued by it shows. A fortnight ago its note circulation was £8,603,000 below the legal maximum, and last week it rose to £973,000 above it, this change being produced by an increase of £8,414,000 in the active circulation, of which upwards of £3,000,000 was represented by coin drawn out. The Austro-Hungarian Bank is in much the same position, an impressive increase having occurred in its note circulation accompanied by a diminution in its gold reserve. The same indication is given by the figures of the Bank of France, which show an increase of almost £5,000,000 in the note circulation accompanied by a decline of £435,000 in the gold in hand. Thus all great European markets continue hard up so far as available cash is concerned, and we must, therefore, look for competition in the open market for the supplies of gold coming to hand, and be ready for demands upon the Bank. Continental exchanges move against us with each dip in our discount rates, and unless the market braces up we fear it may get an unpleasant shock one of these mornings through the withdrawal of gold from the Bank for export.

Heedless of considerations like these, pushed by the cheapness of short loans which have never risen to 3 per cent. during the week, and are now 2½ per cent., bill brokers have worked discount rates down until 60-day bank paper is taken at 3¾ per cent. and the fine rate for 3 per cents. is really no better than 4 per cent., although some houses quote 4 1/16 to 4⅛ per cent. In the beginning of the week six months' bills could rarely be discounted under 4⅞ per cent., and yesterday and to-day the rate has been only 4½ per cent., the market having been in a manner demoralised for this class of bills by the sale of renewal "Treasuries" on Monday. Instead of getting 4½ per cent. or more on such bills the price obtained represented an average discount of only £4 5s. 10.98d. per cent. This is fully ¼ per cent. above the rate paid on the previous issue, but still well below market hopes and current rates. A sale on these terms therefore immediately tempted the bill brokers to take remitted paper of long usances from the market at reduced rates.

The market would have been harder to-day but for the scarcity of bills and the belief entertained that the release of Japanese money beginning next Tuesday may keep short loans very cheap. This is not certain, because the 6 per cent. bonds to be paid off then are not coming in very freely. Altogether about £10,000,000 of them seems to be waiting redemption, and only a moderate proportion of this total has been

deposited as yet. New York is also paying off, and has provided £6,000,000 for its portion, so that at the most the glut of short credits here could only be temporary and afford no ground for running down discount rates. Other motives prompt the market to firmness. There is not only the above-mentioned comparative poverty of Continental markets, but the plain evidence that German competition for the bullion in the open market will again be felt on Monday. German banks have been discounting this day or two in such a way as to lead to the supposition that they mean to have as much of next Monday's £1,000,000 of raw gold as they can buy without driving the price too high.

For all that, cheap money will tell, and as the banks were buying October paper from the brokers at 3¼ per cent. this morning, while the new Treasury bills, paid for to-day without disturbing the credit market in any troublesome way, were bought for France and on behalf of "a certain foreign government," as it was put to us, at 3⅜ per cent. discount, it will be extremely difficult to keep bill rates hard without the help of a fresh fright.

The addition to the "rest" of the Bank of England in this week's return completes the exhibit of profits for the half-year, and the total is almost level with that of twelve months back. This indicates a dividend at the rate of 9 per cent. per annum for the stockholders.

Calls upon new issues are far from important next week, amounting as they do to less than £800,000 all told. The largest is £210,000, payable next Saturday on Buenos Ayres and Pacific Railway new 4½ per cent. debenture stock. The item next in magnitude is £100,000 due on Peruvian Pacific Railway debentures next Monday. On the Friday following £153,400 is payable on Middlesex County 3½ per cent. stock.

Silver.

The Indian Government has resumed its buying of silver, but only on a very moderate scale, and the bazaar demand this week has also been languid. Contrary, however, to expectations, none of the heavy purchases for shipment on the 6th have been resold, and the market has, on the whole, been steady. A considerable quantity of the metal has changed hands owing to speculators adjusting their deliveries; but prices, after touching 31 9/16d. per oz. for cash and 31 5/8d. per oz. for delivery two months forward, eased off again, the two positions alternately losing 1/16d., and by Thursday they were back to the closing levels of last week. To-day an increase in the inquiry, ascribed by some to the bazaars and by others to the Indian Government, caused an advance of ¼d. per oz. in both positions to 31 9/16d. and 31 11/16d. per oz. Tenders for the Rs. 25,00,000 Council drafts on India last Wednesday amounted to Rs. 2,45,30,000 in bills and Rs. 3,50,000 in telegraphic transfers. Of these only Rs. 10,30,000 were allotted in bills and Rs. 3,50,000 in transfers, or Rs. 13,80,000 in all, applications at 1s. 3 31-32d. and 1s. 4d. respectively receiving in full. The amount to be offered next week is again reduced to Rs. 20,00,000.

The Stock Markets.

An interesting correspondence has been going on in the *Times* money article this week regarding the usages and faults of the Stock Exchange. We allude to it because it affords some clue to the remarkable absence of business in all departments of the market. Nothing relieves the monotonous apathy. Prices may decline, and do, but the fall does not bring in buyers. A fall never did, experienced market men will say, but then when prices go up there is equal apathy, or else an increase of sales by the outside public which drives the inside dealer nearer and nearer to absolute despair. Now in the course of this correspondence the jobber has come in for some very hard words. He is called "a brigand" and other sweet names because he does not quote prices to please the outside operator. There is nothing new in this kind of language. Long ago, in the eighteenth century, the great Lord Chatham called the jobbers of Change Alley "cannibals," and described them as miserable, but they have survived in the Stock Exchange all invective of this kind, and will still survive. When, however, the public mind is imbued with sentiments such as this sort of language

reveals, it is very bad for current business, and we really do not see what is going to remove the cloud from markets. It cannot be removed so long as this temper continues, and the temper will continue as long as losses are incurred or visible in the quotations of stocks.

Experience warns us that sudden changes in market moods are prone to arrive when least expected. In the course of a long experience we have now and then beheld stock markets apparently on the verge of utter despair. The volume of business has been reduced to a mere trickle, members have been holding on by the eyelashes and fearing the worst. Suddenly a revival of market energy has been brought about in one security or a few kindred securities; dealings have become active in one particular direction, and gradually activity has spread, until the whole Stock Exchange has been once more in full swing buying and selling and getting gain with the utmost vigour and success. Is it unreasonable to expect that something of this kind may overtake markets in the midst of their present gloom? No, there is always the possibility; but yet the present crisis is different from any preceding one of which we have experience or knowledge. As is often pointed out by us, it is a universal crisis. By dint of helping each other, propping each other up when a critical conjunction of adverse circumstances has to be spirited away in one market or another, all markets have brought themselves into the same overloaded position, and we cannot discern a single point at which renewed energy may be generated with the prospect of bringing on general activity in dealings. Essays in booms are constantly being made, and always fail. This paralysis causes us to doubt whether the markets are now going to escape from a liquidation much more far-reaching and drastic in its results than any this generation has witnessed.

"We have already had the liquidation," people keep on telling us, and in a sense that is true, but we have not had the acknowledgment of the losses caused by the prolonged decline in prices. Neither here nor on the Continent, nor in the United States, have results in suspensions of payment taken place proportionate to the catastrophic extent of the losses already visible. Because failures have not been proclaimed, credit remains, and must remain, strained; market resources are utilised to sustain hollow, ichneumonised positions, not to develop fresh resources of wealth. The holding on is consequently an exhausting process, and on our own market never an account passes without some members of the Stock Exchange disappearing or sinking from a high position into one of insignificance. They do not fail: they evaporate or subside.

Abroad, as we know, failures are every week occurring. In Germany industrial suspensions have been painfully frequent and severe of late; in France, houses of the bucket-shop order have been disappearing, leaving sorrow behind; and in the United States the recent stoppages have been ominously suggestive of impending further trouble. Even on the Wall Street market, propped as it is by the resources of the millionaires and their banks, helped also, surreptitiously it may be, but still helped, by the funds of the life insurance companies, it has been impossible to prevent suspensions. One occurred yesterday, and although the losses of Messrs. Watson and Co., put at £600,000, are attributed to the grain market more than to the Stock Exchange, the failure is none the less symtomatic and of considerable importance to both stock and produce markets. It affords a glimpse of the ravages as yet unconfessed. Thus, look where we may, the prospect is discouraging, and we must insist continually that pauses such as the one our market has enjoyed this week ought, if possible, to be availed of by speculators who may be utilising more credit than they can afford to diminish their commitments. Unfortunately, £5,000 "Brum" stock would often be hard to dispose of at the list-buying price in present circumstances.

British Funds and Other Trustee Securities.

Utter stagnation has characterised the market for all trustee classes of stocks this week. They cannot be described as "flat" or "dull" or "steady," because there has not been enough life in them to warrant any description. Small dealings have taken place in Consols as usual, and in India stocks as well as in London County 3 per cents., but elsewhere day after day passes with never a bargain recorded. Colonial issues have been just as lifeless as the others, and so prices for them may be called steady.

Foreign Stocks.

Foreign Government bonds have also held their ground fairly well throughout the week, and much for the same reason. Outside Japanese, Russian 5 per cents. and one or two Chinese loans together with Egyptian Unified there has been little or nothing going on. Japanese bonds, however, show a slight improvement, and Russian issues have been put up sentimentally owing to the conclusion of an agreement between our Government and that of the Tsar. The Paris Bourse has also been feebly steadier, and German markets have contrived to assume an appearance of stability rather belied by the absence of business and the disquieting position of money and credit there. In South American issues nothing particular has happened, but Brazilian bonds have not lost ground nor yet Chilian.

Home and Other Railway Stocks.

The public would seem to have deserted the Home Railway market altogether, and even the small investor has almost ceased to come for his occasional hundred pounds of ordinary or deferred stock. This is not surprising looking at the way prices recoil. The wonder rather is that there should be any buying at all when the market flinches so on the very slightest provocation. It is quite useless in the present temper of things to emphasise the excellence of the traffic receipts. Already for the nine weeks elapsed of the current half-year the increase is £587,000, and according to the *Railway News* it was £105,547 for the past week alone, but people say, "what is the use of that? All the excess gross revenue, or nearly, will be swallowed up in working expenses," and they are right enough in taking this view while our railway boards continue to meander along in the old, old way, wasting capital and dissipating revenue in antidiluvian modes of competition, as if they deliberately intended to bring about a national railway bankruptcy. The whole system of business followed by our railways will have to be altered and infused with a new spirit of economy, of thrift even, before anything like health can come back to the market for the ordinary stocks. Nevertheless these stocks did not give way so much this past week. Prices are lower as a rule where they have moved, but, generally speaking, no business went on, and even the Caledonian dividend did nothing whatever to lift the market for the Scotch stocks. It was better than many anticipated, but passed almost unnoticed with the market. If their English entanglements would permit it these Scotch railways might play a great stroke and cheer us all up by merely pooling traffic and ending competition.

Here and there amongst preferences there has been some little staying power exhibited, but not much. Selling has not been prominent; that is the best we can say except that some little inquiry has been felt for Midland and North-Eastern preferences as well as for some of the recently depressed Great Central issues. Business in a small way is also possible in North-Western, Great Western and North-Eastern privileged stocks, but you must not try to sell as much as £10,000 of any one of them all at once.

Indian Railway stocks have been steady as a whole, and no particular change has taken place in Grand Trunk stocks or Canadian Pacific shares. The market for these, however, has been the reverse of buoyant, and it is suggestive to note how the successive estimates of the harvest of the West are gradually preparing the public mind for disappointment. It is now

officially estimated that the Manitoba crop will only be from 10 to 14 bushels to the acre, and although "bumper" yields are predicted from Alberta and parts at least of Saskatchewan, we must regard these consolations in the light of a generous desire to temper disappointment. Apart from this, the tension is as great in the Canadian Money market as anywhere in the world, and were it not for the tremendous amount of new money being poured into the country, through railway construction particularly, and also through the mining developments, and the inflow of settlers there would probably have been a crisis in Montreal long ere now.

The Yankee market is still a mere matter of tired out "bull and bear." No seriously minded person is taking the slightest interest in its movements. Considerable professional play has developed now and then in Union Pacific shares, but business has never been large on Wall Street, and consequently excitement has never arisen in Shorter's Court. We do not even respond to the divagations of the great J. J. Hill or the almost greater "J. Pierp." At the close of the week prices have been lifted a little by the "bulls," who have graciously made known their view that the failure of the Inter-Borough Metropolitan Company to pay its usual quarterly dividend at the rate of 6 per cent. on the deferred stock matters not a straw because it has been fully discounted. The last payment was made in scrip, and as this concern has been capitalised on a scale that far outshines in liberality anything our amateur Hooleys and beings of that mean sort could ever rise to, it may well be that the unfortunate shareholders have ceased to expect any dividend. The bonded debt of the concern is said to have been increased upwards of eightfold—from £2,200,000 to £18,000,000—in the process of consolidation. Much has also been made of the "bonus" dividend declared by the Chicago, Burlington and Quincy Company, whose directors have added a trifle of 6 per cent. to the ordinary dividend, said addition representing advances made by the Great Northern and Northern Pacific Companies since they laid hold of the Burlington, and being designed to cover the difference between the usual dividends and the interest on the joint 4 per cent. bonds issued in exchange for Burlington stock. Players must get what consolation they can out of master-strokes of this description, but we should not counsel investors to buy even United States Railroad bonds just yet. A day will doubtless come when they will be cheaper.

Without much business going on Argentine Railway stocks have been steady, and disposed to harden here and there. Antofagasta deferred stock has also been lifted from the depths into which it had sunk, and a little business goes on in it. The gamble in Mexican Railway stocks, however, is perfectly defunct for the time being, and no further progress has been made with the rally in United Railways of the Havana stock or any other Cuban security. On the whole, however, this part of the market has been in a manner firm though lifeless.

Banks and Breweries.

Bank shares are also quite inactive, with no movements worth dwelling upon, and the Brewery and Distillery groups may likewise be passed over without a remark since most of the changes usually take place without anybody troubling to mark bargains. Why, for example, should Truman, Hanbury's "B" debenture stock be marked down to about 52, and Watney, Combe's preference and debenture stocks get marked up, since dealings do not appear to take place in any of them?

The Commercial List and Minor Groups.

Changes are of slight importance amongst Commercial and Industrial securities which, however, rather show steadiness with continued activity in some of the Nitrate shares, a slight reaction in Darracq shares—balanced in a manner by a recovery in Dunlop issues—but without indication anywhere of markets being really alive. Most of the movements occur without trace of business done, but there are occasional transactions in Fine Cotton Spinners' shares which have been firm, and now and then a bargain is recorded in Gordon Hotels shares, which keep their prices fairly well. Mazawattee Tea shares, too, seem steadier, although the debenture stock has dropped back to 85. Waring and Gillow's shares also continue to gain ground, and there is business in them most days.

Electric securities remain in the background and seldom change. Canadian General Electric shares, however, have rallied as well as Montreal Light and Power shares, but elasticity has rarely developed elsewhere. Hudson's Bay shares remain the only steadily active security among Financial, Land and Investment stocks, and the price has been good most days. This group altogether has stood out against the current, and although a few things close faintly down the improvements are more numerous. Changes among financial trusts have been adverse, and it is useless to try to sell many among them. Gas stocks and Insurance shares have generally held previous prices when they have not risen a little. The Iron, Coal and Steel group, however, is suffering by the rise in the price of coal, and even Guest, Keen shares have subsided a few pence. The shares of companies that own collieries have, on the other hand, been buoyant, and quite noticeable rallies have occurred in Pearson and Knowles' and Pease and Partners' shares. Ebbw Vale shares, too, have been better, and, in fact, all shares and some debentures of companies owning and working coal pits. Fair provincial business is reported in some of them. The London market, however, does little, and is inclined to sell industrials of the machinery, steel or heavy ironwork classes.

Cunard fully-paid shares have been put back a fraction, the only effect thus far produced by the renewal of hostilities against the company by the German lines, whose managers are buying our coal dear the better to make a profit by low fares. Tea shares mostly stand as before when they have not gained a trifle. Telegraph and Telephone issues have been forgotten and seem steadier. The Tramway and Omnibus group continues more or less demoralised, in spite of the recovery of 7 in L.G.O. stock, produced by the adroit proceedings at the half-yearly meeting of shareholders. We have always admired Sir John Pound, but never so much as now. The gravity with which he handles the ruins he has seen accumulated around him in the long course of his sway over the company's finances, the ease with which he passes by or over danger spots, and the sympathy with which he feeds hope deferred are all in the most superior style of the benevolent financier. How he must smile as he listens to the innocent prattle of shareholders about "average profits" in the past, future "progress," and so on, knowing as he does that the position of the company is beyond hope. Its debenture-holders seem to think so, and the tramway list altogether betrays dread of sorrows to come.

Friday Evening's News.

The Stock Exchange has a holiday to-morrow, and quite appropriately did next to no business to-day. Prices, however, were steady, and in some instances rather harder. Consols, for instance, showed more firmness, Hudson's Bay shares left off at 86½, Rosario ordinary stock at 104¾ and Manchurian Railway scrip at ½ discount. Should the market remain favourable after next account and no renewed scare take place in the Money market, we shall have an avalanche of new issues.

Japanese Sinking Fund.

From an authoritative source we get the following clear statement of the position of these funds, which were alluded to in our article on Japanese budgets published on August 24:—

"The amount of Sinking Fund, £11,270,000, stated in The Investors' Review of August 24, 1907, to be

'set aside as the annuity to be rigidly applied year after year to meet the charges upon this debt and reduce its amount' is one simply for the charges upon that part of the whole debt which was contracted to meet the expenses of the recent war, and that amounts to a sum about £162,000,000 outstanding, for which this sum of Sinking Fund will be enough to pay off not only interest, but principal.

"As against the loans which already existed before the war, the Government is setting aside year after year a sum about £3,800,000 for the payment of the principal and interest. The Government also makes a provision for redemption of the principal and payment of interest of the loan which became chargeable to it by the nationalisation of railways."

Glasgow Corporation Stock.

On November 11 next £1,100,000 of Glasgow Corporation 3½ per cent. stock falls due for redemption. Glasgow is unable to pay back any of this stock; it will therefore be renewed, and the news agencies report that it is to be replaced by a 3½ per cent. stock, which will be exempt from redemption until 1914. The intention is to issue this new stock at par, and the corporation may consider itself extremely fortunate if it manages to carry such a bold stroke through. Were it to come to the open market and ask for this money it would have to pay 4 per cent. for it.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Fall: Guaranteed A/c. ½, to 82½-83, Transvaal A/c. ½, to 91½-92½, Turkish ½, to 103-106, Bk. of England 1, to 273-278.

CORPORATION AND COUNTY STOCKS.—Fall: St. Helens 2, to 83-85.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES. Rise: Canada 4 p.c. Conv. ½, to 102-103, Manitoba 5 p.c. Debs. 1, to 102-104 Natal 5 p.c. 1, to 101-103, Straits Settlm. 3½ p.c. ½, to 96½-97½. **Fall:** Queensland 3½ p.c. 1945 1, to 99-101, S. Australian Lns. ½, to 102-104.

CORPORATION STOCKS—COLONIAL AND FOREIGN.—Rise: New Plymouth 1, to 101-103, Osaka City ½, to 101-103, Para 2, to 74-77, Rosario 1887, 1888, and 5 p.c. all 1, to 49-51, do. 1889 1, to 48-50, Valparaiso 2, to 102-104. **Fall:** Montreal 4 p.c. 1, to 102 104.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

With a very little public support, which unhappily was not forthcoming, the Kaffir Circus might have been made to "boom" this week. Professionals took it into their heads to put prices up, and as Paris did not discourage the movement some success attended the effort. A few Chinkees were blown to bits at the New Kleinfontein mine, but as this will save the cost of their repatriation, the market did not treat the news at all seriously. Sundry bands of Chinese marauders have been committing some more outrages, but they will probably be accounted for in due course, and in fact the labour news is fairly encouraging. True, 2,300 coolies sailed last Monday for China, but when Reuter telegraphed this some consolatory intelligence was also sent along to the effect that the Cape Government has undertaken to grant special facilities and protection to Cape natives going to the Rand. The Government is said to be doing its utmost to assist the Transvaal in the matter and Dr. "Jim" has announced that the Legislature would tentatively approve the scheme for increasing the supply of native labour for the Rand mines from the Cape. All this taken in conjunction with the statements in the July report of the Chamber of Mines concerning recruiting on Portuguese territory, the end of the quarrel between Mr. J. B. Robinson and the mine owners, and the fact that Chinkee will only go as his contract expires seems to ensure an adequate supply of labour for quite as long as we need look ahead. On the whole, then, the market had some excuse for waking up a little, but after a bit punters grew tired of beating the drum, because the public crowd that gathered round would not have filled a sentry-box. As a result business came to a dead stop about the middle of the week, and this was the signal for modest profit-taking, especially as the fortnightly settlement is at hand again.

Rhodesians caught the fever in a mild way, and Chartered dashed up sixpence on revived discussion of that wonderful new goldfield at Felixburg in Mashonaland. No fewer than 700 claims, each measuring 150 ft. along the reef and 600 ft. across (not the reef), have been pegged out on the main and parallel reefs. The deepest shaft is down 130 ft. and we are told that at this point the vein shows its greatest width. Hooray! Then Tanganyikas were bid up on the publication of a cable reporting a fine strike of ore in the Kansanshi mine, and other leading things like Eldorados and Bankets were kept on the move for a time. But when Kaffirs became dull again Rhodesians followed suit, and the market at the finish was somewhat neglected.

Paris support gave De Beers a good start, but the prospects of that profit tax are not readily forgotten, and prices soon inclined downward once more. Another spurt, however, occurred before the end and Premiers were lifted almost a sovereign in less time than it takes to tell. After strenuous denials it is at last admitted that negotiations have been proceeding for some time between these two companies, and although the immediate result may be nothing more than a diamond-selling agreement, complete absorption can probably be looked for one day. The latest yarn is that the Premier company will be guaranteed sufficient profits from its stones to permit annual dividends of 25s. on the deferred shares. Roberts Victors did not move much, but New Vaals were wretchedly flat and are gradually approaching their true value.

Jungles managed to hide themselves for a couple of days, but reports of favourable developments at certain mines caused them to emerge from their obscurity and one or two shares firmed up. Among West Australians Fingalls were still dull and Hainaults were on offer by German holders, but Horse Shoes firmed up late. The cabled report of the meeting of the Broken Hill Proprietary Company quite upset this group. The wages bill has shown a very heavy increase, and while certain troublesome litigation has been settled the company has had to pay a pretty heavy sum. The report also contains the following significant statement: "Concerning the burdensome Customs tariff proposed to be imposed by the Commonwealth Government, it is to be hoped that Parliament will not consent to penalise a primary industry." A nasty pill for the Tariff Reformers. Deep Leads were quoted anything between sixpence and half-a-crown, except Berry Unites, which could be had for the asking by anyone willing to pay the final calls of 5s. per share. Kalgurlies rallied to 3s.

Copper things have provided a little excitement, although fluctuations have not been so wide as sometimes. The metal commenced badly, falling more than £2 per ton, and all the principal shares went down. At one time Tintos were up to 75¼, and then relapsed to 73⅞. A cut in the metal in New York did not do things any good, although the hope was expressed that the reduction would again bring consumers into the market. So Tintos further weakened to 74¼ after being up again to 75, and the market altogether did not look very grand. The metal statistics showed that the visible supply was practically unaltered compared with the middle of August. Tins were irregular, Dolcoaths weakening on a statement made at the meeting that an accident to the pump had let the water into the bottom of the mine, which will cause a rather sharp decrease in the amount of tin to be sold at the next ticketing. Pahangs have been rather a wild market, but have scored a considerable advance.

Among the miscellaneous assortments Siberians were noticeably weak again and New Zealands displayed a reactionary tendency. Indians kept steady. Camp Birds were offered, but Alaska Treadwells had a rise, and the Le Roi things were inclined to improve. One or two Mexican things were a little lower. Cobalt Townsites weakened, but picked up again.

NATIVE AND CHINESE LABOUR.—According to the report of the executive committee of the Transvaal Chamber of Mines for July the number of natives distributed was 7,162, and 163 were transferred from the Middleburg district. Against this time expirations, desertions, and discharges, together with 41 transferred to the Middleburg district, were 7,700, leaving the number employed at the end of July at 83,111, a loss for the month of 375. In the outside districts exclusive of Barberton there was a nett gain of 181, reducing the actual loss to 194. The Chinese employed, were 51,441, but repatriations have since sensibly reduced this figure. The association has been informed of the conditions under which the Transvaal Government approves of the introduction of natives from Portuguese territory north of latitude 22 deg. and recruiting in these areas has been reopened for the summer season. Recruiting in Cape Colony, which was temporarily suspended in April last, was resumed towards the end of July on demands being received from members of the association. The Government has introduced a Bill for the temporary continuance of the Labour Importation Ordinances in respect of labourers the first term of whose contracts has not expired by March 21, 1908, the date on which, according to the letters patent, these ordinances are repealed.

NIGEL DEEP.—When the directors of this company received their superintending engineer's report in May last it was so discouraging that a special circular was issued to the shareholders advising them of the position of affairs. The engineer's report covers the operations of the year to April 30 and contains the unfortunate intelligence that for some considerable time past the development in the mine has given very erratic and unsatisfactory results. In many cases ore previously considered payable from the assay value has proved patchy and unreliable as to values, and in consequence there has been an excessive proportion of ore of too low grade to give a profit under present conditions. This has necessitated an undue attack on the known richer portions of the mine, and unless current development which is being pushed as energetically as conditions will allow opens up more payable areas, it may be necessary to suspend milling operations and confine the work entirely to the development of the mine, in order to give an opportunity to prospect and open out new areas. It should, however, be noted that during the past year working costs have been gradually reduced from 39s. 0d. per ton crushed in April, 1906, to 29s. 4d. per ton crushed last April, thus bringing into the field of payability as much as of the low grade ore in the mine as possible. Inevitably the financial question crops up, and we find the company getting pretty heavily into debt. During the year a sum of £8,336 has been expended on shaft sinking and equipment, and to meet this the company borrowed the balance, namely £6,000, of the loan previously arranged with the S.A. Gold Trust and £2,500 from the Consolidated Gold Fields Company at the same time arranging to take another £7,500 from the latter. In this way the liabilities on loan account have been brought up to the nice little sum of £142,000, and the cash balance on April 30 was just £1,650, although there was gold in transit £9,210. The company has given certain considerations in the way of extended options for the facilities granted, but they do not appear to be worth much in present circumstances. Tonnage of ore crushed in the period under review was 45,377, yielding 21,596 ozs. or 0.530 dwts. per ton. This was worth £90,724 and the company also added in its reserve ore valued at £7,253, making a total of £97,977. Working costs, including development redemption, came to £81,131, leaving £16,846, which was increased to £17,417 by sundry other items. Interest, commission, and exchange took £9,255, and £5 was absorbed for adjustment of profit tax, reducing the balance of income over expenditure to £8,196. This goes against the debit of £43,979 at the end of April, 1906, bringing it down to £35,783.

BENONI GOLD MINES.—This is another Farrar concern, but it is no better off than the rest, and last September work was discontinued for the usual reason, no "pay." As the financial year begins on June 1 this means that operations practically for four months only, and we do not gather that anything very startling was done in the time. The manager's report shows that there are 352,240 tons of ore developed in the mine, part of this only 36,630 tons average as much as 12.30 dwts., the remainder 315,610 tons giving only 3.26 dwts. per ton. This is divided as to 107,877 tons of 4.36 dwts. ore and 117,733 tons of 1.43 dwts., and under present conditions there is no doubt at all that the whole of this is unpayable. The best the consulting engineer can say is that the possible prospect of being able to improve the grade by a small margin on further opening up of the mine, together with a possibility of reducing working costs to 16s. or 17s., "may lead to your venture yet being profitable." The worst of the case is that all the working capital, together with a loan of £20,000, has been exhausted, and no further funds appear to have been arranged for.

BOKSBURG GOLD MINES.—According to the report for the year to December 31 last operations were carried on until April 24, 1906, when they were suspended owing to want of funds. Thanks to the depression in South Africa, it has not been possible to formulate any scheme on a basis favourable to the shareholders for the raising of funds essential to the further exploration of the property and the erection of the necessary reduction works. There is nothing for it, then, but to wait, because the last £1,500 of the £35,000 loan arranged with the Anglo-French Exploration and Farrar Bros. jointly has been called up and another £2,033 obtained from bankers in order to meet the payment of licences, rents, &c., necessary to preserve the title. Concluding his remarks on the work done in the short period mentioned, the consulting engineer observes that the indications in and about the property are such as to encourage the hope that future development will open up "a mine." He thinks, therefore, it is most desirable that work should be resumed and pushed with all possible speed. Shareholders can gather what encouragement they like from that, and meanwhile take note of the fact that all the issued capital has been spent, and a good deal besides, while the cash balance is the encouraging one of £159. General outlay last year was £7,749, making a total to date of £73,833, and the book value of the property is £535,262.

KLIPFONTEIN ESTATE AND GOLD MINING.—It is the same old story in the report for the year to May 31 last. No work has been done on the property within the period and general depression, financial uneasiness, and things of that sort stand in the way of any financial plans enabling the company to continue the policy of the joint development of the property with that of the Rand Klipfontein. It is all very unfortunate no doubt, but it is hardly possible to express much sympathy. Naturally enough the company is not spending more than it can help, and the total outlay after allowing for small credits on account of interest, &c., was only £819, making the total general expenditure £27,342. The money spent on joint construction account is £62,843, this company's share being one-half. What the company wants is a sympathetic Government, settled conditions, and an efficient and regular supply of unskilled labour, and then we shan't be long. One good point is that the company has cash balances of £14,610, with practically no liabilities.

RAND KLIPFONTEIN COMPANY.—To say much about this company would only be piling on the agony, because the statements in the report are practically a repetition of those made by the Klipfontein Estate directors. General expenditure for the year was only £911, and as interest and revenue from water sales brought in £723 the increase on the year was very trifling at a total of £21,775. The cash balance amounts to £13,811 and the company could go on for a long time doing nothing.

CHIMES WEST.—The position of this concern is rather miserable, and we fear the prospect of a return to better times is not very bright. Owing, states the report, to the existing lack of confidence in South African mining enterprise and the consequent financial depression, the directors have been unable to mature any scheme for the liquidation of the present liabilities of the company or for providing funds for the further exploitation of the property. During the past financial year, which ended on May 31, the further sum of £1,050 was advanced by the Anglo-French Exploration Company in order to pay claim licences, and to preserve the titles. No less a sum than £23,125 is now owing to the Anglo-French Company, besides £3,545 to other creditors, and the general expenditure to date, treated as an asset, reaches the enormous sum of £80,—. This is quite apart from the outlay on property, buildings, machinery and plant, development, and so forth, and as the cash balance is just £187 the company must go on borrowing until it bursts or a turn of fortune's wheel gives a chance of rescuing it from its perilous position. It is an unfortunate fact that 18 per cent. of the 98 gold bearing claims comprising the property have been proved in the past by development to be unpayable, and in addition the country to be very disturbed on account of dykes, faults, &c. But in the western section of the New Klein-

fontein property, which adjoins that of the Chimes West, the ground is free from these disturbances, which leads the directors to hope that if the company were in a position to continue operations from the lower levels of the New Kleinfontein into the undisturbed area of its property, satisfactory values would in all probability be obtained. Even then the quantity of payable ore would be quite problematical and shareholders must find it a dreary business living on hope.

Tanganyika Concessions.—Attempts are apparently being made to get another move on in this company's shares, and possibly as part of the game a statement was circulated that Sir Charles Metcalfe recently travelled over the entire route of the railway from Lobito Bay, in Portuguese West Africa, presumably with the view of ascertaining the feasibility of linking it up with the Cape to Cairo Railway at Broken Hill, the present railroad in North-Western Rhodesia. To prevent any misconception about the matter, Sir Charles wants it known that he did not go over the whole length of the proposed line from Lobito Bay, as that would have taken many months to accomplish. He only inspected the first 200 miles of the route, where the chief difficulties in constructing the railway are to be met with. Further, no arrangement has been come to as to connecting the Benguella Railway with the Rhodesian system. So another fable is exploded.

Inverell Diamond Fields.—We greatly fear that this undertaking is not on the point of making a fortune for its shareholders. The directors submit a report for the "period" to June 30 last and accounts for the year ended December 31, 1906, and we gather that during last year 19,591 square feet were blocked out for 587 loads, yielding 1,550 carats of diamonds and 13,794 lbs. of tin. These figures do not strike one as being particularly lavish, but they are much better than for the previous year, due, however, to instructions having been given to block out the pillars in Davis Mine, which were known to contain valuable wash. But the development work at this mine has proved a great disappointment, and the directors decided that the prospects did not justify a continuance of unproductive expenditure. All this is very unfortunate, as during the last six months 1,979 loads gave only 926 carats of diamonds and 7,701 lbs. of tin, and the directors have decided to reduce the area of certain of the leases in order to keep down the expenses. A portion of the Mountain of Light and the Kohinoor will have to go, which quite saddens us, because it seems inevitable that the prospects will be still more dismal after these shining lights have gone. But we must not lose sight of Medapola, Limited, a property in which the company is interested. It produces plumbago said to be of improving quality in depth. The new plant is now in full working order, and the mine is being systematically opened up by sinking and driving, several veins having been already disclosed. Then there is the M.P. Syndicate, but that has merely "fulfilled the object for which it was formed," and in exchange for the 10,000 shares held the company has received 24,000 fully-paid one-pounders in Medapola out of a total issued capital of £75,000. Of course, the Inverell Company hasn't got much money, only £1,221, and preliminary expenses stand for £1,236, while exploration, development, and general expenditure chargeable against profits of future years amount to the tidy sum of £18,327, so dividends on the issued capital of £292,594 will not be commenced next week. Last year's outlay, after crediting £2,328 on account of diamonds, tin, &c., sold, was £2,769, of which the directors' fees were less than one-fifth.

New Lisbon-Berlyn.—It is a nasty thing to have to meet a reconstruction call in the autumn, just when we want all our halfpence to spend on donkey-rides at the seaside; so in announcing the final call which will make the shares fully paid the directors of this company smooth shareholders down with a few glowing facts about the position of affairs at the mine. Last August, when the statutory meeting was held, the policy of the directors was laid down as follows, and does not seem at all out of place for a mining company: To open up ore reserves on the old reefs; to prospect for new reefs; and to decide on the best method for the treatment of the ore. The last part was considered the most important, because hitherto only about 50 per cent. of the gold contents were recovered from the stone, of which some 150,000 tons were treated, assaying just over 10 dwts. per ton. So the board brought in a well-known metallurgist to investigate the problem, and this gentleman, having conducted an exhaustive series of experiments, is confident of obtaining over 90 per cent. extraction if his scheme is entirely carried out. Not only that, but the process is to result in a great saving of labour and power, and a considerable reduction can be made in the size of the plant originally thought necessary. Work on the Theta reefs has been pushed on, and within twelve months over 3,550 ft. have been driven of which at least 1,350 ft. are in payable ore. Something like 10,000 tons of free milling ore have been developed, and the mine manager sums up the situation in the following nicely chosen phrases:—"Drives look well; prospects good; am sanguine of ultimate success." Up to the present comparatively little has been done in prospecting for new reefs, but some further claims have been acquired, and the discovery by the Transvaal Gold Mining Estates of the Glynn's Reef assaying from 1 to 2 ozs. of gold per ton on their Vaalhoek farm gives a further value to this company's property at Frankfort, which adjoins Vaalhoek. The directors believe this reef will also be found on Frankfort, and have decided to commence boring operations to locate it. It is proposed to hold the annual meeting in the autumn, by which time the directors will probably be in possession of the metallurgist's final report and of more definite information as to the amount of payable ore exposed in the mine.

Mount Elliott.—The consulting engineer, Mr. E. A. Weinberg, has just visited and made a thorough examination of the property, and cables a summary of his report and recommendations. Mr. Weinberg estimates the quantity of ore actually in sight at 71,000 tons, assaying 16 per cent. of copper by wet assay—surely a remarkable yield. With best selected copper at £85 per ton, a very high figure in view of the outlook, a nett profit of £633,000 is looked for, and recent developments in the mine promise exceedingly well, so it is said. Pending the construction of a railway from Mouth Elliott to Cloncurry and the erection of a central smelting works on a larger scale, questions which are now under consideration of the board, the engineer recommends as a temporary measure the erection of a small water jacket furnace and converters at the mine capable of treating 1,500 tons of ore and producing roughly 240 tons of copper per month, which sounds most seductive. The cost is put at £12,000, completion to be by April next, and it is said that all the plant can be usefully employed again later for the central smelting works.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

Bank of British North America.

This bank's profits have lately been subject to rather wide fluctuation, but that, perhaps, is to be expected, having regard to the position of Canadian enterprise generally. Bursts of activity in this direction may swell profits for a particular period, but when things sober down again the opportunities for profitable banking business naturally decrease. We fancy the experience in Canada will be like this for some time. In the half-year to June 29, the nett profit, after deducting all current charges and providing for bad and doubtful debts, was £48,527. This is a decline of £13,234 against the corresponding period, but we may usefully recall that a year ago an increase of £27,738 was shown. Moreover, the balance brought forward is now £19,611 against £7,252, so that the sum for disposal is less than £1,000 smaller at £68,138. Transfers to pension and other funds amount to £1,938, and the directors now propose a dividend at the rate of 6 per cent. per annum, carrying forward £36,200. It must here be stated that before the above profits were struck a sum of £6,060 was used to write down the holding of Consols from 85 to 83, so that the shrinkage in profits was actually about £7,000. No addition is made to reserve which was credited with £20,000 six months back, and now appears at £460,000 against the paid up capital of £1,000,000. The chief items on the debit side of the balance-sheet all show moderate increases, the deposits and current accounts appearing at £4,746,455, notes in circulation at £689,232, and bills payable and other liabilities at £3,978,806. On the other side, the cash and specie have gone up by £156,954 to £1,074,266, but the money at call and short notice is £103,599 less at £2,493,480. Investments are just a little less at £555,747, while the bills receivable, loans on security and other accounts have advanced £455,362 to £6,645,151.

Bank of Africa, Limited.

The depression in South Africa again told heavily on the business of this bank during the six months ended June 30, and gross profits fell another £18,762 to £141,970. Balance brought in, too, was £2,136 down at £18,025, and in spite of a saving of £2,956 at £104,811 in expenses the disposable surplus was only £55,184 compared with £73,126 a year ago. Another reduction in the dividend is therefore inevitable, and the directors declare a distribution at the rate of 7 per cent. per annum against 10 per cent., and after putting £2,000 or £1,000 less to pension fund, carry forward £18,184 against £20,126. The reserve fund has not been added to for some time, and now, owing to the heavy fall in the value of the investment securities, the directors have deemed it expedient to take £145,000 from that fund, bringing it down to £500,000. Deposits, current accounts, and other credit balances are £374,584 smaller at £6,401,674, notes in circulation are £55,545 down at £245,242, and bills payable £126,354 down at £366,873. On the other hand, cash in hand, at call, and short notice has been reduced by £272,475 to £1,536,938, loans and temporary advances, &c., show a decrease of £587,650 at £2,751,948, bills discounted come to £193,682 less at £882,601, and investments are £15,835 lower at £1,098,008; but cash and bills in transit are £129,035 up at £280,924, and bills receivable £237,682 higher at £1,470,234.

The Australian Joint Stock Bank, Limited.

This company's gross income for the past half-year to June 30 was £108,987 and after meeting the current charges of £42,815, £66,172 was left. Of this the interest on fixed deposits and inscribed deposit stock took £64,721, leaving only £1,451 as surplus. This added to the £2,933 brought forward gives £4,384 in all to be carried to the new account. Compared with a year ago the balance-sheet shows a few changes, some of which appear to be encouraging. The "A" fixed deposits have disappeared and the "B" series has been brought down by £279,396 to about £3,007,000. Inscribed deposit stock, on the other

hand, is up about £5,000 to £796,071. So far as the current business is concerned notes in circulation are about £13,000 higher at £75,008, while bills in circulation show an increase of about £25,000 to £131,855. There is also an increase of some £297,000 in the liability on current account deposits and new fixed deposits, the total of which is now £1,463,389, the aggregate of the balance-sheet being £5,784,008, of which £1,680,000 may be taken as about representing the active new working assets of the bank. Amongst its assets generally there is an increase of £80,000 in the coin and bullion at £477,708, and the total of the cash or vendable assets, including investments, balances due by other banks, bills receivable, money at call and short notice in London, and so on, is £237,000 better at £1,260,495. Bills discounted, advances and all other debts due to the bank, and other assets constitute an item the reverse of luminous, but the total is £188,000 down at £4,088,084.

Industrial Bank of Japan, Limited.

In addition to a further instalment of capital having been paid up during the half-year ended June 30 the amount raised on debentures was increased and the extra funds thus placed at the directors' disposal seem to have been profitably employed. Nett profits, including 56,393 yen or 45,475 yen more brought forward, were 225,975 yen up at 747,948 yen, of which 90,400 yen is put to the reserve against losses and 20,000 yen to the dividend equalisation fund compared with 73,800 and 16,200 yen a year ago. Then the dividends paid are raised from 7 to 7½ per cent. per annum, and after giving the officials 20,000 yen against 15,000 yen the balance carried out is still 11,607 yen larger at 61,380 yen. The paid-up capital is now 16,250,000 yen and the debenture debt 12,925,000 yen, while the reserves with the present additions will amount to 623,200 yen. Deposits, including a special sum of 8,571,153 yen, reach a total of 20,585,207, and the aggregate of the balance-sheet is now 52,552,612 yen. On the credit side the holding of local bonds is 13,637,927 yen larger at 17,084,453 yen, and debentures of various industrial undertakings have been increased by 1,695,952 yen to 3,862,912 yen, but the National Loan bonds are only 165,452 yen up at 3,969,352 yen and Treasury bills show a reduction of 7,463,000 yen at 4,954,000 yen. Ordinary loans, too, are 5,348,017 yen down at 14,516,718, cash in hand and at bankers comes to 1,134,122 yen, and money at call and short notice to 1,825,036 yen.

Premier Cycle Co., Limited.

The subsidiary concern in which this company is interested did not do so well during the twelve months ended July 31 and profits from that source fell off by £1,444 to £958, but the parent undertaking itself seems to have had a prosperous time. Dealings in its shares, too, have been much more active as transfer fees yielded £158 against £54, and the gross income from all sources was £8,495 up at £97,721. Expenses, however, rose by £5,928 to £50,374, repairs and depreciation took £7,317 or £371 more, and after providing for debenture interest and directors' remuneration, including the special sum of £500 voted to the chairman at the last annual meeting, £34,111 or an increase of £1,690 was left as nett profit. Balance brought forward was considerably larger at £22,018, making a total of £56,129 to be dealt with against £36,081, out of which the arrears of dividend on the preference shares for two years and eleven months are paid and the ordinary shares receive 5 per cent. Then £21,778 is transferred to reserve to bring that fund up to £25,000 in accordance with the terms of the reconstruction scheme of 1902, and £4,507 is carried forward. During the year £1,970 was spent on additions to freehold land and works, while £1,132 was allowed for depreciation, and £588 was written off for sale of land, leaving this item slightly up on balance at £37,881. In plant and machinery the provision for depreciation was a mere £11 larger than the sum spent, and reduced the total of £26,511, while goodwill, of course, remains at £103,388. Current liabilities are £13,933 smaller at £13,156, and, on the other hand, although stocks and stores are £8,828 down at £50,768, sundry debtors have risen by £11,959 to £81,218, and cash and bills come to £2,662 more at £34,194. In addition the company has a deposit of £3,221 on account of the reserve, and its interest in the subsidiary company is valued at £7,343.

Yorkshire Electric Power Company.

This undertaking made a good deal of progress during the six months to June 30, 1907, effecting a satisfactory reduction in working expenses, while the sale of electrical energy was approximately double that of the corresponding half-year in 1906. Further agreements have been made for 800 horse power, making a total of 4,103 to the date of the accounts. But the most important achievement has been the conclusion of an agreement with the Electrical Distribution Company of Yorkshire to take a bulk supply of energy in all districts for which the Distribution Company hold electric lighting provisional orders within the area of the Power Company. A supply is already being given to the Distribution Company in the urban district of Gomersal, and it is expected that a supply will be laid on in other districts at an early date. An agreement has also been made to utilise this company's staff to manage and develop the Distribution Company, which will assist in rapidly building up an increasing demand for electrical energy. The directors recommend shareholders to put money into the Distribution Company, which they believe will at an early date be profitable in itself, and of great assistance to their own undertaking. There may be much in what the board says, but on the slender details so far available, it seems to be asking the shareholders a lot to finance the other business. Actual revenue for the period under review was £4,700, to which the sale of energy contributed £3,453, and work done for consumers £1,173. On the other hand, generation and distributing expenses required £3,854, and management and general outlay £1,240, so that there was a deficiency of £391. Interest on mortgage took a further £198 making £1,211, and swelling the total administration and capital expenses and balance of nett revenue account to £12,015. To meet expenses, the directors have decided to dispense the issue of proxy forms and will not send full printed reports of the meeting to the shareholders.

Barnet District Gas and Water Company.

Sales of gas during the six months ended June 30 amounted to £10,752 or an increase of £778, residual products yielded £444 more at £2,931 and with small improvements in meter rents and other receipts the total income in this branch was £1,318 better at £14,505. On the other hand, cost of coal was £571 heavier, while £603 more was spent on repairs and maintenance of works, and in spite of small savings in other directions working expenses rose by £807 to £11,283. In the water undertaking the revenue from all sources was £999 up at £10,037, but expenses, with the exception of maintenance of reservoirs, were increased in all directions, and law and Parliamentary charges owing to the costs incurred in opposing certain clauses in the Metropolitan Water Bill rose by £644 to £733, with the result that nett profits were reduced to £8,502 compared with £8,947. Including £29,440 brought forward the credit to profit and loss account was £41,434 and after providing for debenture and other interest the nett balance to be dealt with was £39,325, out of which dividends are paid at the rate of 7½ per cent. per annum on the "A" and "C" stocks, 6½ per cent. per annum on the "B" stock and 5¼ per cent. on the "D" stock. Capital expenditure amounts to £432,007 and this account is overdrawn by £28,847 while the company has no reserves of any kind. Current accounts, too, are decidedly against the company, £13,034 being due to sundry creditors against £7,483 to come in from debtors while the £10,514 held in cash is not much in excess of the sum required to pay the dividends. Stocks are valued at £7,126, about half of which is for gas stoves in stock and on hire.

Wolverhampton Gas Company.

Receipts from gas for the half-year ended June 30 were £38,005, and another £19,128 came in from sales of residuals, interest, &c., making a total of £57,103, of which expenses took £47,402. Nett profits, including £6,070 brought forward, were £16,707, out of which dividends are paid of 3 per cent. on the preference stock, 5⅛ per cent. on the consolidated stock and 3⅛ on the new ordinary stock. The balance of the excess dividend undivided, amounting to £450, is carried to reserve fund, together with £228 for interest, while £44 is transferred to the insurance fund, leaving £7,293 to be carried to the new account. Trading accounts are adverse to the extent of about £2,500, but cash comes to £24,928 and working stocks are valued at £17,684.

Surrey Commercial Dock Company.

The continued depression in the wood trade is again held accountable for the further heavy decreases of £69,373 tons in the wood tonnage and 8,240 tons in vessels carrying firewood entering this company's docks during the past six months. Grain, too, showed a big reduction of 36,933 tons, and coals, notwithstanding the activity in that trade, were 2,153 tons smaller; a good deal, however, of the falling off in these directions was counterbalanced by an increase of 82,000 tons under the head of sundries, and the total tonnage for the half-year was 33,703 tons less at 588,327 tons. The usual dividends for the half-year ending September 30 at the rate of 5 per cent. are declared on the ordinary and "A" preference stocks.

Seaham Harbour Dock Company.

During the half-year ended June 30 757,400 tons of coal were shipped at this dock compared with 704,800 tons in the corresponding period of 1906 and the other traffic consisted of 43 cargoes of wood, cement, sand, &c., imported and 22 cargoes of bottles exported. Revenue from all sources amounted to £22,206 and after providing for all charges, including £387 for depreciation, the nett profits were £11,590. Adding £8,089 brought forward and £103 from interest and transfer fees the disposable balance was £19,703, of which debenture and other interest absorbed £2,761 and directors' fees for two years to December 31, 1906, £500. Preference dividend then took £3,063 and the ordinary shares receive a dividend at the rate of 4 per cent. per annum leaving £6,030 or £1,130 less to be carried forward. The capital account shows a debit balance of £6,536 and a further £1,132 has been spent to date on the construction of an inner breakwater making £7,668 of which £3,874 has been met by the depreciation fund. Creditors at £7,237 exceed debtors by £1,332, but cash is good at £10,420 or practically as much as the credit balance on revenue account.

Hill's Dry Docks and Engineering Co., Limited.

A small Cardiff company this which, however, shows a profit of £9,508 for its 12 months ended June 30 last. Including £688 brought forward this gives £10,196 to be dealt with, out of which a dividend at the rate of 3 per cent. is paid, while £1,200 is applied in redeeming debentures, and £2,500 added to the reserve. This leaves £2,760 to be carried forward. The company appears to be well supplied with cash, the total shown being £21,703, but its miscellaneous debts seem to be rather considerable amounting as they do, including £7,200 of mortgage debentures, to about £30,000, only why is the £22,800 described as "amount written off profits by annual instalments of £1,200, reducing the £30,000 loan on mortgage

debentures," written down as liability at £22,800? That, we presume, means the unredeemed portion of these debentures, and we have so reckoned it in the total.

Floating Dock Company of St. Thomas, Limited.

Although the dock was employed for 24 more days during the year ended July 22 at 107 days, the work does not seem to have been so remunerative, and earnings only rose by £7 to £6,229. Rents and miscellaneous receipts brought the total revenue up to £6,453 or an increase of £65, but against this working costs were £58 higher at £2,780, administration charges took £51 more at £588, and insurance premiums again took £172. Nett revenue consequently was £43 lower at £2,914, but by reducing the sum transferred to reserve and equalisation of dividends fund from £827 to £724 the dividend on the "first preference" shares is maintained at 4 per cent. Dock account is unaltered at £49,129, and the Honduras wharf stands at £400, but investments have been increased by £1,523 to £4,260 through the purchase of £1,759 of Consols. Owing to this cash is £860 down, but still reaches the comfortable figure of £2,487, while bills receivable are £200 up at £800 against an increase of £79 to £371 in sundry creditors.

Tyne-Tees Shipping Co., Limited.

Gross profits for the twelve months ended June 30 were £40,139 and after providing for debenture interest and administration charges £12,378 is written off steamers, £5,394 off freeholds, leaseholds, &c., and £840 off book value of briquette plant sold. Then a special addition of £716 is made to the insurance fund and with £2,138 brought forward the balance remaining amounts to £15,619 out of which dividends aggregating 10 per cent. are paid and £2,179 is carried forward. With a paid-up capital of £134,403 and a debenture debt of £138,150 the company's fleet and other property is valued at £254,739, and it also holds 6,300 £10 shares, £5 paid, in the Free Trade Wharf Company, which cost it £25,500 while the depreciation and insurance funds amount to £33,909. A note in the balance-sheet states that the company has assigned 10s. per share in respect of each of the shares of its issued capital and all calls and sums hereafter made or received in respect thereto to an amount not exceeding £25,200 as a specific security for the purpose of indemnifying the trustees of the Free Trade Wharf Company's leasehold properties from any liability whatsoever in connection with the leases. Trade creditors are moderate enough at £14,860 against sundry debtors, including £5,509 due by the Free Trade Wharf Company, amounting to £28,537, claims on underwriters £3,810 and cash £16,392.

Barnsley Brewery Co., Limited.

Gross profits for the year ended July 31 showed a substantial improvement of £5,870 at £65,275, and with £304 more from rents, the total income was £6,174 larger at £75,298. Increases, however, were shown in all branches of expenditure, repairs, and renewals in particular costing an extra £743 at £4,593, and the gain in nett profits was reduced to £3,855 at £34,720. Licences compensation fund payments took £1,528 or £336 more, but this, the directors explain, is due to their making provision for this liability in respect of four months of the current year, owing to a recent decision in the King's Bench Division that the fund was a charge for the year ended April 5. Adding £3,657 brought forward, the amount to be dealt with was £36,850 compared with £31,257, and after meeting debenture interest and preference dividend and paying the usual 10 per cent. on the ordinary shares, £9,000 is transferred to reserve against £5,000 a year ago, and the sum carried out is raised by £1,593 to £5,250. During the year two additional properties were acquired at a nett cost of £8,300, making the total of estates and goodwill account £406,000 against which the reserve now amounts to £72,000. Plant and rolling stock is much about the same at £11,550 and consumable stocks have been slightly reduced at £13,100. Liabilities to sundry creditors are £885 up at £7,437, while debtors are a little down at £16,509, but cash comes to £3,616 more at £18,692.

Lawes' Chemical Manure Co., Limited.

What causes contributed to the improved results for the year ended June 30 the directors do not say, and we can only record the fact that profits increased by the fairly substantial sum of £1,592 to £16,914. The balance brought forward, however, was only about half that of a year ago at £884 and with £10 from transfer fees gave a total of £17,808 against £17,076. Debenture interest took rather less at £622, so after meeting preference dividend the ordinary shares receive an extra 1s. at 7s. 6d. per share, another £1,000 is put to reserve and £500 is set aside for bad debts compared with £500 leaving £846 to be carried forward. The balance-sheet shows very little change in the position of the company and, all things considered, it is a pity the directors were in such a hurry to raise the dividend by even 1s. per share. Land, buildings, plant, leases, goodwill, &c., are all given in one item and show a reduction of £671 to £187,423 owing to a sale of land. Such a thing as an allowance for depreciation seems to be unknown to the directors, and the reserve, which now amounts to £8,000 and is all in the business, forms a very inefficient substitute. Floating liabilities are rather heavier on balance, a decrease of £2,308 to £8,491 in bills payable being accompanied by an increase of £2,917 to £30,251 in sundry creditors and, on the other hand, sundry debtors are £641 up at £117,141, bills receivable have risen by £664 to £7,205 and cash is £614 larger at £7,451, but stocks have been reduced by £1,265 to £62,117.

Pyle and Blaina Works, Limited.

In its financial year ended June 30 last this small enterprise earned the excellent profit of £54,328, and shareholders stand in for a nice return in the shape of dividend and bonuses. With the addition of £9,928 brought forward the actual disposable balance is £64,256, a figure arrived at after making full provision for debenture interest, renewals of furnaces and coke ovens, and repairs and up-keep of plant. In dividing up this big sum the directors begin by setting aside £5,000 for depreciation and £10,000 as a special reserve for new plant, leaving £49,256. Already shareholders have had an interim dividend of 5 per cent., and they are now to get a final 5 per cent., together with a bonus of 10 per cent., making in all 20 per cent. and requiring £15,000. But there is better still to follow, because in addition to the above shareholders are to have a kind of special bonus of 33⅓ per cent., payable in shares of the company at par or in cash at their option, amounting to £25,000. There is hardly doubt that proprietors will take the shares, because they stand at a nice premium, 3,804 of them having been placed during the year at 30s. each, meaning a premium of 10s. per share. This premium, amounting to £1,902, has been added to the reserve fund, making it £31,902. After providing for all the payments indicated there is a balance to carry forward of £9,256, subject to extra remuneration of the directors, amounting to £650, and provision for income-tax. When the new shares have been issued in connection with the bonus the paid-up capital will be £100,000, and the reserves all told are in the neighbourhood of £42,000. Capital outlay for the twelve months was £11,647, increasing the total to £124,746, but against this must be set the depreciation reserve of £24,369, leaving the nett value at £100,377. Creditors under various heads amount to £25,044 against debtors of £18,027, but there is stock £45,707 and cash £34,855, so that all round the position is sound and good.

Burnyeat, Brown, and Co., Limited.

The prosperity in the coal trade has brought fortune in its train to the shareholders of this Cardiff company, who have seen their profits jump from about £13,500 in 1904-5 and £30,000 in the following year to £89,580 for the twelve months ended June 30. With £11,432 brought in, the sum to be dealt with was £101,012, and after meeting debenture interest and preference dividend the ordinary shares receive 30 per cent. against 15 per cent. a year ago and 7½ per cent. in 1905, £40,000 is put to reserve, against £20,000, and the balance carried forward is increased to £18,412. No proper profit and loss account is submitted, but as far as we can gather from the balance-sheet the question of depreciation has been ignored. Collieries, works, &c., have only been reduced by £491 for wagons sold, and stand at £139,545, while £33,301 spent on Sirhowy sinking account brings the total of that item up to £167,683, and with £6,002 spent on wagons acquired on redemption hire, the whole capital outlay is £313,230 against which the reserve comes to £75,000, but is all in the business. Creditors come to £40,575 against £34,831 due from debtors, £9,987 in bills receivable and £19,768 in cash.

New Monckton Collieries, Limited.

A good demand was experienced for coal and coke during the twelve months ended June 30, but the directors claim that the company derived little benefit from the marked improvement in prices during the second half-year, owing to existing contracts and the 10 per cent. advance in wages. Gross profits were £32,448 and with £1,264 brought in gave a total of £33,712 out of which £7,740 is written off for depreciation and after providing for debenture interest and preference dividend a balance of £16,713 was left. A new ventilating fan is required to replace the present one and £10,000 is set aside to provide for this and for other improvements, which the directors consider should be paid for out of revenue, after which the ordinary shares receive a dividend of 6 per cent. and £1,613 is carried forward. Capital outlay for the year was £6,764, but in addition to the amount written off out of revenue £1,760 was deducted for sales, &c., leaving this item at £239,126 or a nett decrease of £2,736. Liabilities to sundry creditors amount to £27,155, and £2,135 has been obtained from the bank against which debtors owe £35,566. Cash in hand is trifling at £382, apart from a sum of £325 in the hands of the trustees for the first debenture holders and stocks are also small at £8,754, but overpaid mine rents stand at £14,838.

Insoles, Limited.

This is another colliery business that did well last year, and earned a nett profit of £37,467, to which was added £64,980 from the previous account making a total of £102,447. Debenture interest and preference dividend having been met, the directors write £2,088 off Consols held to bring them down to the market value on June 30, and pay a dividend of 10 per cent. on the ordinary shares. Out of the balance remaining £695 is written off formation expenses and £5,000 off new works suspense account, £383 is added to bad debts reserve, and £10,500 devoted to the repayment of 100 debentures at 105, leaving £65,181 to be carried forward. Property account is unaltered at £264,663, but after deducting the above-mentioned amounts the suspense account will stand at £434 and the formation expenses at £1,000, while the outstanding debentures will be reduced to £50,000, against which there are investments valued at £30,479. Liabilities to sundry creditors are £46,815, but debtors owe £61,369, and although cash is small at £379 the company holds other investments amounting to £7,640.

TODD, BURNS AND CO., LIMITED.

In spite of the disturbance to business occasioned by building operations this Dublin drapery business managed to hold its own very well during the year ended July 31. Trading profits amounted to £9,914 or only a few hundreds less than those for the preceding twelve months, and with £7,090 brought in gave a disposable total of £17,004. Of this debenture interest took £2,354, and after writing off £261 for depreciation and paying preference dividend, the ordinary shares receive their usual 6 per cent., and the sum carried out is increased to £7,890. Expenditure on the new buildings was £17,174, and after deducting £1,327 for cost of temporary wholesale premises the property account stands at £57,087 against which there are a building fund of £16,727 and a reserve of £10,500. Liabilities to sundry creditors amount to £23,869, while stocks are valued at £71,322, debtors owe £95,060, and cash and bills stand at £3,024. The item of sundry debtors seems very heavy, but the company has accumulated a debt reserve of no less than £10,000, so the position should be sound enough.

LEIGH MILLS CO., LIMITED.

This little company earned a gross profit for the year ended August 3 of £11,139, to which was added £1,552 from the previous account, making a total of £12,691. After meeting debenture and other charges and providing £2,377 for depreciation, £437 is allowed for bad debts and £1,000 is written off "Orlwoola" trade marks and goodwill. Then a dividend of 6 per cent. is paid on the ordinary shares and, for the first time since 1900, the reserve fund receives attention in the shape of a transfer of £1,000, leaving £1,074 to be carried forward. The paid-up capital is £75,000, and there is a debenture debt of £15,553, while the reserve of £8,000 is all in the business, but the company nevertheless has to depend very much on credit. Loans and advances come to £20,787 and sundry creditors to £17,740, against which stocks and stores are valued at £85,595, and sundry debtors owe £42,094. Cash, however, is very small at £469. Additions to machinery and plant, &c., during the year cost £2,309 or nearly as much as the provision for depreciation, and the property account now stands at £27,278, but trade marks have been reduced to £1,500.

MERCHANTS' WAREHOUSING CO., LIMITED.

This Dublin company's revenue for the year ended June 30 from weighing, storing, &c., warehouse rents and interest amounted to £25,755, increased to £29,336 by the balance brought forward. Outgoings were £18,839, leaving a nett surplus of £10,497, out of which a dividend of 6 per cent. and a bonus of 4 per cent. are paid, £2,000 is written off for depreciation and £3,795 is carried forward. Premises, machinery, &c., are valued at £50,903, less the sum now written off, and expenditure on a new road and 52 workmen's dwellings at East Wall amounts to £5,560, against which the reserve stands at £10,000, all but £1,240 in shares of the Merchants' Carting Company being employed in the business. The company does a good deal in the way of lending money to its customers, and, including these loans, has £114,529 due to it by sundry debtors. On the other hand, sundry creditors are moderate at £13,352, but the policy of making advances has been carried to such an extent that the company in turn has had to borrow £89,880 from its bankers.

BRITISH AND FOREIGN TRUST, LIMITED.

Receipts from all sources for the year ended July 15, including profits on realisations, and after deducting various depreciations and interest amounted to £19,630, and £1,381 was brought forward. Charges took £2,066 of this and preference dividend £4,500, leaving £10,064, out of which the ordinary shares receive 6 per cent. or the same as for the previous year, £5,000 is transferred to reserve, and £2,064 is carried to the new account. Investments, at or under cost, stand at £333,955, and the directors state that, in their opinion the value on July 15 exceeded in the aggregate this amount. Loans and sundry debtors come to £77,868, and the only other asset consists of £1,955 in cash. Against these the paid-up capital is £200,000, and the reserve £45,000, so that the company has had to lean pretty heavily on credit, and bills payable, loans, and sundry creditors, all jumbled together in one item, reach a total of £161,464.

TRADE AND PRODUCE.

WHEAT.—Prices are still advancing, and a fair amount of excitement has appeared in the markets this week. Both spot and future prices are 2d. to 4d. per cental higher than they were a week ago, and even at the higher level holders do not seem anxious to sell. News of the harvests are not very encouraging; the yield must now of a certainty be smaller than that of last year, for though one or two countries send advices of a fairly large crop—some parts of Russia, the Argentine, and Australia—the majority of them report damage by wet and cold weather. So far very little new English wheat has been offered, and that in damp condition, but not in sufficient quantities to decide generally as to quality. It looks, however, as if farmers, by holding on to their supplies, will be able to command very high rates. Last week's deliveries came to 11,847 qrs., averaging 33s. 10d., against 26,545 qrs., averaging 27s. 9d. in this same week last year, while the average for this season to date is 10½d. under last. Imports for the week were 463,867 qrs. against 418,577 in the same week last year. Dornbusch's estimate of the quantities of wheat and flour to the United Kingdom is 2,160,000 qrs. against 2,185,000 last week, to the Continent 1,110,000 qrs. against 1,145,000, and in connection with flour it is to be noted that, in consequence of the rise in wheat, the London Flour Millers' Association have this week raised their price 1s. 6d. per sack. American markets were closed on Monday, but opened on Tuesday with a very bullish tone and good speculative buying, but were subject to many fluctuations later. Advices from Berlin were weak; prices broke sharply, but business kept active and even excited.

WOOL.—All markets for raw material maintain a strong tone, with prices always tending against the buyer. Supplies of Australian merinos have eased off considerably, and are now scarce enough to justify a further rise of 1d to 1½d per lb. Both in London and Australia sales are coming on, and with so many competitors in the field, with consumption so great, and reports from Australia now indicating only an average yield, the situation is regarded as exciting. Continental business in yarns is better, buying and selling prices coming more into agreement, but the manufacturing branch in some directions is not so encouraging.

COTTON (from our Manchester correspondent).—A stronger tone has prevailed in most sections of our market during the week under review. American cotton has shown a tendency to advance, and rather more business has been done in both yarn and cloth. There is still considerable difficulty in arranging transactions, but certain exporters of piece goods have bought speculatively, and some manufacturers have added to their engagements, resulting in quotations being more strictly adhered to. A great deal of uncertainty exists as to the outlook for the American crop. Early next week we shall have two reports from the United States Government and these may clear the air a little. In the meantime, prices continue on a very high level. Most authorities, however, consider that we shall not see lower rates for some little time, the consumptive demand being extensive and the supply of the higher grades is scarcely sufficient to meet the requirements of the world. There has been plenty of inquiry for India in piece goods of various descriptions. Shirtings for Calcutta have moved off better, and the different outlets of our dependency have bought more freely for distant months. Some low rates have been taken, but now makers have work to go on with, prices are more stiffly held. China, on the whole, does not show much change, but healthy advices continue to come through from Shanghai. Odd sales have occurred in special cloths but no free buying has come round in staple goods. Rumours of further financial difficulties in the near Eastern markets have caused some anxiety. Business for the Levant and Egypt at the moment is unimportant, and no free buying can be expected for some little time. Home trade goods have moved off a little better, flannelette makers receiving rather more orders. Considerable activity prevails amongst velveteen makers in the Oldham district. Certain manufacturers are engaged for nearly twelve months ahead, and prices all round are on a much higher scale than twelve months ago. Burnley cloths have met with a moderate amount of attention, and Glossop goods are rather more firmly held. Certain manufacturers in Nelson are not doing so well, and it is said the short holiday at the beginning of next week will be extended. Home trade American yarns have moved off fairly well in small lots. The stoppage at Oldham has enabled spinners to hold more firmly to quotations. Higher rates, however, have not been easily obtained. Twists, all round, are stronger than wefts. Ring beams, here and there, have been in rather better request. Shipping yarns have been rather quieter. There has not been much buying either for India or the Continent. Certain shippers to the Continent are not taking deliveries, and some resales have occurred. Bolton yarns have continued strong, especially in the finer counts. A very fair business continues to come round, and most producers are in a healthy position.

According to Sir Jacob Behrens and Sons, weather reports from America are still unfavourable, and cotton prices continue to advance. Texas is suffering from drought, and some of the other cotton districts have been subjected to tropical storms. The outlook at present is not altogether encouraging, and the "bull" party is making every effort to rush prices to a still higher level. Receipts are small and will in all probability compare unfavourably with previous seasons for some time to come, owing to the lateness of the season. Last year's crop amounted in round numbers to 13,540,000 bales; Messrs. Neill Brothers, in their forecast of 13½ million bales, were therefore very close to the actual result. Egyptian cotton is dull, and quotations are reduced 1/8d. per lb.

COAL.—House coal prices went up 2s per ton to consumers at the beginning of this month, and in all probability October, if no sooner, will see a still further rise. Nor are the higher prices restricted to this class of coal. Everywhere prices are growing stiffer and are now said to be higher than since 1900. The rush to the Baltic is keeping up demand for steams, and Humber has experienced its "record" season. A cheaper class of locomotive coal is being bought by railway companies and giving good results they declare because they will not pay coalowners' demands for the higher priced coal. Gas coals are in heavy request and trade in them promises to be a feature of the autumn. In Wales house coals, steams and anthracites are all participating in the "boom." And already the bad effect of these increased prices is being felt among home industries to a serious degree.

TIN.—Weaker advices from the East, where business was done at £107 7s 6d, sent quotations here down 15s at the opening. Then the market recovered sharply owing to better Eastern advices, and when it was reported that business had been transacted there at £120 6s 3d, prices stiffened still. A fair amount of speculative support was induced, which lifted prices to £108 10s., but liquidation followed, and yesterday quotations

again collapsed, falling £2 on the day. To-night's close was steady at the lower levels of £166 10s. for cash and £166 5s. for three months forward.

Copper.—The market has been active and speculative this week, a good deal of support coming to hand for forward delivery. Prices, however, have dropped all the same, and a sharp break yesterday under heavy selling orders left prices at the close at £73 for cash and £73 2s. 6d. for three months. To-day's market was quiet, but there was sufficient support to bring about a recovery to £73 10s. for spot and £73 17s. 6d. for future metal. Messrs. H. R. Merton and Co. give the visible supply as 14,220 tons against 14,232 a fortnight ago, 29,787 tons being the total supplies for August, and deliveries 28,474 tons against 31,738 and 31,129 tons respectively for July. Stocks in England and France are 7,820 tons against 6,107 tons a month ago. The Chili charters were 2,400 tons for August.

Iron and Steel.—Cleveland pig iron is expected to do well this month, but so far there is not much sign of activity, and prices have gone lower, warrants to 55s. 6d. cash. In other parts of the country a little more animation is noticeable, and orders are coming in more freely, but even there the outlook is not quite so promising as might be hoped, owing to the high prices of fuel. Barrow hematite remains steady at last week's prices, maintained by home demand, for America and the Continent have both eased off considerably; but East Coast hematites are following in the wake of Cleveland, and prices are moving downward, makers not being able to renew their contracts except at from 1s. to 1s. 6d. less per ton. Exports from Cleveland district in August were better for that month than for many years, the average during the previous ten years being 101,015 tons, whereas last month's average exceeded this figure by 45 per cent. Neither Germany nor America was responsible for the increase, but Italy, Belgium and Norway all took larger supplies. There is very little buying of manufactured iron and steel just now, consumers hoping that prices will drop still further than they have yet done, though it is difficult to see where producers will get their profits from if they do. Scotch and Welsh trade in these seems, if anything, better than English.

Tea.—At last the low quotations in medium descriptions appear to be attracting attention, and Messrs. W. J. and H. Thompson's circular shows that there is a distinct improvement in the tone of these teas, though not as yet much advance in price. Catalogues of Indian comprised 34,002 packages, for which quotations were firm throughout, with an occasional advance for broken Pekoes, and the average for the week on 32,332 packages sold on garden account was 8.26d. against 7.75d. last year. Of Ceylon, only 23,349 packages were offered. The smaller quantity, combined with a rather better quality, brought about a distinct improvement in tone for all teas above common sorts. The highest averages were for Goatfell, 1s. 0½d., and St. Leonards, 11½d., the average for the whole sale coming to 7.51d. against 7.36d. last week and 6.98d. in 1906. Java offerings amounted to about 3,300, and sales were steady, without any change in late rates, except that commonest went a little easier.

Sugar.—With the uncertain weather and low thermometer crops are about a fortnight later this year than last. Under these circumstances, says Mr. Czarnikow, "bears" have been trying to cover their sales, and speculation set in strongly this week over here, May advancing from 10s. 1¼d. to 10s. 6d. The American market, on the other hand, remained quiet, refiners at present being satisfied with their holdings, and with good supplies of Lousiana sugars and a fair beet crop are willing to let the future take care of itself. Not that there is much risk, if all crop reports are true, Mr. Czarnikow points out, in holding good stocks. The deficiency in the Cuban crop and that of other cane-producing countries will evidently out-balance the Lousiana increase, while the larger Java crop meets with a good demand in the East, where it displaces European sugar, as well as in the United States and United Kingdom to the extent of say 180,000 tons. Against this we expect a larger deficiency in Europe, which may or may not be covered by Russian sugars in September next, and besides, it is impossible to say whether America will compete in Europe next summer. Anyhow, with all agricultural products—especially grain—much dearer, with more expensive coal, labour, &c., we shall not have a sufficient increase in sowings under 10s., unless exceptional weather now gives to the farmer better returns than he expects at present. At present, however, continues Mr. Czarnikow, all arguments are based on uninterrupted consumption; consumers have taught us a lesson in previous years, which should not be forgotten. The present level is not high yet, but it fully covers cost of production, and beyond that level we have formerly seen yearly variations in consumption of three-quarters of a million tons or more in statistical and Eastern countries, upsetting all forecasts.

Capital and Counties Bank.—Liabilities on August 27, consisted of £33,869,944 on simple contracts and £630,397 on bills, and assets of £5,415,775 cash in hand and at Bank of England, £5,567,265 money at call and short notice, £4,762,961 Consols and other investments, and £19,502,170 bills of exchange, promissory notes and advances to customers.

State of San Paulo 5 per cent. Exchequer Bonds.—Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents advising them that they have further encashed £20,800 in respect of the surtax collected for the service of this loan, making a total of £96,430 encashed since August 1.

The registered offices of the Electricity Supply Company for Spain have been removed to 88, Leadenhall Street, E.C.

COMPANY MEETINGS.

GUAYAQUIL AND QUITO RAILWAY.

A general meeting of the holders of bonds of the Guayaquil and Quito Railway Company, convened by the Council of Foreign Bondholders, was held on Wednesday at the Council House, 17, Moorgate Street, E.C., "to consider the situation and to pass such resolutions as may be thought desirable." The Right Hon. Lord Avebury (President of the Council) occupied the chair.

The Secretary (Mr. James P. Cooper) having read the notice convening the meeting,

The Chairman said: The bonds of the Guayaquil and Quito Railway were introduced on this market such a short time ago that the conditions of their issue and the security they enjoy are no doubt fresh in your minds. At the beginning of the present year there was a delay of about a month in the payment of the January coupon, while the money for the sinking fund on the bonds of the general series was not provided at all. This, together with the uncertainty as to the future, caused a heavy fall in the price of the bonds, and the Council were asked by some of the principal bondholders to address a letter to the Government of Ecuador urging that the terms of the contract regarding the fortnightly deposit of the funds required for the service of the debt should be duly carried into effect. In June the Council were further requested by an influential body of gentlemen holding or representing a very considerable amount of bonds to form a committee to protect the bondholders' interests. In compliance with their request and in consultation with them a committee was formed. At the time the committee was formed the state of affairs in Ecuador was somewhat critical. The ten years allowed by the contract for the construction of the railway expired on June 14 last, but at that date the line was only completed to within 70 miles of its terminus at Quito, and the company were apparently entirely without funds to continue the construction. There was naturally a great deal of discontent in the country at this state of affairs; revolutionary disturbances broke out, and a strong agitation was raised for the cancellation of the contract. The original contract between the Government and the company contained a proviso that all controversies or disagreements that might arise between the contracting parties should be settled by arbitration, the arbitrators being the Presidents of the United States and of Ecuador, with power, if they did not wish to act, to each appoint someone in their places. We understand that this provision of the contract has been duly put into force, and that the two Presidents concerned have already appointed their nominees. The bondholders are in no way responsible for any disputes which may have arisen between the Government and the railway company, and that whatever may be the result of the arbitration the Government is in no way relieved from its direct and unconditional obligation to provide the interest and sinking fund on the bonds. On July 25 a mixed meeting of bond and share holders was convened by the railway company in Jersey City to consider a proposal contained in a letter addressed by the President of Ecuador to Mr. Archer Harman, the chairman of the railway company. The following resolutions were passed by the meeting:—"Resolved—That the offer of the Government of Ecuador set forth in the letter of his Excellency President Eloy Alfaro, dated June 28, 1907, to deposit approximately 900,000 sucres, the amount of interest and sinking fund instalment due July 2, 1907, and to apply the same to the construction and completion of the railway under the supervision of the Government engineer, provided the bondholders and coupon holders shall agree not to exact payment of said coupon due July 2, be and it hereby is accepted." And be it further "resolved that the foregoing waiver and assent to apply said 900,000 sucres to the construction and completion of said railway shall not apply to any future instalment of interest, and shall not be deemed as waiving any future default."

The Secretary at this point read a long letter from the Finance Minister of Ecuador, in which he stated that he considered the holders of the bonds were in no way responsible for the failure of the company to fulfil its engagements, and that it was the intention of the Government to deal equitably with them. This, he said, he wished to place officially on record. The Finance Minister dealt with the various points raised in the letter from the Council of Foreign Bondholders of April 2 last, and he stated that his Government had not only paid what was stipulated in due time, but it had paid more than it was bound to, and this always before it was due. He concluded by saying that whether the bondholders took action through the medium of the Council or through that of the United States Mortgage and Trust Company, as was agreed in the trust deed, he was of opinion that they should as soon as possible have themselves represented in Ecuador, since he earnestly desired that they might not be kept in a state of suspense, but that they might realise and derive benefit from the sincere wish of the Government of Ecuador to protect their interests. In reply to the communication of the Finance Minister, Mr. Cooper, on behalf of the Council, wrote a letter dealing with the various points at issue. In this letter, which he read to the bondholders, he submitted that the documents clearly established (1) that the guarantee of the Government of Ecuador for the bond of the railway company was, as regards the bondholders, absolute and unconditional; (2) that the Government had undertaken to deposit each fortnight the requisite amount of the Customs receipts to provide the interest and sinking fund; for the service of the bonds in sufficient time for payment on the due dates of the coupons and sinking fund; (3) that the application of the nett traffic receipts of the railway was a subsidiary matter between the

Government and the railway company for subsequent adjustment on settlement of accounts between the Government and the railway company. He added that the bondholders were not concerned in the settlement of accounts between the Government and the railway company and, had the payment of the principal and interest of the bonds been in any way dependent on this the Council were quite sure that the bonds would never have been subscribed in this country. The letter concluded by stating that the Council had read with satisfaction the assurances of the Government of Ecuador that the bondholders should not suffer any prejudice, and they noted that his Excellency had ordered the sum required to cover the total amount of the guarantee to be deposited in one of the Guayaquil banks.

The Chairman, continuing, said that on August 22 the committee cabled to the President of Ecuador informing him of this meeting of the English bondholders, and asking whether the Government would give a definite assurance that the January, 1908, interest and sinking fund would be paid at their due date, and would instruct the bank charged with the collection of the Customs duties to set aside preferentially each fortnight, at a separate account, the proportionate sum required to provide for the service of the bonds. I regret to say, however, that no answer has been received from the Government, and in these circumstances what we suggest is that you should pass two resolutions—in the first place, one placing upon record your rights and determination to uphold them, and protesting against the non-payment of the interest and sinking fund. Then, secondly, we think you would be wise to appoint a committee to represent your interests, and, of course, any arrangement the committee may make will be subject to ratification by you at some future meeting.

Mr. C. Haes moved:—"That this general meeting of holders of bonds of the Guayaquil and Quito Railway Company energetically protests against the non-payment to the bondholders of the interest and sinking fund due July 2, 1907, on the bonds which were unconditionally guaranteed by the Government of Ecuador and purchased by the bondholders on the faith of such guarantee."

Mr. A. J. Stanley seconded the resolution.

Mr. H. Marshall said that if a representative of the Government had been present he would have asked him if it was a fact that the Government had 49 per cent. of the common stock of the company, so that it was in effect asking the bondholders to make it a present of the July coupon for the purpose of benefitting the company and itself. He was clearly of opinion that it was in the interests of the shareholders that the line should be completed as soon as possible. The line was very nearly completed now, and when they knew that Quito had a population of between 70,000 and 80,000, and that this was the only railway in the district they would not presume for one moment that the people had not sufficient public spirit to get the line somehow into Quito. He and those he represented would gladly forego the July coupon to finish the line as between themselves and the Government, but they thought that that should be regarded as another loan to the company, which they should recognise and provide for as between the bondholders and the company. (Hear, hear.) He was pleased that the Council of Foreign Bondholders had apparently taken up that position on behalf of the English bondholders. (Hear, hear.) It seemed to him it was only a matter of business when they were asked to make a present to the ordinary shareholders of the company who might reap a benefit hereafter in the shape of profit, that the bondholders should have some small fixed interest or some tangible security to show for it. (Hear, hear.) He had much pleasure in supporting the resolution which had been proposed, leaving it to the Council of Foreign Bondholders to protect their interests and make such arrangements as they thought proper. (Applause.)

Mr. Hedderwick (Glasgow) thought the resolution was an unwise one for this meeting of English bondholders to put forward. They were proposing to negotiate further with the Government of Ecuador, and he thought it would be recognised that they could only deal satisfactorily with that Government by negotiating with them in a friendly and judicious way. He did not think they were adopting the best means of approaching them by commencing with a protest such as had been moved. In his opinion the wisest thing to do was to move approval of the action of the Government of Ecuador in devoting the money to the completion of the railway, and leave the rights of the bondholders in respect of the last half-yearly coupon to be dealt with as between them and the railway company.

Mr. Hart (Glasgow) also objected to the terms of the resolution. He considered it injudicious to use such words as "energetically protests." For his part he considered the proposal of the Government a most sensible one. They said, in effect, "We have no funds to finish this railway; we have the coupon in hand; will you bondholders agree to allow us to use that money to finish the railway?" As sensible bondholders he thought they should say with one voice, "Yes." (Several bondholders: "But on conditions.") He would make these conditions as lenient as possible. He did not think they had anything to complain of, for to his mind the action of the Government was straightforward and businesslike.

The Chairman stated that it might be quite right for the Government to utilise the half-yearly coupon, but the railway company ought to make some arrangement with the bondholders before they were allowed to do so. They did not protest against the company finding the money to complete the railway, but they did protest against the Government not paying the coupon. (Hear, hear.)

The resolution was then put to the meeting and carried with four dissentients.

The Chairman next moved:—"That this meeting ratifies the appointment by the Council of Foreign Bondholders under its rules and regulations of Mr. F. Faithfull Begg, Mr. L. H. de Friese, Mr. Charles Haes, Lord Claud Hamilton, Mr. F. G. Horne, Mr. Streeter Lambert, Mr. B. Newgass, Mr. Arthur Stanley, Mr. H. T. Tatham, Mr. J. H. Vigne, and Mr. A. Weir, with the Right Honourable Lord Avebury, and the Honourable Sir C. W. Fremantle, ex officio, as a committee to represent the bondholders of the Guayaquil and Quito Railway Company, and authorises and requests the Council and committee to take such steps as they may consider expedient in the interests of the bondholders."

Mr. J. Lean seconded the resolution.

Sir William Ramsay (Aberdeen) moved an amendment to the effect that, in view of the meeting held in New York in July, and the fact that a committee has already been duly appointed to look after their interests, it was not desirable that separate action should be taken on their behalf by the Council of Foreign Bondholders, and that the situation would be met by asking the New York Committee to appoint representatives of the bondholders in this country and abroad.

Mr. Hedderwick seconded the amendment, which was lost on a show of hands, and the original resolution was then put and carried.

A vote of thanks to the chairman terminated the proceedings.

F. STEINER AND CO., LIMITED.

The eleventh ordinary general meeting of the shareholders of Messrs. F. Steiner and Co., Limited, was held on Wednesday, at the registered offices of the company, Church Works, Mr. J. F. M. P. Hartmann, chairman of the company, presiding.

Mr. Harvey formally read the notice convening the meeting, the minutes of the previous general meeting, which were accepted as a correct record, and the auditors' certificate testifying to the accuracy of the balance-sheet.

The Chairman said: You will, gentlemen, I think, find the balance-sheet before you satisfactory in every way. During the last four years we have seen this business making steady progress and steadily building up its reserve fund. Much time, thought, and money have been spent upon improvements which are so necessary in a business of this kind, with a result that is now beginning to show itself. It is only by maintaining a business in the highest state of efficiency that success can be hoped for with any degree of certainty, and this will always be one of the chief aims of your directors. We have had our difficulties to overcome during the past year. The prices of cloth and drugs and commodities have, as you know, risen considerably. This, of course, has been against us, and speaking as a shareholder, I think your directors deserve great praise for showing you such good results. There were those who in bad times advanced all sorts of silly theories about our business; but time and results have proved them to be entirely wrong. Our business has never been in a better or sounder position than it is to-day, and it will be the object of your directors to strengthen that position more and more as time goes on. I dare say, gentlemen, that there are those to-day who wonder why we have not given an increased dividend. Gentlemen, you may be quite sure we shall do so when the proper moment arrives. I hope and think this may be very soon, and no one will rejoice more over an increase of income than I shall; of that you may be quite sure. But, gentlemen, our aim is to make your company into as safe a dividend-paying concern as is humanly possible, and this can only be accomplished by care and forethought for the future. The future of this business need give no anxiety; that it is well and ably directed by Mr. Gill as well as by all your directors is amply proved. I can only say it is a great pleasure and a great honour to preside at your meetings.

Mr. H. K. Gill, managing director, in moving the adoption of the report, said: Mr. Chairman and gentlemen, though the report now before us does not bear on its face indications of that abounding degree of prosperity with which the Lancashire cotton trade has been generally associated for the last two years, I am glad that our results are such as we can fairly call satisfactory. The chairman has already referred to the present high cost of cloth, coal, oils, soaps, drugs and chemicals, all of which we use in very large quantities, and as these are matters of such common knowledge in this part of the country, it is not necessary for me to make more than a passing reference to them. From the present look of things it would appear that these phenomenally high costs are factors which our business will have to reckon with for some time to come, and if we can only manage to deal with them as successfully as during the past year we shall not have much reason to complain. Turning to the figures in the balance-sheet, I may be allowed to point out that the first item on the asset side—land, buildings, and machinery—is up £12,458 from last year. In the face of the increased costs which meet us on every side it becomes more and more important year after year, as the chairman says, that we should get the advantage—though the expense involved may be considerable—of improved premises and such new machinery as will enable our various processes to be carried on in the most economical and best way possible. Shareholders must expect increased capital outlay if large concerns such as ours are to be kept abreast of the times. The policy of the directors in this matter will, I feel sure, have the support of all the shareholders. Cash in the hands of the bankers is down from last year, and the value of the stocks on hand is higher. Both

these changes, I think, are the natural outcome of the higher cost of everything we use. I take it, Mr. Chairman, we are all agreed that the most pleasant item in connection with the accounts is the way in which the reserve fund is being increased. Substantial apportions to reserve are bringing us nearer to the time when the ordinary shareholder can reasonably hope to receive the amount of consideration to which he is clearly entitled. Nothing could give any of your directors greater pleasure than to recommend a larger distribution of profits in the shape of dividend, and you may safely leave this matter in their hands. Mr. Gill moved the adoption of the report, and that a dividend be paid on the ordinary shares of the company for the six months ending July 31 of 6 per cent. per annum, making with the interim dividend of 4 per cent. paid on March 1, 5 per cent. for the year, and that £22,000 be placed to revenue reserve, leaving a balance to be carried forward of £14,131 16s. 4d.

Mr. J. Robertson seconded the resolution, which was carried unanimously.

(Mr. J. H. Hartley moved that Messrs. T. R. Fothergill and Arthur Jackson, the retiring directors, be re-elected. He said that from what he could gather the directors worked harmoniously together, and he was sure they had got the interests of the company at heart. He congratulated the board on the balance-sheet, especially considering all the circumstances, and he hoped that next year it would be even better. Mr. J. D. Lonsdale seconded the resolution, and the proceedings terminated with a vote of thanks to the chairman.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Alabama, New Orleans, Texas, and Pacific Junction.—New Orleans and North-Eastern, common stock, 6 per cent.; Alabama and Vicksburg, common stock, 7 per cent.; Vicksburg, Shreveport, and Pacific, preferred stock, 5 per cent. for year to June 30.

Caledonian.—On the ordinary stock at the rate of 3½ per cent. per annum, carrying forward £15,900.

Glasgow and South-Western.—For past half-year at the rate of 4 per cent. per annum on the ordinary stock, being at the rate of 2½ per cent. per annum on the preferred ordinary stock and 1½ per cent. per annum on the deferred, carrying forward £7,537.

Highland.—1½ per cent. per annum on the ordinary stock for past half-year, carrying forward £7,684.

Wellington and Manawatu.—Interim 3 per cent.

MINES.

Bonanza.—First distribution in liquidation of 4s. per share will be made to all shareholders registered in the books on Sept. 30, 1907, and to holders of coupon No. 17 attached to share warrants to bearer.

Durban-Roodepoort Gold.—Interim on account of the year ending Dec. 31, 1907, of 2s. per share, payable Sept. 30.

MISCELLANEOUS.

A. F. Stoddard and Co.—At the rate of 6s. per annum on the ordinary shares for year ended June 30.

African Steam Ship.—Interim of 8s. per share for six months ended June 30, being at the rate of 5 per cent. per annum.

Bank of Australasia.—12 per cent. per annum and a bonus of 8s. per share, making together £2 16s. per share per annum, placing £100,000 to reserve, £15,000 appropriated in reduction of bank premises account, and carrying £17,324 forward.

British Gas Light.—At the rate of 10 per cent. per annum for half-year ended June 30, payable Oct. 10.

Charles Kinloch and Co.—Interim for half-year ended June 29 at the rate of 6 per cent. per annum on the preference shares.

Chelsea Electricity Supply.—Interim on the ordinary shares for half-year to June 30 at the rate of 4 per cent. per annum, payable 16th inst.

Compania Sansinena de Carnes Congeladas.—A final of 5 per cent. for year ended Dec. 31, payable on the 5th inst. at Messrs. Glyn, Mills, Currie and Co.

Davis and Timmins.—6 per cent. interest on the preference shares for six months to June 30.

Gandy Belt Manufacturing.—Interim of 5 per cent. per annum on the ordinary shares.

General and Commercial and Investment Trust.—Interim at the rate of 5 per cent. per annum on the preferred stock, and at the rate of 4 per cent. per annum on the deferred stock for half-year to ug. 31.

Indemnity Mutual Marine.—Interim of 6s. per share.

Jay's.—Interim at the rate of 5 per cent. per annum on the ordinary shares for six months ended July 31.

Kayser Ellison.—Final of 7½ per cent. and a bonus of 1½ per cent., making 14 per cent. for the year; placing £5,000 to reserve, £5,000 written off goodwill, and carrying £6,365 forward.

Locket's Merthyr Collieries (1894).—Interim at the rate of 6 per cent. per annum on the cumulative first preference shares, 10 per cent. per annum on the cumulative second preference shares, and 10 per cent. per annum on the ordinary shares.

Monte Video Waterworks.—Interim at the rate of 6 per cent. per annum on the shares for half-year ended June 30.

New England Breweries.—On the preference shares for six months ended June 30 at the rate of 8 per cent. per annum.

Pearson and Knowles Coal and Iron.—At the rate of 15 per cent. per annum on the ordinary shares, making 10 per cent. for the year.

Prince Line.—For half-year ended June 30 of 2½ per cent., making 5 per cent. for the year.

Staveley Coal and Iron.—Final of £7 10s. per share, making £12 10s. per £60 paid share. Final on the £10 paid share is 25s., making £2 1s. 8d. per share.

River Plate Trust, Loan, and Agency.—Interim at the rate of 16 per cent. per annum on the A, and 4 per cent. per annum on the B shares, for half-year ended June 30.

Robert Ambrose.—For second half-year ended 15th ult. at the rate of 10 per cent. per annum, making 10 per cent. for the year.

Wisbech Lighting.—3s. 9d. per certificate, carrying £3,674 forward.

Wisbech Waterworks.—At the rate of 10 per cent. per annum on the original ordinary shares, and 7 per cent. on the ordinary shares of 1884, carrying £3,816 forward.

MINING RETURNS.

Ashanti Goldfields.—Gold recovered, 415 ozs.

Associated Northern Blocks.—Milled, 3,760 tons ore; treated, 1,395 tons slime; yield, £14,104.

Balaghat Gold.—4,700 tons, 2,218 ozs.; 4,368 tons tailings, 405 ozs.; total, 2,623 ozs.

Barrett Gold.—273 ozs., value £1,100.

Bonanza.—Crushed 2,960 tons, 812 ozs.; cyanide and slimes, 3,086 tons, 843 ozs.; total, 1,655 ozs.

Brilliant and St. George United.—Treated 1,446 tons quartz; value, including residues, £6,585.

Briseis Tin.—Shipped 20 tons tin, including 10 tons on behalf of New Bros. Home No. 1.

British Broken Hill Proprietary.—3,059 tons crude ore produced 402 tons concentrates, containing 253 tons lead and 12,060 ozs. silver, and 106 tons carbonates, making total mined 3,165 tons.

Champion Reef.—14,823 tons, 8,522 ozs.; 18,084 tons tailings, 2,419 ozs.; total, 10,941 ozs.

Chinese Engineering.—Output of coal, 19,000 tons; sales, 19,000 tons; consumption, 1,400 tons.

Dharwar Reefs.—Crushed 950 tons, 417 ozs.; tailings assay per ton 4 dwt.

Duff Development.—Prospecting dredge, 73 ozs.; No. 1 dredge, 49 ozs.; No. 3 dredge, 68 ozs.; total, 190 ozs. of gold.

Eaglehawk Consolidated.—Crushed 1,000 tons, 254 ozs.; 122 ozs. from cyanide.

Glynn's Lydenburg.—Crushed 2,570 tons, 658 ozs.; cyanide 1,697 tons, 590 ozs.; slimes 873 tons, 470 ozs.; total, 1,718 ozs.

Golden Pole.—Crushed 1,156 tons crude ore, 599 ozs.; 1,330 tons sands and 14 tons concentrates, 277 ozs.; total, 876 ozs.

Inverness Railway and Coal.—Screened 14,625 tons; run of the mine 801 tons; slack 6,436 tons; total, 21,863 tons.

Koffyfontein.—4,350 carats diamonds recovered: 366,000 loads of blue ground on floors.

Lace Diamond.—Loads washed 23,874, yielding 2,708 carats, equal to 11·34 carats per 100 loads.

Lloyd Copper.—Production 50 tons.

Mount Molloy.—Smelted 1,087 tons ore and a quantity of matte from stock pile containing six tons copper, producing 45 tons of blister copper.

Mysore Gold.—16,650 tons, 15,428 ozs.; 15,000 tons tailings, 1,937 ozs.; total, 17,365 ozs.

Mysore West-Mysore-Wynaad.—Crushed 650 tons, 899 ozs.; cyanided 2,592 tons, 261 standard ozs.; scrapings from plates, 1,937; total, 3,097.

New Hillgrove.—Crushed 100 tons, 505 ozs.

New Queen.—Crushed 31 tons, 12 ozs.; concentrates, £36 10s.; 368 ft. formation (No. 4 formation), crushed 20 tons, 33 ozs. realised; concentrates, £12. The cablegram adds:—Shall confine ourselves for the present to 368 ft. formation (No. 4 formation); have commenced to drive on the lode (vein) from the rise; seven inches; good quality; prospects are decidedly encouraging.

New Vaal River Diamond.—Diamonds registered by diggers, £4,400.

North Broken Hill.—Treated 2,350 tons crude ore, producing 415 tons concentrates, containing 284 tons 10 cwt. lead and 7,636 ozs. silver.

Nundydroog.—7,030 tons, 5,451 ozs.; 7,290 tons tailings, 709 ozs.; total, 6,160 ozs.

Ooregum Gold.—10,215 tons, 4,834 ozs.; 8,360 tons tailings, 863 ozs.; total, 5,697 ozs.

Oroville Dredging.—Gross returns, $13,735.

Orsk Goldfields.—900 ozs., value £3,525.

Roberts Victor Diamonds.—30,357 loads washed, producing 15,738 carats, equal to 51·8 carats per 100 loads.

Scottish Gympie.—Crushed 7,700 tons, 2,050 ozs.

Sheba Gold.—Treated 6,600 tons, 1,585 ozs.

Sulphide.—12,902 tons ore milled, producing 2,156 tons leady concentrates; also 19,246 tons tailings treated, producing 6,301 tons zinc concentrates and 60 tons leady concentrates; 2,462 tons of leady concentrates, 278 tons residues, and 2,181 tons purchased ores smelted, yielding 1,574 tons lead, containing 151,104 ozs. silver and 6,925 ozs. gold; also treated 335 tons zinc concentrates, producing 93 tons of spelter.

Tasmania Gold.—Crushed 4,617 tons quartz 2,151 ozs.; 170 tons concentrates treated in the chlorination, 353 ozs.; 2,240 tons cyanide, 143 ozs.; total, 2,657 ozs.

Tasmanian Smelting.—The silver-lead bullion shipped contained 830 tons lead, 11,900 ozs. silver, 437 ozs. gold.

Tolima.—65 tons, value £3,500.

Transvaal Gold Mining Estates.—Crushed 8,865 tons, 2,674 ozs. Central cyanide 4,070 tons, 1,170 ozs. Central slimes 3,021 tons, 711 ozs. Kameel's cyanide 1,071 tons, 188 ozs. Kameel's slimes 703 tons, 138 ozs. Old slimes 300 tons, 84 ozs. Elandsdrift 240 tons, 119 ozs. Total, 5,084 ozs.

Voorspoed Diamond.—18,530 loads washed, producing 4,135 carats.

Wankie (Rhodesia).—Output 9,248 tons; sales 5,957 tons.

Wassau (Gold Coast).—Crushed 4,200 tons, 1,855 ozs.; cyanide 3,000 tons, 556 ozs.; total, 2,411 ozs.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

F. E. D.—No. We think the shares must go still lower in sympathy with the drop in the price of the metal. This answer leaves 7s. to your credit on deposit.

A. G. D. (Edinburgh).—The scheme seems a visionary one, and the estimated profit much too brilliant to be realised. Even if it succeeds, the total involved is so small that there could be no free market for either class of security. Leave them alone.

T. C. W.—(1) This is worth watching, but we are afraid to advise a purchase at present. (2) Much too speculative to be a desirable investment.

Beginner.—In the long run these shares have a fair chance of appreciation, but an immediate advance is highly probable. In any event, so small a number of shares is very unmarketable.

A. B.—Both stocks are equally safe, but the operation of the sinking fund helps the price of the one, while the other is kept down by the weight of recent issues, which have not yet been placed.

W. R. D.—(1) There is a reconstruction scheme on foot, and we think you should wait a little longer. The company has been doing better of late, and although its financial position is far from satisfactory, with the alterations in capital account dividends on the new preference shares seem possible. (2) We are very doubtful if any substantial improvement can be possible in this market. It is possible there may be a little recovery from present prices; if so, you should cut your loss. We do not consider these shares an investment in the proper sense. (3) From a dividend point of view, this stock is dear even at its present price, but it is a favourite speculation, and it is possible might be driven up again. Sell on any sharp advance. (4) Egyptian Delta Light Railways cumulative preference.

J. W. M.—(1, 2).—It is, as you say, a "toss up." Those connected with the company are quite capable of engineering a rise in price after reconstruction, if it suits them to do so. We do not think you should add to your risk; it will be quite sufficient to take your proportion of new shares, with the determination to sell if the market is rigged. We doubt if you will get a chance of getting out with all your money back. (3) There is no demand for this stock at present. All you can do is to ask your broker to advise you if a buyer appears. To offer the stock would probably only cause the price to be put still further down, without securing a bid. It is difficult to forecast the future, but as the company becomes better known, it is possible its business will increase, and it should be able to earn its debenture interest. (4) Your bonds are good, but we have not much faith in the common shares you hold. Sell on any sharp rise, even at a loss. (5) A large and powerful company doing a big business just now, but we are doubtful whether they are a tempting investment to people in this country. The very point you mention is enough to prevent any substantial advance in the present state of markets.

Robert Love.—Your suggested purchase would be at best a doubtful speculation in the present condition of the market on the other side. Better leave them alone.

G. H. B. P.—(1) This company is doing very well, but we do not know yet how far it has been affected by the land speculation. Wait a little before buying. (2) Conditions with this institution are quite different, as it does not work in the same direction as No. 1, and these shares seem worth buying. You must not, however, overlook the fact that the company has only another 45 years of existence, and that provision should therefore be made out of dividends for redemption of premium.

W. P.—Nos. 3, 4, 1, following the order you give, are good to buy, and should all advance by and by, but whether within a year is more than we can venture to predict. We place them in the order of merit to the best of our judgment. No. 2 is fair, but not safe to buy just now, because of the stagnant position of the country.

LONDON AND SOUTH-WESTERN BANK.—The statement for August shows current accounts and deposits of £14,089,105, other liabilities £415,528, and acceptances and endorsements £30,022, against assets consisting of cash in hand and at Bank of England £1,900,624, money at call and short notice £1,170,540, British Government and other securities £2,281,594, and bills discounted, loans, &c., £9,227,515.

PARR'S BANK.—Liabilities on current and deposit accounts, &c., on August 31 amounted to £28,528,690, and on drafts current, acceptances on behalf of customers, &c., to £2,110,834, against which cash in hand and at Bank of England stood at £4,681,636, money at call and short notice £6,224,500, Government and other first-class securities £3,306,622, bills of exchange £2,678,248, and loans and advances to customers £14,639,869.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and August 31, 1907:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Aug. 31, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Sept. 1, 1906.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,334,712
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,451,437
REVENUE.			
Customs	31,740,000	13,610,000	14,081,000

Treasury, September 3, 1907.

The business of books is beginning to wake up again after a more than usually slumberous summer, and the *Book Monthly* for September shows outward and visible signs of it in the number of new books it tells us may be ours this month to read and to buy—if we like them well enough. The editor's letter in this respect on the trend of book buying is very interesting, as is also a paper on the changes that have come over the "spirit of the dream" in serial stories. Among the Personal and Particulars is a very good portrait of Mr. Gerald Moore, who [illegible] the subject this month of the editor's genial appreciation.

INSURANCE.

PRUDENTIAL

ASSURANCE COMPANY, LIMITED.

HOLBORN BARS, LONDON.

Invested Funds £65,000,000.

BRITISH TRUST CORPORATION, LIMITED.

CAPITAL - - - £100,000.

NOTICES.

SOUTH AUSTRALIAN GOVERNMENT FOUR PER CENT. BONDS FOR £500,000 MATURING 1ST JANUARY, 1908.

The Government of South Australia have instructed the BANK OF ADELAIDE to give holders the option to SURRENDER these Bonds for cash payment, with accrued interest to date of surrender (principal and interest payable three days after lodgment of Bonds with the BANK OF ADELAIDE), or of CONVERTING the BONDS into Three-and-a-half per Cent. Inscribed Stock, on the following terms:—

For every £100 of these Bonds, with coupon attached, due 1st January, 1908, surrendered to the Bank, the South Australian Government will issue £100 Three-and-a-half per Cent. Inscribed Stock, 1926-36, and also pay £1 10s. in cash. The Inscribed Stock will be dated July 1st, 1907, and a half-year's interest will be payable on January 1st, 1908. Copies of the Act under which this Stock will be issued can be seen at the Office of the Agent-General for South Australia, 28, Bishopsgate Street Within, E.C., or at the BANK OF ADELAIDE, 11, Leadenhall Street, E.C. Full particulars and forms of application can be obtained from the BANK OF ADELAIDE or from Messrs. R. Nivison and Co., 76, Cornhill, E.C.

J. G. JENKINS, Agent-General for South Australia.
London, 30th August, 1907.

THE COMPANIA SANSINENA DE CARNES CONCELADAS

GIVE NOTICE That a final dividend of 5 per cent. for the year ended December 31st, 1906, will be paid on and after the 5th inst., on presentation of shares at the offices of the company, 13-16, Long Lane, West Smithfield, E.C. Messrs. Glyn, Mills, Currie and Co. will remit dividend by warrant to all shareholders on their register.

London, 2nd September, 1907.

IMPERIAL JAPANESE GOVERNMENT 5 PER CENT. LOAN OF 1907.

NOTICE IS HEREBY GIVEN that the coupons due 12th September, 1907, attached to the scrip issued by Parr's Bank, Limited, 4, Bartholomew Lane, London, E.C., the Hong Kong and Shanghai Banking Corporation, 31, Lombard St., E.C., and the Yokohama Specie Bank, Limited, 120, Bishopsgate St. Within, E.C., will be paid on and after Thursday, September 12, 1907 (Saturdays excepted), at the respective banks indicated on the scrip, between the hours of 11 and 3. Coupons must be left three clear days (excluding Saturdays) for examination previous to payment, and be entered in numerical order upon lists which may be obtained on application.

Provincial holders should forward coupons through their bankers for collection, as they will not be paid through the post.

London, 6th September, 1907,

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 506. SATURDAY, SEPTEMBER 14, 1907. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question—**One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

The Investors' Review.

The Source of Money and Stock Market Troubles.

Now and again people who take the trouble to think a little for themselves ask us why we continue to hold it to be imperative that a general and drastic liquidation must take place upon all great stock markets before a healthy condition of affairs can return to them? The question is really not so difficult to answer as it seems. All that is necessary to its solution, is an effort of memory. Look back and note the steps by which markets have reached their present state. This can be done most simply by following the story of individuals or groups treated as examples. Take the case of a firm on the Stock Exchange which has participated, say, in the underwriting business of the past ten years. For a time that business was most likely profitable and in the main apparently attended with little risk. New stocks were guaranteed by the underwriters for a certain fixed commission, and the public took the scrip when offered in the open market, relieving them of all liability. That is the crude and expected course of events in underwriting. As a matter of fact, however, at the very best of times only a certain proportion of the securities thus put upon the market under guarantee were bought outright by the general public, and as time went on the more or less complete failures of new issues in increasing numbers drove the underwriters to engage their credit more and more deeply in order to take up their quotas of the securities guaranteed subscription by them, but which had not sold. In due time many a firm and individual underwriter became so completely locked up through having to hold these fragments or quotas of new issues, whose success as money procurers they had joined in guaranteeing, as to be well-nigh helpless. They were like prisoners so confined as to be able neither to stand up nor lie down. They could neither sell out and release the capital borrowed by them to take up the unsaleable scrip or get back their own money engaged in this treacherous kind of business. They became financially paralysed, and could go no further in the way of accepting fresh commitments. When a market gets clogged with this description of financial embarrassment, nothing whatever can deliver it except a more or less violent clearance. There must be a "knock-out sale," in the course of which much book wealth that looked like capital will disappear like morning dew before the sun, and the market, the country even, may be driven to comprehend that, instead of growing richer by all these financial operations, stock multiplyings, underwritings, market supportings, and so forth, they have been consuming wealth all the time. Credit misused is the one sure devourer of capital.

And the same thing has been going on in other directions everywhere. Why, for instance, is the "Kaffir Circus" in such an apparently hopeless position? The quantity of gold turned out from the mines goes on increasing month by month, no matter whether Chinese are engaged in the extraction or not. It looks as if the outturn for the current year might approach £30,000,000, and some portion of the increase, whatever it may be, is sure to be available for dividends. That does not matter, nothing matters; the market remains listless and any little stir in quotations merely

serves to emphasise its paralysed condition by bringing out shares that holders have been waiting to sell. Why is this? It is principally because inside the Stock Exchange and all over the country—not to say the British Empire, the French Republic, the German Empire, and even the United States—there are multitudes of people who are still clinging to South African mine and finance shares bought by them originally at prices so high as to make any dividends they may receive upon their possessions a wholly insufficient set-off against the interest they have to pay. No agency exists to enable one to estimate the quantity of Kaffir market paper which at the present time lies pledged with banks or otherwise kept off the market by means of borrowed money. Probably enough the total loss incurred by the holders of this treacherous description of so-called capital alone runs into hundreds of millions, but it is loss a considerable proportion of the victims inside and outside the market have thus far failed to realise. They hang on to what they bought, wasting their substance, wearing out their lives with anxiety, hoping against hope that a rally will come, that the stimulus of increasing masses of gold will bring in new buyers and allow them to escape with less loss than they would now have to face. Multitudes amongst this class of people both inside the market and out of it would be bankrupt and ruined were they now to liquidate their position. So they go on paying more for the money they may have borrowed than they can receive back in dividends, and the corrosion of excessive interest must, time given, complete their ruin, pinch and scrape and starve how they may. Therefore in this direction also a tornado of insolvency, so to say, is ready to burst over the market, and must be faced by it before freedom of action can return, liberty to deal. Everything is hollow and unreal in it, while the artificial position established in past years by the reckless folly of the community remains unliquidated, profitable meanwhile to the moneylender alone, and not without growing risk to him.

Wherever we turn we find the same influence at work. The habit has grown so inveterate among certain classes of people in all civilised countries to buy more of a security than the buyer is able to pay for and to carry the purchase by one expedient or another with the help of banking credit, that no matter where we go and look, we find markets and market clients tied up to an extent unprecedented in commitments of this description, the average charges involved in which exceed the average earning capacity of the securities in pawn. It is by grasping how irretrievably all markets are thus embarrassed that we can comprehend what a devastating influence a season of dear money must exercise upon prices. Dear money has been death to the Consol market for years back. One may say ever since 1900, or very little later, holders of Consols on borrowed money have been paying more for the use of that money than the stock returned to them. It has been the same with speculative accounts open for the rise, or for income, in the Home Railway market. Men in former years of "easy money" were tempted to buy much larger amounts of these stocks than they could afford to pay for, because the income the stocks yielded was the larger on the average than the amount of the interest paid for the loan by which the purchases were taken up, and incomes were often sensibly increased by this difference. It is now, and for years has been, exactly the reverse, and because money is now dear and interest received the same or less, every month that passes augments the distress, not only of the market itself, but of multitudes among its clients, forces pawned stock out of the hands of exhausted holders on a market stifled and bereft of adequate new outlets. So is it on the Continent, in the United States, in India, in Australia, no matter where you look. There has been a universal straining after excessive income procured by the help of operations in credit. At the same time the projectors and monopolisers amongst mankind have been forging ahead with all manner of new enterprises, creating potential securities in order to open mines, to build railroads, to fill cities with electric tramways, to organise new industries and open up fresh territories and markets. At fevered speed this locking up of resources or credit in directions not yet remunerative, and often never likely to be, has gone on alongside the other, until now all the money markets of the world are half-buried beneath the masses of paper the zeal of the speculator has brought into existence. There is little free credit available anywhere, but only credit the product of the pawnshop. Therefore the hunger for hard cash also grows in intensity.

Add to all this the prodigious increase which has occurred in mere deadweight obligations brought into existence through the wars of the last dozen years or so. Within fifteen years at the very most we have had the Japanese war with China, the war of the United States for the capture of Spain's colonial possessions, our own South African war, the Boxer war and the gigantic struggle between Russia and Japan. Every one of these conflicts has added to the mountainous piles of unproductive debt which the money markets of Western Europe have to carry, whose interest the nations by whom or on whose behalf the debts have been contracted have to find out of the surplus of their labour, without as a rule obtaining any direct equivalent whatever to recompense them for the additional charges they are called on to bear. These debts stand for capital utterly consumed, are represented at best by a "moral asset." There is thus in all ways a quite incalculable multitude of bonds, stocks and shares, of certificates of capital really or nominally sunk, weighing down finance markets the world over, crippling alike the taxpayer and speculator and wasting the wealth of both in a manner so ruthless, so automatic, so inevitably calamitous, as to drive the observer, whether he likes it or not, to the conclusion that before health can be restored to any money or stock market there must be a liquidation and a readjustment or lightening of the burdens. The dead and putrifying superincumbent mass must be cleared away and consumed. It is often the case with individuals who have over traded or gambled their means away that the only chance they have of recovery is through bankruptcy. A break or liquidation of this description sets the fettered individual or firm at liberty to begin again and try to recover lost ground. Without bankruptcy the prospect is often absolutely hopeless, and just as with individuals so is it with markets. The great stock exchanges and money markets of the world may churn along for months yet, possibly for a year or two, though that is not desirable, but their internal condition is steadily becoming more uncomfortable, and they will not get back to health, to the freedom which will permit them profitably to employ their energies and remaining resources until the deadweight they now writhe under has been taken off. There can be no return to low rates for money while current rates mean to the extent they now do the consumption of capital. Money is dear to the average borrower because the security he gives is a wasting one that devours his substance.

Our Foreign Trade in August.

On the surface it is still progressive, and so far as exports are in question impressively progressive. Yet the figures of imports are less significant of the rising tide as, at £49,296,585, the total increase is only £407,448, or less than 1 per cent., while exports have risen by £3,862,430 or 11½ per cent. to £37,355,000, and there is also an increase of 6.4 per cent. in the re-exports, whose total was £7,367,201 for the month, the increase shown in this aggregate being £443,000. Altogether, and excluding bullion, the foreign trade of the country for the eight months whose value figures are now published aggregated £780,280,000, and showed an increase of £77,345,000 on the total for the previous year to the same date. Not so long ago the

aggregate foreign business for the entire year was less than that now shown for eight months.

Is this prosperity solid and durable, or have we now about reached the highest point of inflation and are we soon to see some recoil? These are the questions of paramount interest at the present moment. Nothing is easier or more comforting to the mind than to indulge

Excess value of imports over exports	107,420,468	102,423,165	88,293,673	− 14,129,492

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

in self-congratulation upon the marvellous development of the country's industries, commerce, and presumable wealth. We can all do that without measure until many of us forget to look under the surface and try to assess the significance of the imposing masses of statistics put forth by the Customs officials of the Board of Trade. Is there anything in the figures for the past month indicative of that pause in the advance which always precedes a set-back; not necessarily such a recoil as will bring the figures back to the point from which they started, but enough to embarrass a good many industries and to throw the calculations of uninquiring optimists into confusion? We think the figures do begin to warn us that we have got near, if not quite up to, the height of the inflation, for inflation it has recently been. Take the small increase in the imports of the month and compare the totals of weight or quantity with those of price, and it will be found that in almost every instance the expansion shown in value totals is the result of higher prices much more than of augmented quantities. Until lately we got our cereals at prices about as low as ruled a year back, but now every description of grain imported is dearer than it was then. In the past month, for example, the quantity of wheat received at our ports fell off by over 8 per cent., but the value went up by more than 2½ per cent. In other directions this discrepancy between bulk and value has been in evidence these many months past, and there are now very few articles classified in the Board of Trade tables which cost us as little as, or less than, they did a year ago. Flax seems to have now passed the highest point so far as price is concerned, and nitrate of soda appears to be a shade cheaper than it was. Sundry articles of consumption, too, like cheese, margarine and fresh beef, are costing us no more than they did and sometimes a little less, but the lesson of the exhibit as a whole is that the increase in the value of our imports is due to price, not to quantity. In many instances quantity is lagging behind, and that, if continuous, is always an indication that we are entering upon a period of diminished business. In the past month most raw materials used in our manufactures cost us more than they did twelve months back, and had it not been for the decline shown in the values of articles wholly or mainly manufactured imported during the month the increased aggregate value of imports would have been more impressive than it is. But even those articles which have recoiled, such as iron and steel and manufactures thereof, machinery, woollen yarns and textiles, and leather and the manufactures thereof, have fallen less in price than in quantity.

The export trade enforces much the same conclusion. We have continued to do a prodigious trade in coal and coke—a trade so great that the quantity is up more than 12 per cent. on that of August, 1906, and the value up nearly 32½ per cent., but even this great business will not continue long on its present scale at present prices. Foreign orders must fall away and the very dearness of the commodity is making a decrease in the demand certain. The same thing is beginning to happen in cotton manufactures and has already happened with some emphasis in linen yarn and piece goods, the quantities of which sent out of the country last month have fallen off, especially the quantity of piece goods, while the value is again higher than it was a year back. And in no instance does the increase in quantity alone appear striking apart perhaps from jute yarns and fabrics and woollen and worsted yarns and worsted tissues. Generally speaking, where the price has gone up to a noticeable extent on the comparison of years, the quantity has betrayed little elasticity. Often it has begun to go back. The quantity of cotton piece goods, for instance, fell off quite 6 per cent. last month, although the value was about ¾ per cent. higher than in August of last year. Examples of this kind appear to warn us to expect less impressive figures for the rest of the year, and we ought perhaps to be prepared to see some decline next year.

At the same time, it would be unwise to draw too emphatic conclusions from the statistics of a single month, because our foreign trade never flows in a uniform stream, whether outward or inward. Accidental causes will augment or diminish the movement of a particular commodity one month or one year, and the next affect some other product. Storms off the

coast may keep back grain ships, timber ships, vessels bringing imports of all kinds, and the export of machinery, for instance, may be heavy one month and light the next. Last month, for example, the exports of steam engines fell off by over £71,000, but that of other engines rose by nearly £317,000, and electrical machinery also rose by about £38,000. Taking account of these considerations, however, it remains true as far as we can judge from watching the figures, not only of the past month but of this year, that the crest of the wave has been about reached in our foreign trade, and that we must be prepared to see it break and fall back. The state of the world's credit markets is hostile to further industrial expansion just now, and it seems probable that the harvests of most of Europe and North America will be under the average. Short crops check business more than even dear money.

Economic and Financial Notes.

The Income-Tax "Trawler" in Fleet Street.

The Chancellor of the Exchequer is in a fair way to be the most unpopular man in Fleet Street, and through no conscious fault of his own. But his new arrangements for insuring a full collection of the income-tax—arrangements that may be compared to the substitution of a steam trawler for the old-fashioned fishing net—are bearing hardly on the "lineage," and even on the salaried, journalist whose income is nearly always small and in these days too often precarious. Although only a sort of literary hodman or journeyman confectioner from the point of view of the politician and newspaper proprietor, the working journalist takes himself seriously, persists in thinking himself as good as the parson or the doctor. His life is certainly a hard one, as hard as theirs, and his work is both arduous and thankless. To succeed at all the journalist must be a man of culture, and keep hand and brain in training. With all his efforts he does not on the average make as much in a year as the great majority of beneficed clergymen, and is easily beaten by many a country doctor. To earn even the pittance he does he has to spend money continually, to half live in restaurants, to pay fares, to buy books often, and sometimes to pay for information. "The parson," he notes, "who has to do next to none of these things, gets an allowance for his library, the doctor for his carriage, his drugs and what not; why should I be left out?" He is left out, and now that employers of this kind of labour—often sweated labour—are obliged to return the amount they pay to each member of their staff, Fleet Street is rising in its wrath. Hitherto it took taxes easy and, having never any money, paid them as late as it could, returning what it thought a reasonable sum as income to be taxed on because it thought itself as good as the Church any day, and superior to the average surgeon. All this is now altered, and in consequence of the new inquisition many a hard-working newspaper column-stainer may have to pinch this coming winter, to husband the coals that are so dear, to wear patched boots, and make his old overcoat do, to refuse his wife an extra blanket. And so he is in the mood to take it out of Mr. Asquith when he gets the chance.

The Value of Our Coal Exports.

We have not lately come across a statement of the case for free coal exports at once so well expressed and so straight to the point as that embedded in an article published by the *Times* in its Commercial and Financial Supplement this week. The writer is dealing with the advance in the price of coal, and after reviewing the various influences at work, most of which are temporary or of slender consequence, he arrives at the conclusion that industrial activity the world over is at the bottom of the augmented demand which has driven the market up. In our own case the effect of this activity is increased by the removal of the export duty on coal. In seven months this year Germany has bought about 2½ million tons more of our coal than in the same time last year, so that the removal of our tax "has enabled us to recover the markets which German sea-borne coal won from us while the impost was in force." "A bad thing for us," cry the hasty and unthinking. Not so, answers the writer in the *Times*, and he develops his argument so logically, with such aptness of illustration, that his own words must be given. A paraphrase would spoil the force of what follows:—

"In plain terms, coal has risen in consequence of an increased export demand. It is certain that if our foreign customers had not taken from us the extra four to five million tons, that quantity would have been available for the home market. This consideration will doubtless serve to accentuate the outcry against the export of our national coal wealth at all. Why, people ask, should we starve our industries and deplete our own pockets by sending abroad what we need at home? The answer is very simple. If we had not this coal to send away we should not need it at home, for our industries would be decadent. Coal constitutes more than three-quarters of our total exports in bulk, and probably three-fourths of our coal exports are carried in British vessels, which but for coal would have no outward cargoes to carry at all. It is bulk which gives the shipowner freights. In order to bring us wheat, and wool, and cotton, and timber, and iron ore, and other material for our industries from abroad the vessels would have to go out in ballast, and, therefore, they would have to charge homeward freights to compensate for the double voyage. That would make our raw material and necessaries of life so dear that we could not compete with other countries. Again, if ships could not earn homeward freights to compensate for the lack of export cargoes, they would not be built at all, and a large number of our tramp fleet are built solely for the purpose of coal carrying. In that case our shipbuilding industry would descend to the level of a third-rate Power; and the shipbuilding industry is our largest consumer of iron and steel, the producers of which are in turn our largest consumers of coal. In 1906 some 251,067,000 tons of coal were raised in the United Kingdom, and of that quantity 58,198,000 tons (including the coal equivalent of coke and patent fuel) were exported and 18,590,000 tons were supplied for the use of steamers in the foreign trade. If we had not exported these 58 million tons, where would the foreign trade be? Our exports of coal, we repeat, amount to about 75 per cent. in weight of all our exports, the other 25 per cent. consisting chiefly of valuable goods of small weight. But our imports consist mostly of bulky and heavy commodities, needing roomy vessels—just such vessels as take away our coal. A steamer going out for, say, a cargo of rice at Rangoon, or one of iron ore at Bilbao, can bring these necessaries home at freights we can afford to pay only by getting outward cargoes of coal. Then it must be remembered that a very large proportion of our coal exports is actually for the consumption of British vessels coaling abroad, and by British plantation and factory owners abroad. Moreover, if it were not for the large output rendered possible by the export trade, the collieries could not be worked so regularly to full capacity; consequently, the average cost of production would be raised, the coal would be dearer, and not cheaper, without than with the export trade."

In point of fact, the price of coal is now high and rising, not because the export tax has been removed but as a consequence of its having been imposed. It was a clog to trade while in existence, and produced two results. Our Consuls abroad have again and again told us that the tax was diverting part of the demand which used to exist for our coals to the inferior product of Continental mines. We were losing the trade, and Germany in particular was pushing in to the field our export duty was tending to expel us from. This was good for the German oversea trade, and in time must have helped the shipping companies of the Fatherland to a good deal of our ocean-carrying business. That was one

result. The other unquestionably was a holding back of orders by those who could not do without coal of our quality. Our usual customers took less of that coal, kept smaller stocks of it, used substitutes where possible, and generally acted so as to avoid coming to our market as much as they could, hoping no doubt that the tax would be only a temporary one. When the tax was removed, therefore, it was natural that there should be a rush of orders to fill up depleted stocks, and as the industrial demand was at its height all over the world coincidently with the date of the removal of the tax, the inevitable harvest of our fiscal bungling was a sharp advance in prices. If the export duty had never been imposed upon our coal, it is fairly arguable that we might have escaped the present spasmodic inflation, together with the mischiefs that may succeed it.

The Australian Exclusion Tariff.

Our home-grown tariffites must forgive us if we smile at their dilemma. They dinned into our ears so those "colonial offers," and have so continually abused Free Traders, above all a Free Trade Government, for "neglecting a great opportunity to bind the Empire closer together" in the unholy bonds of a preferential tariff to be reared against outer barbarians—called "foreigners" in the language of these modern Romans—that the smashing blow Australia has given them almost excites our sympathy. But laugh we must. Here is the *Times*—the out-and-out supporter of "preference," of plain protection, of most antiquated delusions—uttering a wail most melancholy over the ungrateful behaviour of the Australian Commonwealth in hustling out the home manufacturer—in slighting Birmingham, above all places—with its new "preference" tariff. Most courageously, in the circumstances, the *Times* prints those schedules of this tariff which most affect us, and then it weeps, literally sobs and sniffles, over the cruel betrayal of its affections, the contemptuous blow administered to its friends the tariffites by Sir W. Lyne and Co. We gave the principal facts in the Investors' Review of August 17, and it is unnecessary, therefore, to reprint the condensed tables of the *Times*; but we must quote the language in which that woebegone newspaper exhibits to our wondering gaze the nature of the "boon" bestowed on us by Australian solicitude and affection:—"We fear it must be admitted, even by those who are most earnest in promoting commercial intercourse with the Commonwealth, that the course taken by Australian statesmen is scarcely calculated to achieve that result. We can only hope that British goods, though the advantage which they receive as against foreign ones is in many cases almost derisory, may be sufficiently in demand to prevent the volume of our Australian trade from undergoing appreciable diminution." Oh, pious hope and forlorn! As if Australians, any more than Canadians, had ever the least intention to foster or protect Britsh trade. What they are after is exclusion of Britisher and foreigner alike for the benefit of a few boodlers all their own. To "establish domestic industries" for the profit of the few among themselves, the Commonwealth Government and Parliament are ready and the town-herding people even eager to sacrifice not only the British manufacturer and merchant, but their own consumers. Witness the wire-netting episode in New South Wales. What do the boodlers of the towns—diseasedly congested towns for the most part—care for the pastoral and agricultural population which forms the backbone of the country and its only safe mainstay? They care just as much as for the Mother Country manufacturer and merchant, which is nothing at all.

Because this is the fact, and has always been the fact, we have never known quite how to take our apostles and prophets of imperial harmony through the help of a crenellated tariff ring fence. Sometimes we have felt inclined to regard them as a netherworldly swarm of intriguers bent on the ruin of their native land, and at other times they have appeared rather to be a set of unworldly sentimentalists whose imaginations, unballasted by knowledge, had taken wings and flown away with them. On the whole, the romantic interpretation now looks the most probable, for nothing could exceed the guilelessness with which such papers as the *Times* haunt the place of wailing and pour out their griefs. The dear sentimental things took the colonists to their lonesome hearts as brothers and more, loved them with a hectic and super-heated love that found expression often in contempt for everything merely English, which refused to hear a word in defence of the old ways, the Motherland's most cherished institutions. And now they are being rewarded according to their confiding simplicity. The too hotly-loved colonists have turned and kicked their indiscreetly unfortunate lovers away. All the self-deluded tariffites can now hope for is a little pity. "Do not—please do not take away all our trade with you dear, colonial exclusionists, or, at least, not all at once." And the colonials laugh, and we pity and smile, for never was there such a downcome. Will the exposure stop the agitation here? Probably not. It has become a disease with many, and for the rest parrots abound in Fleet Street and purlieus. But never mind: we can laugh still over the "preference" which is exclusion for Birmingham, and not much else for other places.

The Pension Business of the United States Congress.

We had no idea that so much of the time and energy of the great personages who legislate for the 80,000,000 odd people in the great North American Republic should be occupied every session by the business of arranging for pensions to their supporters, until a correspondent obligingly forwarded to us a copy of the "Congressional Record Index" from January 17 to 26 last, a period of twelve days or a working fortnight. Turning over its pages we find that no less than 2,629 pension Bills were submitted to the House within that time. Of this number 2,195 consisted of Bills to increase pensions and only 434 represented entirely fresh applications to the liberality of Congress with money not its own. This is as near as we can compute, and if the pension traffic went on at the same speed throughout the session we can understand the exhaustion with which the law-makers departed for the recess. Some members of the House brought forward quite long lists of people upon whom they were desirous of bestowing a little more of the national revenue, and the significance of the exhibit appears to lie principally in the fact that it is increases more than new pensions which occupy the energies of representatives. Evidently the Republican party does not quite know how to make away with the excessive revenues it draws in from the population. Pretexts for new pensions may be difficult to find as there have been no wars since that with Spain, if we except the guerilla murdering which continues sporadically in the Philippines. But the £27,000,000 or £28,000,000 of revenue devoted each year to pension bribery purposes has to be made away with somehow, and therefore, when new candidates in swarms sufficient fail to come forward, Bills and petitions are got up with a view to increase the pensions of those already in the enjoyment of political charity. It is charity with a purpose, we assume, else why should Mr. Sidney E. Mudd, a representative from Maryland, introduce four Bills for increasing the pensions of certain of his clients, and one Bill for a new pensioner, or what is the motive that impels a gentleman like Mr. Harry Courdrey, a representative from Missouri, to introduce Bills for nearly a dozen pensions, four of which are new and the rest increases? Throughout the list we come upon remarkable exhibits of this description, a zeal in making away with the national money which throws a curious glare on the methods of applying bribery to the constituents. Mr. Joseph Bennett from Kentucky, for instance, introduced no less than 25 Bills, mostly to increase pensions, and the aggregate number of presentments, single and in batches, is, as we say, well on to 3,000 for one fortnight. Is this

what we may expect to come to when old age pensions are established in this country as an engine of political corruption? It is as a political expedient that the project is being supported now by the present Government, or its Chancellor of the Exchequer; and should he get his way we are certain to find in after years one political party vying with another in devoting the means of the nation to bribe constituencies. And "the poor" will always be asking for more.

New South Wales Railways and Tramways.

These belong to the Government, and the report of the Chief Commissioner for the colony's fiscal year ended June 30 last tells us that it ended with a surplus of £659,916 after meeting the interest on invested capital, as well as covering all working expenses. This surplus is nearly £219,000 more than that for the previous year, and is in all respects satisfactory, especially when we take into account the assurance given by the Commissioner that the whole systems of both railways and tramways have been efficiently maintained out of revenue. That is all the more remarkable because the percentage of working expenses to receipts in the railways was only 53.08 per cent. as compared with 54.51 per cent. in the previous year, and no less than 66.69 per cent. in 1888, the year officially selected for comparison. Gross traffic receipts, however, have more than doubled within that interval of time, and expenses have not risen in the same proportion, so that while in the year ended June 30, 1888, the nett revenue before paying interest on capital was only £764,573, it was last year almost £2,210,000, a profit percentage on the capital outlay of £4 19s. 2d. against only £2 17s. in 1888. These figures relate to the railways alone and offer a notable testimony to the care with which this part of the State's business is looked after. In gross earnings alone the improvement last year was 11.21 per cent., New South Wales being in full enjoyment of the prosperity brought by abundant rains in the last two years. What does the Administration do with the surplus available after meeting interest? Is that utilised in lieu of fresh loans to expand and improve the system, or does it go into the common purse and get dissipated in maintaining Government liberality in other directions? During the past year, for instance, 373 odd miles of line were wholly or partially renewed or strengthened, and so many others re-laid, while bridge work is continually going on and improvements at Darling Harbour, a recently acquired Government property. From what money were all these additional works carried out? Elaborate tables are appended to the report of the Commissioner illustrative of the character of the traffic done, but we have no balance-sheet. All the Government supplies is the amount of capital laid out, and this last year came to £1,074,166, no less than £128,453 going into new rolling-stock. Whence this money came from it is impossible to tell, but the cost per mile of line open is now £12,946 and the total capital sunk in rolling-stock alone is £7,522,000 out of an aggregate of £44,700,230. The Chief Commissioner tells us that so much rolling-stock provided during the year was charged to capital, and so much working expenses, but whence came the capital?

About the tramways there is not much to be said. They also prosper, and last year gave a profit of nearly £49,000 after meeting interest on the capital invested. This was, however, decidedly less than the profit on the previous year, which amounted to £55,960, but why this decline has taken place the Commissioner does not clearly tell us. He does, however, inform us that the proportion of working expenses was 80.11 per cent. of the gross income compared with 78.11 per cent. in the preceding year, and that liberal provision was made for the general upkeep of the property, while sums of £45,000 in all were utilised in various ways to provide for upkeep or to write down capital cost to the old cable plants, conduits, &c. Another £25,000 was devoted to the redemption of the cost of the old steam and cable rolling-stock, and in these ways the expenditure on revenue account was increased by nearly £63,000 or 9½ per cent. to £727,947. These assignments are to be commended, especially as the total capital expenditure upon the lines open for traffic amounted on June 30 last to £3,669,524, no less than £68,302 having been spent during the year, of which, however, only £428 was really charged as new capital, the remainder being presumably off-set by the credits above mentioned. Adding railways and tramways together the State of New South Wales has capital to the amount of £48,369,754 involved in these undertakings alone, a very onerous amount for a young community whose years of fatness are followed by a leanness worse than Egyptian. For this money the people had 3,453 miles of railway and about 129 miles of tramway as national property on June 30 last, and the cost of the tramways—all in Sydney and neighbourhood—was £28,518 per mile as compared with less than £13,000 per mile for the railways. Why the tramways should have cost so much we do not know, but it is a suggestive fact that the average cost per mile of 1,107½ miles of the railways was only £3,496. The average for the whole, indeed, is only brought up to £12,946 per mile by the disproportionately excessive outlay on small sections like the Darling Harbour branch, which cost £536,053 per mile, or the Bullock Island branch, the cost of which has been at the rate of £264,412 per mile. No single portion of the tramway system has cost less than £5,000 per mile, and the bulk of it was from £10,000 to £30,000 per mile, one small portion having cost £56,817 per mile. What is the explanation of this perplexing divergence?

The Advance of New Zealand and its Debt Magic.

The Right Hon. Sir J. G. Ward, Premier of New Zealand, has not yet sent us that copy of his budget for which we have been waiting, and in this respect shows less courtesy than his predecessor. That does not surprise us, because Sir Joseph must naturally feel a little nervous in trusting any production of his to one who possesses his *dossier* in connection with the New Zealand Farmers' Association and a certain defunct colonial bank. So we forgive him, and fall back upon the letter of the *Times* correspondent dealing with the last budget. It is a very good letter, dated July 16, and appearing on Monday last, but it does not let us into the mystery of budget surpluses and growing debt. Probably that is no fault of the correspondent, because even when we had the Seddon-Ward budgets to con over, it was never possible for us to quite fathom the legerdemain whereby surpluses flourished and debt grew. Here we have a budget, as was stated in these columns when the figures first appeared, showing a surplus as usual, quite a brilliant surplus. For the completed year ended March 31 last it was said to be £700,000, and yet the gross public debt of New Zealand was then about £2,000,000 larger than at the same date the year before. It is now £64,179,040, and in addition to this there are a great number of local debts—municipal, harbour board and such like—the interest and other charges upon which the million or so of white people in the colony have to find. But how comes it that the debt should grow at this pace while magnificent surpluses are paraded at each year's end? We can only guess. The surpluses are not real. They are of the same description as those balancings which have before distinguished Sir J. G. Ward's finance. Specious cross-entries are apparently made which disguise the fact that the revenues of the colony are fed by additions to the debt. In the letter before us there is a list of the ways borrowed money went last year. An aggregate of £1,472,399 is brought out, and of this £596,015 is assigned to "purchase of land for settlement." Does that borrowed money come into the revenue as purchase instalments, interest, or otherwise? Another £525,000 went for railway construction and additions to open lines, and local bodies got £180,000, while

settlers and "workers" got another £170,000 amongst them, all borrowed money, and all money which may be utilised to swell the revenue, which in any event does help to keep it up to a scale of magnificence impossible were the people to be altogether dependent on their own resources.

For the current year the surplus at the end is estimated to be only about £213,000, a most modest total; but there is not going to be any appreciable diminution in the borrowing so far as we can judge, and the amount set aside for various purposes of the prosperity stimulating class appears to be about £2,116,000, of which all but £1,000,000 is to be found out of accumulated balances, or the unspent portions of borrowings brought forward. Hence the usual regulation £1,000,000, as already mentioned, is all that will have to be publicly asked for in the way of new money, and that is to be raised in the colony whose surplus wealth is so abounding. It may be so, New Zealand is a favoured land we know, one of the most lovely and fertile in the world, and should be one of the best to live in but for its debt blight. Thanks to that the debt will be up another £2,000,000 at the end of next March. And a curious transaction is mentioned in this letter which does not seem to indicate that great abundance of wealth the readiness of local government departments—insurance, banking and other—to find millions as wanted would lead us to expect. The budget mentions that £800,000 of Imperial guarantee debentures matured on June 1 last and they are "in due time to be cancelled." Has the colony then accumulated the money with which to pay off these debentures? Oh, nothing so simple as that. Hitherto this portion of the public debt has been kept in London as a sort of "floater" to be borrowed upon when the colony wanted money to pay interest upon its other debts or for any purpose. The presence of this £800,000 of guaranteed debt enabled the colony to maintain "a strong financial position" in England. It needs that position still, but having become a Dominion it is now determined to do without any such trivial crutch as an Imperial guarantee, and unendorsed debentures for the £800,000 are to be issued here to take the place of the guaranteed ones about to be cancelled. These debentures will, under the control of the High Commissioner of the colony or dominion, be used exclusively for security purposes, as pawnable floaters in short, but we do not understand how the sum is first of all to be invested in gilt-edged securities upon which the Bank of England or other financial houses would grant advances "even at a time of extreme financial pressure." How does the substitution of one kind of loan for another release money to be thus invested? We know it is possible for credit-wielding institutions to use their credit twice over, or oftener if they can manage it, but it baffles us to guess how money which does not exist as a free asset can be "invested" in gilt-edged securities available for pawning purposes when wanted. Has the Imperial Government abandoned its claim? If so, Mr. Asquith will have to be scolded. New Zealand must be rich, though, for is not her generous Government, or at least the Right Hon. Sir Joseph G. Ward, nourishing hope and exciting our expectation that the contribution to be given by the colony to the British Navy shall be raised to £100,000?

A Group of Good Stocks.

In resuming the issue of these assortments, which, however, we cannot promise to continue every week in the present state of markets, it is again necessary to warn readers that they must not treat our suggestions as in any way an intimation that prices are going to rise. All we can possibly aim at in present circumstances is to select such securities as appear to be safe from the point of view of the income yielded by them. Those who buy for income alone are likely enough to do well with such a group as is here appended, but they must be quite prepared to see prices lower before the slow liquidation has worked itself out. Let us add that some people appear to have misinterpreted the word "trust" as applied to these selections of stocks suitable for investment. As used by us in this connection the word means no more than a group of stocks got together for the purpose of dividing risks, and, if possible, to average up the income. It is useless investing the whole of one's means in a single security, useless and often conducive to great loss. If, however, the money is divided amongst a number of stocks, small amounts being put into each, the risk of capital loss is certainly diminished, and by-and-by, when health again returns to markets, purchases of stocks like the subjoined, even if they should in the interval go lower, appear likely enough to bring a profit to holders. But none of these stocks are suitable for buying for the rise on borrowed money, no stock we know of is in that position at present. In all probability were any purchases to be made on credit the interest charged for the loans would average considerably more than the yield of this group, which works out at just about 3⅞ per cent.

It is unnecessary to go into a lengthened description of the five securities presented this week. The conditions surrounding them all are clearly enough indicated in the notes inserted in the table. Everybody knows what the War Loan is, and we may be sure it would not have been obtainable at 98 if stock markets had not been embarrassed and money difficult to come by. Purchasers now have only to wait until April, 1910, and claim their hundred sovereigns for each nominal £100 of stock to do very well indeed by this investment. Croydon stock ought also to be perfectly safe for the interest, although the town has undoubtedly a debt of inconvenient size. We should be less confident about the fate of a long dated Cape security, but the particular loan selected has only 3¾ years to run, and by that time Cape Colony may have adjusted its finances and begun to harvest the fruits of its labour, and of a chastening abstention from fresh borrowings here. A rather encouraging incident has occurred there in the passing of a direct tax of 10 per cent. upon the profits of De Beers, and if the railway difficulties can be adjusted between the Cape of Good Hope and other South African colonies, a return of prosperity may come before this bond issue falls due, but in any case we expect it to be met at maturity, even if the colony has to pay 25s., for the sovereign. Nothing has to be said about the City of Hamilton bonds, which should be quite as safe as many of the stocks issued by home corporations, nor need we emphasise the fact that Copenhagen is a rich city. It recently had to borrow a considerable amount on short term loan, and paid rather a high rate for the money, but this did not imply any weakness in the city's financial position. Money is dear to every borrower just now as New York, which claims to be the wealthiest city in the world, and is not, is finding out.

Calico Printers' Association.

The fortunes of this great Manchester combine, the largest of the textile trusts brought into existence at the end of the last century, have varied widely. The start was a very inauspicious one, and some time elapsed before dividends commenced with a modest payment of 2½ per cent. on the enormous issued share capital of over five millions. Two years before that there had been a heavy shortage, exceeding £100,000, in the amount required to meet debenture interest, and thus early in the company's career it became perfectly obvious that the purchase price of the properties embraced in the agglomeration had been fixed on too liberal lines. It was not that exceptionally heavy sums were allowed for goodwill, the amount, indeed, is exceptionally modest for an undertaking of such magnitude, but the promoters were over-sanguine in their estimates of the results likely to be immediately obtained from the removal of what was considered to be unnecessary competition. After the disastrous experience for the twelve months to December 31, 1901, things began to mend with some rapidity, and for the six months to June 30, 1902—the date of closing the accounts was changed at this point—profits were good enough to justify the hope that original promises were, after all, to be fulfilled. In the following year the figures were better still, but in 1903-4 and 1904-5 revenues again slumped heavily. We recite these facts in order that the full performances should be known, the disposition among interested parties being to regard the most recent achievements during a time of exceeding prosperity in the textile industries as the company's normal progress. We do not think it is anything of the kind, and distinctly hold the opinion that when business is exceptionally good the undertaking will do passably well, while anything may happen when the inevitable reaction follows the boom. During the past two years profits have been larger than we ever expected to see them, we say that quite frankly, but then were the Lancashire textile trades ever so prosperous before? If the shares are to be even a tolerable investment the company must be reasonably sure of making fairly good profits, even in unpropitious times, or else have behind it big genuine reserves to give relief when a period of depression comes along. But the Calico Printers' Association can probably never answer to these requirements because the reserves are still totally inadequate, and if goodwill is not overwhelming at £500,000, there is a very heavy sum, something between £750,000 and £800,000, standing for closed works; that is to say, businesses bought for this money have simply been put out of existence because other plants, purchased at very full prices, can produce all the commodities required.

The authorised share capital is £6,000,000 in £1 shares, of which £5,026,840 has been issued, besides £3,200,000 of debentures, and it will doubtless be recalled that early this year the capital of the association was rearranged. Formerly there were no distinctive classes of shares, but the directors thought it would be well to split up the capital into ordinary and preference, and this was done. The actual division into £3,016,104 preference and £2,010,736 ordinary shares, all of £1, did not altogether commend itself to us, the proportion of preference shares appearing somewhat heavy, but it was the directors' choice, and the shareholders in the usual fashion accepted it. Against this capital share and debenture totalling £8,226,840, the land, water rights, buildings, plant, machinery, goodwill and other properties stand at £6,226,787, including £108,908 added during the past year, leaving £2,000,052 to the credit of the capital account as it were. Other items on the debit side are secured bank loans £570,000 less £301,882 standing to the company's credit on current account, leaving the entry at £268,117, sundry creditors £576,268, credit to depreciation account £233,135, and reserve funds £450,000. Of the remaining assets stock-in-trade of £2,154,527 is much the largest, but sundry debtors, which include certain investments, come to £896,207, and cash and bills are £110,182. Copper and other rollers are valued at £870,606, and if they still stand at 8d. per lb. the figure is much too high.

Now as to profits. These for the year to June 30 last were easily the largest in the history of the association. The total was £832,703, an increase over 1905-6, the previous best, of £116,146. This time the allowance for maintenance, depreciation, repairs and upkeep was £224,711 or £28,774 more, leaving the free profit balance at £607,992 compared with £520,620. Transfer fees and interest on investments produced £3,434 between them, making £611,426, from which administration and other charges take £43,627, interest and bank charges £15,758, and debenture interest £128,000 as usual. With £134,404 brought forward the sum for disposal is £558,444, and the directors propose the payment of a dividend at the fixed rate on the preference shares and of 6¼ per cent. on the ordinary shares, equivalent to 5½ per cent. on the capital as it originally stood, or an improvement of 1½ per cent. After providing these dividends £75,000 is added to revenue reserve, making it £325,000, £50,000 to capital reserve, increasing it to £250,000, and a fire insurance reserve is started with £25,000. The balance then left to be carried forward is £131,968. We hope this fine display can be kept up.

American Business Notes.

No particular indication is yet given by the New York Bank averages of the presence of Washington Treasury money among their deposits. Last week, for example, the deposit average was £40,000 less than in the preceding week, although loans and discounts had gone up by £120,000. If any Government money was put into the custody of the banks during the week, it must have been more than neutralised by the absorption of currency into the active circulation. The specie average, for instance, is down £114,000, and the greenbacks' average £171,000. It follows that, notwithstanding the small decline in deposit and current account liabilities, the surplus reserve has fallen off by £275,000 to a total of only £1,474,200. Even so the situation is decidedly better, on the surface at least, than it was at this time last year, when there was a deficiency on the statutory reserve of about £1,316,000, which compelled the banks to import gold.

Does this improved position encourage the hope that Wall Street is not going to fall into difficulties this year as it did last, and be driven thereby again to import gold from Europe at any cost? We should not like to give an emphatic opinion on the point. Although the banks may seem stronger in some respects, in others Wall Street is weaker than it was this time last year, because its resources have been further strained in the attempt to maintain an appearance of solvency during the intervening months. It has probably much more unmarketable stuff on hand now than it had then, by reason of the sales of European holders, and at the same time credit is being used up in financing corporations of all classes from the great railroads downwards, so as to prevent them from being obliged either to suspend extensions and terminal and other works in hand or to admit that their exhibits of revenue and expenditure have been more or less "stuffed" for years back. It is, therefore, the reverse of certain that New York will work through the autumn and winter without a further crisis of a disturbing nature, or escape the danger of a general liquidation.

Note how the struggle over copper goes on. For many weeks the Amalgamated or Standard Oil group of market swayers pegged up the price of the metal at 22 cents per pound. Nobody bought at that price; all that happened was a cessation of demand at the offices of the "ring's" selling company. Wherever a ton of the metal, or a pound of it, could be got outside the "ring" it was quietly snapped up, and the Amalgamated group was left more and more to itself. Then it put down the price to 18 cents per pound, and with no better success. The market for the metal is still going down, and doing

it in a way which shows us that two important changes have occurred. There is, on the one hand, a diminution in the demand for the metal caused in part by a recoil in the manufacturing activity which itself was forced to an extreme by a misuse of credit; and on the other there is an increase in supplies coming from sources not within the control of the Standard Oil combination. For one thing, scrap copper is proving to be increasingly abundant as was to be supposed owing to the characteristics of this metal. The greater the consumption of copper in industries, the larger becomes the waste or scrap thrown out after a more or less short period of time. The scrap copper from locomotive tubes, for example, comes back to the market at no distant date after it has been originally absorbed as new copper in making these tubes, but the copper utilised in telegraph cables and wires may not be scrapped for years and years. For all that the unprecedented consumption of copper in the past decade or less is now beginning to bear its harvest of scrap, and consumers of the metal both in Europe and America have obviously been compelled by the slackening off in fresh orders to economise in every direction. Therefore they hunt up parcels of waste and hold away from the "ring's" market as long as they can. What will happen to the copper ring when dear money forces it to let go its hoards of the metal? In other directions what is going to be the effect upon the syndicates, rings, corporations, and individuals who are holding either raw materials or securities of any description off the market in order to prevent a slump in prices? Is not the rate of interest these *accapareurs* are charged on the banking capital they employ eating out their resources, and unless buying on an extensive scale is resumed by consumers, investors, manufacturers, and such like, must not the end of the long wait be exhaustion and failure? What, with copper cheap and crops short, is New York going to do this autumn should it require gold, more gold than the banks can lay hands on within the country or by appeals to the Treasury? We should like somebody else to try and answer that question.

It would be futile at present to endeavour to forecast the consequences likely to flow from the hostility of the United States people towards joint stock "holding" corporations, railroad companies, and every organisation in the nature of a monopoly. One thing we are often disposed to be afraid of is a new cleavage between the different sections of the Republic. When we mention this fear to Americans they always say that the hostility between North and South is dead, and that if any trouble does arise again it will be between East and West. We do not believe in this optimism and the recent action of some of the Southern States, particularly of Georgia, in passing laws to coerce the railways running through their territory, without regard to federal judicial supervision or anything else, is to us a symptom of ominous significance. New Yorkers patronisingly tell the people of the South that they are injuring their chance of getting new capital, and the New York *Chronicle*, in a recent article written with considerable force, instanced the slow progress of the iron and steel industries of the South as proof that the action of the State legislatures there was frightening capital away. In the first half of this year the State of Alabama, which twelve or fifteen years ago was thought to be on the way to become one of the greatest centres of iron production in the Union, turned out only 6·4 per cent. of the total pig-iron production of the country. In 1890 it contributed nearly 9 per cent. of the total, and the five States—Virginia, Georgia, Tennessee, Alabama, and Texas—in that year made 15·46 of the country's pig-iron, while in the first half of this year their proportion has barely been 10 per cent. The New York paper accordingly rubs the lesson in, and says that the South is being starved for want of capital because it has frightened away the moneylender. It is difficult to secure money for any Southern enterprise, even the trade papers of the South admit, but is there nothing more than merely local pig-headedness and jealousy working to bring about this unsatisfactory state of affairs. Railroads are harassed elsewhere than in the South, the attitude of the State of New York under the new Public Utilities Law promises to be quite as hostile to monopolist combinations of any description, to rebating and favouritism in trade, as any Southern law of them all, even the law of Georgia, whose harshness and indiscretion at points is obvious enough. There must, therefore, be some other cause at work, and we fear it is an underlying dread of political differences or rifts which might become formidable. The North does not trust the South, and the South fears the North—will have no Yankee combination in its industries, no domination by Wall Street millionaires. Out of this feeling something worse than jealousy might very easily develop, if the South were provoked, say in this matter of railway rate regulation, by what looked like high-handed, over-riding decisions on the part of Federal law courts.

The sale of New York City 4½ per cent. bonds to the amount of £8,000,000 made this week has not been particularly reassuring to the financial potentates. Eliminating a bid for the whole loan sent in by a company whose financial strength appears to have been doubted, for its tender was rejected, the total applications were little more than £33,000,000, and the price at which the loan went was significant of the congested state of the Wall Street Money market. Applications above $101·54, report says, will receive allotments in full. This, at least, is how we interpret the phraseology of the cable messages, and that is the reverse of stimulating to markets, for these 4½ per cents. are clear of taxation to an amount estimated at an additional 1½ per cent. Allowing for that New York may be said to be raising money at 6 per cent., just like a distressed railroad, and it is by no means certain that the bonds have gone straight into the hands of investors to any important extent, although the large houses, headed by J. P. Morgan and Co., appear to have tendered at such low prices as delivered them from the necessity of taking up much of the issue. They merely played buffer. So the average price comes out at 102·06 only for the long term bonds, and at 100·3 for the short term notes.

Several further preliminary statements by leading railways have made their appearance for the year ended June 30 last, and merely emphasise the lesson previously enforced. Thus the Chicago, Milwaukee, and St. Paul earned $5,126,000 more in gross than in the previous year, and the nett revenue was $117,000 worse. The Central of New Jersey, again, had a gross increase of $2,444,000, and only $48,000 of this remained as additional nett income. A little better exhibit is made by the Norfolk and Western, whose gross traffic, however, was only moderately elastic, showing as it did an increase of $467,000, of which about half, or $232,000, remained as additional nett income.

Railway building is proceeding apace in Canada, and will bring a strain upon the resources of that ambitious and rapidly developing country at no distant date. Possibly enough corporations like the Grand Trunk and Canadian Pacific Railways will be able to bear the burdens of new capital they are assuming without material damage. Likewise they may be crippled. All will depend upon the continuance of favourable weather in the Canadian West and North-West. Should a cycle of bad or indifferent harvests follow one of good harvests there, then even these strong corporations may find their finances thrown into temporary confusion by the magnitude of the additional burdens they have assumed. In the meanwhile, however, the population of Canada is benefiting in various ways by the outpouring of money on railroad construction last year and this. It will continue to benefit for years to come—while the money lasts, in fact—but we are not sure that the banks and other credit-handling institutions will also benefit by the inflow of foreign capital. There has been far too much speculation of recent years in land, in enterprises of all sorts within the Dominion, to permit the hope that Montreal will escape the consequences of the frenzy when the rest of the world is passing through its cleansing time.

At present, however, Canadian banks seem to be strong enough, and they have been founded on a system which has stood the test of time in a way as remarkable

in many respects as our own haphazard banking houses. The paper money expands and contracts automatically, deposits mount up step by step with advances, and fall back again as these are paid off, but the position appears to remain sound on the whole, and there seems to be always a sufficient margin of security, Government or metallic, to protect the note circulation from depreciation. Yet money is "tight" on occasion in Canada as elsewhere, and this fact should be noted by those people who think that a Government ought to be called upon to invent some patent machinery, by help of which the price of money, of bankers' loanable capital might be kept at a low uniform rate for the trader, no matter what reckless abandon speculation may have exhibited, or how much the real capital of a country may have been forestalled by the projector. Canada, according to a recent Government bank statement, had a bank-note circulation of about $73,000,000 in July, and that amount may be increased by another $23,000,000 for crop purposes without let or hindrance. In spite of the large amount of speculation in the Dominion, some of the deposits of the Canadian banks, whose aggregate at the date of the return was $589,000,000, can be spared for New York and the total of calls and loans outside Canada showed an increase of $5,500,000, most of which has found lodgment in New York.

Passing Events.

The floating debt is again mounting up to a height we do not like to see, the total amount of Treasury Bills outstanding being now £15,300,000, of which £12,800,000 is carried in the open market. Apart, however, from the fact that this inconvenient form of debt—particularly inconvenient when anything approaching stringency overtakes the Money market—is unpleasantly heavy, there is no cause to grumble very emphatically, because the Government must be paying off floating debt under other categories. No less than £6,000,000 of Exchequer bonds, for example, fell due in the first week of August, and would appear to have been paid off without exercising the slightest influence upon the open market. Probably enough the National Debt Commissioners had already acquired the greater part of the bonds. But the operation may also have involved an increase in the outstanding Treasury bills.

Hitherto the amounts set aside from the Imperial revenue for behoof of local taxation authorities, clergymen and landowners, has not been included in the weekly exhibit of income and outgo. Henceforth it is to be so, and we shall have the gross receipts of all branches of revenue published every Wednesday. To mark the change a note accompanying the table for the past week states that up to August 31 £2,887,443 paid over in relief of local taxation has been brought back into the exhibit of expenditure, raising that to £6,393,198 for the one week. Bank balances, notwithstanding, are £807,581 higher because the Treasury was refreshed by £1,500,000, nominally the proceeds of a re-issue of that amount of six months' Treasury bills, the actual revenue of the week from taxes and public services having been made up to about £4,900,000 by including therein the hitherto omitted portions of the Customs, Excise and death duties allocated to local purposes. The actual Imperial expenditure of the week was only £2,698,174.

The trouble with the Japanese at Vancouver is, we fear, racial quite as much as economic, if not more so. In all our colonies much more than at home, outside a very narrow class, the disposition is to regard the Japanese and their Empire with jealousy, hatred and contempt. Agitators from the United States, imbued with the nigger repulsion, are said to have stirred up the trouble in British Columbia, but it hardly needed stirring. "This is a white man's country," the Columbians are saying, and the Australians also. Even the whites in South Africa are beginning to say it with emphasis and effect, under penalty of seeing themselves submerged by black or by black and yellow. We should not mind this so much were there not such arrogance, such insolence essentially of the decadent quality, ever bursting into view when race antipathy asserts itself. Nothing like that self-respect which involves courtesy to others can be found in the demonstrations of the white population of Vancouver against the deft, hard-working, patient but resolute and courageous Japanese. A dispassionate observer would be inclined to say that the Japanese are the better men of the two, and we do not envy the Ottawa Government its dilemma. It simply must not allow the subjects of Japan to be maltreated and insulted. Better close the country to them altogether and suffer the whites to do without their cheap labour.

We should have thought more of Mr. Andrew Macdonald and his fellow agitators in Glasgow if they had assumed a less hostile attitude towards the board of the Caledonian Railway Company in the circulars and letters issued by them. It is quite true that railway management in this country has not been of the most enlightened description in past years, and most of it is not exactly ideal to-day; but surely there is no reason to imply bad faith on the part of the Caledonian board or any other similar body in Scotland simply because a programme of reforms is not set forth in the half-yearly report. And what is Mr. Macdonald going to do with the proxies he asks the shareholders to send back to him? Has he any definite plan to lay before the shareholders whereby working expenditure may be cut down, train services dovetailed and reduced where unnecessary duplication exists, or is he merely agitating in the vague, dreamy Socialist way without any distinct conception of what he would be at? Until he speaks with greater clearness the shareholders may be just as safe to give their proxies to the board as usual. Events are forcing railway management in this country towards drastic reforms, and we distrust amateur railway reformers, have done so ever since the great effort of the late Mr. William Abbott ended in an invitation to lunch with the board of the South-Eastern.

Is it not the case that at the bottom of the Newfoundland outcry over the arrangement made by the Home Government with the United States is the desire to find some way of escape for the loss inflicted by the absurd McKinley tariff? There would be abundant trade, and profitable trade too, between New England and Newfoundland, just as between New England and Nova Scotia, were it not for this tariff, which bars the way and inflicts a daily injury of a most cruel description upon the people on both sides of the water. Our Government is wholly powerless to sway the fiscal policy of the United States, but that is no reason why it should join in the attempt to perpetuate bitterness of feeling or easily removable restrictions on our side, and as long as Newfoundland remains under the control of our Colonial Office it must submit to the sway of Imperial considerations, although these may not always seem to coincide with local interests. And what is the grievance on which Sir Robert Bond, the Newfoundland Premier, declaims so volubly in announcing his determination to "still resist the *modus vivendi* by every constitutional means, and uphold the sovereignty of the laws of the colony"? We do not quite know, but it appears Sir Robert and his Government were willing to allow Americans to buy herrings from colonists in treaty waters, whereas the *modus* gives American skippers liberty to hire Newfoundland men to work on their vessels. Was ever such mortal injury done to colonial manhood?

The sudden death of Mr. Edgar Lubbock, Deputy-Governor of the Bank of England, removes a well-known and handsome figure from the City. Mr. Lubbock was not a banker, although the youngest brother of Lord Avebury, head of Messrs. Robarts, Lubbock and Co. He was a brewer, one of the managing directors of the great firm of Whitbread and Co. He was also known in the insurance world, having been on the board of the old Phœnix Assurance Company. A man of many attainments, wide knowledge of business, and courteous manners, he will be much missed by his colleagues. He was a comparatively young man, too,

being only in his 61st year; indeed, it was not his turn to become Deputy-Governor, but he stepped into the vice-chair when Mr. Cosmo Bonsor stepped behind it.

The more one reads about the Porto Alegre Railway seizure the less possible is it to stand up for either the Federal Government of Brazil or the State Government of Rio Grande do Sul. As told by Messrs. Walter Webb and Co., solicitors to the Porto Alegre company, the seizure of the line bears the aspect of a piece of undisguised robbery. Not only is the railway, upon which £405,232 has been spent with the full approval of the *ex officio* director, confiscated for a payment of £202,500 to be made not in cash but in State bonds, whose value may not approach par, but it is handed over at once to a Belgian company, to be worked by it under lease in such a manner as gives the directors of the British Porto Alegre Company no redress whatever, still less any opportunity to discuss terms, to put in tenders in opposition to the Belgian company, or, in fact, to do anything whatever. A transaction of this description cannot be allowed to pass without protest, and it ought not to be possible for the Government of the United States of Brazil to escape the consequences of so high-handed a piece of confiscation. If the property is not worth the money sunk in it the fact ought to be made clear by an independent valuation, and the company should have been given the opportunity to effect the requisite improvements. Probably the Rio Grande Government is really the sinner, but that does not lessen the responsibility of the Federal authorities.

The latest statistics concerning the supply of labour to the Witwatersrand mines show that the number of Chinese employed during August fell to 49,071, which is 5,851 less than the total for September, 1906, the highest ever reached. At the same time the number of African natives working at the mines last month rose to 91,914, which was 15,879 more than in October, 1906, when the lowest figure was touched within the past 13 months. Are we to infer that it takes nearly three natives to do the work of one Chinaman? Hardly, for the output of gold has been going up steadily all the time. More work is, therefore, being done, but it would be interesting to ascertain what the output is per man, black and yellow.

One of these days trouble of a like kind is bound to arise in Australia, and in a dangerously pronounced form, for there the Japanese are hated and despised with an outspokenness fraught with mischief. No insult is too gross to be hurled at the nation that stood up against Russia as no single European nation ever did. In a recent issue, for example, of the Sydney *Bulletin*, said to be the most widely read paper in Australia, a cartoon appeared depicting Japan as a forage-capped gorilla gazing at the news that the Commonwealth is to begin building a navy of its own, and scratching itself with its claw. Underneath is the legend "Only a flea-bite"—a most vulgar and brutal cartoon, humiliating to look upon. But it probably harmonises with the sentiment of the people, and that such a spirit exists in Australia is an ominous fact warning us of trouble to come. Japan has won her place among the valiant nations of mankind, and is entitled to be treated with common decency, if with nothing more.

The City of Ottawa has just raised a considerable loan on one year notes at 5½ per cent. What a mass of these short term obligations will be falling due next year! Surely it would have been better to try the open market with 10 or 15 year bonds, even if ½ to 1 per cent. more had had to be paid for the money than the borrowers were used to, for it may prove still more expensive to renew these yearlings than it has been to set them afloat now.

There will be no redress for shareholders in the Rhodesia Goldfields Company. The law permits it, but does not provide the means. Shareholders may storm and threaten, the board is quite safe and the brokers. Indeed, what is the use of "going for" them now? All the money, all that £500,000 mentioned by Mr. Lindley, has evaporated, and the very men who let it do so are likely enough poorer than before. That is the way with consumptive joint-stock fabrics like this Rhodesia Goldfields. Surely Mr. Stevenson, of the renowned firm of solicitors, Asmore, Morris, Crisp and Co., "a plain business man," made the hopelessness of any quest plain to the most heated mind at Tuesday's creditors' and contributories' meeting. His firm had acted as the company's solicitors, and were also solicitors to Mr. Partridge, so that he could not but know all about everything; he knew at least that "amalgamation" with fresh creations and messings-up of capital might bring him in sight of the "considerable sum" due to him from the company. Any other course would be disastrous to the claims of others besides Mr. Stevenson. An independent liquidator like Mr. Dawson, the intelligent investigator proposed by Mr. Percy Lindley, the gentleman who has "splendidly fought the shareholders' case," as Mr. Lyall said, might make claims for restitution upon lots of people, and give no end of trouble to men whose piping times of plenty are now at an end.

Few commercial or industrial tragedies, if the word is permissible, of modern times have been more complete than the decay of the tea trade in Foochow. Within less than a generation this, the greatest of the Chinese trading ports whence tea was exported to Europe, has fallen into utter insignificance as a tea exporter, and it now seems not improbable that the exports of the dried leaf will soon disappear altogether. There is a growing demand for China tea in other countries; it is felt here and seems to have developed in the United States, but in the long period of decay which the tea growers in China have experienced, the methods and cultivation seem to have degenerated, and it is now difficult to get leaf of good quality properly cured. That is what we gather from the report of Mr. Consul Playfair. And is there nothing to take the place of this commodity? Apparently many things, but not enough of any. Foochow is not a port whose export trade is expanding in any direction in a permanent or notable fashion, although for 1906 there was an increase of £266,341 in the values over the figure for 1905. Camphor is a commodity which might perhaps revive the prosperity of the place were attention given to the cultivation of the camphor-yielding tree, but this is a form of progress regarding which also Mr. Playfair appears to be anything but an optimist. The supply of camphor has been increasing recently at Foochow, but at the cost of the forests, and as the camphor-yielding tree must be forty years old before it can be cut down and burnt in order to extract the drug, it is only reasonable to assume that in the course of a few decades the devastation implied by the augmented supply will have done its work. Replanting is taking place in some instances, but not to a systematic or adequate extent. Our Consul thinks that the Government should simultaneously with the denudation of the old forests establish camphor-tree reservations, to be strictly protected from the woodman's axe for, say, 50 years. Unless something of this kind is done this valuable trade likewise will in time disappear from Foochow.

Again we ask, what is the Marconi Wireless Telegraph Company here doing to put an end to the scandal and wrong connected with the sale of alleged shares in its Canadian dependent to Australians, on what now looks extremely like false pretences? Purchasers are unable to obtain delivery of the scrip or to get satisfaction of any kind. They would seem to have been victimised by a new variation of the old confidence trick, and it seems to us to be the duty of the Marconi company here to stir up the Canadian company to see justice done. If the sales in Australia were genuine the scrip ought to be forthcoming; if not, then the Canadian company ought to be stirred up to set the law in motion to recover damages on behalf of holders in equity of its shares, or failing that to get the perpetrators of the imposition laid by the heels.

Critical Index to New Investments.

Peruvian Rubber Co., Limited.

This company has undertaken to construct a mule road, 120 miles in length, from the town of Phara, in the province of Sandia, to a point navigable by steamer on the Tambopata River. Upon completion of the road the company will be entitled to claim from the Peruvian Government titles to grants in perpetuity of 420,000 acres in the rubber-producing country, the land to be selected in lots not exceeding 2,500 hectares, each to be separated lot from lot by five kilometres. Part of the road has been partially constructed by the original concessionnaires, and it is estimated that £10,000 will be required to complete the work on that portion, while another £35,000 should carry it to the river. It is estimated that, with 500 men on the property, 400,000 lbs. of rubber per annum could be collected, which at a nett profit of 2s. per lb. would give £40,000 a year, and as, according to one of the experts, there is no reason why 2,000 or 3,000 men should not be ultimately employed on the property, the dreams of wealth become still more alluring. Yet the owners of the concession are willing to part with all their prospects for £20,000 in cash and £10,000 in shares. The vendors to this company, however, have no intention of letting it go so cheaply, and out of a total capital of £250,000 in £1 shares take £25,000 in cash, £25,000 in cash or shares, and £75,000 in shares, together with an option to acquire at par a further 75,000 shares when the company sees fit to issue these. A sudden expansion of this kind in the value of the property would be hard to justify, and speculators disposed to take an interest in rubber can find plenty of opportunities in companies which have considerably less water in their capital.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

Hukeem.—The market is in a very depressed state just now, and it might be advisable to wait awhile before selling.

L. G. R.—Not under present conditions. We understand that the company is suffering from a rate war, and its affairs are further complicated by the political situation.

W. P.—We do not see any probability of an immediate rise, but the stock seems by no means a bad speculation if you mean to take it up and hold it.

W. B. J.—Well, they have tried to reconstruct, we believe. The thing is still nearly drowned in "water," and there is no open market for the shares. Let them alone.

Afric.—We have heard nothing indicating a "call," and do not regard it as probable. The concern has never been strong, and must be much locked up, but we hardly like to tell you to cut your loss.

Paradox.—(1) These debentures are first-class, and worth buying. (2) Great progress has been made by this company, but it has a bad past, and we think this issue poorly secured, and likely to go lower. (3) These begin to look tempting, but only begin, and you should not buy yet. (4) Too dear also. They will most likely sink to par before the crisis is over.

L. C. J.—Very doubtful. Trade is leaving the river, and the company does not get much help from Government orders nowadays.

G. R.—The position is far from sound if account is taken of the liabilities, and we should regard the shares as a risky speculation.

Grasmere.—The shares are a fair investment if you are not nervous about the heavy liability, but at the same time we see little scope for improvement in the present price.

F. E. D.—(1) Not much rise in this in the present temper of the markets and with the high price of coal. (2) Rather speculative. Fixed charges have increased and traffic improvement to date is small. (3) Ought to be a very fair purchase. The company has a good property, and its position seems very sound.

The Royal Mail Steam Packet Company intimates that the business of their Southampton office has been removed from Canute Road to their new premises, R.M.S.P. Buildings, Southampton.

The Right Honourable Austen Chamberlain, M.P., has joined the board of the Bank of Africa, Limited, to fill the vacancy created by the death of the late Mr. R. W. Chamney.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and September 7, 1907:—

Revenue and Other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Sept. 7, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Sept. 8, 1906.
	£	£	£
Balances, April 1:			
Bank of England	—	5,807,721	9,334,212

	£	£	
Bank of England	4,757,427	5,283,559	
Bank of Ireland	899,005	836,616	
		5,656,432	6,120,175
Total		70,297,472	69,836,614

Note.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

Mem.—Treasury Bills outstanding on September 7, 1907:—

Bills issued by Public Tender	£12,800,000
Bills otherwise issued	2,500,000
Treasury, September 10, 1907. Total	£15,300,000

Lloyds Bank.—The balance-sheet for August shows liabilities consisting of current and deposit accounts £64,974,370, and bills accepted or endorsed £1,133,296, and assets of cash in hand and at Bank of England £10,558,963, cash at call and short notice £5,032,292, bills of exchange £7,282,769, Consols and other investments £5,970,207, and advances to customers and other securities £36,155,323.

National Provincial Bank of England.—The statement for August 28 shows liabilities on notes or bills of £651,375, and on simple contracts of £55,078,418, against assets consisting of cash on hand and at Bank of England £8,508,666, money at call and short notice £3,236,154, British Government and other securities £14,821,377, and bills of exchange £34,513,696.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended September 7, $3,268, decrease $846; aggregate from July 1, $42,754.

Argentine North Eastern.—Traffic receipts for week ended August 9, £3,055, increase £105; aggregate from July 1, £16,822, increase £579.

Assam Bengal.—Traffic receipts for week ended August 10, Rs. 87,640, increase Rs. 13,731; aggregate from July 1, Rs. 5,23,083, increase Rs. 97,446.

Bilbao River and Cantabrian.—Traffic returns for August £10,501, increase £3,933; aggregate from January 1, £75,633, decrease £6,149.

Canadian Northern Railway.—Traffic receipts for week ended Sept. 7, $188,700, increase $44,500; total from July 1, $1,907,500, increase $564,600.

Egyptian Delta.—Traffic receipts for week ended August 24, £4,836, increase £441; aggregate from January 1, £98,799, increase £15,600.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 10, Rs. 22,613, increase Rs. 6,114; aggregate from July 1, Rs. 1,34,802, increase Rs. 7,789.

Midland Uruguay.—Receipts for month of August, £5,958, increase £832; aggregate from July 1, £11,022, increase £1,007.

North Western of Uruguay.—Traffic receipts for August, $22,000, increase $3,503; aggregate from July 1, $42,800, decrease $904.

Quebec Central Railway.—Traffic receipts for the 1st week of September, $23,442, increase $6,626; aggregate from January 1, $689,343, increase $49,481.

Quebec and Lake St. John.—Traffic receipts for July $66,401, increase $8,676; aggregate $336,862, increase $44,713.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 10, Rs. 18,134, increase Rs. 2,135; aggregate from July 1, Rs. 1,20,654, increase Rs. 23,810.

Uruguay Northern.—Gross receipts for month of June, £2,221, increase £642; aggregate from July 1, £22,618, increase £3,445.

White Pass and Yukon Railway.—Traffic receipts for 10 days ended August 31, amounted to $109,031, increase $36,531.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending September 7, £1,250, increase £48; aggregate from July 1, £13,007, increase £1,146.

Cockermouth and Keswick Railway.—Receipts for week ending September 7, £1,002, decrease £12; aggregate from July 1, £11,131, increase £15.

East London Railway.—Traffic receipts for June, £2,683, decrease £391.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending September 7, £460, increase £133; aggregate from July 1, £4,052, increase £1,043.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending September 4, £992, decrease £143; aggregate from January 1, £28,753, decrease £1,219.

Blessington and Poulaphouca.—Traffic receipts for week ending September 4, £32, increase £2; aggregate from July 1, £320, decrease £56.

Bristol Tramways and Carriage.—Traffic receipts for week ending September 6, £5,375, decrease £233; aggregate from July 1, £54,664, decrease £1,416.

British Electric Traction.—Receipts of all the Associated Companies for the week ending September 6, £30,432; 424½ miles.

Burnley Corporation.—Traffic receipts for week ending September 7, £1,357, increase £32; aggregate from July 1, £13,071, increase £408.

Dublin and Blessington.—Traffic receipts for week ending September 4, £161, decrease £12; aggregate from July 1, £1,718, decrease £109.

Dublin and Lucan.—Traffic receipts for week ending September 6, £168, increase £24; aggregate from July 1, £1,575, increase £109.

Dublin United.—Traffic receipts for week ending September 6, £7,575, increase £1,350; aggregate from July 1, £74,760, increase £16,505.

Edinburgh and District.—Traffic receipts for week ending September 7, £4,935, decrease £378; aggregate from January 1, 1907, £179,486, increase £1,080.

Hastings and District.—Traffic receipts for week ending September 5, £1,603.

Isle of Thanet.—Traffic receipts for week ending September 7, £1,505, decrease £103; aggregate from October 1, £28,559, decrease £795.

London County Council.—Traffic receipts for week ending August 31, £31,917, increase £5,349; aggregate from April 1, £689,548, increase £108,471. Miles 117¼, against 98.

London General Omnibus.—Traffic receipts for week ending September 7, £20,208, decrease £2,825; aggregate from July 1, £214,742, decrease £22,823.

London Road Car.—Traffic receipts for week ending September 7, £8,277, increase £393; aggregate from July 1, £85,667, increase £5,425.

London United.—Traffic receipts for week ending September 6, £7,379, decrease £59; aggregate from January 1, £234,901, increase £7,397.

Provincial Trams.—Traffic receipts for week ending September 7, £2,330, increase £58; aggregate from October 1, £84,803, increase £6,378.

Rossendale Valley.—Traffic receipts for week ending September 6, £231, decrease £6.

Sunderland District.—Traffic receipts for week ending September 4, £518, decrease £18, aggregate from Jan. 1, £16,392, increase £1,885.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending September 8, £1,314, increase £442; aggregate from January 1, £41,645.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending September 9, £17,209, increase £1,892, aggregate from January 1, £59[illegible], increase £58,841.

Auckland Electric.—Traffic receipts for four weeks ending August 16, £10,063, increase £505; aggregate from January 1, £63,769, increase £3,473.

Brisbane.—Traffic receipts for month of August, 1907, £15,225, increase £1,039.

British Columbia Electric.—Nett earnings for July, $6[illegible], increase $23,909. Nett earnings, including income from investments, from July 1 to July 31, $73,468, increase $25,409.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for week ending September 9, £7,397.

Calcutta.—Traffic receipts for week ending September 7, Rs. 48,454, increase Rs. 3,204; aggregate from January 1, Rs. 17,38,733, increase Rs. 1,63,107.

Cape Electric.—Traffic revenue for month of July, Cape Town, £9,697; Port Elizabeth, £2,878.

Carthagena and Herrerias.—Traffic receipts for the month of August, £3,362, decrease £346; total from January 1, £38,[illegible], increase £3,624.

Geneva Trams.—Earnings for July, fr. 221,726; increase fr. 18,276.

Kalgoorlie Electric.—Traffic receipts for August, £4,549; aggregate from January 1, £31,955.

Lisbon Electric.—Earnings for July, milreis 128,811.

Madras Electric.—Traffic receipts for fortnight ended August 31, Rs. 18,728, increase 28½ per cent.; aggregate from January 1, Rs. 2,74,600, increase 20 per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for August, £42,000.

Mexico.—Nett earnings for month of July, $107,500, increase $3,604; aggregate nett earnings from January 1, $1,145,083, increase $46,899.

Perth (W.A.) Electric.—Traffic receipts for week ended September 6, £1,315, decrease £71; aggregate from January 1, £50,848, decrease £1,750.

Rio de Janeiro.—Nett earnings for July, $189,849; aggregate from Jan. 1, $1,115,650.

Sao Paulo.—Traffic returns for July: nett earnings, $98,452, decrease $7,548; aggregate from Jan. 1, $773,717, increase $16,461.

Twin City Rapid.—Traffic receipts for the month of May, $496,711, increase $48,607; aggregate from January 1, $2,317,873, increase $247,855. Nett traffic receipts, $260,724, increase $21,884; aggregate from January 1, $1,169,500, increase $98,320.

The Investors' Review.

The Week's Money Market.

Bank Rate 4½ per cent. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

A further improvement is noticeable in the position of the money market, and it is most welcome, because for one thing the weakness of the New York exchange and the fresh developments taking place on Wall Street render it by no means improbable that a sudden demand for gold may spring upon us from that quarter. It is also now estimated that Egypt will take £6,000,000 of the metal before the end of the year, and there is a report in the market that a beginning of shipments will be made to-morrow by the Crédit Lyonnais. Others say that the gold will not go in any amount until later, and not to last year's amount at all. Enough change, however, has come over the mood of the market to cause bill brokers to be less willing to discount three months' bank bills much below 4 per cent. The rate for such has been as low as 3⅞ per cent. for fine paper, and yesterday business was done at 3 15/16 per cent. in the general market, but unquestionably if gold begins to move away from the Bank, we shall witness a swift advance.

This morning some discount houses quoted 4 per cent. for three months' bank paper, and others did business at 3⅞-15/16 per cent., and the market left off much as it opened, opinions being divided. Fine bank bills to arrive, however, were sold, presumably to the Continent, at 4⅛ per cent. for threes and 4 3/16 for sixes, the actual rates for sixes being 4 5/16-4⅜. The gold export dread does not appear to be so very active.

And such gold demand as there may be should, perhaps, be encountered with greater equanimity this autumn than last. Thanks to the prompt advance in the Bank rate a month ago, gold has been coming in, and the Bank again got about half the supply available in the open market on Monday. Altogether, about £500,000 was available, and the Bank divided it with Continental buyers, the price being ½d. down at 79 5/8d. Next week there will again be rather more than £500,000 in all available in the open market, including £454,000 from South Africa and about £67,000 from other quarters. Probably enough, Germany will still compete, but even if half the amount left after trade and other domestic requirements have been satisfied should again go abroad, it is a help to our market, because it satisfies Continental requirements without affecting the stock in the Bank, which is now £38,654,000, £3,608,000 higher than it was a year ago, or about the amount of the gold then taken by New York. Mainly because of this opportune addition to the bullion, the reserve is also £3,233,000 up at £27,995,000, and the other deposits, at £46,924,000, are £4,447,000 higher. Consequently the Bank of England is in a better position to meet sudden demands from abroad than it was then, and it should have less difficulty in controlling these demands because its rate is higher and the market more disposed to follow its lead.

And we are not sure that Egypt is going to take away all the millions alleged, because it is difficult to see how bankers there are to get the means to purchase the metal. We are forgetting that financial affairs in Egypt have been and still are passing through a dangerous crisis, whose effect is to most seriously cripple some of the banks there. How are they going to get the credit with which to buy gold? Their bills will be scrutinised with the utmost vigilance, and it is probable enough that the power to purchase the metal for Egypt will only arise in force when Egyptian produce comes to market. Credit institutions in Egypt are in no position to play with accommodation paper, and that may be why the Crédit Lyonnais is coming to the rescue, but it is only expected to take about £250,000 at most to-morrow.

Continental banks are not strengthening themselves to the same degree as the Bank of England has recently done, but their position is undoubtedly rather better than it was, and the figures of both the Reichsbank and the Bank of France indicate a welcome though slight diminution in the strain. For all that we do not look for a long period free of anxiety in our Money market. The very ease of short credits there continues to warn us that higher rates are looked for a little later in the year and bill brokers and banks are keen buyers of short paper only. Longer usances they are ready to sell; in fact, as one house put it, there is "a good appetite" both on home and Continental account for November maturities at 3⅝ per cent. and November and December bills together have been taken by the banks at 3¾ per cent. Discrimination is also being used against both American and German manufacturers of negotiable paper, and our banks are not going to be caught again as they were last autumn. So the continuance of 2½ to 2¾ per cent. as the rates for seven-day loans and of 3 per cent. as the best the India Council can get for its month-to-month money, with call loans often at 2 per cent., no more points to ease in the near future than it did weeks ago.

So far marvellously little influence has been exercised on money rates by the redemption of the Japanese 6 per cent. bonds. In all £11,000,000 of these have to be paid off, and if the whole of that money had been demanded here and in New York last Tuesday, the banks in charge of the disbursements could not have avoided causing some inconvenience to the short credit jobber. So far, however, the bonds have been coming in with astonishing slowness, and up to last night, out of the whole amount little more than £5,000,000 had been received for redemption. Apparently this apathy on the part of holders excites surprise, but it only illustrates the usual carelessness of the British investor. Very likely many of these bonds will not come in until the holders discover that they have ceased to bear interest.

Calls next week come to about £2,000,000, of which the chief are as follows:—On Tuesday £800,000 on South Manchurian Railway bonds; on Wednesday £375,000 on Chinese Imperial Railway (Kowloon) bonds; on Thursday £250,000 on Antofagasta debenture stock; and on Friday £528,000 on Buenos Ayres and Rosario new shares. Every one of of these items, it may be noted, represents a call on our capital given to corporations or other borrowing agencies outside the country. Happily the engagements are not so great as to cause us inconvenience unless they coincide with complications arising elsewhere.

Silver.

Immediately the purchases for shipment in time for the Bombay settlement ceased, the market settled down and became very quiet. The announcement last Saturday of a French tender for 20,000 kilos had little effect in checking the downward tendency of quotations, and with no other competition the Indian Government has had matters pretty well its own way. It has bought steadily throughout the week, but was able to secure most of the supplies offering from day to day at dwindling prices. By Wednesday quotations were down to 31¼d. per oz. for spot, and 31⅜d. per oz. for delivery two months forward, but on Thursday some buying on account of the Far East caused a rally to 31⅝d. and 31½d. per oz. respectively. That demand,

however, was soon satisfied, and with Bombay closed, the market slipped back and closed dull at 31 15/16d. and 31 7/16d. per oz. Tenders for the Rs. 20,00,000 Council drafts on India last Wednesday amounted to Rs. 1,81,60,000 all in bills, and applications at 1s. 3 31-32d. per rupee received about 11 per cent. Next week another Rs. 20,00,000 will be offered.

The Stock Markets.

Again a settlement has passed smoothly by on the Stock Exchange, and prices have on the whole favoured holders. They have also been helped by rather cheaper money, and were the underlying situation clean, unencumbered, we might look forward with some confidence to something like a cheering recovery. Unfortunately the surface only of the Stock Exchange is calm. There is still an appalling absence of business, even of investment business, and the account arranged fortnight by fortnight, in spite of little rallies here and there, as a whole marks further stages in the process of exhaustion. Business is not bad on the Stock Exchange because there is no money pouring into it to be invested. A great many people throughout the country and the Empire continue to make profits. In many lines of business the profits have been unusually good for the past two or three years, and some of the wealth thus gathered would be certain to reach the Stock markets in due course were there no barrier keeping it back. Part of it is reaching the markets, but not enough. The barrier, moreover, is just as insurmountable as ever, and not a little of the new wealth, so to say, disappears in making good old losses, gets absorbed by the banks and never reaches the jobbers. Everybody is more or less engaged in keeping up appearances in nursing securities upon which the losses are too severe to be realised, and not an account passes over on the Stock Exchange without the disappearance of some one or more among the once prominent firms. They are not "hammered," they just quietly liquidate and draw out of the arena, or else certain partners vanish and the firm is reconstituted on a reduced footing. All through the market also brokers are struggling to prevent themselves from having to be proclaimed defaulters because of the inability of their clients to pay up differences. Never in the history of the Stock Exchange was there such an amount of unpaid claims for these differences on the books of members as there is to-day. What is the use of accumulations of new wealth outside if so much of it is swallowed up before it can reach the market, if the market itself is so trammelled by bad debts that cannot be collected? Brokers and clients alike hang on to their difficulties hoping against hope, and by refusing to apply the one drastic remedy they often appear to render their ultimate ruin inevitable.

Observe once more what is passing upon Wall Street. There have been several frothings there this week, and selected prices have been hoisted in quite a brilliant manner, in spite of disappointments like the failure of the Hill railways of the North-West to imitate the Burlington in paying extra dividends, for the payment of which it would not be convenient just now to borrow money. All these spurts, however, whether produced by the rush of operators for the fall to close or by manipulative buying on the part of the embarrassed players, have been followed by reaction. The same things take place on Wall Street that we

continually see here. Directly prices are lifted, no matter through what agency, a stream of securities is poured in upon the market by exhausted holders eager to escape. Hence after each rally and hoist the market is weaker than before. For the moment it may have a smaller "bear" account to assist in buoying it up, and it is compelled to take up an increased amount of securities thrown into it. Thus it will go on, and the process is now exhausting to the players in the eyes of all men. The least familiar mind can understand why the banks, and also the great credit swayers and market dominators in Wall Street, are less able to withstand assault after each apparent triumph. The more they struggle to uphold markets the more stock they get handed in upon them to carry, and some of them will have to liquidate or go openly bankrupt before all is over. Rumours of impending failures fill the Street most days, and several weaklings have already succumbed.

In Germany the acute distress is not perhaps so visible as it was early last month, but it is bound to come on again with coming dearer money, and we look for calamitous liquidations on the Bourses there also. What avails it then to talk of "better business," "reviving markets," "an improved tone," and so forth? There must be a wind up, and therefore if you buy at all buy only for investment and to an extent well within your means.

Unpleasant though the outlook is, there are certain encouraging symptoms indicating that in some directions a healing process is going on. Every account, for example, reveals a diminution in the amount of stock carried in the Stock Exchange on borrowed money. Brokers who have had Home Railway securities and other stocks in their names, sometimes for many years back, and on which they have continuously lent money, are now finding the stock taken away from them. Contangoes are no longer obtainable on it. It is either passing into the hands of investors or into strong hands in the market, and the more the Stock Exchange is relieved in this way the healthier does it become, the better able to encounter whatever storms may lie ahead. It is a movement of this description which gives ground for the assurance continually given to us that, whatever may be the case outside, as a whole "the Stock Exchange is sound." We believe it to be so, sound and poorer.

Contangoes.

If there was any difference money was about ¼ per cent. cheaper for the new account than for the one this week wound up. Bankers lent at 3¾ per cent. to the general market and at 3½ per cent. to the money brokers, whereas a fortnight ago they generally stuck to 3¾ and 4 per cent., the higher rate being paid by all except the small class of money brokers. Slight as the change was, it helped to relieve the minds of borrowers to a slight extent; that is to say, they, or those they borrow for, are bleeding to death rather less rapidly this account than they were last.

On Home Railway stocks, for instance, the contango charge, everything included, rarely amounted to 6 per cent., and was usually about 5 per cent. upon stocks like Great Eastern, North British deferred, North-Eastern and North-Western. On gambling counters like Brighton deferred the "bear" account was fully more conspicuous this time than at the end of August, and had it been a mere question of rates for money the Home Railway market altogether might have been quite buoyant. Money was likewise cheap enough upon Foreign Government bonds, seldom more than 4 per cent. except on some Russian and one or two Japanese issues, but then the account in many of these securities may be said to grow more minute every settlement.

On American Railroad shares also the contango rates were hardly so firm as at the previous carry-over, many borrowers getting what they required at 4½ per cent., instead of 5 per cent., and a good deal being again lent at 4 per cent. This trifling reduction in market charges may be ascribed in part to the existence of a certain "bear" account here, but it is due principally to the unloading of shares by London and by the Continent through London on to New York. It is said, for example, that the *Lusitania* is carrying a heavy parcel of Canadian Pacific shares to New York to enable the "bears" there to cover their transactions, and unquestionably these shares, whose chief markets have recently been in Berlin and New York, are being sent back to America with almost every ship. The same is true of most other American Railroad shares. We, however, continue to hold Grand Trunk stocks, and the contangoes upon the ordinary and third preference issues of that company are much the same as on the heavy Home Railway stocks, say 4½ to at most 5½ per cent.

On Argentine Railways the rates were fully as high as on any group of securities in the market, and borrowers had not seldom to pay 6 per cent. to continue their speculations. Very little money seems to have been lent in this department of the market under 5½ per cent., and these rates were likewise levied on the speculator's favourites amongst the stocks of the old Mexican Railway Company. A "bear" account has developed in Rio Tinto shares, as was inevitable when the price of the metal became such a temptation, and therefore money on these was nearly as easy as on the bulk of Foreign Government bonds, rarely going higher than 5 per cent. That was likewise about the medium charge on Hudson's Bay shares, in which there is a biggish account open for the fall.

Consols and Other Trustee Stocks.

Wherever prices have moved among these stocks during the past week they have almost invariably advanced, and Consols are now well above 82. Other Government issues are better, noticeably Irish Land stock, and there has been a sympathetic recovery in India stocks and in the various issues of the London County Council. Home Municipal stocks in general have not yet participated, and one or two of them are down on the week, but the market for this group as well as for Colonial stocks remains comatose, with a diminishing amount of business being transacted and rare changes in prices.

Foreign Government Bonds, &c.

Foreign Government stocks have recovered with other classes, and Japanese bonds are better, especially the first series of 4½ per cents. Russian issues, too, have recovered, and German 3 per cents. and Prussian Consols. The South American group has likewise shown a fair amount of elasticity, Argentine 4 per cents. in particular being all marked up, without, however, any appreciable business in them going on here. That is also true of Brazilian bonds, and throughout the market there are very few adverse movements to be seen. The recovery may be taken as proof that French and German bourses are disposed to take a rather more hopeful view of the immediate future, and some of the recoveries are no doubt the result of speculative account adjustments. Markets, indeed, are in that state which always brings a more or less perceptible rally when fears are less acute. It is easier to lift prices just a little than to attract buyers able to pay for what they buy. Among Foreign and Colonial Corporation stocks we may note a recovery in both the Municipal bonds of Johannesburg and the inscribed stock of the Rand Water Board. The jobbers have put up Rosario bonds too, but we have not heard that the public has thought of them; nevertheless it should not despise even Rosario overmuch, for Argentina is growing, and has got what should prove to be a splendid lift from the Australians.

Home Railway Stocks.

One of the least satisfactory departments of the Stock Exchange is still the Home Railway market, and yet more good business goes on in it than almost anywhere else in the Stock Exchange. The small investor

is buying, and the "bear" is less in evidence; consequently most of the rare changes on the week are favourable, and no noticeable influence has been exercised by even such an untoward-looking event as the North British dividend. Both Caledonian and North British stocks, indeed, are steady, and, as many people expected the North British Company to pay something less than the 1 per cent. per annum declared on the deferred stock, a rally took place in the prices of both the preferred and deferred when the news reached the market. Probably enough prices would not have slipped back much further if the directors had abstained from making any distribution whatever on this stock. It would be for the ultimate benefit of the stockholders if they some day did.

Traffic receipts in general continue excellent, and again showed an increase of no less than £109,547 on the week. This brings the total increase, according to the reckoning of the *Railway News*, up to £696,628 for the ten weeks thus far elapsed of the current half-year, and, as we have often remarked, figures so cheering would have had a stronger effect in hardening prices were it not for the far-reaching influences still dominant in favour of depreciation. Business has not yet improved in the privileged classes of stocks, and the best we can say is that some little investment demand is experienced for a few of the debenture and guaranteed stocks. Preference stocks, though, are offered still rather than inquired for, although a fair business is doing in Midland preference and in the preferences of the other "heavy" lines. Metropolitan District 5 per cent. Extension preference stock was dealt in yesterday at 17½, and must in present circumstances be difficult to sell at any price. It, indeed, seems a pity that anybody who can avoid selling should throw this stock out at present.

Indian and Colonial Railway Stocks.

Indian Railway stocks were generally firmer where they moved, and a welcome small trade goes on in them likewise. The play has been less vigorous in Canadian Pacific shares during the week, but they have held their price fairly well, and now and again there has been something like a spurt in the lower issues of the Grand Trunk Company. All this class of stocks, however, hangs together, and Canadian Pacific shares in particular depend so much on New York and Berlin that it is in a manner dangerous to form an opinion upon the market for them. No particular effect has been produced by the Canadian Pacific Company's report, which only came out late on Thursday afternoon, but we doubt whether it will be regarded as altogether favourable when the market notes the large amount of new capital expenditure foreshadowed. Mashonaland debentures have been put up, but not by demands on the part of the public, and Rhodesia Railway debentures stand where they did a week ago.

United States and Foreign Railroad Securities.

The week as a whole has not been unfavourable to holders of Yankee railroad shares, who have been watching an opportunity to sell out. The tipsters have been doing their very utmost to help them by prophesying an immediate and general advance in the market, and doing their best to fulfil the prophecy. Those who act thus are either totally without discernment, or emancipated from any kind of scruple. Instead of going up it is but too likely that the market for these shares in New York is again nearing a fit of the "falling sickness," and as we write the news comes that the demoralisation in the Copper market has stopped the movement for the rise. It will do more. As readers know, we have regarded this Copper market as something to avoid for years past. Not only has the market for the metal been manipulated with a perfect unscrupulousness, but the copper share market has been "corralled" and prices there rigged, until the amount of private and banking capital involved in the world-embracing gamble must be great enough to strain the resources even of a combination of plunderers so almighty looking as the Standard Oil group. Its active manager, H. H. Rogers, is said to be dying, and there appears to be no doubt that he has fallen into a condition of health which prevents him from taking any active part in endeavouring to keep back the avalanche. But even had he been in full vigour, events would have been too many for him, because he and his "pals" have been too clever by three-quarters.

The copper-controlling swindle—for it is nothing else, an unscrupulous swindle elaborated for the purpose of robbing the consumer, and ruining everyone who endeavoured to fight against it—is coming to its natural end. The idea was a grandiose one—to get control of the world's supply of copper and hold it against mankind so that no one could get a pound of the metal except at the forestallers' price, and, through the metal, to sway the share market. But there is too much of the metal in the world to make success in such a rascally enterprise possible for more than a few years, and every month that passed added to the stock of influences calculated to increase the embarrassments of those engaged in piracy so nefarious. It is now reported that the Amalgamated Copper Company, the chief instrument of the Standard Oil group, is having to shut down its Butte Mines, and that it has been accumulating copper at them for a long time past, holding it off the market in the vain hope that buyers would still be forced to submit to its terms. We have long held that there must be countless millions of dollars engaged in this business, most of which now stand a good chance of being lost. But a collapse cannot take place in the Copper market without affecting the whole financial structure of the United States finance market, and probably enough weakening the credit of not a few bankers in Europe. Therefore, the approach of the copper liquidation, which has been fully heralded for years past, must demoralise anew the Wall Street market for Railroad shares, and increase the difficulties of those who are struggling to borrow money in sufficient quantity to enable them to seem to appear solvent. It will probably bring dear money on Wall Street, and might lead to frenetic imports of gold from London. Our counsel, therefore, still is, keep away from this group of counters, and pay no attention whatever either to the prophets of higher prices or to brilliant traffic exhibits, probably made for the occasion. The crisis which has been slowly developing in Wall Street is not nearly at an end.

Investors continue to come for Argentine Railway stocks, and a few of them, like the Buenos Ayres and Pacific ordinary and preference stocks, Rosario ordinary and Great Southern ordinary and preference, have improved since we last wrote. Outside the securities of these three companies there is not much going on, but the disposition of investors, speculative and other, is favourable to this group at present, and promises to become increasingly so should advices regarding the coming Argentine harvest be favourable. A good harvest in Argentina when the prices of grain are rising would bring all these stocks into favour, no matter what happened in the general market, but because the overshadowing circumstances are everywhere unfavourable we do not think there will be any running away of prices. Antofagasta stocks have continued to recover, and there has been some little improvement in the debentures of the Manila Railway Company, as well as in one or two Uruguay issues, but the Cuban group has remained inert, and although business has been much more active in the stocks of the Mexican Railway the result has not been such an advance as might have been looked for. It is again an active corner of the Exchange, however, this Mexican market, and the public is taking a much greater interest in the play, on the "bull" side, of course.

Banks, Breweries, Industrial Securities, &c.

Bank of Africa shares have been knocked down by the unfavourable report, and a few nervous holders have been selling, or trying to sell. We do not, however, see any special cause for alarm. The Bank was

never a strong one, but, so far as its figures indicate, it does not appear to be suffering much more than its neighbours. All African banks are bound to show less favourable results than they did during the war or for a year or two after, but with care they should gradually recover with the country itself. Other Bank shares were for the most part unaltered, but Bank of Egypt shares have been noticeably weaker, and the shares of the Imperial Bank of Persia naturally went down on the sorrowful accounts from that country about the Shah's finances and the general bankruptcy of its inhabitants. The shares of London banks were firm, and those of discount companies also tended to harden because the shrewd ones think the discount business being done at present about the most profitable seen for a long time. Brewery securities need not detain us, and it is a good thing the market has not to live by the business found in that quarter. All we need particularise is a further tumble in the securities of Watney, Combe and Company, due perhaps to efforts to sell by people in distress. Dock securities are as calm as the water in the docks, and there is really very little going on amongst the Miscellaneous groups of stocks. Nitrate shares incline perhaps to be better, but the shares of motor companies again betray a tendency to slip back. Fine Cotton Spinners ordinary shares have been in some demand and are firmer. General Hydraulic Power stock has gone up, Gordon Hotels ordinary seem to have been inquired for in a small way, and there is a slight recovery to note in the preference shares of the Mazawattee Tea Company. Niger shares, too, are harder, as well as the preference shares of the Neuchatel Asphalte Company, and Waring and Gillow's shares keep their prices. Some improvement, too, is noticeable in the shares of the Salt Union. Gas stocks are impassive, Insurance shares firm and now and then up, Electric securities lumpish, Land shares in favour, with "Bays" £1 up, Peruvian Corporation stocks up and Pekin Syndicates too.

The market for Iron, Coal and Steel securities indicates hesitation on the part of the public. Only a trifling business goes on, and although prices were steady and sometimes up a little for coal properties, there is an increasing disposition to sell the securities of mere iron and steel enterprises. This is quite natural in view of the present outlook in coal, but as yet the selling has not amounted to much, and we hope there is not going to be any panicky rush in that quarter. Tea shares keep their prices well, and most Telegraph and Telephone securities are steady, the only noticeable exceptions being the ordinary and preferred stocks of the Anglo-American Company and the debenture stock of the Commercial Cable Company. Prices have also been generally maintained in the Tramway and Omnibus group, where business is also too thin to be worth description.

Friday Evening's News.

Outside the Copper gamble, which appears to be now fairly on the way to collapse, scarcely anything ruffled the surface of markets to-day. Prices drooped though, and closed with really no trace of staying power. The Home Railway market was quite flat for Brighton "A's" and some of the other light stocks. Even the "heavy" stocks closed below the best. Yankee shares were also weak, and it is said that in the last two days over 3,000 tons of copper have been sold on the London market by American holders. This is probably a mere closing of gambles for the rise, but the market is so demoralised that 100 tons loudly offered would upset it. Rio Tinto shares, which are the market barometer here, opened about 71 and finished some 10s. better after an unsatisfactory day. The Kaffir market has also been anything but animated, and altogether the outlook is cheerless. A little buying though went on in one or two Argentine issues, but Rosario stock closed to-night some 30s. under yesterday. United States Steel common shares, too, are down to 29½ xd. Manchuria debentures are still at a discount, but left off to-night only 5s. below the issue price.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

Although Monday was the eve of the carry-over and the Jews were away there was not much the matter with the Kaffir Circus at the start, and a small inquiry was actually noticed for leading stocks. It did not amount to much but seemed to justify hopes of better things to come, and the settlement was entered upon in a very cheerful fashion. As generally expected, the account open inside the House proved to be of the smallest possible dimensions. No difficulty was experienced at any point in arranging the carry-over, and rates varied but slightly from the figures now so long prevailing. The general South African rate was 6½-7½ per cent., and bulls of Premiers also borrowed on those terms, but Randfontein were taken in at 6-7 per cent., Modders, Johannesburg Consolidated, and Jagers at 5½-6½ per cent., Gold Fields at 5-6 per cent., and New Vaals, Rand Mines, and East Rands at 4½-5½ per cent. Chartered were continued at ½-1d. and the rate on Rhodesians was 6-8 per cent. That was also the charge for carrying over West Africans, and West Australians were usually done at 6½-7½ per cent., Great Boulders, Fingalls, and Horseshoes being exceptions at 5½-6½ per cent. There has evidently been some short selling of Broken Hill Proprietary shares and these after opening at 4-6 per cent. went off to even. The general rate in this section was 5-7 per cent. and Australian Copper shares were taken in at the same cost, but Great Cobars were done at 4-6 per cent. The rate on Rio Tintos and Anacondas was 3-5 per cent. and the Miscellaneous group of mines were borrowed on 6-7 per cent. Making-up prices usually favoured the Bulls, and among South African Premier deferred, Modders, and Robinson were all ¾ higher, while H. F Co.'s shares advanced ⅝, and Central Minings, Roberts Victor Diamonds, Roodepoort United, Crown Deep, Rand Mines, and Ferreiras rose ½ or thereby. There were improvements of ⅜ in Driefonteins, Geldenhuis Deep, Eldorados, and Tanganyika, 1/16 in Apex, Robinson Central Deep, and Robinson, while a good many more were smaller fractions up. The gains, however, did not embrace every share, several Diamonds showing losses on the fortnight. New Vaals were ¼ down, De Beers preferred lost ⅜, the deferred ¼, and South African Options ¼. West Africans did not perform badly, Nigeria Investments rising ¼, and Amalgamated ⅛, but West Australians were irregular. Kalgurlis made up ⅜ to the good and Horseshoes rose ⅛, but Hainaults dropped ¼, Ivanhoes 1/16, and Great Fingalls 5-32. Among Broken Hills Block 10 went up ¼, but Proprietary Co. shares were 1/16 down after making allowance for the dividend, and South Blocks fell 5-32. In the Copper list Rio Tintos were no less than 3¼ lower, and Anacondas lost ⅜, but Great Cobars put on ½, Bostons 1/16, and Spasskys ¼. Among Miscellaneous Alaska Treadwells advanced ¼, while Siberians were lower, Siberian Proprietary, Russian Estates, and Nerchinsk Options all falling ¼.

The new account opened with a bang. Kaffirs forged ahead in grand style, mainly due to highly optimistic forecasts of the output for August. Cables from the other side had predicted a "record" so called, and anticipations were not falsified. The output was 555,027 ozs. or an increase of no less than 22,000 ozs. compared with July, which contained the same number of working days and is 4,860 ozs. better than the previous best, that of last December. The inclusion of gold reserves, which are no longer kept in a good many cases, rather confuses the comparison, 17,385 ozs. having been taken in last December as compared with 11,750 for the past month, but however looked at the figures just issued are easily the best. The labour returns also showed up well, and it is certainly curious to note that the Chinkee loss for the month was just about made good by the distribution of extra natives. We give below the complete figures, and the usual comparative statements. Good profit statements by many of the mines helped to keep things cheerful, and the Kaffir people are declaring that the recent white miners' strike was absolutely the best thing that could have happened, yet we read that the mines are reverting to the contract system the method of payment at so much a day having proved a failure. Paris was not indisposed to support its particular favourites, and prices enjoyed a most pleasant rise. We have not seen anything better for a long time, and sincerely hope it can be kept up. But our inquiries do not lead us to conclude that the public is doing anything in particular and no market can be kept going without the aid of outside support. In the middle of the week a little hesitation was shown, but all things considered the market remained wonderfully good, and things may perhaps be kept going for a little while longer.

Rhodesians spurted along with Kaffirs, but soon eased off again, Tanganyikas being rather flat owing to a certain amount of option selling. Diamonds were easier. The Bill providing for the new profit-tax of 10 per cent. has passed the third reading in the Cape Assembly, and the market also had to face another item of news which, although not altogether intelligible, is somewhat serious. An amendment has been accepted "providing that a defined dividend on preference shares in mining companies shall be taxed at the rate of 2s. in the £." What precisely this means no one seems able to say, but it looks as though this is a special dividend tax quite apart from that on profits. But whether preference share embrace preferred shares which are really a portion of the original ordinary capital has yet to be discovered, but we have no doubt they do, and the tax is probably designed to make preferred holders pay their share. At first De Beers fell away, while Premiers went up, but later on all things were inclined to improve, including Jagersfontein, New Vaals, and Roberts Victor. Land and Finance shares were tolerably firm.

The movements among West Australians were small and not always in favour of holders. Horseshoes were a pretty good market, but Oroya Black Range suffered from profit-taking despite a satisfactory first return. The Ivanhoe estimate of ore reserves at June 30 shows a total of 978,504 tons valued at £255,011 as compared with 932,551 tons worth £2,530,838 in December last. Thus while the tonnage has gone up by about 46,000 the value is down 2s. 4d. per ton. New Zealands were quiet and steady, and Broken Hills, after falling further, picked up on a few small orders, and some shortage of shares at the settlement. Zincs and one or two Deep Leads hardened a shade, Egyptians were unaltered, and West Africans neglected.

Copper shares were distinctly flat. The metal slumped in a rather alarming fashion following another "cut" in the New York price, and the market did not at all like the $5 reduction in the Calumet and Hecla dividend. Paris was a seller, and Tintos were a pretty bad market all the week. There were recoveries at times, but there was no real strength in the rallies. Other Copper shares slumped away as well, Amalgamated, Anaconda, Bostons, Spasskys, and Arizona all being ruminently flat.

In the Miscellaneous group Siberians were somewhat better, but the Mexican division was inclined to dulness, and Indian gold shares were generally easier. Tin shares showed irregularity, but Pahangs had a good jump, shares being in short supply.

TRANSVAAL GOLD RETURNS.—During August the output of gold from the Witwatersrand was 534,598 ozs., and from the outside districts 20,429 ozs. or a total of 555,027 ozs. valued at £2,357,602 as against 532,711 ozs. valued at £2,262,813 last month. The improvement compared with July is 22,316 ozs. and the gain over the previous highest in December last is 4,860 ozs. In the subjoined tables we show the output, and values for several years:—

* Includes £33,766 not declared previously.

NATIVE AND COOLIE LABOUR.—The statistics for August show that the natives distributed to the mines by the Witwatersrand Native Labour Association numbered 10,283 as against 7,962 lost by time expiration and other wastage, making the gain for the month 2,321, and increasing the number of "boys"

employed to 91,914. In the subjoined table are shown the number of natives and Chinese employed on the Rand during the past year:—

Month.	Natives Joined.	Natives Left.	Net Gain or Loss.	Natives Employed end of Month.	Chinese.
August, 1906	6,777	7,526	749*	76,246	53,835
September	8,367	6,755	1,612	77,858	54,922
October	9,845	7,387	2,458	76,035	53,134

Total ..	514,291	597,786	606,233	615,561	563,478	350,244

The output from the Kolar field for August appears a very good one, but this is entirely due to an abnormal return by the Mysore West and Wynaad. The mine has now closed down, and scrapings from the plates gave 1,937 ozs., making the total for the month 3,097 ozs. compared with 927 ozs. In other directions the changes were slight. The Champion Reef, Mysore, Nundydroog, and Ooregum all did rather better, while the Balaghat showed a falling off.

Geduld Proprietary Mines.—Just now the shares of this company stand about as low as they have ever done, a little over par, which compares tragically with the £10 reached in the sweet days gone by. Nevertheless, the directors think the present moment a good one for arranging an increase of capital, and consult shareholders accordingly. It may be remembered that at the end of 1905 something approaching a sensation was caused by the splitting up of the reef and very low assay values, the shares tumbling violently, and it cannot be said that they have ever really recovered. Fortunately, there has been some improvement since then, and in a circular to the proprietors the directors refer to the fact that a large proportion of the reef opened up shows very satisfactory values, as indicated by the last annual report and the regular quarterly statements. But money is now wanted, and an increase in the capital to £750,000 is suggested. Its subscription is already arranged for, the board having entered into the necessary agreement with the controlling house, Messrs. A. Goerz and Co. This concern undertakes to buy 100,000 shares at par, with the option to purchase within two years from November 1 next the whole or part of 50,000 shares at 25s. each, and of 50,000 shares at 30s. each, on condition that the 100,000 now taken are offered to the Geduld shareholders at the same price. In other words, Messrs. Goerz will take them if the shareholders do not. The money will no doubt be used for further development, but how many years will elapse before the properties reach the producing stage we should not like to say, and the payment of dividends seems a terribly long way off.

Tronoh Mines.—A circular has been issued to the shareholders of this tin mining company advising them of a scheme for reorganising the method of working at the mines. So far as we can judge the proposals of the directors are sound. Hitherto mining costs have been somewhat heavy principally owing to the scattered nature of the present plant rendered necessary by the method hitherto adopted of working by several small shafts. All that is to be done away with in favour of a new main hauling and pumping shaft to be sunk in solid rock and the equipment of the mine with a central electric generating station, having a capacity of about 2,000 horse-power. When the scheme has been carried out it is confidently expected that the working costs will be considerably reduced and the output largely increased, "so that the company will still be in a position to earn handsome profits in the event of any serious drop in the price of tin." The scheme will probably entail an expenditure of between £50,000 and £60,000, but instead of raising further capital in shares or debentures, the directors propose to devote a portion of the profits to meet the outlay, which will be spread over the next twelve months, surely a sensible plan. The profits now in hand would have permitted the usual dividend of 2s. per share for the current quarter, and still leave a considerable balance, but in the circumstances the board will pay only 1s. per share, and if, as they believe, another 1s. is paid in December next, the total distribution for the year will reach 3o per cent. The reports received from the new manager since he took up his duties are described as most satisfactory and encouraging both as regards the value and extent of the unworked portions of the properties and in the opinion of the board more than justify the proposed expenditure.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

The Canadian Pacific Railway.

The public already knows the general results of this company's business for its year ended June 30 last, but the full report now to hand is packed with interesting matter, and as an introduction to the general information it is well as usual to give a few figures. Gross earnings for the year rose to $72,217,528, which was about $10,548,000 more than the total for the previous year, a total in its turn showing a handsome increase. Working expenses came to $46,914,219, which was $8,218,000 up, the proportion of working expenses to receipts having risen to 64.96 against 62.75 per cent. in the preceding year. That year, however, was much below the average and 6.6 per cent. lower than the proportion for the year ended June 30, 1905. None the less has the renewed expansion in expenditure swept away the greater part of the increase in gross revenue, so that the nett earnings of $25,303,309 shown are only about $2,330,000 more than those of the preceding year. There were some increases, however, in miscellaneous receipts, including $723,649 described as "nett earnings of steamships in excess of amount included in monthly reports." That tells us nothing, and the whole steamship department of the company's business remains a profound mystery, but the figure as given shows an increase of $71,000 on the comparison of years, and there was also $324,000 more received from miscellaneous sources, such as interest on deposits and on the bonds of subsidiary companies held, the total being $1,641,000. Thus the aggregate nett revenue was brought up to $27,666,659 or $2,755,000 more. Fixed charges at $8,511,756 were only $161,000,000 up, but compared with two years ago the increase is $557,000. None the less was the surplus after meeting these charges the highest ever exhibited, or $19,156,034, and although $200,000 more than a year ago at $700,000 was transferred to steamship replacement fund, together with another $80,000 contributed to the pension fund, the balance of revenue carried forward was a clear $18,376,000, out of which the preference dividend has been paid, together with a 6 per cent. dividend on the ordinary stock, the second half of which will be disbursed on October 1. These distributions made the surplus for the year stand at $9,339,000, bringing the total of this book entry up to $30,713,000. One cannot too much admire the remarkably skilful finance and far-sighted enterprise by which results of this description have been brought about. The Canadian Pacific Railway is now one of the great systems of the North American continent, and including 823 miles under construction at the beginning of the year, its total length is now over 13,000 miles. This total, however, embraces the mileage of the "Soo" Railway put at 2,282, and also that of the Duluth company, which is 591. Even so, there would appear to have been about 5,000 miles added to the length of the company's roads within a period of seven years, and the capital, although steadily expanding at the rate of several million pounds per annum, is still remarkably small, amounting, as it did on June 30 last, to less than £63,000,000 all told, and apart from the £4,400,000 or so represented by the land grant obligations. In the past year £930,000 of 4 per cent. consolidated debenture stock was created and sold together with £250,000 of new preference stock or £1,180,000 in all. In addition to this, £700,000 of 4 per cent. consolidated mortgage bonds was issued by the Minneapolis, St. Paul and Saulte St. Marie Railway, and much more money will be wanted for many purposes in the current and future years, notwithstanding the handsome surplus shown in the balance-sheet of the splendid amount of upwards of £4,000,000 of cash in hand. But some of this money will probably be found by issues made by subsidiaries. Thus the directors have agreed to construct an extension of the Northern Colonisation Railway Company's line, which will be about 34 miles long, and when built will be taken over by the Canadian Pacific Company. Its cost is not to exceed £4,000 per mile. The St. Mary's and Western Ontario Railway is to be leased to the Canadian Pacific Company when certain portions of the line have been completed and the rental to be paid is to be 40 per cent. of the gross earnings, with a minimum. The directors also intimate that they will proceed with the construction of a railway in the vicinity of Sudbury on the Ontario division, the aggregate cost of which is not to exceed £6,000 per mile. This cost will be met by the issue of the company's consolidated debt stock. Then two new steamers are being constructed for the lakes traffic at a cost of about £180,000, and still another steamer is to be put upon the Vancouver-Seattle route at a cost of about £120,000. As before remarked, no particulars are given with regard to the position of the various steamship businesses of the company. Probably enough its lake and Pacific coast traffic pays, but we have always had our doubts about the Pacific mail traffic, and doubt still whether the subsidy granted, even if increased under a new contract, will be enough to make good the loss. Everywhere, however, this

company is forging ahead, and west of Lake Superior there are 747 miles of new line under construction, while doubling the line is going on steadily in the more eastern parts of the system.

CALEDONIAN RAILWAY.

Traffic receipts in the half-year ended July 31 last rose by £42,320 to £2,191,245. The gross income includes £69,703 from the canal owned by the company, the railway having an increase of £30,560 in its earnings and the canal one of £5,760. Working expenses for the railway came to £1,195,368 or £56 6s. 10d. per cent. of the receipts, and of the canal to £24,139 or £34 12s. 7d. per cent. Working expenses were all over actually £55,351 larger than in the first half of the previous year, and accordingly the nett revenue of £1,031,537 was about £4,300 less, so that nothing whatever in the way of improved income came to the stockholders from the increase in gross receipts. And as the interest charges on debenture stock, temporary loans, &c., came to £7,215 more, while there was also a slight increase in the feu duties and ground rents payable, it followed that, after setting aside £10,000 to the reserve for bridge renewals, displacements and contingencies, the sum left over for stock dividends was only £705,247 or £14,364 less than in the corresponding half-year. After meeting the preference dividends there was £339,079 left for the ordinary stock, as against £357,527, and the dividend at the same rate of 3½ per cent. per annum on the undivided ordinary stock, equivalent to 3 per cent. per annum on the preferred and ½ per cent. per annum on the deferred, left only £15,923 to be carried forward against £20,507 brought in. Expenditure on the upkeep, however, seems to have been liberal, and the company has merely suffered from the general influences adversely affecting all our railways for the time being. For example, the increase in the cost of locomotive power was £49,445 in the past half-year, and traffic expenses went up nearly £7,000, while maintenance of way was nearly £5,000 higher and carriage and wagon repairs £3,255 up. The great increase was thus in the price of coal, and as that indispensable commodity remains dear, grows dearer indeed, it is no wonder that the market for Home Railway stocks is the reverse of elastic. Capital expenditure in the half-year was only £232,746, of which £146,934 went into lines open for traffic and £30,609 into new working stock. In the current half-year the capital expenditure is put at £214,000, and we may perhaps accept this as an indication of the sincere desire of the Scotch railway boards to retrench and economise. They will be helped in maintaining this attitude by the difficulty of raising fresh capital which the Caledonian board, like many others, must be desirous to procure. On July 31 the capital account was overdrawn by £1,493,595 and the total amount of trust money of all kinds in the company's hands was only £1,322,000. In addition, however, the board has had to borrow £450,000 on temporary loan, always on the average an expensive form of debt. Nothing whatever is said in the report about the negotiations alleged to have been entered into between the board of this company and that of the North British with reference to a cessation of competition, but presumably nothing whatever has yet been settled. The circumstances of the time, however, are all in favour of a policy of harmonious economy which ought not to be difficult to carry out in Scotland if the English lines with which these Scotch companies are linked up do not interfere to prevent an agreement. The dividends are payable on October 1.

GLASGOW AND SOUTH-WESTERN RAILWAY COMPANY.

In the opening half of the year ending on July 31 the gross receipts reached a total of £913,545, an increase against the corresponding period of £13,030, but expenses rose by £16,000 to £533,107, the ratio between income and outgo, excluding the steamboats, being 56.46 per cent. against 55.25 per cent. There was very little movement in the passenger traffic, the increase, indeed, being little more than £1,000, but it is satisfactory in a way that the gain came almost entirely from season tickets. The third-class business also showed a small increase, but this was practically neutralised by a decline in the first. Parcels, horses, carriages, &c., and the carriage of mails were practically stationary, and in merchandise the improvement was only £1,717. Live stock did a little better, and the mineral traffic yielded £2,519 more. Curiously enough, rents of the company's property gave the largest advance, one of £2,049, and the debit per mileage and demurrage was only about half that of the corresponding period. The only item on the expenditure side really calling for comment is locomotive power, which cost the company just about £12,000 more entirely due to the additional price paid for coal and coke, a circumstance which makes the prospect for the next half-year or so rather a dismal one because in those periods fuel promises to involve the company in still heavier charges. Outlay on maintenance of way was just about the same, and a little more was spent on account of carriage and wagon repairs, traffic expenses, and general and law charges, but we are glad to note the substantial saving in parliamentary expenses. Rates and taxes showed no movement worth comment, while the steamboat working expenses depreciation and insurance took £32,766, a rise of about £1,500. Needless, perhaps, to say we are still without any details of the revenue of this part of the company's business. Balance to the nett revenue account was £380,438, a drop of almost £5,000, which was made good only to a very small extent by a rise to £6,998 in the balance brought forward. Including this and small items from other sources, the total available is £388,304 compared with £391,174. Fixed charges showed an increase of nearly £4,000, so that the balance for dividend was fully £6,500 less. It follows, therefore, that after providing the preference dividends which took the same and the local dividend at 2½ per cent. per annum on the preferred ordinary stock the directors are obliged to reduce the distribution on the deferred ordinary by ¼ per cent. to 1½ per cent. per annum, carrying forward the rather larger credit of £7,547. Total capital expenditure for the period was £[illegible], of which £43,389 went into lines already under traffic and £[illegible] into new working stock. Capital account is at present overdrawn to the extent of £703,561, and the company cannot much longer exist on its savings banks' depreciation and other funds. The dividends will be payable on the 30th inst.

GREAT NORTH OF SCOTLAND RAILWAY COMPANY.

For the six months to July 31 the total gross revenue was £249,086, an increase of £1,418, but the working expenses grew by £5,000 to £126,450 and the proportion of expenditure to income advanced from 46.63 per cent. to 48.37 per cent. There was an improvement of not quite £2,000 in the third-class passenger traffic, but first-class and season tickets each fell off, and a small decline appeared under parcels, horses, carriages, &c. Merchandise business was stationary or really somewhat lower after allowing heavier charges for collection and delivery, but minerals did rather better. Miscellaneous items were about £800 down. As with the other Scotch railways, the increase in locomotive power was the most important movement on the expenditure side, the advance being almost £4,000. Maintenance of way cost an extra £1,000, but other items were very much the same. Rates and taxes were actually a little less. Balance to nett revenue account was £122,636, a drop of £3,642, but the balance brought in was just about £2,000 up at £5,962, and general interest gave rather more, making the total for disposal £128,852 against £130,313. Fixed charges were on a rather higher scale, but after meeting the preference dividends the directors maintain the dividends at 3 per cent. per annum on the preferred ordinary and 1 per cent. per annum on the deferred ordinary stocks, reducing the carry forward from £4,098 to £2,223, only £9,397 was spent on capital account in the half-year, but most of it was on working stock, the company laying out £6,111 on road motor vehicles. In the present half-year the outgo is expected to be £20,000, and the account is already overdrawn £265,155, rendering necessary temporary loans of £92,000.

CALLANDER AND OBAN RAILWAY COMPANY.

Receipts from passenger traffic during the six months ended July 31 fell off by £1,012 at £19,898, while merchandise gave £528 less, and although these decreases were partly offset by improvements of £283 in minerals, £173 in parcels and £300 in mails, the total revenue including £156 more from rents was £573 smaller than a year ago at £43,442. On the other hand, expenses were £23,370 or £1,206 heavier, of which £897 was in rates and taxes, and with £64 brought forward the nett revenue was £1,805 down at £20,136. An increase of £1,078 to £6,185 in debenture interest, however, was accompanied by decreases of £2,413 to £58 in interest account, and £470 to £2,281 in interest on temporary loans, with the result that the balance available for distribution was the same at £11,612, and after paying the dividends on the preference stocks £40 was again carried forward. Capital expenditure for the six months was trifling, but there is now a debit balance of £108,010 on this account, and temporary loans are consequently large at £114,000 apart from £1,438 borrowed from the bankers.

HONGKONG AND SHANGHAI BANKING CORPORATION.

The profits of this great Eastern bank for its 54th half-year ended June 30 last amounted to $3,845,222, including $1,721,559 brought forward. The directors accordingly pay the now usual dividend of 35s. per share which, including $660,833 required to meet the difference between the current rate of exchange and the 4s. 6d. per $ at which the dividend is reckoned, absorbs $1,283,055. Out of the balance another $750,000 is added to the silver reserve fund, raising it to $11,750,000, and there will still be $1,797,168 left to carry forward. There are again some changes in the balance-sheet figures compared with a year ago which we do not profess to be able to interpret, but the aggregate of the balance is about $29,000,000 more than it was on June 30, 1906, at $289,262,553. Shiftings about in connection with the various liabilities on current and deposit accounts form a ground for this change, the fixed deposits in gold being nearly $4,000,000 down, while the current account deposits in silver are also slightly less, but as a whole the liabilities of the bank on current and deposit accounts in gold and silver exceed $222,533,000. The largest item in the assets is bills receivable, which at $123,361,613 shows an increase of nearly $[illegible]. Bills discounted, on the other hand, are nearly $[illegible] lower. The bank is, as usual, remarkably strong in cash, its free money being $42,802,000, while $10,000,000 in coin is lodged with the Hongkong Government against a note circulation which at $18,113,504 is $8,113,504 in excess of the authorised issue. The bank also holds $3,042,000 of bullion in transit and its investments of various kinds aggregate $18,502,007.

ROYAL BANK OF IRELAND, LIMITED.

There was an increase from £92,005 to £99,859 in the gross profit of this bank in the year to August 31 compared with the previous twelve months, but interest paid was £6,[illegible] higher at £20,843, and expenditure rose £749 to £30,333, so that after providing income-tax, the balance of profit is very little higher

at £38,698. Sum brought in was £14,615, making £53,313 from which the directors again provide dividends aggregating 12 per cent., carrying £2,000 to the superannuation fund and £15,313 to next account. No addition is made to reserve, but instead the directors have considered it advisable to temporarily transfer the sum of £50,000 from this account to the credit of an investment depreciation fund. This will leave the reserve at £150,000 against the paid-up capital of £300,000. There is a moderate decline to £1,860,051 in the deposit and current accounts, and the bankers' balances at call and cash at head office and branches show a reduction of £20,966 to £195,902. Investments of £892,615 show a trifling reduction, while the bills discounted and advances to customers have been lowered by £62,353 to £1,328,146.

Royal Bank of Queensland, Limited.

The progress made by this bank, although in no way startling, is fairly steady, and the increase of £2,658 to £36,335 in the profits for the six months ended June 30 is satisfactory enough, considering that it follows an improvement of £3,714 for the corresponding half of 1906. A much smaller balance of £690, however, was brought forward, and as expenses rose by £822 to £11,319, while interest, rebate and exchange took £606 more at £13,769, the nett profits were only £500 up at £11,936. The dividend nevertheless is maintained at the rate of 4 per cent. per annum to which it was raised in the previous half-year, and after transferring another £1,000 to reserve and providing £513 for income-tax £1,146, or £822 less, is carried forward. The paid-up capital is now £467,581, owing to the issue of more preference shares, the collection of overdue calls on the ordinary shares and a small sum paid in advance on account of uncalled capital, and the reserve fund, with the present transfer from profits, will stand at £69,000. Deposits and other liabilities come to £1,068,764 or an increase of £81,857, and in this connection the chairman stated at the meeting that £20,000 of the Government deposits had been paid off. Bills payable are £16,249 up at £25,370, but notes in reserve are unaltered at £33,500. Coin and cash at bankers is £57,205 larger at £272,469 and Treasury notes on hand have risen by £7,812 to £43,707, but investments are unaltered at £76,977 and bullion is £2,625 down at £27,030, the total cash assets amounting to £420,183 compared with £357,791 a year ago. Bills discounted and all other debts due to the bank show an increase of £48,072 at £1,191,195, and with a slight addition to premises, &c., at £63,773 the aggregate of the balance-sheet stands at £1,675,151 or £110,573 more.

Manchester Liners, Limited.

The directors state that continued recurrence of labour difficulties at practically all ports served by the company, involving lengthy delays and seriously increased expenditure, adversely affected the results of steamers' voyages during the year ended June 30. In spite of these circumstances, however, the trading profits again improved by £10,493 to £48,672, and having made their lamentation the directors might have gone further and explained how this result was obtained. Was it because part of the fleet has been specially employed by the Anglo-Argentine Shipping Company and others? Including £8 from transfer fees, the total revenue was £48,680, of which debenture interest took £10,102 or £574 less, debenture trustees' and directors' fees came to £1,506 against £1,350, and the same deductions as last year of £858 off debenture issue expenses and £158 off furniture are made. With £146 more at £1,450 brought forward, the disposable balance was £37,486 compared with £26,430, and after writing off another £25,000 for depreciation of steamships the directors pay one year's arrears of preference dividend to December 31, 1904, and carry forward £1,525. Special expenditure on refrigeration amounted to £31,262, so that allowing for the present appropriation out of revenue, the book value of the steamships is only £18,738 less at £758,317. No particulars are given of the fleet and we are ignorant even of the number of vessels, so that it is impossible to say whether or not this is a fair valuation, but as only £50,000 has been written off since June, 1903, the inference is that the figure is too high. During the year, however, £16,518 debentures have been purchased and cancelled, reducing the amount outstanding to £221,631, and that is so much to the good. Liabilities on bills payable are £19,474 lower at £64,075, while sundry debtors have risen by £8,261 to £65,865, but against these debtors owe no more than £19,046 and cash is down to £9,340, and the company is therefore still desperately hard up for liquid resources.

Pearson and Knowles Coal and Iron Co., Limited.

Good fortune attended this company's operations in all its branches during the year ended June 30, with the result that nett profits showed a very substantial increase of £47,813 at £110,680. A good demand for both home and foreign markets kept the various departments of the iron and steel and engineering trades regularly employed at full production, and although the position of the coal trade up to the close of 1906 was disappointing the company has had nothing to complain of since. Including £9,323 or £1,242 more brought in the directors had at their disposal £120,003 compared with £70,948, out of which they transfer £20,000 to reserve against £10,000 a year ago, and write off £15,756 spent on capital account, and are still able to double the dividend on the ordinary shares at 10 per cent., with only a small reduction of £325 to £8,998 in the sum carried forward. After making the adjustments above mentioned, the value of the properties will stand at £554,590, while the colliery leases and goodwill of ironworks and collieries have long ago been written off, and in addition a reserve fund of £150,000 has been accumulated. The purchase of the business of Rylands Bros., Limited, and of shares in the Moss Hall and Wigan Junction Collieries was completed during the year, the operations being financed by the issue of bonds redeemable at two, three, and five years, which now appear in the balance-sheet for £108,575. No profits, however, from these sources are included in the accounts and apparently the transactions have been treated as an account of reserve as the investments specifically earmarked for that fund are £109,481 up at £191,141. Floating liabilities have increased by £12,520 to £80,136, but on the other hand, sundry debtors have risen by £50,827 to £159,691, and cash and bills are £18,698 up at £93,745, while stocks show a small reduction of £12,166 at £250,961.

Kayser, Ellison and Co., Limited.

No profit and loss account is issued by this Sheffield steel-making business, nor do the directors enter into any details regarding its affairs, but, judging by the figures they submit, the company seems to have secured a fair share of the improvement in trade. Nett profits were about £3,000 better than for the previous twelve months at £30,519, and with £6,546 brought forward gave an available total of £37,065. Preference dividend having been paid, £5,000 is transferred to reserve, and a similar sum is written off goodwill, after which the ordinary shares receive a dividend of 12½ per cent., and a bonus of 1½ per cent. or 14 per cent. in all compared with 12½ per cent. a year ago, and £6,365 is carried to the new account. In addition to the sum written off goodwill, £3,000 was allowed for depreciation of machinery, bringing the property account down to £146,767, against which the reserve now stands at £67,500, and is all employed outside the business, as investments are valued at £76,078. The issued capital is £205,000 and £50,000 has been raised on mortgage debentures, but floating liabilities are light at £11,016. On the other hand, stocks at Sheffield come to £36,422, and stocks and assets at agencies to £6,352, while sundry debtors owe £52,068 and cash and bills reach the comfortable total of £34,644.

United Horse Shoe and Nail Co., Limited.

This company continues to drag on in an unhappy way, spending more than it can earn, and in order to cover up their failure as much as possible, the directors make a somewhat disingenuous use of the recent outcry against the War Office. They state that "orders from the Government which were formerly an important branch of the company's business, have practically ceased for some time past, having been given to American manufacturers." Considering that it is some years now since they lost these contracts, the excuse seems a very feeble one, and it would have been decidedly more creditable to the directors if they had refrained from making it do duty again. Gross profits for the six months to June 30 fell off by about £400 to £2,224, and with interest, exchange and transfer fees gave a total of £2,315, of which expenses took £1,715, leaving a balance of £600. Debenture interest, however, required £345 and some provision had to be made for depreciation of plant, so after writing off £815 under this head and setting aside £50 for bad and doubtful debts, the nett result for the half-year was a loss of £614, bringing the debit balance up to £3,053. No attempt has yet been made to reduce patents, trade marks, and goodwill, which stand at £79,766, and plant suspense account remains at £9,569, although the value of the first item must be very problematical, and the second represents nothing more tangible than plant long since discarded. Sundry creditors amount to £4,931 against debtors £9,417 and stocks £16,473, while the company has £5,423 in cash, thanks largely to a loan of £3,000 from its bankers. No mention is made of the preference dividend being paid, although the balance-sheet shows undivided profits of £2,237 on their account as at June 30, 1906, as well as £3,036 on account of the ordinary shares.

Price's Patent Candle Co., Limited.

From the interim figures for the half-year to June 30 just issued it would appear that the high cost of materials has again eaten into this company's profits, which show a decrease of £2,385 at £31,506. Income-tax took £142 less, leaving a nett reduction of £2,243 at £29,817, but as only £8,510 was brought forward against £9,130, the disposable balance was £2,863 smaller at £38,327. The company's position, however, is so eminently sound that the directors have no hesitation in declaring the usual dividend of 15s. per share, leaving £10,202 or £2,863 less to be carried forward.

Brighton and Hove General Gas Company.

During the half-year ended June 30 sales of gas amounted to 593,708,600 cubic feet, or an increase of 1.56 per cent. compared with the corresponding six months of 1906, and receipts were £84,874. Meter and other rents gave £8,286, residual products £18,222, and with miscellaneous receipts the total revenue came to £111,682, of which £28,395 was retained as nett profit. With £12,452 brought forward and £33 from interest the disposable balance, after providing debenture and other interest, was £38,246, out of which the dividends are paid on the "B" and "C" preference stocks, together with dividends at the rate of 11¼ per cent. per annum on the original ordinary consolidated stock and 8¾ per cent. per annum on the "A" ordinary stock, leaving £14,010 to be carried to the new account. The credit balance on capital account is £57,455, and reserve, insurance and depreciation funds amount to £71,498, all invested in Consols and other high-class securities.

Trading balances are decidedly favourable, and cash is good at £22,508.

UNITED ELECTRIC CAR CO., LIMITED, PRESTON.

This company, which was formerly known as the Electric Railway and Tramway Carriage Works, Limited, made a gross profit for the year ended June 30 of £47,733, of which expenses, interest, &c., including £2,893 for repairs and £6,106 written off for depreciation, took £27,274. Adding £2,136 brought forward, the nett profits were £22,595, and after meeting preference dividend and paying a dividend on the ordinary shares £2,000 is transferred to general reserve and £2,000 written off preliminary expenses in connection with the purchase of Hadley and Manchester Works and the issue of preference shares, leaving £5,095 to be carried forward. With an issued capital of £250,000 and a debenture debt of £50,000, the company posseses land, buildings, fixed plant and machinery valued at £202,110, against which a depreciation fund of £25,500 and a general reserve of £10,000 have been built up. Fixtures, loose tools, &c., stand at £9,653, and stocks on hand and work in progress amount to £80,716. Current liabilities reach a total of £35,986, but debtors owe £87,105, and as the company has £6,892 in cash it is comfortably situated unless there is more than meets the eye in the auditors' remark that they certify to the correctness of the accounts subject to full provision having been made for depreciation.

READ HOLLIDAY AND SONS, LIMITED.

This business of manufacturing chemists, dye and colour manufacturers has had a somewhat chequered career since its incorporation in 1890, and its fortunes at one time fell so low that for the six years to June 30, 1906, no dividend was forthcoming on its ordinary shares. Business, however, was better during the past twelve months, the gross trading profits being returned at £20,744 and with £3,639 brought in the available total is £24,383, out of which £500 is put to the private insurance fund, and £8,480 is written off for depreciation. After providing £2,227 for debenture interest and £400 for directors' fees a balance of £12,776 is left, so the ordinary shares get a distribution of 5 per cent., £2,000 is put to reserve, and £3,687 is carried forward. It is impossible from the skeleton balance-sheet, which is all the directors think fit to submit to the shareholders, to arrive at any reliable estimate of the company's position. The debit items are given with a fair amount of detail and show that in addition to a subscribed capital of £146,272 and a debenture debt of £51,857 including accrued interest, the company has accumulated a private insurance fund of £7,387 and a reserve of £13,000, while its liabilities to sundry creditors come to £63,575. But a good deal of secrecy is observed in setting out the other side of the balance-sheet. Stock-in-trade, book debts, cash, investments, American assets, &c., are thrown together in one item, totalling, after deducting £239 for depreciation, £140,567, and the only other entry is one for the Huddersfield works, land, buildings, machinery, &c., which are valued at £157,904 less a depreciation allowance of £8,242, or about 5¼ per cent.

TRADE AND PRODUCE.

WHEAT.—Weekly shipments to Europe were heavy, and under their influence markets reacted a little, and quotations for futures have dropped a little. Spot parcels have kept firm, but not much business has been done in them, as buyers are holding back, hoping, perhaps, to get better terms if the brilliant weather lasts till harvests are completed. This week, certainly, the tendency of foreign wheat has been in buyers' favour, prices being from 6d. to 9d. lower. English wheat keeps firm, and farmers' deliveries for the week amounted to 18,316 qrs. at 31s. 11d. against 55,716 qrs. averaging 26s 9d. in the same week of last year. Imports came to 422,937 qrs. against 439,530 qrs. last week, and the quantities of wheat and flour on passage to the United Kingdom are estimated at 1,940,000 qrs. against 2,160,000 qrs. last week. American markets have had a week of fluctuations and a generally unsettled business.

WOOL.—The position of the trade has not altered in any way. Business is quiet and steady and values firm, with always a tendency against the buyer. Merinos are particularly stiff, and if rumour is correct supplies at the next sales will not meet demand. Spinners are busy, some of them with orders enough in hand to carry them through the first six months of next year, and manufacturers have employment enough to work overtime, where cheap goods are concerned the trade in these for the colonies and for South America being large and steady.

COTTON (from our Manchester correspondent).—The feature of interest in our market this week has been the downward tendency of American cotton. This was brought about on Monday by the publication of the Bureau and Ginners reports, which caused an easier feeling, as the figures were considered "bearish." The result has been a rather disturbed market, and buyers of yarn and cloth have been afraid to operate with any freedom. The outlook for the American crop has certainly improved during the last few weeks, and although it is too early for any reliable estimate, some authorities are expecting a large yield. The consumption of the world, however, is rapidly increasing, and a big supply is now necessary to meet the requirements of users. In piece goods there has been an encouraging demand for India, but many of the offers are quite unworkable. There has not been much done in shirtings, buyers declining to operate at the prices named by makers. Various fine cloths, however, such as dhooties and jaconettes, have moved off fairly well. Certain producers are not so easy to deal with as a few weeks back, as orders booked recently have filled the looms with work. China presents scarcely any new feature of moment, and very little can be done for the Levant and Egypt. Printing cloths have been a little more firmly held, but no improvement can be recorded in the demand. Home trade cloths in certain special makes have moved off fairly well, but prices are resisted by buyers. In American yarns for home consumption a quiet business has been done at rather irregular rates. Spinners are endeavouring to regain some ground recently lost, and they have not given way to the full extent of the drop in cotton. Business for export purposes is difficult to arrange, owing to the stiff attitude of spinners and the long delivery which has to be given for certain kinds and qualities. Bolton yarns remain strong, and full rates have to be paid for anything wanted. With regard to the easier tone of American prices, Sir Jacob Behrens and Sons' circular states that "a condition of about 71 was in favour," whereas the actual figure was 72.7 against 77.3 last year. Opinions as regards the future of prices appear to be divided, and whilst some point to the healthy demand and probability of a comparatively small crop as being indicative of a continuance of the present high rates, others are of the opinion that in view of the heavy supplies which will be placed upon the market before long, it will be almost impossible to keep prices up, more especially as stocks at the Continental mills, in view of the heavy engagements of Continental spinners, are likely to be large, and the necessity of purchasing further lots less pressing than for some time past. Egyptian cotton quotations are down another ⅛d. per lb., but spinners are not suggesting lower prices for Egyptian yarns, their engagements are too heavy.

COAL.—By many it is thought that the highest prices have now been reached, except perhaps in house coals, and following the ordinary course of "booms" we might soon expect a reaction. But at present there are no actual signs of it. Contracts and orders on hand are said to be too numerous to allow of such a thing. Demand is still in excess of supply, and great difficulty is being experienced in getting adequate shipping to send exports, with the result that freights also are having something of a boom. Nevertheless, there are rumours here and there that things are not quite so superlatively good as they appear, and the fact that from the North comes a report that some owners, while expressing their confidence that the boom will last till March, are offering to take 1s. to 2s. less for forward delivery, seems rather significant.

IRON AND STEEL.—Trade in hematites is very quiet, and prices, consequently, are easing further and buyers of the East Coast production are doing as little as possible, seeing that quotations must come down still further. Nor is West Coast trade in better plight. Home demand keeps good, but American buying has completely stopped and Continental orders have eased off considerably during the last month or two. Neither so far has the revival appeared in Cleveland pig-iron, and the business doing is more than usually small for September, with disappointing shipments. It is the same in manufactured iron and steel, an unusually quiet September and a weakness in quotations, but manufacturers are regarding the lower price for hematites with satisfaction, as in them they see a greater prospect of profits. In normal times, says the *Engineer*, hematites command about 10s. per ton more than Lincolnshire iron, but for the past twelve months the difference has ranged from 22s. 6d. to 27s. per ton.

COPPER.—The market has been active enough, and a good deal of metal has changed hands, but prices have gone downward all the week. The break in American prices, considerable pressure to sell and the fact that the largest European producers had made a further reduction all helped to weaken the market, and on Thursday quotations fell to £66 5s. for cash and £66 10s for three months. A further relapse was recorded to-day at £65 12s. 6d. for cash and £65 17s. 6d. for three months, but the tone was steadier.

TIN.—The market advanced sharply soon after the opening last Monday, under active general demand, but when Eastern prices reacted and copper collapsed tin followed suit. Forward metal fell to £164 and cash to £164 15s. on Thursday, and only a limited business was put through at that figure. To-day a further heavy drop took place and closing values were dull at £160 15s. for spot and £159 15s. for three months.

TEA.—This week's sales of Indian fully maintained the slight recovery in rates noticed last week for medium and fine quality teas, but common kinds were, according to Messrs. Gow, Wilson, and Stanton's, Limited, report, hardly as strong, a small quantity being obtainable at 6¼d. 30,308 packages were offered, out of which 37,050 were sold on garden account at an average of 8.20d. against 43,113 packages average 7.68d. a year ago. The supply, it is thought, of fine tea from India will be smaller than usual, and inquiry for good parcels should increase during the next few months. Ceylon offerings were smaller (20,493 packages), and with some improvement in quality prices hardened, and competition for all descriptions was good, 7.55d. being the average price for the week against 7.19d. in 1906. Java sales were rather irregular, competition for the 2,122 packages brought forward not being so good as of late, especially in lower qualities of whole leaf and broken, and several packages had to be withdrawn at 6½d. per lb.

SUGAR.—Prices have experienced a reaction during the past week under the influence of more favourable European weather. Speculators, says Mr. Czarnikow, have been realising, and May values fluctuated from 10s. 6¼d. to 10s. 6½d. to 10s. 3d. to 10s. 3¾d. to 10s. 2d. to 10s. 2¼d. Whether the liquidation at the

decline will continue remains to be seen. The general outlook appears in favour of the higher level reached, though naturally the weather during the next six weeks must have a great influence; it is not likely to be better than last year, when we had a fine first fortnight in September, followed by the usual equinoctial disturbances and by a splendid October. If the roots could all be left growing in fine autumn weather a fortnight longer than last season, some of the backwardness might be recovered; but this is not possible with the whole of the crop, and a more or less serious deficiency is still expected. Should there be the usual increase in the world's consumption, we might require higher prices to check it, but on this point nobody can form an opinion until later in the season. The shipments to the East, &c., can then be gauged, as well as the possibility of America requiring European sugars next summer. Trade over here has been quiet, and not much prompt sugar offering. The American market also opened dull, but later registered a fractional advance, and spot was quoted at 96 per cent. Now preferential sugars are still neglected, buyers probably waiting to see at what prices Louisiana planters are willing to enter into contracts. Landings in the three ports were only 18,000 tons, while meltings reached 41,000 against 48,000 tons, leaving stocks at 261,000 tons.

MINING RETURNS.

Abbontiakoon Block 1.—Treated 5,151 tons, 1,429 ozs.; 1,146 ozs. from sands and slimes (total yield 2,575 ozs.).

Abosso Gold.—Crushed 3,656 tons, 1,839 ozs.; tailings 2,557 tons, 595 ozs.; old tailings 1,252 tons, 186 ozs.; total, 2,620 ozs.

Alaska Treadwell.—Crushed 76,548 tons ore, value $87,617; saved 1,492 tons sulphurets; value $78,818.

Angelo.—Milled 31,000 tons, 10,063 ozs.; sands 19,905 tons, 3,307 ozs.; slimes 11,095 tons, 1,226 ozs.; total, 14,596 ozs.; profit £32,579.

Antenior (Matabele).—618 tons, 216 ozs.; cyanide 400 tons.

Ashanti Goldfields.—Obuasi plant—Crushed 5,008 tons, 1,599 ozs.; tailings, 515 ozs.; products from roasting plant 1,859 ozs.; total 3,973 ozs.

Associated of Western Australia.—Milled 10,076 tons, £19,521 sterling.

Ayrshire Gold.—1,595 ozs. from 8,350 tons crushed; 1,123 ozs. from 6,300 tons cyanided, value £10,054; 860 tons reserve tailings cyanided.

Boston Consolidated.—During August 701,198 lbs. of copper, 1,450 ozs. of gold, and 9,342 ozs. of silver were produced.

Bibiani.—Crushed, 3,827 tons, 1,676 ozs.; 2,995 tons treated cyanide for £1,922; total, 2,128 ozs.

Brilliant Extended.—Crushed 3,314 tons for £6,505.

Briseis Tin.—Black tin cleaned up from Briseis Company, 85 tons 16 cwt.; from New Brothers Home No. 1 Company, 33 tons 2 cwt.; Briseis Company's proportion of month's total output of black tin, 105 tons. Shipped 24 tons, including 10 tons on behalf of New Brothers Home No. 1 Company.

British Broken Hill Proprietary.—3,214 tons crude ore produced 420 tons concentrates, containing 256 tons lead and 12,180 ozs. silver.

Broken Hill Proprietary Block 10.—12,039 tons crude ore, producing 1,866 tons concentrates, containing 1,157 tons lead and 59,712 ozs. silver.

Broken Hill Proprietary Block 14.—Treated 7,455 tons of crude ore, producing 900 tons of concentrates, containing 546 tons lead and 25,305 ozs. silver; lead carbonates despatched, 2,128 tons.

Broken Hill South Blocks.—Treated 8,017 tons ore, assaying 17½ per cent. lead, 2¾ ozs. silver, 11 per cent. zinc per ton, produced 1,503 tons leady concentrates, assaying 63½ per cent. lead, 8¼ ozs. silver, 7¾ per cent. zinc per ton.

Broomassie.—Crushed 1,483 tons, 1,746 ozs., and 14 tons of concentrates of an assay value of £28 per ton.

Burbanks Birthday.—Crushed 1,400 tons, 997 ozs.; profits from cyanide, £368; total working expenses, £1,102; total receipts, £2,223; tailings, 1,350 tons, 148 ozs.

Burma Ruby.—193,000 loads washed, producing rubies value Rs. 142,000; royalties, Rs.23,000.

Cape Copper.—Ookiep.—917 tons of 14 per cent. equals 128 tons of fine copper.—Nababeep.—4,581 tons of 3½ per cent. equals 160 tons of fine copper.

Cason.—Tons milled, 33,000, 8,582 ozs.; tons of sands 22,576; 5,272 ozs.; tons of slimes 10,424, 1,684 ozs.; total 15,538 ozs.; profit £32,282.

Central Siberia.—From dredger on the Alexandrovski property, 119 ozs.

Chillagoe.—2,053 tons copper ore and 2,062 tons lead ore, producing 596 tons copper matte and 248 tons lead bullion, containing 238 tons copper, 248 tons lead, and 38,749 ozs. silver.

Chinese Engineering.—Output, 20,000 tons; sales, 15,500 tons; consumption, 1,300 tons.

City and Suburban.—Crushed 26,300 tons, 9,843 ozs.; profit, £14,556.

Clitters United.—Treated 1,711 tons. Minerals sold or on hand:—Tin and wolfram, 13 tons 15 cwt., value £1,796; arsenic and copper-iron product, £812.

Consolidated Gold Fields of New Zealand.—Progress.—Crushed 5,184 tons, value £9 370. Golden Fleece.—Crushed 1,200 tons, value £2,283. Wealth of Nations.—Crushed 1,175 tons, value £2,156.

Consolidated Main Reef.—Crushed 19,456 tons, 3,998 ozs.; sands and concentrates 19,456 tons, 2,395 ozs.; total, 6,393 ozs.; profit, £7,176.

Crown Deep.—Crushed 34,245 tons, 10,452 ozs.; 20,800 tons of sands, 3,403 ozs.; 11,517 tons of slimes, 1,099 ozs.; total, 14,954 ozs.; profit, £30,150.

Crown Reef.—Crushed 22,000 tons, 6,351 ozs.; 14,882 tons of sands and concentrates, 1,994 ozs.; 10,237 tons of slimes, 945 ozs.; total, 9,290 ozs.; profit, £18,061.

De Lamar.—Crushed 2,827 tons, $28,200; surplus, $3,900; miscellaneous, $50; total, $32,510; profit, $3,650.

Driefontein.—Milled 25,500 tons, 6,424 ozs.; 18,270 tons of sands, 2,303 ozs.; 7,230 tons of slimes, 578 ozs.; total, 9,305 ozs.; profit, £12,644.

Duff Development.—Prospecting dredge, 29 ozs.; No. 1 dredge, 35 ozs.; No. 3 dredge, 74 ozs.; total, 138 ozs.

Durban-Roodepoort.—Milled, 11,715 tons, 2,975 ozs.; tailings, 8,125 tons, 1,024 ozs.; slimes, 3,895 tons, 225 ozs.; total, 4,224 ozs.

Durban Roodepoort Deep.—Crushed 12,070 tons, 3,193 ozs.; sands, 8,188 tons, 1,200 ozs.; slimes, 4,436 tons, 307 ozs.; total, 4,700 ozs.; profit, £4,250.

Durham Prospect.—Crushed 1,157 tons, 683 ozs.

East Gwanda.—East Gwanda Mill.—Crushed 8,735 tons, 2,679 ozs.; concentrates, 227 tons produced 535 ozs.; cyanide (on contract), 4,200 tons treated, 532 ozs.; total, 3,746 ozs. Smelter, 63 tons of matter produced 425 ozs. gold (previously declared in concentrates) and 7 short tons metallic copper.

Ferreira Deep.—Crushed 22,780 tons, 8,994 ozs.; sands, 16,029 tons, 3,263 ozs.; slimes, 6,380 tons, 560 ozs.; total, 12,817 ozs.; profit, £33,050.

Ferreira Gold.—Crushed 23,500 tons, 8,650 ozs.; 16,240 tons of sands and concentrates, 16,240, 3,087 ozs.; 9,566 tons of slimes, 1,314 ozs.; total, 13,051 ozs.; profit, £30,518.

Foldal Copper.—Ore produced, 4,546 tons (including 47 tons under-estimated for July); ore shipped, 3,660 tons.

Forbes Rhodesia.—Veracity: Crushed 600 tons, 443 ozs.; cyanide 450 tons, 132 ozs. Dumbleton: 315 tons, 85 ozs. Electric Reef: 256 tons, 27 ozs.

French Rand.—Crushed 18,900 tons, 3,613 ozs.; sands and concentrates 14,400 tons, 1,810 ozs.; slimes, 6,683 tons, 491 ozs.; total 5,914 ozs.; profit, £4,085.

Gaika Gold.—Crushed 2,192 tons, 808 ozs.; cyanide, 1,486 tons, 115 ozs.

Geldenhuis Estate.—Crushed 18,180 tons from mill, 4,344 ozs.; tailings, 1,909 ozs.; slimes, 459 ozs.; total, 6,712 ozs.; profit, £14,126.

Giant Mines of Rhodesia.—Treated 4,906 tons, 2,373 ozs.; profit, £4,700.

Glen Deep.—Crushed 19,275 tons, 5,115 ozs.; sands 11,310 tons, 2,002 ozs.; slimes 7,700 tons, 612 ozs.; total, 7,729 ozs.; profit, £9,450.

Globe and Phœnix.—Crushed 6,794 tons, 2,626 ozs.; cyanide 4,496 tons, 419 ozs.; slimes 1,247 tons, 152 ozs.; total, 3,197 ozs.

Golden Horse-Shoe Estates.—Treated 24,099 tons, 12,424 ozs.; profit, £25,733.

Great Boulder Perseverance.—Sulphide plant: Treated 16,956 tons, 7,295 ozs. gold and 910 ozs. silver.

Great Boulder Proprietary.—Mill: Treated 13,750 tons, 11,629 ozs. Tailings (old): Treated 11,183 tons, 1,430 ozs. Total 13,059 ozs.

Etruscan Copper Estates.—Approximate value of copper produced £2,225.

Great Fingall.—Treated 20,960 tons, 5,607 ozs.; tailings 21,597 tons, 1,415 ozs.; concentrates 448 tons, 1,223 ozs.; total 8,245 ozs.

Gwalia Consolidated.—Crushed 2,019 tons, 176 ozs.; sands 1,104 tons, 321 ozs.; slimes 1,828 tons, 239 ozs.

Hainult.—Crushed 4,610 tons, 1,465 ozs.

Hannan's Reward.—Crushed 2,825 tons, 442 ozs.; royalties from tributors £278.

Ivanhoe Gold.—Crushed 19,330 tons, 3,128 ozs.; sands 9,340 tons, 1,647 ozs.; slimes 8,300 tons, 2,987 ozs.; concentrates 1,690 tons, 2,680 ozs.; total, 19,330 tons, 10,442 ozs.; profit £21,110.

Johannesburg Consolidated.—New Primrose: 18,458 tons, 6,982 ozs; profit, £11,139. New Rietfontein Estate: 17,770 tons, 9,526 ozs.; profit, £15,986. Witwatersrand: 33,050 tons, 10,426 ozs.; profit, £15,018. Glencairn Main Reef: 20,030 tons, 4,281 ozs.; profit, £3,001. Ginsberg: 10,201 tons, 3,113 ozs.; profit, £2,701. Consolidated Langlaagte: 23,140 tons, 7,665 ozs.; profit, £10,253. New Unified Main Reef: 10,017 tons, 3,075 ozs.; profit, £2,349. Buffelsdoorn Estate: 4,200 tons of slimes, 522 ozs.; profit, £738. (This production is for months of July and August.)

Jubilee.—Mill, crushed 5,226 tons, 1,144 ozs.; cyanide, 3,767 tons, 493 ozs.

Jumpers.—Crushed 11,800 tons, 3,882 ozs.; tailings, 1,311 ozs.; current slimes, 394 ozs.; accumulated slimes, 202 ozs.; total, 5,789 ozs.; profit, £5,427.

Jumpers Deep.—Crushed 19,055 tons, 4,647 ozs.; tons of sands 12,210, 1,537 ozs.; tons of slimes 5,917, 428 ozs.; total, 6,612 ozs.; profit, £5,000.

Kluchi Gold.—July: Crushed 641 tons, 339 ozs. Tailings stored averaged 32s. per ton.

Knight's Deep.—39,100 tons, 11,730 ozs.; profit, £14,969.

Killarney Hibernia.—Crushed 4,807 tons, 442 ozs.

Lake View Consols.—Treated 11,418 tons, 3,217 ozs.; profit, £1,197.

Lancaster.—Crushed 16,250 tons, 2,134 ozs.; cyanide 11,386 tons, 1,486 ozs.; total, 3,620 ozs. Output includes by-products containing 84 ozs. fine gold; profit, £666.

Lancaster West.—Crushed 6,644 tons, 1,279 ozs.; cyanide 5,620 tons, 831 ozs.; total, 2,110 ozs.; profit, £1,338.

Lancefield.—Treated 6,023 tons, 2,269 ozs.

Langlaagte Deep.—Crushed 29,565 tons, 7,425 ozs.; sands 19,620 tons, 1,816 ozs.; slimes 10,023 tons, 597 ozs.; total, 9,838 ozs.; profit, £8,600.

Langlaagte Estate.—Crushed 33,049 tons, 7,222 ozs.; concentrates 550 tons, 884 ozs.; tailings 21,600 tons, 2,538 ozs.; slimes 15,861 tons, 1,377 ozs.; total, 12,021 ozs.; profit, £22,500.

Le Roi.—Shipped to Northport 2,959 tons, containing 823 ozs. gold, 1,450 ozs. silver, and 70,650 lbs. copper.

Le Roi No. 2.—Vancouver.—Receipts £1,664, being payment for 79 tons concentrates shipped. Total crushed 2,300 tons, value concentrates, £1,938.

Le Roi No. 2.—Josie Mine.—Shipped 1,320 tons; net receipts £2,784, being payment for 960 tons shipped, and £216, being payment for 78 tons concentrates shipped; in all £3,000.

Matabele Reefs.—Blanket Mine.—Crushed 2,071 tons, 592 ozs.; Alice Cyanide (on tribute)—Treated 1,075 tons, 148 ozs.

May Consolidated.—Crushed 15,180 tons, 3,525 ozs.; cyanide 10,555 tons, 1,816 ozs.; slimes 4,491 tons, 345 ozs.; total, 5,686 ozs.; profit, £11,768.

Merton's Reward.—Crushed 893 tons, 305 ozs.; sands 586 tons, 125 ozs.; slimes 225 tons, 42 ozs.; total, 472 ozs.

Messina (Transvaal).—484 tons copper ore; of this amount 175 tons is shipping ore, assaying 60 per cent. copper, the balance of 309 tons remaining for future treatment.

Mexico Mines of El Oro.—Shipped 540 tons of ore, value U.S. $95 gold and 80 ozs. silver per ton; net proceeds, $60,000.

Meyer and Charlton.—Crushed 12,420 tons, 2,192 ozs.; 3,096 ozs. from cyanide; total, 5,288 ozs.; profit, £9,822.

Mills' Day Dawn United.—Crushed 1,991 tons; value, £7,800.

Montana.—Drumlummon Mine.—Treated 6,800 tons of tailings and fines, $12,000; shipping ore, $400; total, $12,400. Gold, 450 ozs.; silver, 5,000 ozs.—Lucky Girl Group.—Crushed 1,700 tons, yielding 620 ozs. gold and 710 ozs. silver; $13,000.

Mount Boppy.—6,720 tons gave 951 ozs.; cyanide 4,014 tons, 2,007 ozs.; slimes 2,702 tons, 998 ozs.; concentrates 26 tons, 124 ozs.; total, 4,080 ozs.

Mount Cattlin Copper.—Ore sent to smelter 787 tons, containing 4,138 units copper, 125 ozs. gold; net value, £1,303; tons of ore on dump 14,578, assays 5 per cent. copper.

Mount Morgan (Queensland).—Treated 19,727 tons ore, 7,180 ozs.; copper reduction works treated 12,775 tons ore and metalliferous flux, produced 401 tons of blister copper, containing approximately 397 tons of copper and 6,015 ozs. of fine gold.

Mount Zeehan (Tasmania).—550 tons silver-lead ore, containing 300 tons lead and 35,700 ozs. silver.

New Comet.—Milled 21,250 tons, 4,782 ozs.; sands 14,652 tons, 2,046 ozs.; slimes 6,598 tons, 676 ozs.; total 7,504 ozs.; profit £7,025.

New Goch.—Crushed 18,924 tons, 3,976 ozs.; cyanide 2,814 ozs.; total 6,790 ozs.; profit £8,053.

New Heriot.—Crushed 9,340 tons, 4,224 ozs.; profit £6,092.

New Kleinfontein.—Milled 32,585 tons, 8,726 ozs.; sands 22,948 tons, 2,770 ozs.; slimes 10,070 tons, 960 ozs.; total 12,456 ozs.; profit, £20,001.

New Modderfontein.—Crushed 24,118 tons, 6,456 ozs.; sands and concentrates 15,650 tons, 1,808 ozs.; slimes 10,745 tons, 1,161 ozs.; total 9,425 ozs.; profit £11,506.

New Zealand Crown.—Crushed 1,992 tons, £4,666.

Nigel Deep.—5,135 tons, 2,222 ozs.; profit, £2,044.

Nigel Gold.—Crushed 9,960 tons, 4,433 ozs.; profit, £7,335.

North Broken Hill.—Treated 2,365 tons of crude ore, producing 415 tons concentrates containing 283 tons 4 cwt. lead and 8,258 ozs. silver.

North Randfontein.—Crushed 17,457 tons, 3,433 ozs.; 11,520 tons tailings, 2,387 ozs.; 6,114 tons slimes, 706 ozs.; total, 6,526 ozs.; profit, £8,400.

Nourse Mines.—Crushed 34,590 tons, 8,914 ozs.; 23,840 tons of sands, 4,490 ozs.; 11,379 tons of slimes, 761 ozs.; total, 14,165 ozs.; profit, £19,900.

Oroya Brownhill.—Crushed 11,335 tons, 7,084 ozs.

Penhalonga Proprietary.—Crushed 7,900 tons, 797 ozs.; concentrates, 199 tons, 727 ozs.; total, 1,524 ozs.; profit, £3,140.

Pena Copper.—Output from mine, 18,000 tons; shipments amounted to 11,058 tons; about 62 tons of fine copper in precipitate produced.

Pniel Diamond.—Value of diamonds registered, £3,700.

Porges Randfontein.—Crushed 14,921 tons, 3,587 ozs.; concentrates, 1,639 tons, 520 ozs.; tailings, 9,324 tons, 1,537 ozs.; slimes, 3,966 tons, 469 ozs.; total, 6,113 ozs.; profit, £9,400.

Prestea Block A.—Crushed 7,523 tons, 4,202 ozs.; tailings, 4,594 tons, 799 ozs.; total, 5,001 ozs; concentrates, 107 ozs.

Princess Estate.—Crushed 8,480 tons, 2,973 ozs.; cyanide 5,645 tons, 1,268 tons; total, 4,241 ozs.; profit, £5,598.

Raub Australian.—Ore crushed, 5,251 tons, 939 ozs.

Rezende.—Crushed 4,000 tons, 907 ozs.; 3,450 tons sands, 390 ozs.; 23 tons concentrates recovered, 184 ozs.; total, 1,481 ozs.; profit, £1,875.

Rhodesia.—Colleen Bawn.—Crushed 772 tons, 269 ozs.; 573 tons by cyanide, 547 ozs.; 619 tons of slimes, 325 ozs.

Rhodesia Consolidated.—Nelly.—Crushed 2,000 tons, 1,028 ozs.; cyanided, 844 tons, 280 ozs.; total, 1,308 ozs.

Robinson Central Deep.—Crushed 21,665 tons, 8,353 ozs.; sands and concentrates 13,600 tons, 2,595 ozs.; slimes 8,185 tons, 887 ozs.; total 11,835 ozs.; profit £32,078.

Robinson Deep.—41,322 tons, 18,074 ozs.; profit £32,590.

Robinson Randfontein.—Crushed 14,750 tons, 3,071 ozs.; concentrates 1,450 tons, 471 ozs.; tailings 9,450 tons, 1,808 ozs.; slimes 4,149 tons, 525 ozs.; total 5,875 ozs.; profit £6,200.

Robinson Gold.—Crushed 34,600 tons, 15,762 ozs.; sands and concentrates 23,497 tons, 6,077 ozs.; slimes 13,339 tons, 1,970 ozs.; taken from reserve 11,905 ozs.; total 35,714 ozs.

Roodepoort Central Deep.—Crushed 8,585 tons, 2,158 ozs.; cyanide 6,000 tons, 1,065 ozs.; total 3,223 ozs.; profit £1,537.

Roodepoort United.—4,083 ozs. from 15,480 tons, 2,575 ozs. from cyanide; total, 6,658 ozs.; profit, £11,127.

St. John Del Rey.—Gold produce, £28,400; yield per ton, 63 of an oz troy.

Selukwe Gold.—Crushed 6,628 tons, 1,731 ozs.; cyanide 4,414 tons, 590 ozs.; total, 2,321 ozs.

Simmer and Jack East.—35,670 tons, 9,917 ozs.; profit, £5,695.

Simmer and Jack Proprietary.—Tons, 68,180; ounces, 25,225; profit, £30,234.

Sons of Gwalia.—Crushed 13,348 tons, 2,459 ozs.; tailings 7,149 tons, 1,173 ozs.; concentrates 220 tons, 521 ozs.; accumulated slimes treated 2,806 tons, 339 ozs.; total, 4,492 ozs.

South Kalgurli.—Crushed 8,702 tons, 2,937 ozs.; net profit, £2,687.

South Randfontein.—Crushed 15,008 tons, 3,326 ozs.; concentrates 1,575 tons, 446 ozs.; tailings, 8,830 tons, 1,455 ozs.; slimes, 4,626 tons, 558 ozs.; total, 5,805 ozs.; profit, £6,000.

Surprise Gold.—Crushed 3,093 tons, 853 ozs.; cyanide, 367 ozs. from 3,350 tons.

Talisman.—Treated 3,772 tons; value, £15,335; profit, £8,907.

Tanganyika Concessions—Kuwe.—Output for July 341 ozs.

Theta Gold.—Crushed 1,800 tons, 330 ozs.; by cyanide, 687 tons, 159 ozs.; total value, £1,665.

Tingha Consolidated Tin.—Production 19 tons.

Tomboy.—Crushed 8,700 tons, value $55,000; concentrates shipped 380 tons, value $27,000; total, $82,000; profit, $39,500.

Treasury.—Crushed 9,146 tons, 1,654 ozs.; sands and concentrates 9,245 tons, 1,160 ozs.; total, 2,814 ozs.; profit, £1,009.

Van Ryn.—Crushed 23,440 tons, 6,984 ozs.; sands 15,800 tons, 2,107 ozs.; slimes 7,737 tons, 698 ozs.; total, 9,689 ozs.; net profit, £18,477.

Village Main Reef.—Crushed 40,500 tons, 10,393 ozs.; sands and concentrates 28,968 tons, 3,901 ozs.; slimes 12,044 tons, 845 ozs.; total, 15,139 ozs.; profit, £26,501.

Village Deep.—Crushed 24,500 tons, 4,592 ozs.; 17,917 tons of sands and concentrates, 3,102 ozs.; tons of slimes 6,585, 631 ozs.; total, 8,325 ozs.; profit, £6,000.

Vivien.—Milled 3,004 tons, 683 ozs.; tailings 1,900 tons, 181 ozs.

Wanderer (Selukwe).—Cyanide 17,298 tons, 1,866 ozs.

West Rand Central.—Crushed 5,525 tons, 461 ozs.; cyanided 2,075 tons, 360 ozs.; slimes 1,075 tons, 173 ozs.; total, 994 ozs.

Westralia Mount Morgans.—Crushed 5,100 tons, 805 ozs.; cyanided 2,950 tons, 733 ozs.; slimes, 2,550 tons, 462 ozs.

Willoughby's Consolidated.—Queen's—Crushed 1,481 tons, 793 ozs.; cyanide 1,580 tons, 317 ozs.

Windsor Gold.—Crushed 5,069 tons, 806 ozs.; cyanide 4,117 tons, 682 ozs.; total, 1,488 ozs.

Witwatersrand Deep.—Crushed 33,460 tons, 9,206 ozs.; sands and concentrates 33,352 tons, 5,023 ozs.; total, 14,229 ozs.; profit, £26,379.

Wolhuter Gold.—Crushed 19,070 tons, 3,515 ozs.; sands and slimes 19,050 tons, 2,504 ozs.; total, 6,019 ozs.; profit, £6,035.

Zeehan-Montana.—390 tons silver-lead ore, containing 230 tons lead and 25,400 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAY.

North British.—At the rate of 1 per cent. per annum on the deferred stock, with £15,000 forward.

BANKS.

Yokohama Specie.—12 per cent. per annum for six months ended June 30, placing 500,000 yen to reserve, and 1,055,000 yen carried forward.

National Bank of India.—Interim at the rate of 12 per cent. per annum for the half-year ended June 30, with £212,022 carried forward.

MINES.

Esperanza.—Interim of 6d. per share and an additional interim of 5s. per share for quarter ending Sept. 30, payable Oct. 19.

Kalgurli Gold.—Interim of 7s. 6d. per share, payable Oct. 7.

Libiola Copper.—Interim of 1s. per share

Mount Molloy.—6d. per share.

North Broken Hill.—2s. 6d. per share, payable Oct. 16.

MISCELLANEOUS.

American "E.C." and Schultze Gunpowder.—Interim of 1½ per cent.

Bell Brothers.—Interim of 4s. 6d. per £4 10s. paid share.

British and American Mortgage.—Interim for half-year ended June 30 at the rate of 8 per cent. per annum on the ordinary shares, payable Sept. 28.

Carreras.—At the rate of 10 per cent. per annum for past half-year, making 7½ per cent. for the year, carrying £15,223 forward.

Chamberlain, King, and Jones.—Interim at the rate of 5 per cent. on the ordinary shares for half-year ended July 31.

Chas. Baker and Co.—Interim for half-year ended July 31 on the ordinary shares at the rate of 6 per cent. per annum.

City Offices.—Interim of 4s. per share on the ordinary shares for half-year ended June 30.

Dimbula Valley (Ceylon) Tea.—Interim of 4 per cent. on the ordinary shares on account of the year ending Dec. 31 next, payable Oct. 1.

Finch and Co.—12½ per cent.

Henry Tomlinson.—Interim at the rate of 10 per cent. per annum.

John Arnott and Co.—Interim at the rate of 4 per cent

John K. Wilson and Co.—At the rate of 3 per cent.

J. Mandleberg and Co.—Interim on the ordinary shares at the rate of 10 per cent. per annum for the half-year ended June 19.

Kalgoorlie Electric Power and Lighting.—The preference shares at the rate of 6 per cent. per annum for six months ending Sept., payable Oct. 15.

Martinez, Gassiot, and Co.—5 per cent. for year ended June 30 on the ordinary shares, with £1,000 written off goodwill, carrying £2,054 forward.

Muirhead and Willcock.—Final of 2½ per cent. on the ordinary shares, making 5 per cent. for the year ended Aug. 3, placing £5,000 to reserve, and carrying £591 forward.

Robertson, Ledlie, and Ferguson.—At the rate of 5 per cent.

Sephinjuri Bheel Tea.—Interim of 7½ per cent. on account of 1907, payable Sept. 20.

Singleton and Cole.—Interim at the rate of 5 per cent. per annum for half-year ended July 31.

Staffordshire and Worcestershire Canal.—For half-year ended June 30 at the rate of 3 per cent. per annum, carrying forward £6,210.

Thomas Hetton and Co.—Further of 3 per cent. on the ordinary shares, making 5 per cent. for the year ended July 31, carrying £3,596 forward.

Virginia-Carolina Chemical.—Quarterly at the rate of 8 per cent. per annum on the preference stock, payable Oct. 15.

Letters to the Editor.

Sir,—In your issue of September 7 you have an article on "Dear Coal." You state that the export duty on coal is a "mistaken and condemned tax." A little further on you say: "The Germans will soon tire of buying our coal at prices which must not only materially augment the cost of working their mercantile navy, but hurtfully affect the competing power of all German manufacturers." As you say that the export duty on coal is a mistake, you must obviously approve of the Germans being allowed to buy our coal as cheap as possible, so as to compete against us. But a good heavy export duty would, on your own showing, clearly help our manufacturers to compete with the Germans, because they would "soon tire of buying our coal at "prices, &c., &c.," while our manufacturers could obtain coal at a cheap rate, or, anyhow, cheaper than Germany. You, therefore demonstrate that an export duty on coal is a splendid thing for Great Britain. But you also say it is a mistake. Perhaps you will explain what you do mean and why, if everybody wants our coal, we are such fatheads as to let them have it cheap, so as to be able to compete against us.

Yours faithfully,

Pro-British.

*** There is no real contradiction. See note on another page. —Ed.

NEXT WEEK'S MEETINGS.

Monday, September 16.

Muirhead and Willcock.—Manchester, noon.
United Horse Shoe and Nail.—Cubitt Town, E., 11.30 a.m.

Tuesday, September 17.

Alby United Carbide Factories.—Winchester House, noon.
Caledonian Railway.—Glasgow, 1 p.m.
Callander and Oban Railway.—Glasgow, 4 p.m.
Colonists Land and Loan.—Dashwood House, 11.30 a.m.
Glasgow and South-Western Railway.—Glasgow, 11.30 a.m.

Wednesday, September 18.

Bank of Africa.—Cannon Street Hotel, noon.
Golden Blocks (Taitapu).—Moorgate Place, E.C., 12.30 p.m.
Transvaal Exploring Land and Minerals.—Winchester House, 11.30 a.m.

Thursday, September 19.

Manchester Liners.—Manchester, 1 p.m.
North-Eastern of Uruguay.—River Plate House, 11 a.m.
United Electric Car.—Preston, noon.

Friday, September 20.

Leeds and Liverpool Canal.—Liverpool, noon.
Pearks Stores (Africa).—Winchester House, noon.
Redhills Tin Mining.—Redruth, noon.

New Zealand Gold Output.—The yield for August amounted to 50,951 ozs. valued at £203,505, compared with 41,660 ozs. worth £167,457 in the corresponding month last year, a satisfactory improvement.

West Australian Gold Returns.—The Council of West Australian Mine Owners announce that the gold reported for export during August was 41,090 ozs. compared with 64,657 ozs. last year, while the mint returns were 98,052 ozs. against 92,253 ozs. The total weight was therefore 17,768 ozs. lower at 139,142 ozs., the falling off in value being £76,474 at £590,034.

The offices of Messrs. Thomson, Alston, and Co., the Yatiyantota, Ceylon, Tea Co., Limited, the Panawatte Tea and Rubber Estates, Limited, the Sungei Choh Rubber Estate Co., Limited, have been removed to Ocean House, 24-25, Great Tower Street, London, E.C.

COMPANY MEETINGS.

BUENOS AYRES AND BELGRANO ELECTRIC TRAMS.

An extraordinary general meeting of shareholders of the Buenos Ayres and Belgrano Electric Tramways Co., Limited, was held on Monday, at Winchester House, Old Broad Street, E.C., for the purpose of considering a resolution approving the completion of the purchase of the property on July 1 next, instead of on July 1, 1909. Mr. J. B. Concannon (Chairman) occupied the chair.

The Secretary (Mr. H. S. M. Woodrow) having read the notice convening the meeting,

The Chairman said: The object of this meeting is simply to give you an opportunity of accepting payment of the balance of the purchase money of our property on July 1, 1908, instead of waiting for twelve months' notice from July 1, 1908. Probably the majority, if not all of you, will be better pleased to get your money, more particularly as investments are now at a very low figure, and you might have the opportunity of reinvesting it at any time between now and July 1, 1908. The reason why we do not intend to pay a dividend until we distribute the whole of the assets is due to the fact that technically we have sold the property at a loss, and our legal advisers tell us that it is much safer not to pay a dividend on the ordinary shares in the meantime, as it might be said to be payment out of capital. We could have got over that difficulty, but it would mean that we should have to hold two meetings to reduce the nominal amount of capital. As a matter of fact, we sold the property for considerably over the nominal capital, but the first debenture-holders get a premium of 15 per cent. and the second debenture-holders get a premium of 5 per cent., and these premiums put us in the position that we ordinary shareholders have nominally less money. I think there is nothing more except to formally move the resolution.

Mr. James Anderson seconded the motion.

A Shareholder: Do the debenture-holders get their 115 and 105 next year in cash?

The Chairman: Yes.

Mr. W. W. Chapman objected most strongly to anybody retaining the interest on money which ought to be distributed. He was not present at the last meeting, otherwise he would have strongly objected to the sale of the company, because he thought it would be quite as open for the directors as for the shareholders to know that the purchasing company had made a profit of £250,000 on the purchase of the property.

Mr. Barber Glenn said that the ordinary shareholders would not get any dividend in any event until April, so that the postponement of it for the half-year of 1907 was simply a postponement from April to July, and the profit to June, 1908, would not be postponed at all, because they would be paid in July.

The Chairman said that with regard to the remarks of Mr. Chapman, on the point of the payment of dividend on the ordinary shares, Mr. Glenn had really answered him. He might add that the money, whatever it was, would be invested or deposited at interest, and that interest would accrue to the ordinary shareholders. Mr. Chapman had also referred to the profit made by the Belgian company in the sale of this undertaking to the Anglo-Argentine Company. The Belgian company sold this Belgrano undertaking, for which they were paying the Belgrano Company £1,350,000 in cash, to the Anglo-Argentine Company for £1,600,000 in paper, in practically deferred ordinary shares. Well, that was a very different thing from selling for cash and that £250,000 profit was quite a problematical one. Those gentlemen who got the shares would have probably to wait a long time before they could market them, and the price would depend to a great extent on the future of the combined properties.

The resolution was agreed to unanimously, and the proceedings terminated.

Hongkong and Shanghai Banking CORPORATION.

EIGHTY-FOURTH REPORT OF THE COURT OF DIRECTORS TO THE Ordinary Half-Yearly General Meeting of Shareholders, Held at THE CITY HALL, HONGKONG, on the 17th AUGUST, 1907.

To the Proprietors of the

HONGKONG AND SHANGHAI BANKING CORPORATION.

GENTLEMEN.—The Directors have now to submit to you a General Statement of the affairs of the Bank, and Balance-sheet for the half-year ending June 30, 1907.

The net profits for that period, including $1,721,558.90, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts, amount to $3,845,222.43.

The Directors recommend the transfer of $750,000 from the Profit and Loss Account to credit of the Silver Reserve Fund, which Fund will then stand at $11,750,000.

After making this Transfer and deducting Remuneration to Directors there remains for appropriation $3,080,222.43, out of which the Directors recommend the payment of a Dividend of One Pound and Fifteen Shillings Sterling per Share, which at 4/6 will absorb $622,222.22.

The difference in Exchange between 4/6, the rate at which the Dividend is declared, and 2/2$\frac{3}{16}$, the rate of the day, amounts to $660,832.67.

The Balance $1,797,167.54 to be carried to New Profit and Loss Account.

DIRECTORS.

Mr. N. A. Siebs, Mr. D. M. Nissim, the Honourable W. J. Gresson (Deputy-Chairman), and Mr. G. Balloch having resigned their seats on leaving the Colony, Mr. A. Fuchs, Mr. E. Shellim, the Honourable Henry Keswick and Mr. H. A. W. Slade have been invited to fill the vacancies; these appointments require confirmation at this Meeting.

The Honourable Henry Keswick has been elected Deputy-Chairman for the remainder of the year.

AUDITORS.

The accounts have been audited by Mr. A. G. Wood and Mr. F. Maitland, the latter acting for Mr. W. Hutton Potts, who is absent from the Colony.

G. H. MEDHURST,

Hongkong, 6th August, 1907. Chairman.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 507. SATURDAY, SEPTEMBER 21, 1907. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein

The Investors' Review.

The Post Office Savings Bank.

The report of the Postmaster-General deals with general Post Office matters for the year ending March 31; with the Post Office Savings Bank for the year ending December 31. In view of the difference of the dates of closing the books in the two sections, it is desirable that the section relating to the Savings Bank should be published separately at an earlier date than the other. On one occasion this year Mr. Asquith refused to admit that the Post Office Savings Bank is at all on the same footing as the commercial banks. It is certainly not in the same position as regards the presentation of its accounts. The commercial banks present audited accounts a fortnight or three weeks after the closing of the books. The report of the Postmaster-General is usually issued to the public early in August; this year it was distributed only on September 14. We ought not to have to wait eight months to learn the facts, or so much of them as is disclosed, as to the Bank. There are not wanting grounds for suspecting that the book-keeping of the Post Office Savings Bank is not much better than its finance. In answering a question put by Mr. Remnant on April 11, the Chancellor of the Exchequer gave the estimated totals of deposits and withdrawals for the year ended December 31. The withdrawals were stated to amount to £43,804,000. We learn from the report that the actual amount was £43,763,000, so that more than three months after closing the books the Department had not ascertained the correct amount within £40,000.

The report is, as might be expected, remarkable chiefly for what it does not tell us. It does not, of course, contain a balance-sheet with a valuation of the securities. When the constantly increasing deficit in the assets had reached five millions, the Treasury made the discovery that a balance-sheet such as had been issued for 40 years was "misleading." For 40 years we had been wandering in a financial desert. A Select Committee was appointed to inquire into the general conditions of the Savings Bank. It was induced to accept the view of the Treasury that it is "misleading" to publish a balance-sheet in the form adopted by every sound commercial and financial concern in the kingdom. In 1904, when the deficit had reached eleven millions, an Act was smuggled through Parliament to give effect to the recommendation of the Committee that in future "an annual statement of the securities held for the Savings Bank's funds should be substituted for a valuation at market price." I say "smuggled through Parliament" because the clause suppressing the balance-sheets was not in the Bill as introduced. The Bill was referred to the Standing Committee on Trade, and while it was passing through this Committee the clause was added by the Chancellor of the Exchequer, Mr. Austen Chamberlain. The method of introducing the clause proves one of two things—either it must have been desired to keep the thing as far as possible from the cognisance of Parliament, or its introduction was an afterthought. The first hypothesis being absolutely inadmissible, we are left to form the conclusion that the matter was not considered of great importance. Other recommendations of the same Committee were disregarded. Yet now appeal is constantly made to this particular recommendation as something sacrosanct: the voice of

reason and common-sense is at once stifled by appeal to the recommendation of the Select Committee of 1902.

The policy of concealment has not stopped here. The 50th report, the first from which the balance-sheet was omitted, still set out in full the terminable annuities held on account of the Post Office Savings Bank, with references to the 32 Acts of Parliament under which the annuities were set up or extended. The next report omitted these particulars, giving merely the totals under two heads, "Annuities operating to replace stock," and "Annuities operating to replace cash." The public has now, therefore, no means of ascertaining whether it is still paying to the Post Office Savings Bank £281,000 per annum for Uganda Railways, or £40,000 for the Royal Niger Company annuity.

The public is liable to make good every penny of deficiency in the deposits, swollen by the addition of compound interest to the aggregate amount, on December 31, 1906, of £156,000,000. The public has, therefore, the clearest right to know fully the financial position of this institution. No one would venture openly to contest this right. In practice it is denied. But the attempt to conceal the deplorable state of the Post Office Savings Bank has had exactly the effect that might have been foreseen. Great forbearance was shown towards Mr. Asquith in the first year of his tenure of office; it was, no doubt, felt that he should have full time to look round him before he settled his plans. In the session of 1906 few questions were asked as to the position of the institution, and these for the most part only towards the end of the session. This year the case has been different, and Mr. Asquith has made it clear that he has no intention of departing from the policy of his predecessor. Questions have been put by several members—Mr. Byles, Mr. MacNeill, Mr. Myer, Mr. Bowles, Mr. Remnant—the answers to which, however diplomatic, give us a knowledge fuller than we should have gained from a mere balance-sheet. It will, therefore, be useful to sum up the results of these questions. From the report we know that the sum due to depositors amounted to £156,000,000, repayable at a few days' notice, and that against this liability there was held in cash £184,432. Deducting from this the amount of warrants issued but not presented for payment, we have less than £97,000 cash against this enormous liability, or about 1s. 3d. per £100. It is admitted that in the years 1894-9 the National Debt Commissioners purchased on behalf of the Post Office Savings Bank £45,000,000 of Consols, at an average price of £107 14s. 6d. per cent.; that the Commissioners hold £60,000,000 of Consols standing on the books at £103 per cent.; that they sold during the year £1,777,000 Consols, at an average of £88 3s. 1d. per cent.; that, the market price of Consols being on December 31 86 per cent., there was a deficiency in the value of the Consols held of £10,000,000. And not only is there this enormous deficit in what is called the capital account; the Bank does not pay its way. Its earnings fell short of expenses by £119,870.

This summary gives, without the least exaggeration, the position of the institution at the end of last December. The deficiency in Consols by no means represents the total deficit. The position is worse to-day than it was then, and may well be worse at the end of 1907 than it was at the end of 1906.

Mr. Asquith came into a bad inheritance. One could find it in his heart to pity him if he had not elected to accept the policy of his predecessor, or, rather, we should say, to submit his judgment to the bureaucrats of the Treasury. In one respect he has, indeed, gone beyond his predecessor. Mr. Austen Chamberlain admitted that a great deal of the money in the Savings Banks belongs to the well-to-do classes, who have no proper concern with them except to contribute towards making good the deficiency. Mr. Asquith denies that the middle classes have invaded the Savings Banks. Not once, but on many occasions, he has declared that a balance-sheet is "misleading"; he deprecates "arbitrary valuation" of the securities; he sees no reason for departing from the policy of the late Government; he refuses to appoint a Committee to consider this most serious question. The law gives power to deal with the situation; it should have been dealt with long ago. It will not right itself, and as long as it is allowed to continue, so long is the country exposed to grave financial dangers, to which the public is awakening.

Alfred Marks.

The Customs Revenue.

Many duties are performed by the Commissioners of Customs beside the collection of taxes. They constitute a sort of moral and hygienic police, watching that nothing comes into the country calculated to injure the people's morals or health. It is as tax-collectors, however, that we are interested in the results of their labours, and their report for the past year is as instructive as usual. In one sense our tariff is a small and light one, and the gross revenue of £34,817,821 collected in the year ended March 31 last was made up principally of the tobacco duty, the tea duty, sugar duties, and the duties on foreign spirits and wines. Apart from these no single item of the Customs tariff yielded as much as £1,000,000 gross to the revenue, if we rule out the coal duty, which ceased on October 31 last, after yielding £1,749,363 gross to the revenue for the seven months of the fiscal year then expired. The nett income gathered by the Customs for the year was £32,894,636, of which tobacco gave £13,295,803, tea £5,588,288, sugar, glucose, saccharin and other articles struck by the sugar duty about £6,250,000, spirits over £4,000,000, and wines £1,238,172. There were decreases in the receipts from the tea and tobacco duties, but increases in the receipts from the spirit duties and from the wine tax, although, as the Commissioners point out, the consumption of imported wines and spirits is now "very much below" the figures attained in 1903-4 and 1902-3.

It is interesting to note with reference to the coal duty that the average price went up after the duty was removed. In 1901-2 the average declared export value of coal sent out of the country was 13s. 2d. per ton. From that figure it fell in the succeeding year to 12s., in the year following to 11s. 6d., and by 1905-6 had dropped back to 10s. 6d., rising, however, to 11s. as the average for the seven months ended October 31 last. For the five months ended March 31, however, the price of the duty free coal exported averaged 11s. 5d. per ton, which was the highest price since 1903-4, and it has been going up ever since. Is there any relation between the abolition of the duty and this rise in the price? Not necessarily, although it is possible enough that the duty, by restricting foreign purchases, did tend to depress the market. In reality, however, the high price of coal is the direct outcome of the industrial development which has been in progress for several years past all over the world, and we have evidence enough of the effect of the larger trade thus generated in the figures of coal exports for the service of our mercantile marine and navy. Shipments of what is called "bunker coal," never subject to duty, rose in the past fiscal year to nearly 18,470,000 tons, and this in spite of the fact that in the last five months of the year only 7,438,000 tons were sent out as against 11,038,000 tons in the first seven months, a decrease of about 90,000 tons per month. The aggregate for the 12 months is about 675,000 tons more than for the preceding year, and larger by over 4,500,000 tons than the total for 1901-2. It would be interesting to know how much of the increase is ascribable to increased consumption by the navy, how much to the requirements of the mercantile marine.

A distinct expansion has occurred in the consumption of tea concurrently with the reduction in the duty to 5d. per lb., just as a decrease took place when the duty was raised to 8d. in 1904-5. In the year preceding that date the duty was 6d. per lb., and the quantity retained for home consumption rose to 262,759,000 lbs. In the succeeding year, the duty being 8d., consumption fell off by nearly 11,500,000 lbs. to 251,280,000 lbs. Last year it rose again to 265,680,000 lbs., although the duty was only brought down to 5d. on May 14. Even so, the

receipts from the 5d. duty came to only about £387,000 less than the product of the 6d. duty in 1902-3, and was actually larger by about £20,000 than the product of the 6d. duty in 1903-4.

Simple though our tariff looks, it is amazing what a variety of articles are embraced in it, and nothing is more striking than the effect of the reimposition of the sugar duty. That duty looked simple enough as stated by the Chancellor of the Exchequer, a mere matter of 2s. to 4s. 2d. per cwt., according to degrees of polarisation or refinement. In reality, however, the imposition of this duty involved a perplexing variety of other taxes, which had to be put on as a defence of the out-works as it were of the main tax. Thus liquid and solid blacking containing sugar or any sweetening matter has to pay a Customs duty of 1s. per cwt. Then all manner of sweets, preserved fruits containing sugar, sweetened gums, caramels, licorice, canned fruits with fruit pulp, and so on, are struck with import duties varying from 1s. up to 7s. per cwt., the highest scale of duties being designed to embrace not merely a compensation for the duty levied on sugar pure and simple, but for the taxes on ordinary dried fruits as well. Milk powder, Nestlé's milk food, soy, tamarinds in syrup, and all things of that description also have to pay import duty thanks to the reimposition of the sugar tax.

Another class of articles consists of dried fruits of all kinds, the duty on which is generally 7s. per cwt., and we are disposed to think that the imposts on this kind of foreign produce, as well as on coffee, cocoa, and chicory, might very well be dispensed with. The yield to the revenue is insignificant, hardly worth bothering about, and the more our tariff can be simplified the less should be the cost of collection. Last year, for instance, the nett receipts from the chicory duty came to but £48,550, and coffee gave only £177,216, while the receipts from dried fruits such as currants, raisins, figs, plums, and prunes amounted to less than £500,000 all told. The Chancellor of the Exchequer might well consider whether all this group of taxes might not be removed as serving little good purpose of any kind. To the revenue they are meanly productive, and they cannot "protect" any domestic industry. Probably, however, it will be impossible to make a move in this direction, so far at least as most dried fruits are concerned, while the sugar duty remains in force, and as it last year gave the highest product of any year since its reimposition, we shall have to travel a long way towards economy in national expenditure before such a prolific impost can be dispensed with. Last fiscal year's nett imports of refined and unrefined sugars taken together amounted to 33,158,596 cwt., the highest of any year since 1902, when the total was 31,451,335 cwt. As in another year's time we shall be free of most of the entanglements imposed by the Brussels Sugar Convention, the promise is that this source of revenue will grow more and more fruitful of revenue, and as imports become in other respects less restricted, we may be sure no Minister of Finance will display any enthusiasm in restoring a free breakfast table to the country. It is otherwise, however, with the duties on coffee, cocoa, and chicory, and kindred articles. These seem to be kept in existence from old habit, and from a desire to put substances of this description on a level with tea. We hardly think, however, there would be any danger to the revenue from tea were these minute imposts done away with.

Economic and Financial Notes.

Postmaster-General's Report.

With so much of this report as refers to the Savings Bank, Mr. Alfred Marks deals elsewhere in this issue, and there is not a great deal in the remainder to require more than a brief reference. Results in the postal department were again eminently satisfactory from a trading point of view, but, as we have so often repeated, we see no good reason why the State should conduct a business of this kind in a manner to yield such large profits. Including the estimated value of services rendered to other departments, the total revenue for 1906-7 showed an increase of £297,019 at £17,361,042, but the expenditure, mainly because more was required for salaries, wages, &c., rose by £440,775 to £12,289,787, and nett profits were consequently £143,756 less at £5,071,255. Receipts from telegrams improved by £43,924 to £2,787,110, and in addition free Government and railway telegrams were transmitted to the estimated value of £22,700 and £59,000 against £18,500 and £59,000 in 1905-6. The telephone business of the Post Office is growing steadily, if slowly, and the number of instruments connected in the Metropolitan area rose from 32,879 to 41,236, while in the provinces the number of telephones in use has increased by 1,626 to 12,006, exclusive of the additions received through the purchase of the systems of the Glasgow and Brighton Corporations, amounting to 12,964 and 1,884 instruments respectively. After payment of working expenses the year's working of the entire system resulted in a surplus of £451,787, while the estimated amount required for depreciation and for interest at 3 per cent. on the capital and expenditure was £432,726. The combined revenue of the telegraph and telephone services was £4,369,230 or an increase of £217,850, and after deducting actual working costs a surplus of £96,340 was left compared with deficits of £81,178 in the previous year and £249,713 in 1904-5. Expenditure on sites, buildings and extensions, however, came to £748,395, and there was therefore an actual deficit on the year's operations of £652,055 or £88,764 less than for the previous year. Taking the postal and telegraph services as a whole, the nett income totalled £4,419,200 before allowing anything for interest on the capital of £10,867,644 expended on the purchase of the telegraphs, but if this is taken into account the nett profits would be £549,002 less than last year at £4,147,509.

Associated Portland Cement Manufacturers (1900), Limited.

Although the report and statement of accounts of this great combine for the year ended June 30 last show a very considerable improvement over those of the previous year, the document must really come as a greater disappointment than ever to the ordinary shareholders. During the period under review the company has clearly derived very considerable benefit from serious disasters in various parts of the world, such as the catastrophe at San Francisco, which naturally led to a very heavy demand for such an article as cement, and it is probable that the company has experienced one of the best times it is ever likely to. Yet this notwithstanding, the unfortunate ordinary proprietors are still as far away from a dividend as ever, and while the capital remains at its present bloated and utterly unjustifiable total the outlook from the ordinary shareholders' standpoint seems well-nigh hopeless. We have referred many times to the various matters which render the outlook so unsatisfactory, and it is not really necessary to go over the ground again. But for many years to come any surplus profits over and above the sum required to meet the cumulative preference dividend must be devoted towards strengthening the financial position and providing for the improvements to machinery which the out-of-date nature of so much of the company's plant renders essential for economical working. Just take note, for example, that whereas on July 1, 1900, the book value of the property was £6,618,660 the total is now £6,778,320, nett additions to the rotary and other plant, buildings and machinery, &c., having been £174,134 against £14,475 received on account of property sold. Looking to the other side it can be discovered that the mortgages have been increased by a trifling sum to £238,775, and whereas the certificates of indebtedness in connection with the rotary patents have been reduced by £11,700, those on account of capital expenditure show an increase of £45,367 at £228,035. What the directors say about the past 12 months' trading is that the profits have shown some improvement on those of the previous year, largely owing to the increased demand for Portland

cement in certain export markets. Prices have been somewhat better during the period, but, on the other hand, in consequence of the increased cost of fuel the expense of manufacture has advanced and will certainly be still higher for the current financial year. Therefore, if profits are to be maintained it will be necessary to obtain improved prices for cement. After allowing about £18,000 more at £138,619 for repairs and renewals the nett revenue comes out at £403,524 or an increase of just over £68,000. Including £12,552 brought forward the sum for disposal is £416,076, and from this figure the following deductions are made. Directors' fees, &c., £18,541, debenture stock, mortgage and other interest £136,667, sinking funds, depreciation and reserve £70,775, and reserve for bad and doubtful debts £10,000. Added together these items make away with £235,984, and the sum still left permits the payment of the full preference dividend as in previous years, the addition of £25,000 to the general reserve and depreciation account, and an increase of £23,656 to £36,208 in the credit carried forward. It is pointed out that the total charge against profits for sinking funds, depreciation and reserve, including the amount written off patents and the allocation against bad and doubtful debts, is £105,775, an increase over the previous year of £43,272, and is mainly due to the substantially larger sum written off the purchase price of the rotary patents. All this, of course, is very good, but it only serves to emphasise what we have already said, that extra profits when earned are not likely to find their way into the pockets of the ordinary shareholders. Against the enormous capital outlay already mentioned the entire accumulations to date are little more than £310,000, and in order to render the condition of the company even tolerably good it would be necessary to wipe away capital to the extent of millions. Altogether £43,500 was written off the rotary patents last year, reducing their value to £96,014, and in due time this item will no doubt be completely extinguished, as certainly it should be. Ordinary trade debtors owe £300,654 against £193,828 due to creditors, and there is a sinking fund investment account of £64,465 and cash balances £138,563, while the stock in trade is valued at £345,443. During the year one director retired from the board, and death deprived the company of the services of its vice-chairman. Four of the directors are due to retire on the present occasion, and two of them do not desire to be re-elected. The remaining directors are anxious to thank these gentlemen for their services to the company during the past seven years and to intimate that the vacanciees created will not be filled up.

Staveley Coal and Iron Company.

Evidence accumulates of the remarkable prosperity of the coal and iron trades during the past year. Here is another company which did remarkably well, its profit being £167,652, as compared with £121,410 in the previous year. The total is arrived at after providing the dividend on £25,000 of preference shares and interest on about £68,000 of debenture bonds, and after adding £28,287 brought forward, the total nett balance is £125,940, a remarkably fine figure. Interim dividends of £5 on the "A" and "C" shares having £60 paid, and 16s. 8d. per share on the "B" and "D" shares, these being paid up to the extent of £10, have been already provided, and the directors now propose another £7 10s. on each "A" and "C" share, and £1 5s. on each "B" and "D" share, carrying forward £33,023. At the end of June, 1906, the property account had a book value of £796,780, and very extensive additions during the year involved a total outlay of £220,859, making £1,017,639. From this must be deducted the reserve fund of £58,100 for debenture redemption transferred from the other side, leaving the total balance-sheet value of the properties at £959,539. In regard to the new plant at the Devonshire works, 50 new coke ovens were started on May 22, and the remaining 50 on July 1, the whole of the ovens together with the bye-product plant being now in active operation. The first of the three furnaces was blown in on July 22, and the whole of the plant has since been working with the most satisfactory results. At the Brodsworth main colliery sinking operations have been continued throughout the year without intermission, and it is confidently hoped that the Barnsley bed will be reached before the end of the year. The whole of the plant and machinery is also in a forward state and will be ready to deal with the coal when reached. The directors have recently entered into negotiations which have resulted in the acquisition of a number of leases covering in all between 5,000 and 6,000 acres of the Barnsley bed of coal lying south-west of Doncaster, and which will probably be known as the Edlington colliery. The leases are now being prepared. This, of course, will involve further capital outlay, and it should be noted that already the company owes £96,498 to its bankers, including loans. Ordinary trading accounts, however, are a long way favourable, and stock of material on hand is valued at £75,887. In addition to the debenture redemption account there is an insurance fund for fire and workmen's compensation of £45,160. Shareholders are already fully acquainted with the steps taken for raising the additional capital required and the ultimate splitting of the shares. No difficulty was experienced in getting the necessary Act of Parliament, and the whole scheme will be concluded at an earlier date than at first anticipated.

Yorkshire Dyeware and Chemical Company.

When dealing with the annual report of this undertaking 12 months ago we made the following observation: "The board of this miserable enterprise advances no reason or explanation for the wretched results displayed for the year ended June 30, probably because there is none, except rank over-capitalisation and inherently bad business." During the past 12 months the directors of the company have evidently taken our observations to heart, as a scheme for the reduction of the company's capital was placed before the shareholders, and since the plan involved no real sacrifice on the part of ordinary investors, it was accepted with practical unanimity. The scheme provided for the cancellation of the whole of the 80,000 ordinary shares held by the vendors and the writing down of the 100,000 preference shares by 5s. per share, being a total reduction of £105,000, and leaving the capital as reduced at £75,000 in 100,000 shares of 15s. each. The reorganisation has enabled the directors to write off the entire deficiency on profit and loss account amounting to £10,486, to eliminate goodwill in its entirety, and to considerably reduce the valuation of the buildings, plant and machinery where necessary. It is quite comforting to learn the directors' decision that no goodwill can attach to a business producing the miserable results that this one did, and if further evidence of the gross over-capitalisation of the concern were needed, which it is not, it would be found in the necessity of writing down the book value of the actual tangible property. The advisory committee appointed at the meeting of the shareholders held in January last has worked in co-operation with the directors, so we are told, and has rendered useful services to the company, but we do not gather that any statement by them is to be issued to the shareholders. Happily for all concerned, the reduction in capital has coincided with a sensible improvement in business, and from the latest statement of accounts, covering the 12 months to June 30 last, it can be gleaned that, after providing for depreciation of property, plant, and machinery, and all other charges except directors' remuneration, the trading resulted in a profit of £12,070. This is an improvement of £7,298 compared with the previous year, but there is still the heavy charge of £4,873 for interest on debenture stock and £2,942 for directors' salaries and commission. This means that only £4,254 is available for division, and after paying a dividend of 2½ per cent. on the reduced capital the directors propose to add £2,000 to reserve and to carry forward £473.

The complete capital of the company now consists of £75,000 in shares and £114,000 in first mortgage debenture stock being part of £140,000 authorised and bearing interest at 4½ per cent. On the other side the property account, after writing off £1,822 for depreciation, appears at £60,068, a very small sum which leads to a tolerably good position so far as general finances are concerned. Only £8,503 is due to sundry creditors, and sundry debtors, bills receivable, &c., alone amount to £34,895. Cash in hand and in bank comes to £37,640, and besides debenture stock purchased at cost to the amount of £15,047 the company has £10,000 invested in the Halifax Corporation Loan. Stock-in-trade is entered at £40,621, and we need only express the hope that the better display made for the past year will be steadily improved upon in future.

SHEEPBRIDGE COAL AND IRON CO., LIMITED.

This company's experience during the financial year which ended on June 30 was a highly gratifying one, and shareholders again have their dividend increased by 2½ per cent. No profit and loss account is issued, but the nett profit for the period is returned at £107,053, being an increase of £26,794 over the previous twelve months. The balance brought forward was not quite so large, but it was good enough at £14,082, and raises the disposable credit to £121,135 compared with £95,789 in 1905-6 and £69,309 in the year before that. Interim dividends already paid have absorbed £35,853, and the directors now make up the distribution on the ordinary and both classes of preference shares to 12½ per cent., being 2½ per cent. more, and goes against 7½ per cent. in 1904-5. This time twice as much at £20,000 is retained from revenue towards the cost of new collieries, which involves a reduction to £11,502 in the sum carried forward. It was hardly necessary for the directors to tell us that the prices of coal have advanced during the year. We know that to our cost, and if no material reduction takes place the company ought to do still better in the current period, especially if the demand for pig and bar iron keeps up, and the increased values are maintained. On the other hand, it may be noted that the cost of raw material has been considerably higher, and we are told that the workmen have received substantial advances in wages. The Newstead Colliery, in which the company holds one-half the shares, is said to have yielded a satisfactory result, and the development of the Dinnington Main Colliery has progressed rapidly. A large output is now being obtained, and is yielding satisfactory profit. With regard to the colliery at Maltby previously referred to, the line of the South Yorkshire Joint Lines Railway has been laid as far as the colliery, a portion of the sidings from the railway to the side of the pits has been completed, and the preparations for sinking have made good progress. The company formed for the working of this Maltby Colliery has been registered, the capital, as intimated a year ago, being £350,000, and of this a large proportion has been subscribed. Another step taken by the directors is the formation of a company in connection with the Power Gas Corporation to undertake the recovery of the bye products from the slack produced at the Langwith Colliery, and to effect economies in its working. The good point about all this further enterprise is that a fair proportion of the necessary expenditure is being provided from current revenue. Including the £20,000 set aside from last year's profits, the reserve fund for development of new collieries amounts to £70,000, besides which the general reserve stands at £80,000. The collieries, freehold properties, and other investments have a balance-sheet value of £778,908, and £25,000 has been paid on account of the interest in the Maltby Main Colliery. Sum due by debtors is £85,753, against £95,848, owing to sundry creditors and for royalties, railway tolls and wages, stocks of various kinds are worth £50,842, cash is £21,559, and loans and interest £86,559. This means a comfortable position all round, and while trade remains so good the company will probably have no difficulty in finding a ready market for its products.

American Business Notes.

New York bank averages for the week ended September 14 were suggestive of a sharp contraction in lending facilities. Nett deposits are down no less than £2,320,000, and although the loan average is up by £80,000, it is none the less true that the banks must be contracting credit in some directions, for the coin and greenback averages are together down only £173,000, specie being less by £282,000 and U.S. notes up by £109,200. Owing, however, to the decline in the liabilities on deposits the surplus reserve is up £407,200 to a total of £1,881,400, which compares with £707,200 a year back. What, then, are the banks doing? They are apparently curtailing facilities to the copper hoarding gang and to speculatve builders of all kinds. This action of theirs is probably enough a measure of necessity as much as of foresight, but it none the less reveals a belief that industrial reaction has set in. If credit is no longer bestowed upon all and sundry, the speculative railroad builder must hold his hand as well as the builder of "sky-scraper" dwellings, the gambler in "industrial expansions," and the over-eager creator of consumers' markets.

In the circumstances it is curious to note how the dazed gamblers seize pretexts for lifting prices. They have discovered one in the disappearance of Mr. H. H. Rogers from the scene of his many campaigns of plunder. This notorious player with loaded dice is now admittedly incapacitated from what is called business through apoplexy, and will in all probability now vegetate into his grave as lightly regarded as the meanest of his victims, and his concealed impotence is now said to have been the sole cause of the copper slump. He has been at the head both of the Standard Oil Trust and of the Copper Ali Baba's band, and when it became public that he would never again command in a raid or organise a burglary on Wall Street prices were put up. "We know the worst now," the "kerb" mob said, and a great show of buying, or buying back, was made. The chain of reasoning appears to have missing links, but what does that matter. "Rogers is gone, and all will now be bullish" does as well as any other catch phrase. Let him go in peace; his going or staying would now make no difference, and Wall Street must live out its agony.

Perhaps the copper story illustrates best of all what is going on. For years past the demand for copper has been maintained at an unwholesome magnitude by the energies of the gambler in "improvements" and "developments." Companies without number have been formed throughout the States to provide electricity for the use of the community—street railways, power centres, lighting and heat installations—all have been thrust upon the people, often without leave asked. The result has been an abnormal and wholly excessive demand for copper, not only in the U.S., but here, all over Europe, in South America, in Africa, and even in Asia. At home we have been experiencing the reaction for some time past, but in the U.S. it would appear to have struck the gamblers with almost dramatic swiftness. All at once the demand for copper fell off, and as the producers have been this long while back putting an excessive supply of the metal on the market, they became immediately embarrassed by the stocks they were compelled to accumulate and carry. Then the banks became so alarmed as to have decided to accept no more copper as security for advances. No sooner was this stage reached than distress sales became the fashion, and the price of the metal crumbled away as if it had no bottom. What stocks the Standard Oil potentates may have been carrying we have as yet no means of knowing, but we have long held that they have systematically over-stimulated production, and our hope now is that they may be ruined by the consequences of their berserker policy.

"They are too wealthy for that," we are always told, but are none so sure. The wealth of the Rothschilds might easily be consumed by copper if the effort to at one and the same time maintain a fictitious demand and an excessive supply continued long enough. And the Standard Oilers are not yet as rich as the Rothschilds, nor have they so many holds over the wealth-producing capacity of civilised and semi-civilised peoples. It must never be forgotten that the entire copper conspiracy has been an affair of credit, of Standard Oil banking. Demand has been created by the full use of credit. Credit was utilised to pay for the orders given, and in many instances credit kept alive production at the mines. The process has been at work in the United Kingdom before our eyes for years. A producing company must have work or else its excessive capitalisation will soon overwhelm it. To get work it creates other companies to give it orders and accepts payment in paper for the goods supplied, or as much of them as it cannot get cash for—witness the balance-sheets of our electric manufacturing companies. To carry this paper, the manufacturing company has in its turn to resort to credit, and ultimately the mine sells at least part of its output on the same terms. All goes seeming well until the credit prop breaks down, or is withdrawn, when ruin, swift, irretrievable, overtakes the whole elaborate and, till yesterday, impregnable looking structure.

In the United States this ruin is overtaking the copper speculators now, and the devastation will not stop at copper. All the world-confounding expansion of recent years in the iron and steel industries of the Union has equally been an affair of credit. Railroads have spent without stint and borrowed the money to pay, not an industry exists, unless possibly those controlled by the Beef Trust—in any sense the most brutish of all "combines"—whose great and unexampled prosperity has not been more or less—generally more—an affair of credit, and any curtailment in the supply of this moral electricity to one group of users immediately affects the whole field. It is for this reason mainly that we regard "the disastrous break" in copper as herald of world-wide credit calamities, of such a subsidence of feverish development in the United States as will leave traces on the life and social development of the country for many a year to come.

In all probability the effect of the gamblers' and forestallers' defeat in the region of the metallic industries will be aggravated this winter by the shortness of grain crops in most parts of the northern hemisphere. Russia is said to have a "surplus," and possibly her corn may, as usual, be exported though her working population should starve, but North America, England, France, Germany, Austria-Hungary and the countries of the lower Danube all have harvests unusually poor, light in grain, nor is India very well off. It is computed that there will not be enough wheat to go round by 9,200,000 quarters. It would be a mistake to put much faith in this estimate yet, and it is possible that the southern hemisphere may come to our rescue with surpluses from Australia and Argentina, but on the most hopeful basis there will probably be some deficiency. Already bread is dearer, and the prospect for the poor the reverse of cheerful. But hard as the lot of the lower ranks of the workers may be, that of the credit slave promises to be harder. For a time at least the very dearness of cereals will suck away banking credit from the channels in which it has been flowing so exuberantly, and if the deficiency of harvests should reach acute proportions, or should the quality of the grain forbid remunerative sales by farmers something very like a credit blight might occur over large areas hitherto inundated by this exhausting fertiliser. What is this but another way of repeating the truism the world of finance is so reluctant to accept, that we are as yet only on the threshold of the reaction so many assure us every day and every week to be now at an end." Heartily do we wish it were, good reader, but alas! it cannot be, and what we witness is but an occasional pause—a sort of back-water swirl in the onrushing stream.

Last year's cotton crop in the United States is now put at 13,550,760 bales, of which only 276,844 bales remained unsold at the end of the cotton year—September 1. Of the total 8,527,228 bales were exported and 5,195,750 bales consumed by spinners within the Union. The crop was almost identical in bulk with that of 1904-5, but 2,231,000 bales larger than that of 1905-6. Mills in the Southern States now take nearly as much of the crops as those in the northern. Although last year's crop has been nearly all disposed of, the available supply of old cotton at the end of August was about 1,355,844 bales or a greater bulk than was ever before carried forward from one season to another, the stock brought in at the beginning of the year having been 893,526 bales. It is computed that the world's consumption of cotton in the past season was over 17,000,000 bales. Four years ago it was only 14,310,000 bales. Does it follow from these statistics that the United States is falling back as a source of supply for the raw material? Hardly as yet, but the day is not distant when its younger competitors will run it hard. For the 1907-8 season, however, the indications now are that a larger crop than last year's and one of more than average quality will this year be available.

Messrs. Chandler Bros. and Co., of Philadelphia, have been calculating the loss inflicted upon security holders in the American Union by the fall in prices that has occurred since January last. They have based their estimate on securities quoted on the New York, Philadelphia and Boston Stock Exchanges, and arrive at an estimated contraction amounting to no less than £615,000,000, which is less than we should have thought. Of this total £510,000,000 or rather more has fallen in New York, but the list of stocks is obviously incomplete. As it stands, however, the sum is formidable enough, and must signify no small measure of embarrassment to credit holders of all degrees and classes.

The French Westinghouse Company, another dependent of the American Westinghouse Company, has been going through the painful process of writing off "water" or waste capital. In virtue of this, the ordinary shares have been docked of half their nominal value—become £10 shares instead of £20 or 250 fr. as compared with 500 fr. The preferred shares are also submitted to a change, but their halving seems to be only nominal as holders who on the one hand submit to a reduction of 250 fr. per share on the other receive a new preferred share of 250 fr. Even so the share capital seems to have been shorn of £400,000, and in order to provide for the company's floating debt as well as to secure more working capital, an issue of £400,000 in terminable bonds has been authorised. If we may judge by the balance-sheet of December 31 last, this allowance will be nothing too much, especially if prompt payment be not made for work done by the muncipality of Petersburg.

It is odd that public opinion in the United States should have been startled out of its equanimity by the revelation of Standard Oil profits. The gross assets of the parent Standard Oil company, it was stated in evidence by the company's assistant comptroller, Mr. Rey, have increased from £40,158,000 in 1899 to £74,333,000 in 1906. During the same period the total profits came to £98,063,000, out of which £61,672,000 has been distributed in dividends. This is distinctly a first-class performance of its kind, but it has excited the wrath of the American Press and people, and the papers, among other proofs of upset equilibrium, are now roundly asserting that the great H. H. Rogers is shamming illness in order to escape the witness-box. He may be capable of that for the position of a witness never commended itself to his imperial or berserker mind; but the man is old, and his greatness is departing, and copper must have been a bother to him for years, so that apoplexy seems a reasonable explanation of his seclusion. His friend

Mark Twain might tell us the truth about him. Meantime, we are glad to see that distress has obliged the Standard Oilers Amalgamated Copper Company to reduce its output by 50 per cent., for that should give other producers their opportunity. How much stock of the metal is the Standard Oil gang carrying now? There is talk of a syndicate being formed to lift about 100,000 tons of the metal off the market. Is there three times as much in stock, hidden away by the people who thought they had power enough to rule the world, and make it spin to order? We cannot say, but the sensations to come promise to exceed this of Standard Oil profits, even as a thunderbolt out-dazzles a cracker.

Messrs. J. P. Morgan and Co. are said to have lent £4,000,000 on Wall Street for six months at 6 per cent. per annum. This does not exactly imply cheap money there, although day-to-day loans have been kicking about as with us at 2 per cent. or little more. Is the cheapness of hand-to-hand money the product of Mr. Cortelyou's energy in making deposits of Government cash with the banks? Partly that, perhaps, but it seems to be mostly the outcome of dread. And where is the Treasury money? There is no sign of it yet in the deposit averages of the New York banks. Nor is there evidence of loose wealth in the fate of the Union Pacific's 4 per cent. convertible bond issue. Only £1,000,000 has been sold to the public out of the £15,000,000 offered. The syndicate has had to take all the rest, and the holding of £14,000,000 on time loans will not be exactly cheap and easy at present.

Particulars contained in the report of its president, Mr. Daniel Guggenheim, let us see something of the fine business possessed by the American Smelting and Refining Company. It was organised in 1899, and has made increased profits every year since it started. For 1900 the profit was rather less than £400,000, and for the year ended April 30 last it was £2,300,000. Not a single year has passed that did not show an increase. The share capital is now £20,000,000, half in preferred and half in common shares, which get regular dividends of 7 per cent. per annum. With such profits as it now makes the controllers might pay more, but they prefer to pile up a surplus and to meet out of revenue all manner of charges usually debited to capital. Last year, for example, £406,300 spent on "ordinary repairs, betterments, improvements, and new construction" was taken from current revenue, no addition having been made to the valuation of the property. And after paying away £1,400,000 in dividends there was still nearly £600,000 left to be carried to the accumulated surplus, raising it to £2,679,400. Over and above the company has accumulated a "profit-sharing" fund of £108,000 odd, out of which, in part at least, a pension fund has been formed on a most modest scale. At present it amounts to but £35,200. The company, it should be added, is not quite what its name implies, but a good deal more, since it owns mines in various parts of the Continent, and is ever ready to buy up promising claims in new fields. The Guggenheims, for instance, are pretty deeply involved in the new silver mines of Ontario. Some of these acquisitions appear to have been turned over at the suitable moment to the subordinate "American Smelters' Securities Company," whose share capital is mostly the property of the Smelting and Refining Company. A tight little thing in monopolies for family aggrandisement this.

In a year which was admittedly marked by conditions of general prosperity in the two States traversed by its system, the Denver and Rio Grande Railroad Company was only able to add $1,723,000 to its gross income at $21,409,000, and as most of this disappeared in working expenses the improvement in nett revenue from operations was no more than $575,0000. With interest and dividends received the surplus came to $8,400,000 or $556,000 more, but interest and fixed charges were heavier, and after paying two dividends of 2½ per cent. each on the preferred stock and setting aside another $120,000 to renewal fund $1,770,000 was left against $1,307,000. Of this $700,000 is appropriated for betterments and $825,000 for new equipment compared with $150,000 and $1,000,000 respectively, leaving a slightly increased balance of $245,000 to be carried forward. The company hopes that, if the favourable conditions of contented labour and good prices for the base metals are fairly well maintained, the current year should yield results at least equally as good as those covered by the report. So far as the last-named influence is concerned, it looks as if the hopes were doomed to disappointment even before the report was written. A comparison is made between the position of the company now and at the end of 1896, when dividends on the preferred shares were resumed with distributions of 2 per cent. after an interval of three years. During that time the mileage has gone up from 2,177 to 2,552 miles, and the capacity of the freight cars from 166,712 to 425,765 tons. The preferred capital stock in the same period was increased by $22,111,400, most of which was due to the acquisition of the Rio Grande Western Railway in 1901, and $19,680,900 was added to the funded debt or a total increase of $41,792,300, irrespective of over $12,000,000 spent on improvments and additions out of income. As a result of these expansions gross earnings have risen from $10,009,000 to $21,409,000, but nett earnings have only gone up from $4,160,000 to $8,157,000, and the proportion to gross receipts is now only 33.43 per cent. against 41.56 per cent.

Passing Events.

It is impossible to avoid anxiety regarding the attitude of railway boards towards the Amalgamated Society of Railway Servants, led so ably by Mr. Richard Bell, M.P. They mostly decline to have any dealings with the representatives of that body on the ground that it is "alien," something outside the particular staff of each company. "We are always accessible to the representatives of our own men," they keep repeating, "but can have nothing to do with an organisation of which we know nothing, whose status we can in no way recognise." Intelligible though this position may seem to the railway director, it is none the less unwise as tactics. By holding off in this way from the Amalgamated Society, the railway boards are playing into the hands of Mr. Bell and his supporters, and also into the hands of "bears" of Home railway stocks. If their confidence that all is as it should be with their staffs is well placed, railway boards would lose nothing in dignity and gain much in moral support if they frankly met the elected delegates of the general body of employees, and frankly thrashed out the alleged grievances. Their present obstinate aloofness tends to encourage discontent, and may end in bringing about that general strike which it should be the earnest endeavour of everybody concerned to avert. We can appreciate the mental attitude of railway directors; it is the good, honest, old Tory attitude, untenable in these modern days except by closing the eyes to facts. The Amalgamated Society is a fact, expressive of the modern tendency of labour to combine against capital—organised capital be it noted—and the fact cannot be obliterated by ignoring it. Long since the board of the North-Eastern Railway recognised the truth, the drift and meaning of events, and neither the company nor its staff has suffered from the frank acceptance of the inevitable. Why should other railway boards be less prudent, less wise in their day? Should they adhere to the position they have hitherto taken up there will be trouble, and, in the end, they will most likely have to accept much more unpalatable facts than those they now refuse to face like men.

We thought it would come to that. When a few men start an agitation against a railway board in this country it almost invariably proves to be the case that a substitution of directors is aimed at. At a rule, too, the leaders of the agitation possess little pecuniary interest in the company whose directors are attacked. They are either quite recent stockholders in a small way

or they are "bears" of its stocks. We know nothing of the Scotch raiders upon the board of the Caledonian. They may be, as their leader Mr. Andrew Macdonald says, the most patriotic and disinterested of men, full of zeal for reform, and possessed of a deep stake in the fortunes of the company. We speak merely as past experience guides, and events have already proved that whatever their motives may be the end aimed at by these men is what it always has been—a supplanting of the existing board by "new blood." In the present case this change is sought to be accomplished at the very moment when the existing board is doing its best to carry out the changes clamoured for by shareholders and the Scotch Press; they are busy working out a scheme for economy-insuring harmony between the different companies. That is a difficult and delicate piece of work, as the chairman of the company indicated at the meeting on Tuesday. To be enduring there must be no guess work or slovenliness about the compact, and for months past the staffs of the Caledonian and North British companies have been busy with investigations, upon whose results a durable plan of interworking in peace may be founded, to the great gain of stockholders and without loss to the public. It is at such a juncture that the consuming and overturning zeal of the reformer flames out in subversive fervour, and the fact is not wholly reassuring.

Lord St. Aldwyn, better known as Sir Michael Hicks-Beach, was never distinguished for his optimism, but he seems to have gone to the extreme of pessimism in his speech to the shareholders of the Bank of Africa on Wednesday. Everything is for the worst in the that worst possible of worlds — South Africa—at present. "If the depression continues," failures will multiply, and from the way he talked the shareholders might almost conclude that the bank itself was in danger. But it has now two ex-Chancellors of the Exchequer on its board, and if their financial experience and skill cannot save it, surely no bank in Africa could be considered safe. And we must not despair, for his Lordship did see traces of better things to come, if only the depression were removed. His description of the origin of this depression was, as we should expect from so able a man, lucid, and not without suggestions of hope. All dates from the war that his Lordship was taught, when Chanceller of the Exchequer, to deem an affair of £10,000,000 and a few parades with bands and banners, cases of champagne and honours lists. Trade had increased largely during the war through the "pouring of millions of our money" into the country, and the people thereof thought prosperity would continue when the war was over. They forgot that most of the money poured in with our armies was withdrawn again by army contractors and other war heroes. So little of it remained, that stagnation seized upon the country, and has held it ever since as in a vice, to the great derangement of banking profit, among other untoward things. But let us be cheerful still. The people are making more butter and needing less credit to provide imports.

Considerable amusement has been excited in the minds of those who know anything of War Office traditions and methods by the latest exhibition of Mr. Haldane's most innocently virtuous zeal. He discovered, it seems, that the British horseshoe-making industry is dominated by a "ring," and to break that ring gave an order for quite a lot of these necessary articles to an American firm. He did not himself do this, of course, but the permanent officials suggested the step, and the bustling, loquacious Mr. Haldane promptly did as suggested, terms of specification being altered to render the step easy. Whereupon great expenditure of wrath on the part of the tariffites and the "all British" makers of horseshoes. The *Morning Post* has been as busy as a squirrel in autumn with the affair, and we are gleefully assured from many quarters that it has "damaged the Government immensely, don't you know." Perhaps that does not interest us very much, but what we do feel a little stirred by is the curious absence of any clear denial from our shoemakers of the existence of a "ring." Probably no denial is possible; probably, also, the ring has been temporarily sent to the right-about because it did not manage the baksheesh part of the business with sufficient liberality or adroitness. For our spending departments are often only in this way amenable to reason, and there is about as much of "favouring the foreigner" in Mr. Haldane's horseshoe deal as in herring fishing.

The litigation caused by the refusal of British fire offices to recognise claims arising out of the Jamaica disaster last January has reached another stage. Apparently the companies some time ago abandoned their original defence that the "earthquake clause" in their policies relieved them of all liability. Instead they have put forward the plea that the assured cannot recover because they failed to comply with the conditions of the contract, and did not give particulars of the cause of the fire. In this plea the companies were supported by Mr. Justice Vickers, and his decision has been so far upheld by the Supreme Court in Kingston that the plaintiffs must prove that their buildings were destroyed by fire. On the other hand, however, the companies are obliged to prove that the fire was a result of the earthquake, so that the honours do not rest with them altogether. A strong combination of policy-holders has been formed, and a large sum subscribed to fight the companies to the end. Whatever may be the result, the prestige of British offices appears to be irretrievably ruined, and so great is the resentment against them that an invitation has been sent to leading American companies to enter into competition.

The London and County Banking Company is making an interesting departure. At the end of last week it announced the acquisition of the business of Messrs. Frederick Burt and Co., foreign bankers, as from October 1 next, which will be carried on as the Foreign Exchange branch of the great Lombard Street institution. We believe the only other big London bank that has entered this field is the London City and Midland, and it is probable that profitable opportunities for business have been unduly neglected. Most of this business has gone into the hands of the large foreign banks with branches in London, and great efforts will be necessary to recover any considerable proportion of it. Competition in this particular branch is exceedingly keen, but the London and County, with its magnificent connection, should not find it difficult to get a share of the trade.

The liquidator of the Manchester District Motor Omnibus Company, the first to completely break down, has forwarded a very interesting circular to the shareholders. We dealt with the situation to date when the decision was come to to wind up, but the liquidator, Mr. Ernest J. Husey, adds much to our knowledge. Ever since he assumed his position he has been engaged in compromising contracts engaged in by the directors and others. First there was the contract for the 'buses themselves to be settled and arranged, then the tyres and the supply of petrol, to say nothing of an agreement for examination, and another with the managing director. Many of these contracts were for long periods, and some matters are still outstanding because one of the shareholders has strenuously opposed the steps taken, so that no comment on the actual compromises can be made. The liquidator, however, points out that, except for the opposition, he would have had all the business closed up by now, and probably been in a position to return 1s. 6d. per share to the unfortunate shareholders, whereas a call may become necessary. At the same time, it must be pointed out that the action of the shareholders mentioned was endorsed by many of the others.

One of the leading German newspapers paints a most gloomy picture of the future of the motor-car industry. The outlook for the public vehicle would appear to be particularly distressing, and there is doubtless all too much truth in the conclusions arrived at. The cost of maintaining the huge and cumbersome vehicles which fly about the street—when they are not broken down—is simply enormous, and, while the case of the Berlin General Omnibus Company may

not be quite so disastrous as some of our own companies, its operations have not been crowned with brilliant success. The motor cab industry is no better, many mechanical vehicles having been replaced by horse-cabs, and, so far as private cars are concerned, the market is becoming overstocked. It is all very well to buy one of these costly-equipped cars, but finding the money is a troublesome matter with financial conditions what they are, and our manufacturers may have to slacken pace presently, even if they have not already done so. We ought to be able to pick up a motor-car pretty cheap presently, and motor shares too.

Is the failure to bring about a working agreement among the big soap manufacturers to be followed by a war? It looks very much like it. Despite the admittedly high cost of raw materials, reductions in prices have been recently announced by some of the leading firms, and evidently a stiff struggle for business is taking place in the wholesale trade. But there is to be no reduction in the selling figures for Lever Bros.' soaps, Sunlight and the others. The company has issued a circular to the trade in which it refers to the "mania" for lowering quotations at a time when the market prices for raw materials give no justification for the step. Even now it is declared that a legitimate profit is not left to the soap-maker, and the drop in price is bound to lead to a gradual reduction in purity and quality. So says the Lever circular, possibly with much justification, and as there is no intention to permit these things in connection with Sunlight the price must remain as at present.

A call of 2s. per share, making them 16s. paid, is announced by the secretaries of the Ceylon (Para) Rubber Company, who state that the planted areas by the end of this year will amount to 2,025 acres, of which 991 acres are at Ambadeniya and the remainder at Kiribatgalla and Dela. Extensions at the first-named will then have been carried as far as possible, but at Kiribatgalla there will be still 452 acres of fine land suitable for planting, and it is proposed to continue extensions on a limited scale. The superintendent reports that the rubber planted in 1905 on both divisions continues to grow in a satisfactory manner, and also speaks favourably of the 1906 clearings.

We regret to learn of the death of Mr. Andrew Gordon, London manager of the Union Bank of Scotland, which took place last Friday night. Mr. Gordon had been in the service of the bank for more than forty years, about half of which were spent in London. For a good part of the time he was assistant to Mr. J. A. Fradgley, and succeeded that gentleman on his retirement in the end of last year. He was at his office during the day in his usual health, and the news of his sudden death from heart failure a few hours after came as a painful shock to his many friends in the City.

Letters to the Editor.

ANOTHER OBJECT-LESSON IN AMERICAN LIFE INSURANCE METHODS.

SIR,—As one who has in the past gone rather fully into the methods of American insurance companies, I think you will be interested in the following facts.

I insured in 1897 with the Mutual Life Insurance Company of New York under a whole-life policy, with a ten-year distribution of profits—no profits during this period in the event of the policy becoming a claim, my age at the time being 40. Certain estimates of what the profits would be were supplied me, and on the showing of these estimates I decided to take the policy out, believing it to be better than could be obtained in any other company.

The ten years' distribution was up last month, and I find the bonus over 40 per cent. less than the estimate of ten years ago, and the actual reversionary bonus equal to only about 24s. per cent. on the sum assured.

Some time ago the Mutual issued a pamphlet called "Facts," which was a reprint of a speech by its present general manager for the United Kingdom, in February last, and in this speech he made the statement that "If your bonuses have been diminished slightly, you still get more from us than you would have got elsewhere," and then later in his speech he says, "The only reason you come to us, and the only reason we come to you, is because we can offer you something more attractive than you can get at home."

When reading the first quotation it naturally made me think some mistake must have been made in the bonus allocated to me by the Mutual, but I am sorry to say, upon application to the Mutual on this point, they simply confirmed the amount offered me. I pointed out that such a statement could not be substantiated, and the reply was that it referred to "general conditions," as well as "bonuses." These general conditions, however, seem to make the result of the Mutual's policy appear only worse than if you look at it from the standpoint of bonuses alone, seeing that as regards insurance cover I have been very much worse off in the Mutual than in a good British office (whose interim bonus would be very much more than the Mutual offer, after waiting ten years for it); and, lastly, the Mutual's surrender value is less at the end of the ten years than that of the British office, who would have given me all the advantages during this time of largely increased cover by the additions in the way of bonuses, and also charged a lower premium. I pointed this out to the Mutual, and was told by its present general manager that he did not propose to carry the matter further by correspondence, but invited me to call and discuss the matter with him, a course I did not choose to adopt.

As regards the second quotation, I certainly was offered something "more attractive than could be got at home" in estimates, but, unfortunately, from my point of view, it has not been realised.

In the late action brought by the Mutual against its former general manager in the United Kingdom, reference was made to a circular issued by the Mutual, which could not be substantiated in this country, and it was afterwards stated that the issue here was a "mistake." In giving his judgment in the action, the judge made the remark that he had no evidence of any "mistake" having been made.

In my opinion, this pamphlet "Facts" must have been issued in "mistake" also, if we are to judge it by the results declared under my policy.

Yours truly,

E. HENDERSON SMITH.

London, N., September 19, 1907.

Critical Index to New Investments.

NORTHERN AMERICAN TRUST CO., LIMITED.

This Dundee company recently issued £250,000 of new shares, bringing the total up to £1,000,000, and now invites applications for £250,000 in 4 per cent. terminable debentures, having a currency of three, four, and five years. The debentures will rank *pari passu* with the existing £750,000 debenture stock, and will be secured on the whole of the investments and funds. Apparently the directors rely on the issue being taken up by those already interested in the company, as they give no particulars beyond stating that the reserve fund, including £68,750 received from premiums, amounts to £348,750, and that they estimate that the nett revenue will be more than three times what is required to pay the debenture interest.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending September 15 was 207,000 poods, equals 3,317 tons.

Baku Russian Petroleum.—Production of crude oil for week ended September 14 was 288,000 poods, equals 4,613 tons.

State of San Paulo 5 per Cent. Exchequer Bonds.—Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents, advising them that they have further encashed £26,600 in respect of the surtax collected for the service of this loan, making a total of £130,750 encashed since August 1.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

We have not heard of anything fresh regarding the Kaffir Circus during our walks round the City this week, or of anything likely to produce a material change in the position of the market in the near future. Every day the report is still the same, of absolutely nothing doing, the public keeping as far off as ever and the professionals more disposed to lighten their books than to add to them. As a matter of fact, whatever interest has been taken in the mining sections during the past week has been in other departments, and we hear of considerable numbers of jobbers leaving the Kaffir Circus and migrating elsewhere in the hope of earning enough for their Sunday dinner. Details of movements need not be referred to, because they rarely exceed the usual minute fraction, and if a few pence were added one day they were almost invariably lost the next. The fact that the Jews were absent from the market on Wednesday helped to accentuate the stagnation, because the foreign bourses would also suffer from this cause. Every now and then a few small orders come along for some of the best dividend-paying mines, but the great majority of shares are frequently neglected for days and even weeks at a time, so that quotations are often purely nominal. The fact is that one can neither buy nor sell in any quantity at the prices daily sent out by dealers, a buyer of even 200 or 300 shares immediately having the price put up against him, while a seller will probably have to take ⅛ or ¼ below current quotations for any stuff he wants to get rid of. This state of affairs may be in large measure responsible for the utter stagnation of business, but that such conditions exist is after all not very surprising. The great Kaffir houses are stuffed to bursting point with great masses of shares, by far the greater proportion of them having been taken at much higher figures than those ruling to-day, and they can neither afford to take more nor afford to sell at existing market values. The result is more or less a deadlock, and the chances of a change are not worth discussing. A few small orders were supposed to have come from the Cape on one or two days, and Paris did nothing to cause any particular disturbance, but the effect of the small buying soon wore off, and on the balance prices are very little altered. Three Kaffir dividends have been declared during the week, the Ferreira Deep announcing the payment of 3s. 6d. per share or the same as a year ago, while the Jumpers Deep distributes 1s., being the first payment since 1904, when 12½ per cent. was paid, and the Crown Deep £1 compared with 22s.

The Land and Finance group was in much the same condition as the Kaffir Circus, and we might have passed by Rhodesians altogether except for the smash up in Tanganyikas. Selling in these commenced quite early in the week, and before it had exhausted itself something like a sovereign had been knocked off the price. We could fill half this week's number if we tried to repeat all the rumours current concerning the undertaking, but may as well refer to a few. For one thing, the company was supposed to have had a row with the Chartered Company, then the report of Mr. Frecheville, who has been examining the property, was declared to be horribly bad, and the provinces were said to be pitching out shares in very large quantities. The truth of the matter probably is, however, that very large call options had been entered into for the end of September account, and that those who had expected to rig the shares before that time found their efforts doomed to failure. This led to heavy realisations by those who had put stock on their books against the options granted, and it was further said that a good many put options had been entered into. This would naturally lead to further selling, and in a way give colour to the story that the forthcoming report will not be exactly brilliant. The Chartered Company has been circulating some official figures of crushing to June 30 last from the new goldfield at Felixburg, and it does the heart good to learn that the Cheer Up mine produced 2,628 ozs. from 2,318 tons, while True Blue managed to get 89 ozs. out of 147 tons. Sunbeam gladdened the miners with 110 ozs. out of 100 tons, but the poor little Orphan could only get 43 ozs. out of 60 tons. Cheer Up is said to be still looking well, which is surely the least that could be expected of it, but if it is capitalised at more than a couple of millions its chances of success may be somewhat jeopardised.

The De Beers and Premier Diamond Companies are still keeping back any official announcement concerning the negotiations going on between the two companies, but we have it on the authority of the *Times* that, subject to details, the basis of an agreement has been established, by which the output of the two undertakings will in future be pooled, and sold in fixed proportions to the syndicate which at present deals with the De Beers production only. The agreement is said to have the approval of the Transvaal Government, which is entitled to 60 per cent. of the profits of the Premier Company, and it may, therefore, not be long before particulars of the deal are made available. It is, perhaps, needless to say that when reports were first current that negotiations were going on between the two companies they were strenuously denied, but we had it on the best authority that something of the kind was proceeding, and in due time expect to find the companies completely amalgamated. On the whole, the market for diamond shares has kept fairly firm, Premiers having been in moderate request, especially the preferred.

West Australian mines did not come prominently to the front, and on the whole the tendency was the wrong way. The usual quarterly dividend of 1s. per share by the Sons of Gwalia did not cause the slightest movement in the shares, but Great Fingalls were a little dull, because the 2s. 6d. quarterly dividend was not accompanied by the 6d. bonus paid last time, and latest development advices show that the lower workings are still in unpayable ore. It was not possible to beat up much enthusiasm in the Broken Hill group, but prices were undoubtedly much steadier than of late, and the market derived some comfort from reports of good development. Among New Zealand mines, Waihi went lower on a cable announcing that a settlement was going on in the upper levels of the Martha Reef, but they soon recovered again, because the trouble is quite unimportant, and will not involve damage of more than £50. No difficulty is expected in keeping the mill running steadily. Deep Lead shares were inclined to ease off when they were mentioned, which was seldom, but Zincs continued to pick up, and are now round about 4s. 3d., whereas only a few weeks ago they were little above 1s.

The Copper share market was again in a somewhat agitated condition, and during the first day or two prices of the metal showed further severe falls, both in America and in London. The declines on Monday took place in face of the fortnightly statistics showing a decrease of almost 1,500 tons in the visible supply, but the opening weakness was followed by a sharp recovery, in which Copper shares naturally participated. A steadier feeling also became noticeable in New York, and it was thought that the latest prices quoted by the Amalgamated company would again bring customers into the market. It has, however, been pointed out that the statistics refer only to stocks in public warehouses in this country and in France, taking no account of those held in private warehouses of the large producers on both sides of the Atlantic and the public stores in other Continental centres. It is believed that a quantity equal to quite four months' consumption is thus accumulated, and in a way we get confirmation of this belief in the report that the companies subsidiary to the Amalgamated have resolved to restrict their outputs by 50 per cent. immediately. This decision was arrived at at a meeting held in New York on Wednesday, the companies represented being the Anaconda, Butte and Boston, Boston and Montana, and the Parrott. During the week Rio Tintos have touched extreme points of 71¼ and 73¾, closing rather flat, and other Copper shares have usually followed this lead. Arizonas were a bad spot, and the market says that selling of pawned stock from the north still continues. Tin shares were generally rather better, the metal having been a very strong market throughout the week.

Among Miscellaneous mines, Siberian things have been miserably flat again, and in the American division Esperanzas eased off on the August profit being heavily lower than that for July. Camp Birds, however, recovered a little on the report given below. Alaska Mexican and United also inclined to pick up, and Indian mining shares were a better market.

New Modderfontein Gold Mining.—The year ended on June 30 last marked an interesting stage in the history of this well-known and important Transvaal gold mining company. At the end of 1906 the first dividend ever declared was announced, one of 5 per cent., and this was followed in the past half-year by a further payment of 3¾ per cent. Needless to say, the reduction from the initial declaration caused some disappointment, and the total return for the year of 8¾ per cent. can hardly be regarded as lavish, even taking the shares at their present price, while for those who paid the enormous figures at one time reached the result must be particularly distressing. During the year the total ore received from the mine was 293,887 tons, of which 54,968 tons were sorted out as waste, leaving 238,919 tons sent to the mill. Including a small amount in the bins at the beginning of the year, the amount crushed was 239,956 tons, which yielded 64,013 fine ounces of gold or an average per ton of 5.335 fine dwts. At the cyanide works a total of 177,944 tons of sand and slimes were treated producing 19,237 fine ozs., and bringing up the total output to 83,250 ozs. or 6.939 fine dwts. per ton, a decrease compared with the previous year of 0.550 dwt. The value of all this gold was £350,139 or £1 9s. 2.203d. per ton, being 2s. 3.074d. per ton under that of the previous year. The total working expenses came to £255,219 or £1 1s. 3.266d. per ton, a decrease in this case of 3s. 5.950d. per ton, leaving the working profit at £94,919. To that has to be added balance brought forward of £52,816 and sundry revenue of £5,597, bringing up the total available income to £153,332. Exchange and commission, donations and profits tax took £8,226 between them, and the two dividends mentioned required £105,000 or about £10,000 more than the actual working profit, so that the reduction in the second dividend was absolutely necessary. The balance carried forward is £40,106. Total capital expenditure for the year was £71,500 after writing off from profits the outlay of £39,674 on mine development, bringing the aggregate to date £682,548, apart, of course, from the ordinary property account of £834,260. The ore developed at the end of the financial year was 337,604 tons in excess of that shown at the end of the previous year, due chiefly to the development of a greater tonnage than mined and to the inclusion of all shaft pillars. There are now 1,789,155 tons of ore developed of an average value of 5.67 dwts. per ton, and it is interesting to note that whereas in the last report 6 dwts. was fixed as the limit of payability the figure is now taken at only 4.86 dwts. This reduction has been largely brought about by the increased extraction and reduction in working costs, which the general manager considers will not exceed an average of 21s. per ton milled during the ensuing year. During November and January next the company will lose 1,250 Chinkees owing to repatriations, but no efforts will be spared to replace these labourers by native "boys."

Jupiter.—In the quarterly report of this company it is stated that all underground work at the Catlin shaft was suspended at the end of May. With a view to economy in capital outlay and working costs, the directors have made arrangements with the Simmer Deep, Limited, for the erection of a joint 300-stamp milling plant and necessary cyanide works, of which 100 stamps are for the use of this property. The cost of the plant will be borne in the proportion of Jupiter one-third and Simmer Deep two-thirds. The works have been designed and will be laid out so as to permit of extensions being made as circumstances warrant. Work has already commenced, and it is estimated that the plant will be ready to start crushing operations in September 1908. Capital expenditure, including development and proportion of cost of joint reduction plant, is put at £34,374.

Voorspoed Diamond.—We do not know that many people here are interested in this South African diamond thing with the almost unpronounceable name, but details of progress made on the property may be worth giving. According to a cable just received plans for the new plant are now ready. There has been an unavoidable delay, chiefly owing to the carrying out of important tests on the property, the result of which has necessitated alterations of original plans. The gear designed comprises complete double treatment plant of a minimum capacity of 4,000 loads per day or 8,000, counting the day and night shifts, and it is confidently anticipated that the plant will equal in economy and efficiency anything existing. We are sure we hope so, too. Orders have been placed for steel structural work, and also for a considerable portion of the machinery, part of which will be delivered in two months, and the whole within eight months. The dam wall at the water rights, which will impound about 200 million gallons, is nearly completed.

Camp Bird.—Shareholders of this company do not need to be reminded that in March, 1906, the stamp mill was practically destroyed by a snow-slide and fire, and it was not until November 1 last that the new mill was completed and ready for operations. Therefore, although the annual report covers the twelve months to April 30 last, the actual working period was only six months. In these circumstances it is natural that the results displayed should show a heavy falling off compared with the previous year. The new mill of 60 stamps was in operation for about 172 days, and in this time crushed 39,476 tons wet yielding a total value of $1,339,864, practically the entire contents of the ore being gold, other metals, such as silver, lead and copper, being in small proportions. Proceeds of bullion concentrates and other revenue items came to £276,066 or £7 4s. 2.1d. per ton treated, and the total working costs, including depreciation on plant and machinery, were £96,384, leaving the profit on operations at £179,682. Of this £38,592 was payable to Mr. T. F. Walsh, and after making a few other adjustments, including the provision for London office expenses and bonus to general manager and staff, the nett available balance is £139,030. A previous over-estimate of losses in connection with the snow-slide and fire enables the directors to add £3,270 to this figure, increasing it to £142,300, but it is necessary to provide £29,310 against cost of shares in Imogene Basin Gold Mines Company now written down, and £3,781 for depreciation on Consols. All these outlays made, and the balance over is £109,208, besides which the heavy amount of £115,621 was brought forward, bringing up the total to £224,829. Out of that the shareholders have had £102,500 in dividends, representing aggregate payments of 2s. 6d. per share or 12½ per cent., the directors' remuneration is £1,092 and £10,000 is reserved for income-tax, leaving £111,237, which it is proposed to carry forward. The development of the mine seems to have proceeded satisfactorily, and the reports of the engineer and general managers show that after treating the past year's tonnage the reserves on April 30 were 112,000 wet tons broken in the stopes and 89,000 wet tons blocked out, or 201,000 tons of wet ore in all, which it is estimated will yield a profit of approximately £717,000. Future developments, we are told, will be carried on as vigorously as possible, especially in the upper levels of the mine, but the speed at which the work will be carried out will depend largely upon the labour question. At present the outlook is said to be somewhat better than during last winter. Up to the close of the year the sum of £30,310 was expended on account of the Imogene Gold Mines just mentioned, this company receiving 574,230 shares of one dollar each. The company holds good titles to approximately 500 acres of territory adjacent to the Camp Bird, and while considerable development work has been performed without disclosing payable ore, the property cannot be considered more than partially prospected, and the development to date has not yet disproved the value of the property. Nevertheless the directors think it well to apply a large sum towards writing down the company's holding, which now appears at the nominal amount of £1,000. Expenditure during the year on account of mill reconstruction, &c., was £32,027, raising the total cost of the property and its equipment to £822,338, but the company's finances are in a very sound condition, £55,000 of Consols being valued at 85, while the cash balances exceed £90,500.

Taquah and Abosso.—On August 6 last the shareholders of this West African company were informed that the trial runs of the new 50-head mill commenced on the 3rd of that month. These have been continued throughout the period, and we are glad to note that the mill and power plant have been proved to work most satisfactorily. During the 134 hours the mill ran it crushed 1,430 tons of unsorted development stone taken from the dump. A delay in completing the water service prevented a longer run. No general clean-up has been made owing to a large proportion of the gold having been absorbed by the new plates, but 624 ozs. valued at £2,557 were taken from the top plates. The general manager cables that the water service is now completed, that the mill is running 15 hours per day, and that he expects to maintain this rate throughout the month. Several minor sections of the surface plant are in course of completion, and until they are finished full time cannot be worked.

No. 2 South Great Eastern Gold.—During the half-year ended July 4 this company's output was 22,070 tons for a yield of 6,087 ozs. of smelted gold, the total value of the products, including proceeds from residues sold, being £11,851. The mining cost per ton was £1 1s. 4.77d., an increase on previous figures doubtless due to the decrease in tonnage. This is easily explained, as the surface expenses are in many instances the same as when the company had a greater number of men at the mine. Unfortunately the quality of the stone became very poor, and the directors very reluctantly decided that it was necessary to reduce the stampers and crush a much less quantity of ore. One shift of 80 head was discontinued, but as a profit could not be made with two shifts of 80 head the directors reduced the crushing to only 60 head and one shift. Many parts of the mine are said to look exceedingly well, and though the strata was all that could be desired the quality of stone did not improve. Steps are now being taken to find the lode worked in the South Glanmore and Monkland property. Including interest the total revenue for the six months was £21,941, but the expenditure under all heads was £25,134, meaning a loss on operations of £3,193, which has the effect of reducing the credit brought in from £40,105 to £36,912. Therefore shareholders who used to get such fine dividends on the tiny capital of £2,400 must this time go empty away, as most of the big credit is represented by machinery, plant, and buildings. We hope prosperity will one day come back to the company, because it is a fine example of the manner in which a mining enterprise should really be conducted; but the original shareholders, if such still exist, have not much cause for complaint, as the dividend disbursements to date have been £547,662, meaning that the capital has been received back 224 times.

Spassky Copper Mine.—Work on this company's property appears to be making steady progress. Timbering of the main shaft in the Yuspenssky mine and preparations for the erection of the new machinery have been going forward, the boilers and hoist are in position, pumps are being lowered, and it was expected that steam connection would be made, and the new plant started by July 13 last. These facts are extracted from the progress report, dated July 5. At No. 3 shaft supplementary hoisting arrangements have been made, which will greatly facilitate the delivery of the ore. Most of the ore stoped has been left in the mine pending the completion of the main hoist, but 1,397 tons were raised and 2,710 tons shipped to the smelting works from stocks. The ore produced has maintained an average of from 18 per cent. to 20 per cent. copper, and the 40 per cent. ore found in the hanging wall side of the Annensky chute has been mixed with the lower grade stuff won from the "lateral," which has been run to block out the main ore body. Labour is plentiful enough, despite some trouble with a batch of 500 men, the stocks of coal and timber have been considerably added to, and good progress made with the surface works. The railway between the copper works and the coal mine is rapidly approaching completion, and rails are laid to within two miles of the former. Connection with the lime quarries was made on August 1 and much other useful work appears to have been accomplished. The Government engineer has tested and passed the three erected locomotives.

NEXT WEEK'S MEETINGS.

Monday, September 23.

Ibbotson Bros. and Co.—Sheffield, 11 30 a.m
Sheepbridge Coal and Iron.—Sheffield, 3 p.m.

Tuesday, September 24

Anglo-Sicilian Sulphur.—Winchester House, 2.30 p.m.
Camp Bird.—Salisbury House, noon.
Dick, Kerr and Co.—Cannon Street Hotel, noon.
G. M. Callender and Co.—Westminster Palace Hotel, 2 p.m
Ottoman Railway (Smyrna to Aidin).—Winchester House, noon.
Staveley Coal and Iron.—Sheffield, 2 p.m

Wednesday, September 25

British Gas Light.—11, George Yard, E.C., noon.
British Transvaal Mines.—Winchester House, noon.
Carreras.—Winchester House, 11.30 a.m.
Glasgow Harbour Tunnel.—Glasgow, noon.
Highland Railway.—Inverness, 1 p.m.
Palmers Shipbuilding and Iron Company.—Newcastle-on-Tyne, 11.45 a.m.
Tennent Brothers.—Sheffield, 12.30 p.m.

Thursday, September 26.

Bexhill Water and Gas.—Cannon Street Hotel, noon.
Buxton Lime Firms.—Buxton, 1 15 p.m
Denver United Breweries.—6, Throgmerton Avenue, E.C., 2 45 p.m
Leigh Mills.—Coventry, 12.30 p.m.
Martinez, Gassiot and Company.—Cannon Street Hotel, noon.
North British Railway.—Edinburgh, 12.30 p.m.
Tongaat Sugar.—Liverpool, noon.
Ulster Bank.—Belfast, noon.

Friday, September 27.

Broomhill Collieries.—Newcastle-on-Tyne, 1 p.m.
Glasgow and South Africa Co.—Glasgow, 1 p.m.
Lanarkshire and Ayrshire Railway.—Glasgow, 2.30 p.m.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended September 14, $3,238, decrease $424; aggregate from July 1, $45,992.

Argentine North Eastern.—Traffic receipts for week ended August 16, £3,256, increase £370; aggregate from July 1, £20,078, decrease £208.

Assam Bengal.—Traffic receipts for week ended August 17, Rs. 91,28½, increase Rs. 8,489; aggregate from July 1, Rs. 6,14,366, increase Rs. 1,05,935.

Bilbao River and Cantabrian.—Traffic returns for August £10,501, increase £3,933; aggregate from January 1, £75,633, decrease £6,149.

Canadian Northern Railway.—Traffic receipts for week ended Sept. 14, $187,900, increase $39,800; total from July 1, $2,095,400, increase $604,400.

Egyptian Delta.—Traffic receipts for week ended August 31, £4,643, increase £339; aggregate from January 1, £103,442, increase £15,939.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 17, Rs. 22,581, increase Rs. 3,972; aggregate from July 1, Rs. 1,57,383, increase Rs. 11,761.

Midland Uruguay.—Receipts for month of August, £5,958, increase £832; aggregate from July 1, £11,022, increase £1,007.

North Western of Uruguay.—Traffic receipts for August, $22,000, increase $3,503; aggregate from July 1, $42,800, decrease $904.

Quebec Central Railway.—Traffic receipts for the 2nd week of September, $21,645, increase $3,601; aggregate from January 1, $710,988, increase $53,082.

Quebec and Lake St. John.—Traffic receipts for August $68,753, increase $4,833; aggregate $405,615, increase $49,546.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 17, Rs. 20,231, increase Rs. 3,266; aggregate from July 1, Rs. 1,40,885, increase Rs. 27,076.

Uruguay Northern.—Gross receipts for month of June, £2,221, increase £642; aggregate from July 1, £22,618, increase £3,445.

White Pass and Yukon Railway.—Traffic receipts for week ended September 7, amounted to $70,604.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending September 14, £1,378, increase £66; aggregate from July 1, £14,385, increase £1,212.

Cockermouth and Keswick Railway.—Receipts for week ending September 14, £1,014, increase £33; aggregate from July 1, £12,145, increase £48.

East London Railway.—Traffic receipts for June, £2,683, decrease £391.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending September 14, £482, increase £112; aggregate from July 1, £4,534, increase £1,155.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending September 11, £1,024, decrease £46; aggregate from January 1, £29,777, decrease £1,265.

Blessington and Poulaphouca.—Traffic receipts for week ending September 11, £35, increase £7; aggregate from July 1, £355, decrease £50.

Bristol Tramways and Carriage.—Traffic receipts for week ending September 13, £5,542, decrease £38; aggregate from July 1, £60,206, decrease £1,454.

British Electric Traction.—Receipts of all the Associated Companies for the week ending September 13, £31,355; 424½ miles.

Burnley Corporation.—Traffic receipts for week ending September 14, £1,554, increase £359; aggregate from July 1, £14,625, increase £767.

Dublin and Blessington.—Traffic receipts for week ending September 11, £166, increase £6; aggregate from July 1, £1,883, decrease £104.

Dublin and Lucan.—Traffic receipts for week ending September 13, £160, increase £17; aggregate from July 1, £1,735, increase £126.

Dublin United.—Traffic receipts for week ending September 13, £7,381, increase £2,014; aggregate from July 1, £82,142, increase £18,465.

Edinburgh and District.—Traffic receipts for week ending September 14, £5,038, increase £142; aggregate from January 1, 1907, £184,524, increase £1,223.

Hastings and District.—Traffic receipts for week ending September 12, £1,680.

Isle of Thanet.—Traffic receipts for week ending September 14, £1,360, increase £68; aggregate from October 1, £29,919, decrease £727.

London County Council.—Traffic receipts for week ending September 7, £31,512, increase £4,938; aggregate from April 1, £721,060, increase £113,409. Miles 116½, against 97½.

London General Omnibus.—Traffic receipts for week ending September 14, £21,976, decrease £926; aggregate from July 1, £236,718, decrease £23,749.

London Road Car.—Traffic receipts for week ending September 14, £9,159, increase £1,564; aggregate from July 1, £94,826, increase £6,765.

London United.—Traffic receipts for week ending September 13, £8,090, increase £848; aggregate from January 1, £242,991, increase £8,245.

Provincial Trams.—Traffic receipts for week ending September 14, £2,313, increase £356; aggregate from October 1, £87,116, increase £6,734.

Rossendale Valley.—Traffic receipts for week ending September 13, £225, increase £16.

Sunderland District.—Traffic receipts for week ending September 11, £491, increase £21; aggregate from Jan. 1, £16,794, increase £1,907.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending September 15, £1,258, increase £416; aggregate from January 1, £42,903.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending September 16, £16,997, increase £1,587; aggregate from January 1, £609,335, increase £60,428.

Auckland Electric.—Traffic receipts for four weeks ending August 16, £10,063, increase £505; aggregate from January 1, £83,769, increase £3,473.

Brisbane.—Traffic receipts for month of August, 1907, £15,225, increase £1,039.

The Investors' Review.

The Week's Money Market.

Bank Rate 4½ per cent. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

With the Money market, as with so many other markets, the chief trouble lies in the fact that there is not at present anything that can really be called a market. Just as a beaten force ceases to be an army and becomes a mere mob, so after the strain and stress of the last few years—ever since Empire-building wasted all those millions in the veld—markets in the City have ceased to be meeting places of reasonable folk, bent on buying and selling, and have degenerated into centres of neurotic hysteria, swayed violently first in one direction and then in the other, so violently they are always "all one way," and have no healthy opposition of competing views to maintain equilibrium and give ease and freedom to bargaining. Owing to the world-wide influences which converge upon it, the Money market is especially full of unwholesome paradoxes, chief among which is the universal hunger for capital—as examples of which we may instance Chilian bills offered to pay 6 per cent. Mexican National Railroad notes, yielding 7 per cent., and a well-secured Canadian industrial preference stock, giving an opportunity for permanent investment at 7 per cent. combined with a state of affairs in Lombard Street which has necessitated the placing of day-to-day balances, on one of the days of this week, at rates ranging down to ½ per cent.

No one can contend that this is a healthy condition of things. On the surface it is chiefly due to the feverish alarms of last August, when the discount market suddenly shut up like a clasp-knife, and left all its business to be done by the Bank of England, with the result that some £4,000,000 bills were taken to it, and fresh paper credit was thus created to that extent. Under the surface the deeper cause is merely a variation of the same disease, apprehension. Apprehension makes holders of money chary of letting it out of their control for long, and narrows the circle of those to whom they are prepared to lend it; consequently they offer it with increasing insistence for short periods, and those to whom they offer it take it with growing reluctance, because they know that the more of it they have to handle the greater their difficulty in using it to advantage without committing themselves, which is just what nobody wants to do. The apparent cheapness of money that thus results, is not only a thoroughly unwholesome symptom, but to a great extent an unreal one. On Wednesday, whether because the Jews were absent from business, or for some other less obvious cause, the supply of money suddenly seemed to dry up, and late in the afternoon borrowers, who the day before had only to sit at their telephones and be offered thousands at 1 per cent., had to go out and look for funds at 2 per cent. If the market were really at work, it may be doubted whether there would really be much more than enough credit to go round, in spite of the bloated figures of the other deposits. But the market is not at work; it is sick, and full of fancies. Just as Falstaff, when he was "rheumatic," first "talked of the whore of Babylon," and finally "babbled o' green fields," so Lombard Street deals in theories rather than in discounts, and vents its energies in vapours.

Cheap money, a strong Bank return week after week, very few bills, and yet discount rates remain wonderfully firm, all things considered. On the face of it the whole thing is paradox; under the surface it is most reasonable, for it all arises, once more, out of apprehension. The Bank gets stronger week by week, but only because currency drifts back from the country to an extent which may perhaps be the first indication of slackening trade at home. This week the Bank was not even allowed a share of the arrival of gold from the Cape: foreign buyers shouldered it out of the way and outbid it in spite of exchanges, which did not allow of any profit on the purchase. Berlin does not stop to count the cost of taking gold; gold she will have, and Paris, too, where money is said to be so plentiful and the investor is so thrifty and obliging, seems to think a little hard cash is worth paying for. And so the Bank can only strengthen itself by means of the reflux of coin and notes from circulation, and has already had its vaults raided by the beginning of the Egyptian drain; away go the sovereigns to be hoarded by the pious Mussulman, and Oriental futility squats above a heap of gold buried in its backyard, while Western energy is at a standstill for want of capital. 'Tis a mad world, and there is little wonder that Lombard Street takes little comfort out of the figures of the Bank return. For this early beginning of the Egyptian drain has exploded one of the comfortable theories by which the bullish theorists had almost persuaded themselves that the autumn was not to be so uneasy after all. The Egyp-

tian banks, they assured us, were so full of gold accumulated at the time of the crisis, that they would not want much from London, and would not take it yet awhile; and yet £200,000 went last Saturday, and now, having swung round to the opposite pole of pessimism, the prophets are talking of a possible £1,000,000 to go to-morrow. If all the other comfortable theories are to prove equally trustworthy, things will move this autumn.

In the discount market the appearances are as untrustworthy and unreal as in the short loan market. Very little doing is the daily report, very few bills and very few takers. The scarcity of bills at this time of active trade and approaching movement of crops is a curious symptom enough, but is attributable again to the apprehensions which have arisen out of the memories of last autumn, and the breakdown in credit which followed the Egyptian crisis. Less attention than it deserves has been given to the latter episode, partly because London was directly concerned to a very small extent, most of the trouble being developed in Egypt itself and in Manchester. But there can be no doubt that its moral effect on dealers in credit has been very considerable, since it has served as a timely reminder that a bill is not necessarily an effective credit instrument merely by being a bill, and that something tangible in the way of assets behind it is a great improvement to its security. A good deal of very questionable business has been abolished by the application of this simple principle, and it may be that dealers in bills have now rather gone to the other extreme in their anxiety as to the class of paper they will or will not handle. The result is that credit facilities have been to some extent curtailed, and it would not be surprising if the final result of this operation were to be abnormally violent fluctuations in exchange, and perhaps abnormally large movements of actual currency when crops begin to move the market. As it is discount rates, owing to the narrowness of the market, are unusually sensitive, and the offer or purchase of a comparatively small line of bills has an abnormal effect. Quotations to-day were given as $3\frac{3}{4}$-$3\frac{13}{16}$ per cent. for three months, and $4\frac{3}{16}$-$4\frac{1}{4}$ per cent. for six months.

SILVER.

With very little inquiry from either the bazaars or the Far East, the silver market has again had to depend on the Indian Government for its support. Purchases on that account have also been small, and prices consequently have fluctuated within very narrow limits, the highest figures touched being $31\frac{3}{8}$d. per oz. for cash and $31\frac{1}{2}$d. per oz. for future delivery, and the lowest $\frac{1}{4}$d. per oz. under that for both positions. A rally on Thursday caused quotations to recover $\frac{1}{16}$d. from the worst, but they dropped back again to-day, and close at $31\frac{1}{4}$d. and $31\frac{3}{8}$d. per oz. respectively. Applications for the Rs. 20,00,000 Council drafts on India last Wednesday amounted to Rs. 2,23,07,000 all in bills, and tenders at 1s. 4d. per rupee received about 9 per cent. The amount to be offered next week is increased to Rs. 30,00,000.

The Stock Markets.

Towards the close of last week there were not wanting indications that a gradual change for the better was making itself felt in stock markets, owing to the tardy appearance of the public in more than one direction. With markets apparently short of stock, and prices at a tempting level, not much attention from the public was required to fairly start the long-looked-for boom. But the course of events in the copper market and the prospect of a general strike on the entire railway system throughout the United Kingdom caused the timid investor to draw back hurriedly. Jobbers in the Home Railway market promptly marked down prices all round by way of precaution, which gave the market a depressed appearance almost before it was possible to look round. This in turn reacted on other markets, all sensitive to the slightest breath of an ill-wind, and ready to fall back again into the state of idleness and depression which has been their chief characteristic for so long a period. The beginning of the autumn drain of gold to Egypt gave a nasty jar to the gilt-edged market, which received another blow, when it was found that Continental buyers of bar gold were so determined to secure all available supplies that they were prepared to offer higher terms than the Bank of England could offer, with the result that all this week's shipments go abroad and the Bank gets

nothing. With the change of sentiment it was soon discovered that the scarcity of stock in most departments was more apparent than real, and prices promptly showed signs of crumbling away. What little business there was came to a dead stop on Wednesday owing to the absence of the Jewish element, and during the concluding hours of the week, though markets were dull on the whole, they may be said to have maintained a commendably steady front in spite of adverse circumstances and the continued apathy of the public. The railway labour dispute has engrossed so much attention that all minor troubles have sunk into comparative insignificance, but in addition to the trouble in the railway world, the industrial situation is now further complicated by the threat of the shipbuilding employers to lock out the members of the Boilermakers' Society on October 5. This would it is estimated affect about 40,000 men employed on the Clyde and elsewhere, while as another indication of the feeling of unrest in the labour world it may be noted that a stoppage of work is threatened on the whole of the London County Council tramways, the men being at issue with the management on several points.

Events in Wall Street have not tended to help matters in the right direction. The market there has been nervous throughout owing to the uncertainties of the copper position and the weakness of United States Steel and other industrials. In other directions, however, the outlook was a little more encouraging; the Continental Bourses have shown a steady front, and here and there markets have had a few redeeming features.

Consols and Other Trustee Stocks.

The beginning of the customary drain of sovereigns to Egypt, and the failure on the part of the Bank of England to secure any of this week's arrival of Cape gold, left marks on the market for gilt-edged securities. Consols dropped ten shillings on Tuesday (which, however, brought in the Government broker as a buyer to a small extent), and the prospect of an early issue of Transvaal Treasury bills for a million or so also acted as a damper on the market. A steady investment inquiry for small amounts has offset the adverse influences, so that things are not much changed either way on balance. But the state of the market may be judged from the fact that the offer of an absurdly small amount of Consols knocked fully ½ off the price in the course of the morning, while in the case of a trustee stock, such as Manchester Corporation 4 per cent., the effect produced was startling when a dealer endeavoured to place a few thousands of stock; the price gave way pounds at a time, and before the deal was finished the quotation was nominally some 6 or 7 points lower. In the case of Home Railway preference and debentures, the appearance of a seller resulted in the marking down of the price by a point or two before even a moderate amount of stock could be placed, dealers refusing to put more stock on their books.

The Foreign Market.

The strength of this section has been one of the best features of the House, and the reported scarcity of stock would appear to be within the bounds of truth so far as this market is concerned. Paris operators were made happy by easy continuation rates, which averaged about 2½ per cent., and the Bourse has shown a disposition to free itself from the unfavourable influences of foreign markets. The situation as regards Morocco has undergone a substantial improvement, and a fair all-round investment demand has steadied the tone. The relative strength of Rio Tinto shares in face of the heavy fall in the metal and the violent decline of copper stocks in America says much for the firm grip that French holders have kept on their shares, and they evidently regard the present decline in copper as temporary. An issue of a million Chilian Treasury bills has been privately placed this week, and are now changing hands on the basis of 5¾ per cent.

Home Railway Stocks.

In face of the tremendous loss that would ensue from even a short interruption of traffic, Home Railway stocks have been distressingly weak. The amount of stock that has come to market seems in the aggregate to have been quite moderate, but the effect on prices was material. Dealers profess to be quite easy in their minds that a strike is quite impossible, but the uncertainty that must continue for possibly the next six weeks can have nothing but an adverse effect on a market already sunk to the lowest depths of despair. Rumour, in the first place, went so far as to say that the men's notices were to be posted to expire next week, and prices were marked down indiscriminately, dealers refusing to make prices, knowing full well that the market was all one way. Since then, in the interval of discussing the pros and cons of the situation, the dealers having amused themselves by still further lowering prices. As railway directors have several weeks to consider matters before the men's ballot papers are returned, it is hoped that much may be effected. The request for a preliminary conference which has now been addressed to the railway companies by Mr. Bell on behalf of the Associated Society of Railway Servants makes the fourth attempt that he has made to persuade the companies to adopt a conciliatory attitude towards the principal question at issue, namely, the official recognition of the men's union, and its right to represent its members by placing their grievances before the directors. A less defiant attitude on the part of the directors and some indication of their readiness to negotiate will bring the public round to their side.

Some straight remarks were made by Lord Brassey on Wednesday at the meeting of the Chamber of Commerce at Liverpool, and during the course of his speech he said there was a growing demand that railways shall be managed with a single eye to the public service, and not for the benefit of shareholders.

The directors of the Caledonian Company were easily able to resist the attack made by Mr. Andrew Macdonald and his fellow-agitators in Glasgow. Although the directors were defeated at the meeting on a show of hands, the shareholders having turned up in such force that an adjournment to a larger hall had to be made, yet as the result of a poll demanded by the directors, the proxies sent in gave such a preponderating vote in favour of the board that the chairman of the Shareholders' Association could only admit that he had been fairly beaten in the contest. Sir Jas. King, the chairman of the Caledonian company, was able to make the gratifying announcement at the meeting that the relations between that company and their two neighbours were now so cordial and harmonious that the time seemed to have arrived when these friendly relations might be turned to practical account. Preliminary meetings have already taken place, and the directors hope to soon bring the negotiations to a successful termination, and adjust an agreement extending over a period of years which would be a means of effecting economies where possible, and putting a stop to all unnecessary competition. It was the news to this effect that put the shareholders in a good humour, and induced them to rally to the support of the board. The first public indication that a move is being made towards closer working relations was the issuing, on Monday last, of a joint notice from the North British and Caledonian companies that from the end of the year the 15 per cent. discount allowed on dock charges at both companies' docks at Methil, Grangemouth, &c., will be withdrawn, and that certain other privileges will cease. In view of the brilliant weather, the traffic returns of the southern passenger lines were distinctly disappointing, but apart from this, all the returns were extremely good, and traffics look like breaking fresh records. According to the *Railway News*, the figures for the past week show an increase of practically £100,000, bringing the aggregate receipts for the past eleven weeks about £800,000 above those for the corresponding period of last year. Provided there is no interruption to traffic, and in spite of increased coal bills, a fair proportion of this amount ought to be retained in net receipts. While on the question of the coal bill, it may be noted that the Midland company, one of the

companies most largely interested, has made a move in regard to the struggle over locomotive contracts, begun at the end of June, by accepting the tenders of a number of Derbyshire coalowners at 11s. 3d. a ton, and although these tenders do not cover the whole of the company's supply, the move is regarded as an important one.

As prices in the Home Railway market were, as stated above, marked down almost indiscriminately, it is almost labour lost to single out any particular stocks for special mention. It may, however, be pointed out that the Central London Company had another very bad traffic return, which helped to depress its stocks, and that South-Western descriptions appeared to suffer more heavily than others simply because they are difficult stocks to deal in at the best of times. South-Eastern preferred was sold as low as 102½, and this, be it noted, a stock that paid 4½ per cent. for the second half of 1906.

American and Foreign Railways.

The New York market has been completely dominated by the uncertainties of the copper position, at one moment rallying from a state of nervous depression and the next plunging in the opposite direction. Dealings were almost entirely professional, arbitrage transactions being few. No improvement is looked for pending the adjustment of the copper situation. The complete breakdown of Mr. H. H. Rogers leaves the Amalgamated Copper without a president, and the Standard Oil minus a vice-president, and a successor has to be found to keep the game going. A heavy loss had to be faced by the syndicate that was formed for the purpose of getting off the 75 million dollars worth of 4 per cent. Union Pacific bonds, and it was rumoured that about 90 per cent. was left on their hands. Stockholders of the Minneapolis, St. Louis and Sault Ste. Marie have cheerfully agreed to the doubling of the amount of their capital, thus increasing the nominal amount from 20 to 40 millions during the course of one sitting. Whether it is contemplated to issue any or all the capital now is a detail not disclosed. The Hill group of stocks profited by the persistent recurrence of reports that Northern Pacific stockholders would receive a substantial extra dividend, and the advance in this and kindred stocks was assisted by a strong demand from the "short" interests which found sellers scarce. Needless to say, the market was in the hands of the "bears," and prices fluctuated violently. Most days business was confined almost entirely to copper and steel counters, the movements in which were reflected in the Railroad list.

Statements as to the harvest in Canada vary considerably, but on the whole lean to the side of "good to fairly good." With favourable weather, 70 per cent. of the crop in Western Canada may be saved, but a week ago Alberta had a taste of snow, and since then a number of districts are reported to have been affected by early frosts. Berlin operators sold Canadian Pacific shares on the less favourable outlook, and Grand Trunk stocks have not been a very good market, although the traffic return was quite up to market anticipations. The Canadian Pacific Company intends to erect at Fort William what is described as a million-ton dock, six new freight sheds and other necessary accommodation, all being part of its policy of building up a great shipping trade on the Lakes.

There was a short outburst of gambling in the stocks of the old Mexican Company, based upon dividend anticipations. Anything from the full dividend on the second preference up to 5s. on the ordinary was the story, but in view of the surprises which from time to time have been sprung upon stockholders, and bearing in mind the large expenditure on renewals, &c., and the almost certain prospect of higher working expenses to be faced, it is doubtful whether the full dividend will be forthcoming on Mexican seconds. Buenos Ayres and Rosario ordinary was bought early in the week on the rumour that the official sanction to the amalgamation with the Central Argentine Company was really coming at last, and undoubtedly when the scheme is passed there will be a considerable saving in working costs. The market expressed some disgust when the dividend statement came out yesterday, the dividend being at the same rate as a year ago, with a carry forward of practically £100,000 less. Some new shares rank for dividend on this occasion, but only on the amounts paid up as at June 30, and as £20,000 more was bought in, and the traffic receipts for the half-year were nearly £100,000 higher, apparently a very considerable sum has gone in betterments and increased cost of working. In the meantime crop and weather reports from all parts of the Argentine Republic state that the prospects are exceedingly encouraging, and the latest estimates of the total value of the crops give an exportable surplus of about 54 millions sterling. United and Western of Havana descriptions were bought on some good looking traffic returns, which were better than they appeared to be owing to a dislocating of traffic a year ago.

Banks, Breweries, Industrial Securities, &c.

Bank of Africa shares, which were knocked down last week by the unfavourable report, have been slowly recovering the lost ground. As we pointed out last week, there does not seem to be any special cause for alarm, and at the meeting of the shareholders on Wednesday the chairman was in a position to state that although the directors had considered it advisable to transfer £145,000 from reserve for depreciation of investment securities and as a further provision for doubtful debts, yet they did not for a moment believe that the money was lost, or that those debts were bad. As a practical proof of their sympathy with the shareholders who get a reduced dividend, the directors propose to revert to their former fees of £3,000 a year instead of £4,000, until the dividend could again be increased—an example that shareholders in many other concerns would like to see followed. Egyptian ventures were steadied by the latest news from Cairo regarding the cotton crop, which is stated to be turning out splendidly, the estimated value being set at about thirty million sterling. Shipping shares were offered on the news of the spreading of the Atlantic rate war, the Cunard company announcing a further cut in fares, and as the White Star and the American companies have followed suit a general rate war is likely to be entered upon in November, unless an amicable arrangement is arrived at during the course of the next few weeks. The market in rubber shares was one of the brightest in the Stock Exchange. At first prices advanced steadily all round, to be followed later by a slight reaction on sales to secure profits. Mincing lane houses have been taking a considerable amount of interest in the movement, which would seem to indicate that those with a good knowledge of the trade were disposed to regard the prospects of rubber with a favourable eye. While there is undoubtedly a future for the best of the producing companies, and more especially those which are either actually placing the article on the market or will be in a position to do so before long, yet the fact must not be lost sight of that, as the planting of rubber goes on apace, in a few years the world's production will increase at an enormous rate. Most of the companies recently floated were disposed to estimate profits on the basis of something approaching the present price of rubber, and the ventures were capitalised on those lines. Official returns just published give the production of rubber in the Malay States alone at about 860,000 lbs. for 1906, valued at about £215,000 as compared with an output valued at £3,000 in 1904. A reference to the official list discloses the fact that already some of the shares are standing at huge premiums, which the present state of affairs hardly justifies. Domestic iron, coal, and steel shares have shown a fair amount of animation, with no decided tendency either way. The hematite iron trade, judging by recent reports, is in a very unsatisfactory position, the American demand having fallen away altogether, while the Continental business has been very considerably reduced. Armament shares maintain their position, and it appears that the leading companies are still full up with orders. Textile shares

have hardened under the lead of Coats, which advanced steadily, owing to a demand from the North. Buyers of tea shares found the market all one way, and in the absence of sellers prices moved in the upward direction. Associated Cement issues hardened on the appearance of the report for the past year, which showed an improvement over the previous twelve months, largely owing to the increased demand for Portland cement in certain export markets. The ordinary shares relapsed later on provincial sales. Hudson's Bay shares fell sharply, and then partially recovered; the market in these shares is narrow and in the hands of a few dealers, but it was said that the cause of the fall early in the week was due to the coming to market of a line of shares that had been taken over temporarily some time back. Van Diemen's Land shares, which seldom move, have this week risen £6 by easy stages for no apparent reason. The dividend declared by the Gramophone Company was up to expectations, and the shares have now reached a pretty big price. Motor shares were inclined to be dull, a very bad report of one of the less prominent companies making its appearance. General Motor Cab preferred ordinary has got back to over par, the company having published what purports to be a traffic statement for a period of three months. The figures indicate steady progress, but they would have been of more use as a guide if the earning power per cab had been given. London General Omnibus stock was put up 4 owing to the appearance of a small buyer, this being another of the stocks in which the market is at all times a narrow one. Most of the early advance melted away, the traffic return showing a substantial decrease, despite the continuance of fine weather, which ought to have benefited "above ground" traffic carriers.

Friday's Stock Markets.

A distinct change of sentiment came over markets to-day. Liquidation appeared to have come to an end for the moment, and prices rallied slightly even in the Home Railway market. This was chiefly due to repurchases by bears, who were anxious to have their books even over the week end. Consols and other gilt-edged stocks were firmer on a cessation of sales, and American shares responded to the firmer advices from Wall street. Russian and Japanese bonds were buoyant, and Rio Tinto shares, after rising from 72⅜ to 73⅜, closed at 73¼, the copper market having a firm appearance. Among Foreign Railway stocks Rosario fell to 105 on sales by disappointed holders, but San Paulo ordinary was in demand, the dividend announced to-day being at the rate of 10 per cent. with a bonus of 2 per cent. A year ago the dividend was the same, but the bonus was only 1 per cent., and a much larger sum is now carried forward. Mexican ordinary and second preference were flat during the early hours, recovering a part of the fall in the later dealings. Antofagasta Ord. was pushed up to 131½. The Kaffir market was inanimate and closed with a dull tendency, but there was a sharp rise in Pahangs to 44s. 3d. bid. Rubber shares were weak at the opening, but met with some inquiry just towards the end. Anglo-American Telegraph issues were offered, the preferred closing at 10⅛ and the deferred at 17½. Hudson's Bay shares were firm at 85½.

WATERWORKS.—Rise: Consol. of Rosario Ord. $\frac{1}{4}$, to 11$\frac{1}{4}$-11$\frac{3}{4}$.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

NORTH BRITISH RAILWAY COMPANY.

In the July half-year the total revenue reached a sum of £2,440,109 or an increase against the corresponding period of £79,458. The greater part of this increase, however, was swallowed up in additional working charges, the total expenditure being £66,042 higher at £1,313,570. The ratio of expenditure to total revenue is therefore 1.12 per cent. larger at 55.02 per cent. In common with nearly all other British railways, first-class passenger traffic showed a small falling off, but it was compensated by a fair increase amounting to £14,584 in third-class. Season tickets did just a little better, and in parcels, horses, carriages, &c., there was an improvement of £9,578. The carriage of 2,616,730 tons of merchandise produced a revenue of £739,450, and after deducting cartage, &c., this yielded £663,306 nett or a gain of £12,627. Of minerals 11,531,840 tons were handled, and in this case the additional revenue gathered was £35,668. Miscellaneous receipts showed the satisfactory rise of £6,353, rents of property giving about £7,000 more. **The additional expenditure touched practically** every important department, general expenses alone showing a small decrease. Maintenance of way cost an extra £9,000, and the expenditure for locomotive power was a good £36,000 higher, of which coal and coke accounted for £25,351. The additional **mileage run, including steamers, concerning which very little** information is available, showed an increase of 343,211. Outlay **on carriage and wagon repairs was £9,433 heavier, and traffic** expenses went up rather more than £10,000. Compensation for accidents showed little change, but was heavier, and the cost **of working the steamers was about £600 heavier. Rates and** taxes were on the up-grade, and the balance of profit shows an increase of £13,415 at a total of £1,126,538, not a brilliant performance in view of the substantial gross gain. Including the **sum brought forward and dividends on shares, the available** profit is £1,137,270 against £1,124,305, and the company had to meet some heavily increased fixed charges. General interest, **for example, cost £23,400 more, and as £12,000 compared with** nothing is reserved for repair and renewal of engines, the sum **left for dividend shows the heavy reduction of £24,862 at a total of £729,353.** Preference dividends were rather less owing to conversions, and after meeting the ordinary preference dividend at 3 per cent. per annum, the distribution on the ordinary stock must come down from 1½ to 1 per cent. per annum, with **an increase of £4,873 to £15,259 in the carry forward.** Capital expenditure in the half-year reached the pretty considerable sum of £366,934, and of this no less than £217,056 was on new **working stock—surely a very heavy sum.** For the current period the expenditure is put down at the much smaller amount of £180,860, but the account is already overdrawn £2,073,476, and in addition to using up all the accumulations on savings bank and other accounts the heavy sum of £853,802 has been borrowed from bankers. In addition to this something like **£800,000 would have to be borrowed for dividend and interest payments, and we cannot regard the financial position as other-**wise than very unsatisfactory. Dividends are payable on October 10.

HIGHLAND RAILWAY COMPANY.

For the six months ended July 31 this company's total income amounted to £262,808 or an increase of £7,577 against the corresponding period, but the total working expenses were up by **£4,417 to £152,613, the ratio between expenditure and income** therefore rising from 55.45 per cent. to 58.99 per cent. Apart from goods and minerals, which showed an improvement of £5,021 between them, the traffic did not show much elasticity, the next largest gain being one of £1,588 in parcels, horses, carriages, &c. Passenger income was only £548 better, and live stock gave an extra £429. There was a small advance in the number of passengers carried, but this was entirely in third-class, as the first-class showed a falling-off and season tickets yielded rather less, never a good sign. As with all other Scotch railways, the principal cause of the higher working expenses was the advance in locomotive power, which cost the company £9,663 more. In an effort to make this good, the outlay on carriage and wagon repairs was reduced no less than £6,875 to £8,159, and it seems rather remarkable that the work necessary in this department can be subject to such extensive fluctuation. Other items on the expenditure side do not call for comment until we come to the remuneration received for working the Invergary and Fort Augustus Railway, and as this yielded only £280 against £2,000 there was an additional outlay to provide of £1,720. There was no charge this time for expenses connected with the proposed amalgamation of the company with the Great North of Scotland against £972, and the balance of nett revenue comes out at £116,195 or an improvement of £3,159. Credit brought forward was £10,117 against £8,254, making the disposable balance £126,362 compared with £113,540. Fixed charges were a little heavier, and after again adding £1,000 to the bridge renewal fund £72,354 was left. Preference dividends require the same, and after maintaining the distribution on the ordinary stock at the rate of 1½ per cent. per annum, the balance carried forward is put up £3,814 to £7,054. Capital outlay in the half-year was £20,457 compared with the estimate of £20,787, most of it being on working stock. In the current six months it is intended to spend only £8,050, which is well, because the capital account is at present £154,984 to the bad and already £40,000 has been borrowed on temporary loan.

OTTOMAN RAILWAY.

This company's traffic revenue for the six months to June 30 amounted to £124,597, or an increase of £10,850 against the corresponding half of 1906. Coaching traffic contributed **moderately to the improvement, the gain under this head being £4,068 and parcels, excess luggage, and telegrams also did** better. The mineral traffic was rather less, but live stock improved a few hundred pounds, and merchandise yielded £82,605 compared with £67,386. The total working expenditure increased by £9,247 to £56,618, the principal part of which was under maintenance of way and works, due to exceptionally heavy outlay on bridges and culverts. Locomotive expenses were also higher on account of the additional traffic handled, and **moderate increases appeared under maintenance of carriages** and wagons and traffic expenses. Balance of nett revenue was £68,489 or £10,553 more, but the balance brought forward was about £6,500 less at £60,226, and the income from interest was **also on a smaller scale, so that the actual nett increase was reduced £2,651 at a total of £131,350.** After meeting all fixed charges and £2,801 spent on improvements and additions, but not strictly chargeable to operating expenses, the balance over **is £57,021, or almost precisely the same as a year ago.** Interest on the preference shares takes £5,928 and from the £51,093 **still left the directors again propose an interim dividend of 8s.** per share, or at the rate of 4 per cent. per annum, leaving **£33,254 to be carried forward. Capital expenditure during the** period for pier extension and warehouses was £10,441, and on additions to rolling stock £16,934, making a total of £27,375, and reducing the credit to capital to £81,424. The company's finances are in very good order, as apart from this capital credit there is a reserve fund of £110,781, and a sinking fund reserve of £6,150, while the cash balances and remittances in transit make the excellent total of £127,423. Traffic for the current **half-year shows a decrease to date owing to diminished crops in the lower districts of the line caused by the wet and late season,** but the reports from the higher districts are satisfactory, and **the outlook in that portion of the line is better than it was last year.**

NATIONAL BANK OF INDIA, LIMITED.

In the half-year ended June 30 this bank earned a gross profit of £209,286, and after meeting expenses of management, the nett balance was £125,858. To this was added £122,165 brought forward, making a total of £248,023, out of which an interim dividend at the rate of 12 per cent. per annum is paid, and £212,023 is carried forward. Liabilities on current and deposit accounts amount to £10,187,688, loans against security stand **at £425,000, bills payable at £497,055, and sundry adjustments,** including provision for bad and doubtful debts and contingencies, come to £473,153, while acceptances for customers, appearing on both sides of the balance-sheet, are £667,402. **Cash and bullion reach a total of £2,632,096 or nearly 25.83 per** cent. of the liabilities to depositors. Indian Government rupee **securities held are valued at £327,201 and other investments at** £618,301. Bills of exchange come to £3,587,915, discounts, loans, &c., to £5,699,778, and with £71,131 for house property and furniture and £94,436 for sundry adjustments, &c., the aggregate of the balance-sheet is brought up to £13,608,481.

DICK, KERR AND CO., LIMITED.

This well-known undertaking had many difficulties to contend against during the past year ended on June 30, especially the greatly increased cost of all raw materials and the advance in the price of labour. Competition was not less keen we may be sure, and the company must therefore be held to have done well in producing a nett profit of £80,476 or a reduction of not quite £6,000 compared with the previous twelve months. After meeting debenture interest and trustees' fees with £12,812, and providing £300 for premium payable on debenture stock redeemed, the directors pay the preference dividend and propose to distribute 10 per cent. on the ordinary shares. It is not considered necessary to make any further additions to reserve at the present time, and the directors have therefore increased the amount carried forward by £23,063 making it £70,140. Since the money is not distributed, it does not matter very much whether it is carried forward as a credit to profit and loss or placed direct to reserves, and, in any case, the latter all told reach the pretty good figure of £210,000. Of this £150,000 is specially set aside to secure the debenture stock, another £50,000 is a reserve for extensions or special depreciation and the balance of £10,000 stands as a special reserve. On the other side there are sundry investments standing for £148,515, but whether these are ordi-

nary securities or trading investments we are not quite sure. Capital expenditure, including goodwill, and patents amounts to £581,984, and contracts outstanding, money due for work and stock of materials, &c., are valued at £460,680. This is a reduction of over £200,000 compared with the previous account, but stocks on hand and work in progress are somewhat higher at £145,225. Sundry creditors also show an important decline of about £110,000 to £322,735, while ordinary debtors are up from £59,741 to £86,452, bills receivable are £27,651 against £5,625 and cash balances are fair at £43,994.

Palmer's Shipbuilding and Iron Co., Limited.

Notwithstanding the lack of activity in shipbuilding and the keen competition for orders, this company's shipyard and engine works were moderately employed on both naval and mercantile tonnage during the year ended June 30. Prices, however, were low, and the cost of labour and material high, and it is apparently due more to the iron and steel departments, which were kept working to the full extent of their capacity, that the company is able to make so satisfactory a showing as it does. Nett profits were practically the same as for the previous year at £80,673, but £20,459 or £2,158 more was brought forward, and the available total was therefore £101,132 compared with £98,871. Debenture and loan interest, however, took an extra £825 at £9,382, while £700 more was required to meet the dividend of 5 per cent. on the preference and ordinary shares owing to the directors having placed the unissued preference shares to provide working capital, and after writing off £45,000 against £39,691 for depreciation the sum carried out is reduced to £15,886. Good progress has been made with the extensions to the steel works, and the first of the two large Talbot furnaces has been started, while the capacity of the engine works has been further increased. The cost of these, less sales of old machinery, amounted to £90,524, bringing the total up to £784,355, while the reserves have been reduced by £17,270 to £15,204. A note appended to the item in the balance-sheet states that the expenditure on extensions from the date of the reconstruction valuation in 1895 to June 30, 1906, has been £312,848, of which £299,190 has been provided out of profits, and the auditors certify that the present provision of £45,000 amply covers the question of depreciation. Bills payable, sundry creditors and deposits show an increase of £47,971 to £298,416, but, on the other hand, cash is £47,106 up at £77,061, and although works in progress, materials and sundry debtors come to £39,582 less, the figure is still the substantial one of £323,481.

Crosswell's Cardiff Brewery, Limited.

The directors of this Welsh brewery have pleasure in reporting that the results of trading during the year ended on June 29 show a considerable improvement upon the accounts of the two previous years. The statements submitted for the last-named periods must have been poor indeed, because the company is still in very bad case, and no improvement likely to admit of a fair return on the whole of the company's capital seems at all likely. The company's issued share capital amounts to £200,000 divided into 10,000 preference and 10,000 ordinary shares, all of £10 each, besides which there is a mortgage debenture debt of £200,000. This makes the considerable total of £400,000, yet the nett profit for the period under review, after providing unnamed amounts for depreciation and bad and doubtful debts, amounted to only £13,078. Adding the trifle of £635 from the previous year and the sum for division is £13,713, all but £4,713 of which is absorbed in paying debenture interest. The directors can therefore do no more than provide 4 per cent. on account of dividend arrears on the preference shares for the year to June 30, 1906. As these shares carry 6 per cent. interest, this means that 2 per cent. is still due on account of the previous year, and the full payment in respect of the year under review making 8 per cent. still owing. The balance carried forward is then increased a trifle to £713. In the report it is stated that the directors have continued in the policy inaugurated, and practically rendered obligatory by the Licensing Act of 1904, of effecting repairs and alterations to their licensed premises to safeguard the licences so far as possible from forfeiture, and with the view also of adding to the value of the premises by making them more suitable. It is further intimated that all licences have been preserved during the year, although considerable legal expenses were incurred in protecting them before the various Courts of magistrates. The property of the company, after deducting mortgages for £13,000, has a balance-sheet value of £378,909 apart from casks, horses, movable plant, &c., valued at £8,775. This makes a total of £387,685, and up to the present not a single penny of reserves has been accumulated. There are outstanding loans and mortgages for £10,390, which evidently cannot be called in, or it would not be necessary for the company to borrow £6,896 from its bankers or leave unpaid certain instalments of purchase money to the amount of £1,725. Sundry creditors are considerably in excess of the amount due from debtors, and the cash balance is the trifle of £429, although it may be pointed out that provision has been made for debenture interest warrants still uncashed. In a word, the financial position of the business is about on a par with its earning capacity, which is not saying very much.

George M. Callender and Co., Limited.

The continued stagnation in the building trade, and the absence of municipal enterprise, are the causes put forward for the somewhat poor show made by this company for the 15 months ended June 30. Colonial business has been so disappointing that the managing director is to be sent on an extended tour, on which he is to combine business with pleasure by opening up new markets. As for South Africa, the directors are innocent enough to look for an early revival of business, an opinion which is not shared by so capable a judge as Lord St. Aldwyn. Trading results for the period under review amounted to £8,792, of which £4,145 represented profit, and with £3,220 from manufacturing account and £1,040 from rent, interest, &c., the total profits were £8,406. Of this managing director's and assistant manager's salaries took £1,667, and income-tax £402, and after adding £625 brought forward the disposable balance was £6,962. Out of this the preference dividend has been met, and an interim dividend of 5 per cent. was paid on the ordinary shares, but the directors, in view of the proportion of unsatisfactory items in the balance-sheet, do not propose to make any further distribution. Instead, they write £502 off the cost of the factory, &c., and £1,000 off preliminary expenses, leaving £912 to be carried to the new account. Some such disposition as this was absolutely necessary, as included amongst the assets are such things as preliminary expenses £4,283, and exhibition expenses £390, while goodwill represents £50,000, or the whole of the ordinary share capital, and no attempt has yet been made to create a reserve. Trading accounts, however, are decidedly favourable, as against £7,928 due to sundry creditors, and on bills payable there are £20,016 due from sundry debtors, £7,727 in stocks, and £2,155 in works in progress, while cash amounts to £2,047. The company also holds securities of analogous companies, principally of the Italian undertaking, valued at £3,784, in addition to 5,000 £1 ordinary and 500 1s. founders' shares in the Egyptian company, which were allotted as fully paid, and are not taken into the accounts.

Enfield Autocar Co., Limited.

This undertaking is an offshoot of the Enfield Cycle Company, and was formed in the early part of 1906 to take over the portion of the business of the cycle concern relating to the manufacture of motor-cars. It was given a capital of £150,000, of which £83,595 has been issued, and now presents a report and balance-sheet covering the 19 months to July 31. It is a terribly disappointing statement, particularly in view of the fine reports lately issued by other motor-car companies, even when allowance is made for the fact that the business has been more or less in the development stage since its formation. There is no getting away from the fact that a loss of £19,264 has been incurred, and shareholders may or may not fully realise, as the directors suggest, that the figures more truly represent expenditure on development and administration than loss on the actual manufacture and sale of cars. However, the belief is expressed that by means of this expenditure the Enfield Autocar has been firmly established in popular favour, but in order that the company may take full advantage of the present demand it is necessary that the production be considerably increased. That, of course, means money, and to carry out this policy further working capital must be provided, so that at yesterday's meeting a scheme with this object was submitted to the shareholders. We shall have something to say about it next week. Purchase price of the freehold land and buildings, machinery, plant, tools, &c., as taken over from the Enfield Company was £25,958, and the additions since have cost £17,265, so that, after allowing £1,672 for depreciation, the balance-sheet value of this item is £41,551. Stock in trade is in at £22,336, but a sum of £18,154 is owing to sundry creditors against debtors of only £4,475. Cash and bills in hand, however, are moderately good at £10,378. Formation expenses still unliquidated amount to £2,952, so that even assuming that no further losses are incurred a total sum of £22,215 has to be made good before the company can begin to place profits on the right side.

Anglo-Sicilian Sulphur Co., Limited.

As is by now quite well known, this company's business and stocks have been acquired by the Sicilian Sulphur Industry, known as the Consorzio, and in due course the undertaking will be wound up. It is not necessary to recapitulate the circumstances surrounding the purchase, and we need only connect the story to the point at which it was left a year ago. It is now stated that the company's stock of sulphur sold to the Consorzio as at July 31, 1906, was found to be in order, and the guaranteed bonds, representing 19,780,000 lire, in payment for the stock have been handed to the company. These bonds, less those drawn for redemption and paid for on August 1 last at par, were sold in June last at 95, and the proceeds with the exception of about £74,000, which will come in at the end of the present month, have been received. The total amount, counting in this £74,000, comes to £756,426, and other important assets belonging to the company are temporary investments £67,846, investment of capital guarantee fund £83,387, debtors for coupon due and drawn bonds payable August 1 last £79,762, and cash £22,512. The total capital guarantee fund is £125,849, the general reserve is £44,860 and reserve for contingencies in Sicily £7,886. The preference capital issued amounts to £700,000 and the ordinary capital to £35,000, so that after the former has been repaid there ought to be a substantial sum remaining for the ordinary proprietors. In the past year the gross profit on trading was only £4,336, but interest on Consorzio bonds came to £28,593 and £2,419 was received from other sources. Then a big profit amounting to £88,773 was made on exchange, bringing up the total revenue to £124,121, current expenses amounted to £18,528, a nett sum of £5,327 was provided for depreciation upon investments and the 5 per cent. loss on the sale of Consorzio bonds took a sum of £35,895. Balance still left was £64,371, and from this £42,000 was pro-

vided for preference dividend, capital guarantee fund was credited with £4,474 and general reserve with £17,897. No dividend is recommended upon the ordinary shares, as when the liquidation of the company takes place, the liabilities have been discharged, and the preference capital returned, the surplus assets become the exclusive property of the holders of the ordinary shares.

TRADE AND PRODUCE.

WHEAT.—This week the tendency of prices has with one or two slight fluctuations been against the buyer. Prices for foreign wheat, both spot and future, have advanced from 1½d. to 4d. per cental, and English samples, which are getting more numerous, are, when in good condition, selling at from 6d. to 1s. advance. Farmers' deliveries for the week—the second of the new season—amounted to 35,802 qrs. averaging 31s. 4d. per qr. against 89,745 qrs. averaging 25s. 11d., and unless farmers rush their produce on to the market there seems no reason why the higher average should not be maintained. So far harvesting has shown the quality to be much better than was expected. Imports for this week amounted to 472,313, against 495,857 qrs. last year, and the quantities of wheat and flour estimated to be on passage again shows an increase, at 2,015,000 qrs., against 1,040,000 last. Trade on the Continent keeps good, top prices ruling at most of the principal exchanges, but the latest reports of the Russian crops are anything but satisfactory. American markets suffered some wide fluctuations in the early part of the week, but grew firmer under stimulating foreign advices and bad crop news.

WOOL.—Markets keep steady, but in view of the London sales next week business is restricted to immediate requirements. It is prophesied that these sales will see a rise of from 5 to 10 per cent., and in consequence holders have stiffened prices, especially for choice home-grown wools, for which inquiries are numerous. Coarse and inferior qualities, on the other hand, are being neglected. There is no change in spinners' positions. Large contracts for medium and low grades have been placed, some spinners reporting themselves booked up well on into next year, and the demand for fine yarns is increasing. Manufacturers are busy also in some directions, repeat orders for winter having come well to hand for the lower-priced goods, but makers of fine cloths are not able to employ their machinery full time.

COTTON (from our Manchester correspondent).—The fluctuations in the price of American cotton continue to have a disturbing influence upon our market. A rather firmer feeling has prevailed this week, but the outlook is uncertain, and buyers are scarcely disposed to operate freely pending fuller news relating to the prospects of the American crop. We are likely to experience many ups and downs during the next few weeks. Manchester people, on the whole, are expecting a good yield. The acreage is much larger than last year, and the forward movement is proving fairly satisfactory. Egyptian cotton has been lower in quotation, and the prospects for that crop continue very satisfactory, some authorities estimating that the yield will be equal to 8,000,000 cantars. The inquiry for piece goods has been of fairly extensive dimensions, and for various markets a steady business has been done. There is still difficulty, however, in buyers and sellers getting to close quarters for lots of quantity. Rather better offers have come through from China, and although the turnover so far has not been important, there seems to be some indication of more activity on the part of shippers. India continues to provide a good business, although few sales of weight are reported. Certain makers of fine goods are stiff in quotation, owing to their engagements having recently been fortified. Shirting makers vary to a considerable extent in their order lists, the lower grades not being very satisfactorily placed. The near Eastern markets are still rather unsatisfactory, but now and again business is reported in rather unlikely quarters. Home trade demand has not yet come up to expectations: buyers seem to adopt a waiting attitude. Grey goods have not commanded much attention. Flannelettes all round are healthy, a steady business being done to meet home requirements. Velveteens are moving off fairly well in the distributing houses. American yarns for home use have been well held in most counts and qualities, but certain numbers in wefts are rather poorly situated. Twists are firm, and for early delivery full rates have to be paid. There is no abundance of yarn as yet, and spinners on the whole maintain their position fairly well. Shipping yarns are stiff in quotation in practically all counts and qualities. Most two-fold yarns are deeply sold, and in 40's mule for India long delivery has to be given. Continental demand has been of fair extent. Bolton yarns remain strong, and spinners are much pressed for deliveries. A quiet, steady demand continues, full rates having to be paid for anything wanted. According to Sir Jacob Behrens and Sons' circular, American cotton has fallen about ½d. per lb. in Liverpool and rather more in America itself since our last report. The cause of this drop is attributed to financial troubles, selling out by "bulls" consequent upon increased offerings from the South and the comparatively free movement of the crop when the lateness of the season is taken into consideration. The trade will not buy freely at present rates, and until some adverse weather reports come to hand it will be difficult for cotton to recover the ground already lost. Of course, there is always the fear of an early frost, but so long as the present weather continues we are likely to experience a dragging market.

COAL.—Intimation has been given out that house coals are shortly to be raised another 1s. per ton, news that will not be very grateful to householders who have not laid in their winter supplies. In other branches no actual change in quotations appears, but everywhere they are very firm, and in steam coals at least business is as active as ever, as far as exports are concerned. Most gas coal contracts have now been completed at prices ranging from 2s. 6d. to 3s. 6d. per ton above last year's, all the latest contracts being at the higher figure, but so far the locomotive fuel contracts, with the exception of those placed by the Midland Company, are no further forward than they were a few weeks ago. The railway companies also show signs of retaliation by withdrawing, or intending to withdraw at the beginning of the year, certain privileges they have hitherto granted to shippers at their docks, and are also trying to obtain higher rates for carrying coal. Home trade generally is showing signs of uneasiness, and indicates that the advance in prices is being carried too far to eventually benefit the trade itself.

COPPER.—A further downward tendency occurred early in the week, chiefly due to American influences, the Amalgamated group making further reductions, and in spite of the fact that the figures of visible supply showed a large decrease. On Wednesday the market was firm, though American quotations showed another fall, and at one time forward metal touched £68; then prices reacted, and, with a quiet, dull market, fluctuated within narrow limits. To-night, however, prices were again lower at £67 17s. 6d. for both cash and future metal. Messrs. H. R. Merton and Co. give the visible supply at 12,742 tons against 14,220 tons at the end of August. The supplies for the first half of the month amounted to 10,024 tons and deliveries to 12,102, making stocks in England and France 6,842 tons against 7,820 tons a fortnight ago. The Chile charters amount to 800 tons.

TIN.—Business has been active most of the week, but values have fluctuated widely owing to the alternating influences of speculative buying followed by aggressive sales of forward metal. Eastern advices were firm, and for a time had a steadying effect; bears covered freely, and prices hardened 35s. to 40s. on the day. Thursday's price for cash metal shot up to £168, but "bear" sales continuing, it closed at £167 15s., while forward metal dropped to £164 5s.

IRON AND STEEL.—Coal prices are badly affecting iron-masters, who cannot get any profits with fuel so dear, especially as the price of metals is tending downwards. The warrant market is depressed, Cleveland metal having been at a lower figure than has been known since April, and only 1s. 1d. lower than the lowest price for the year. As to hematites, they are more than quiet. Barrow makers have reduced their quotations to 76s. for mixed Bessemers f.o.b., and several furnaces are being put out of blast, as neither home nor foreign demand is good enough to keep them going, nor is there any immediate prospect that it will improve. Manufacturers of finished iron and steel are beginning to complain of lack of orders, yet declare it impossible to reduce their prices in order to attract custom, owing to the summer rates of raw material and fuel being dearer than they have been for seven years or so.

TEA.—Messrs. W. J. and H. Thompson's weekly report on the market states that a healthy tone has again marked the week's sales. Demand for good liquoring teas still improves, only the comparatively cheap mediums from 7d. to 7¼d. showing a decline. Indian offerings were smaller at 35,264 packages, and this also helped to stimulate competition, grades between 8d. and 9d. frequently marking ¼d. per lb. advance. The rates now ruling, says the circular, for these descriptions show a recovery of ¼d.-½d. per lb. from the lowest point recorded four weeks ago, although prices are still cheap. Compared with this time last year, 33,332 packages were sold on garden account averaging 8.14d. against 41,379 packages averaging 7.64d. in 1906. Ceylon importers brought forward 22,258 packages, and where a further slight improvement in the quality was noticeable, good and fine teas showed a hardening tendency, but common sorts, between 6¾d. and 7½d., occasionally went in buyers' favour, and for the entire sale 7.71d. was obtained against 7.21d. in 1906. Two small catalogues of Java, comprising 1,298 packages, met with fair competition, but with a slight weakness noticeable here and there in lower grades. One hundred and eight packages from "Goalpara" realised an average of 8¾d. per lb.

SUGAR.—Under the favourable weather of this week and also with fairly satisfactory reports on probable European production the market declined a little from 10s. 2¼d. to 10s. 1½d., but improved again to 10s. 2d. It is too early yet to judge of the actual yield, and Mr. Czarnikow's circular says that we must wait till the middle or end of next month for exact figures. The roots have benefited during the last fortnight, but are not up to last year; it remains to be seen what October will bring, though it is hardly probable that progress will be greater than in 1906. Austria apparently expects last year's quantity, because the Bohemian production then was not very good, and will compare well, but in Hungary less area has been sown, and the yield will be a little short; some factories have already started work there. France has sown 5 per cent. more, but does not expect a corresponding increase, the roots, though sown earlier, being so far smaller, and the weather colder, especially at nights. Russia, with larger sowings, is supposed to have, with larger old stocks, a fair crop, though grain crops in the South are suffering from drought. As usual, continues the circular, on the eve of harvest, and under such circumstances, the trade acts with great reserve, but with a later production and with the

Hamburg stock down to 27,000 tons, France may have a chance of still reducing her large stock (which constitutes 40 per cent. of Continental supplies); besides, more cane sugars may find a market here. The present reserve of buyers, who are not well supplied, should sooner or later stimulate a healthy trade demand, the more so if crop figures were disappointing. New York, though quiet and steady, has raised the quotation for raws another fraction, and 96 per cent. centrifugals are now 3.95 cents, equal to 10s. 4½d. c.i.f. for non-preferential, equal to 9s. 4½d. 88 per cent. beet, but buyers are still acting with reserve, apparently waiting more reliable European beet accounts, and watching the effect on the market of their domestic beet and cane crops. In the meantime there is a rather improved demand for refined grades, though meltings remain at 41,000 tons, while landings amount to only 25,000 tons, reducing stocks to 246,000 tons.

Answers to Correspondents.

**** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

Dix.—(1) This company has to some extent traded on its name. There has been a delay in issuing the 1906 report, and some dissatisfaction is felt with the monthly returns so far published. The property, however, appears to have some value, although a good deal of its ore is low grade, and it is possible the mine may ultimately do well, but a purchase probably means a long lock up. (2) For the moment this group is out of favour, but the area has always been a good producing one, and as a speculative lock up the shares seem to offer a fair chance. Development has been carried on steadily, and if actual results approach estimates there should be dividends, but the producing stage has not yet been reached.

Hardware.—We are not in favour of this company. There has been too much manipulation of the market, and the declaration of a 15s. dividend looks like part of the game. We are inclined to say sell.

B. W. J.—The fall appears to be due to circumstances which we could not possibly forsee a year ago. As these may be only temporary it might be as well to hold, but do not buy more yet.

Cropper.—This company has not yet reached the stage where its shares can be classed as an investment, and at the same time it seems to us that the future has been so far discounted in the current quotation as to render them unsatisfactory as a speculation.

W. G.—(1) The position is, of course, improved by the amalgamation, but we hardly think the time has yet come to buy. (2) These are fairly promising as a speculative lock up.

J. S. H. S.—Although the company is undoubtedly doing well, and the shares may possibly go higher, we think you would be prudent to take your profit on at least part of your holding.

D. H. C.—(1) We do not think the new developments will have much effect on this company and its colleagues, but your stock appears to be fully priced at present quotation. At times it is a favourite with the speculative investor. If he turns attention to it again there may be an improvement, but you have a profit now, and we think it would be well to accept it. (2) We see no reason to sell these just now. There may be a further shrinkage from the cause you mention, but the company's business is good. It is also interested in a new undertaking which appears to have good prospects.

Francis.—You have made a bad speculation, but the price has been unduly depressed by forced selling. It is unlikely that it will go back to your figure, but by waiting a little you may be able to get out with less loss.

R. D. H.—We should be inclined to sell No. 2 first because the company is so overweighted with capital. No. 1 might also be sold, although in this case the company is in a little better condition now to stand a set-back in trade. No. 3 should, we think, be held for the present.

Hungary.—There is no reason why a fall in silver should affect these, as the currency of the country is now nominally on a gold basis. So far as the coupons are concerned, they are negotiated here at the exchange of the day, which fluctuates under the usual influences. The fee for this answer is 1s.

MINING RETURNS.

Alaska Mexican.—Crushed 22,394 tons ore, value $30,077; saved 425 tons sulphurets, value $25,415.

Battlefields (Rhodesia).—Crushed 1,530 tons, 830 ozs.; cyanide 1,280 tons, 626 ozs.; slimes 352 tons, 77 ozs.

Brilliant Central.—Treated 1,000 tons; value, including concentrates, &c., £3,300.

British Broken Hill.—3,073 tons crude ore produced 369 tons concentrates, containing 221 tons lead and 9,594 ozs. silver.

Carrington's United.—Crushed 198 tons for £185; concentrates 20 tons.

Central Siberia.—Alexandrovski, 103 ozs.

Chinese Engineering.—Output of coal 19,000 tons, sales 20,000 tons, consumption 1,600 tons.

Duff Development.—Prospecting dredge 37 ozs.: No. 1 dredge, 36 ozs.; No. 3, 74 ozs.; total 147 ozs.

Durban-Roodepoort.—Quartz milled 11,715 tons, 2,975 ozs.; tailings 8,125 tons, 1,024 ozs.; slimes 3,895 tons, 225 ozs.; total, 4,224 ozs.

El Oro.—Crushed 21,745 tons, ore producing $189,667.

Esperanza.—Crushed 14,418 tons dry ore; concentrates shipped 554 tons dry ore; value, $167,123; value concentrates, $111,438.

Jumbo Gold.—Ore crushed 1,705 tons, 903 ozs.; concentrates 1,094 tons, 347 ozs.; slimes 887 tons, 161 ozs.; total, 1,411 ozs.

Kluchi.—Crushed 980 tons, 347 ozs.; average assay of ore 14½ dwts. per ton; tailings assay average 6½ dwts. per ton.

Komata Reefs.—Crushed 2,330 tons; bullion, £3,500.

Mount Lyell.—29,882 tons ore treated; in addition 1,529 tons of purchased ore and metal bearing fluxes; converters produced 613 tons blister copper, containing copper, 605 tons; silver, 48,447 ozs.; gold, 1,427 ozs.

Mount Molloy.—Smelted 901 tons of ore, 97 tons flux sulphides, and a quantity of matter from stock pile containing 1 ton of copper, producing 53 tons blister copper.

New Bayley's.—Crushed 100 tons, 1,000 ozs.

North Broken Hill.—Treated 2,350 tons crude ore, producing 410 tons concentrates containing 284 tons 15 cwt. lead and 7,872 ozs. silver.

Salisbury.—Crushed 5,450 tons, 1,525 ozs.

Spassky Copper.—Production of bar copper 5,000 poods = 80·36 tons.

Tasmanian.—Treated 4,903 tons of ores (inclusive of purchased ores), producing 210 tons matte and metallics, averaging 63 per cent. Cu. Rosebery: Shipments, 1,040 tons.

Troitzk.—Crushed 1,550 tons, 255 ozs.; crushed 525 tons tributers' ore, 82 ozs.; alluvial gold obtained by tributers, 122 ozs.; 1,175 ozs. from tailings; total, 1,675 ozs.

Tyee Copper.—Treated 1,588 tons Tyee ore, value (after deducting refining charges) $14,567; 5,347 tons Customs ore; total, 6,935 tons.

United Rhodesia.—King's Daughter 1,700 tons, 1,025 ozs.; Cambrian 615 tons, 187 ozs.; Lion 320 tons, 117 ozs.; British United 205 tons, 85 ozs.; Bonanza 1,375 tons, 160 ozs.; Jumbo 1,705 tons, 1,411 ozs.; Inez 1,271 tons, 540 ozs.

Victoria Proprietary.—443 ozs. from 510 tons crushed.

Waihi Grand Junction.—Crushed 3,200 tons, yielding £6,500.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Bilbao River and Cantabrian.—Interim and bonus on the ordinary and preference shares amounting together to 6s. per share, for half-year to June 30.

Buenos Ayres and Rosario.—Interim for half-year ended June 30: on the consolidated ordinary stock, 2¼ per cent., being at the rate of 5 per cent. per annum; on the instalments paid on the new shares, 1906, from the due dates of such instalments to June 30, at the rate of 5 per cent per annum—viz., 1s. 4·20d., per share, carrying £254,444 forward.

Carrizal and Cerro Blanco.—3½ per cent. for half-year to June 30 last, carrying forward $7,636.

Dublin and Kingstown.—At the rate of 7½ per cent. per annum on the general capital stock for half-year ended Aug. 31, carrying £2,984 forward.

East Indian.—£1 1s. 4d. per cent. on the deferred annuity capital and the deferred annuity capital class "D" of the company, in addition to the guaranteed interest of £2 per cent. for the half-year.

Isle of Man.—Interim at the rate of 4 per cent. per annum on the ordinary shares for half-year ended June 30.

New York Central and Hudson River.—1½ per cent. payable Oct. 15.

BREWERIES.

Alton Court.—At the rate of 8 per cent. per annum, for half-year ended June 30.

Workington.—Interim of 2 per cent. on account of the year to Feb. 29.

MINES.

Consolidated Gold Fields of New Zealand.—1s. 6d. per share, payable 29th prox.

Crown Reef.—100 per cent. for half-year ending Sept. 30, payable about Nov. 4.

Ferreira Deep.—Interim of 17½ per cent. for half-year ending Sept. 30, payable about Nov. 4.

Great Fingall.—Quarterly interim 2s. 6d. per share, payable Oct. 10.

Jumpers Deep.—Interim of 5 per cent. (1s. per share) for half-year ending Sept. 30, payable about Nov. 4.

Progress of New Zealand.—1s. 6d. per share, payable 29th prox.

Sons of Gwalia.—Interim quarterly at the rate of 1s. per share, payable Oct. 26.

Talisman Consolidated.—Interim at the rate of 1s. per share, payable Oct. 15.

MISCELLANEOUS.

Alliance and Dublin Consumers' Gas.—At the rate of 10½ and 7½ per cent. per annum on the respective shares for half-year ended June 30.

Alliance Trust.—Interim on the A stock and ordinary shares at the rate of 12 per cent. per annum for half-year ended July 31.

American Telephone and Telegraph.—Quarterly of 2 per cent.

Army and Navy Co-operative Society.—Interim of 1s. per 1s. share.

Ben Evans and Co.—Interim at the rate of 7 per cent. per annum on the ordinary shares for half-year ended Aug. 31.

British American Land.—Interim of 12s. 6d. per share on the "A" shares, payable Oct. 10.

Bromley (Kent) Electric Light and Power.—Interim of 2 per cent.

Burnley Paper Works.—Final of 6s. per share, making 10 per cent. for year ended Aug. 31, carrying £10,122 forward.

Chicago Junction Railways and Union Stock Yards.—1¾ per cent. on the preferred and of 2 per cent. on the common stock for three months ending Sept. 30.

Calgary and Edmonton Land.—Third interim for 1907 of 2s. 6d. per share, payable Oct. 1.

Canadian Northern Prarie Lands.—For half-year to June 30 at the rate of 10 per cent. per annum.

D. H. Evans and Co.—Interim of 5 per cent on the ordinary shares, and £2 per share on the founders' shares.

D. H. Evans and Co. Founders' Shares.—Interim of 8d. per share.

Direct Spanish Telegraph.—Interim at the rate of 4 per cent. per annum on the ordinary shares for half-year ended June 30.

Dorking Gas.—At the rate of 6 per cent. per annum on the A, B, and C shares, and at the rate of 5 per cent. on the D shares for half-year ended June 30, carrying £163 forward.

Drake and Mount (1902).—Interim at the rate of 4 per cent. per annum on the ordinary shares for half-year ending Sept. 30.

Eastern Telegraph.—Second quarterly interim of 1¼ per cent. on the ordinary stock in respect of profits for year ending Dec. 31.

Edinburgh Collieries.—Interim of 5 per cent.

Express Dairy.—Interim of 2½ per cent.

Foreign, American and General Investments Trust.—Interim for half-year ended Sept. 15 at the rate of 5 per cent. per annum on both the preferred and deferred stocks, payable Sept. 30.

Glamorgan Coal.—On the cumulative preference shares at the rate of 7 per cent for past half-year and 14s. per share on account of arrears, making a total of £1 1s. per share.

Globe Telegraph and Trust.—Interim quarterly of 2s. per share.

Gramophone and Typewriter.—Interim at the rate of 15 per cent. per annum on the ordinary shares for quarter ending Sept. 30.

H. Holdron.—Interim at the rate of 5 per cent. per annum.

Halifax and Bermudas Cable.—Further of 2½ per cent., making 5 per cent. for year ended June 30, carrying £682 forward.

Hart Brothers and Co.—4 per cent. for past year.

Irrawaddy Flotilla.—Interim of £2 per share for half-year to June 30.

Jabez Johnson, Hodgkinson and Pearson.—Interim at the rate of 8 per cent. per annum on the ordinary shares for half-year ended July 31.

James W. Cook and Co.—Interim for half-year ended June 30, at the rate of 4 per cent. per annum payable Oct. 12.

Linares Lead.—2s. 6d. per share to June 30.

London Guarantee and Accident.—Interim of 15 per cent. on account of the year 1907.

Lothian Coal.—2½ per cent. on the ordinary shares for year ended May 31, carrying £4,180 forward.

Melbourne Tramway and Omnibus.—For quarter ended 30th inst., at the rate of 15 per cent. per annum, payable Oct. 1.

Milwaukee and Chicago Breweries.—Interim for half-year at the rate of 6 per cent. per annum on the capital stock, payable Oct. 1.

Mitchell and Muil.—Interim at the rate of 5 per cent. per annum.

Morley and Lanceley.—Interim at the rate of 6 per cent. per annum on the ordinary shares for past half-year.

Natal Land and Colonisation.—Interim of 2½ per cent. on account of 1907.

Nicholsons.—At the rate of 6 per cent. per annum on the ordinary shares for half-year ended Aug. 12.

Ocean Accident.—Interim at the rate of 15 per cent. per annum for half-year ended June 30.

Robert Allen and Co.—6 per cent. for year to June 30, placing £1,000 to reserve and carrying forward £344.

Robertson, Ledlie, Ferguson.—At the rate of 5 per cent. per annum for the year ended July 31.

Samuel Marsden and Son.—5 per cent. on the ordinary shares for year ended June 30, carrying £2,057 forward.

Sao Paulo Tramway Light and Power.—Quarterly of 2 per cent., payable Oct. 1.

Staffordshire and Worcestershire Canal.—At the rate of 3 per cent. per annum for half-year ended June 30, carrying £6,210 forward.

T. R. Roberts.—Interim on the ordinary shares at the rate of 4 per cent. per annum.

Tarapaca Water Works.—Interim of 3¼ per cent. on account of current year, payable Oct. 1.

Theatre Royal of Manchester.—At the rate of 5¼ per cent. per annum for year ended Aug. 4, carrying £465 forward.

Thomas Owen and Co.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended June 30.

Wright and Co., Middlesbrough.—Interim at the rate of 7½ per cent. per annum on the ordinary shares for half-year ended Aug. 31.

NEW SOUTH WALES GOLD YIELD.—The gold yield of this State for the month of August was surprisingly poor, only 9,104 ozs., worth £32,532, as compared with 19,545 ozs. valued at £71,294 in the corresponding period in 1906. For the first eight months of the year the total production amounts to 199,252 ozs. valued at £715,097, as compared with 202,900 ozs. worth £717,407 for the preceding year.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and September 14, 1907:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Sept. 14, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Sept. 15, 1906.
Balances, April 1:	£	£	£
Bank of England	—	5,207,721	9,144,212
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,451,487
REVENUE.			
Customs	31,923,000	14,863,000	15,449,417
Excise	35,695,000	14,146,000	14,217,683
Estate, &c., Duties	17,697,000	9,111,000	9,271,893
Stamps	8,000,000	3,980,000	4,156,000
Land Tax and House Duty	2,600,000	400,000	350,000
Property and Income Tax	30,500,000	5,659,000	5,249,000
Post Office	17,600,000	6,700,000	6,440,000
Telegraph Service	4,400,000	2,120,000	2,083,000
Crown Lands	500,000	260,000	180,000
Receipts from Suez Canal Shares and Sundry Loans	1,100,000	688,500	686,542
Miscellaneous	1,550,000	1,009,024	794,772
*Revenue	152,835,000	58,578,524	58,109,257
Total, including balance		65,510,947	68,560,744
OTHER RECEIPTS.			
Repayment of Advances for Bullion		750,000	450,000
For Treasury Bills (net amount)		4,587,000	—
Under Telegraph Acts, 1892 to 1904		170,000	750,000
Under Naval Works Acts, 1895 to 1905		—	965,000
Under Public Buildings Expenses Act, 1903		80,000	75,000
Under Public Offices Site (Dublin) Act, 1903		—	10,000
Temporary Advances, Deficiency		1,500,000	1,900,000
Temporary Advances, Ways and Means (Treasury Bills)		—	500,000
Total		72,597,947	72,310,744

EXPENDITURE AND OTHER ISSUES.

—	Estimate for the year 1907-1908 (including Supplementary Estimates).	Total Issues out of the Exchequer to meet payments from April 1, 1907, to Sept. 14, 1907.	Total Issues out of the Exchequer to meet payments from April 1, 1906, to Sept. 15, 1906.
EXPENDITURE.	£	£	£
National Debt Services	29,500,000	10,675,557	11,947,683
Other Consolidated Fund Services	1,685,000	705,035	726,668
Payments to Local Taxation Accounts	11,205,000	3,486,007	4,278,910
Supply Services	110,678,000	44,223,299	42,897,536
Expenditure	153,068,000	59,089,898	59,849,597
OTHER ISSUES.			
For Advances for Bullion		800,000	600,200
For Advances for Interest on Exchequer Bonds issued under the Capital Expenditure (Money) Act, 1904		90,000	90,000
Under Telegraph Acts, 1892 to 1907		370,000	755,000
Under Naval Works Acts, 1895 to 1905		440,000	1,292,000
Under Military Works Acts 1897 to 1901		150,000	—
Under Public Buildings Expenses Act, 1903		175,000	75,000
Under Public Offices Site (Dublin) Act, 1903		—	10,000
Under Cunard Agreement (Money) Act, 1904		177,234	625,910
Surplus Revenue applied to reduce Debt		3,500,000	1,000,000
Deficiency Advances repaid		1,500,000	1,000,000
		66,292,132	65,297,707
	1907. Sept. 14 / 1906. Sept. 15.		
Balances in Exchequer:—	£ / £		
Bank of England	5,661,638 / 6,299,248		
Bank of Ireland	644,177 / 713,789		
		6,305,815	7,013,037
Total		72,597,947	72,310,744

NOTE.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 15), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

MEM.—Treasury Bills outstanding on September 14, 1907:—

Bills issued by Public Tender	£12,800,000
Bills otherwise issued	2,500,000
Treasury, September 17, 1907. Total	£15,300,000

LONDON AND COUNTY BANKING.—Liabilities on August 31, amounted to £44,984,924 on simple contracts and £2,824,702 on acceptances, against which the assets were £6,610,305 in investments, £8,873,347 in bills of exchange, £20,297,081 in loans and advances to customers, £6,563,108 in cash at the Bank of England and on hand, and £3,036,138 in money at call and notice

LONDON JOINT STOCK BANK.—Liabilities on August 23 consisted of £1,378,420 on notes and bills, £17,980,708 on simple contracts, and assets of £3,373,027 government and other securities, £14,235,059 bills of exchange, promissory notes and other advances, £2,842,355 cash at Bank of England and in hand and £1,872,186 other securities and etc.

COMPANY MEETINGS.

CALEDONIAN RAILWAY COMPANY.

Very great interest was taken in the half-yearly meeting of the Caledonian Railway Company, held on Tuesday last, in view of the opposition which was offered by the Scottish Railway Shareholders' Association. The Glasgow Merchants' House, the usual meeting place, proved quite incapable of accommodating the crowd of people, and the directors in anticipation had secured the use of the City Hall. It was necessary, however, to constitute the meeting in the Merchants' House, and this having been done by the reading of the notice convening the meeting and closing the register of shares, an adjournment was made to the City Hall. The movement created an unwonted scene even in the busy streets of the city, as the crowds of shareholders made their way from George Square to the Candleriggs in quick step. The area of the hall was three-parts filled, and the galleries were chosen by many to witness the proceedings. Probably about 1,500 persons were present. On the whole the meeting proved very orderly, though the sympathisers of the "reform" party made themselves conspicuous in its course. The difficulties of conducting discussion in a large hall were admirably met by the tact of Sir James King, the chairman, who afforded every facility and indulgence to speakers.

EXPLANATION OF ACCOUNTS.

The Chairman, in moving the adoption of the accounts, said: There have been no receipts on capital account, and the expenditure has amounted to £232,746, as against an estimate of £235,000. The principal items were £17,529 expended on the extension of the accommodation for goods traffic at Buchanan Street Station, £20,988 on the widening of the line at Eglinton Street, £9,165 on the Aberdeen Goods Station, £9,851 in final settlement of land claims in connection with the Lochearnhead, St. Fillans, and Comrie Railway, £14,090 in final settlement for the Larkhall and Stonehouse connecting lines, and £67,485 on the Clydebank Dock branch. £30,609 has been spent on working stock and £49,782 on Grangemouth Docks. The "estimate of further expenditure on capital account" shows an estimated outlay of £214,000 during the current half-year, including £25,000 for the Eglinton Street widening, £44,000 for the Glasgow Central Station extension (an expenditure which, I am glad to say, is now very nearly at an end), £28,000 for the extension of the Buchanan Street Goods Station, and £30,000 for working stock. Table No. 8 gives the capital powers and assets available to meet further capital expenditure, and shows a debit balance of £832,977. This, however, has been put right by the £1,500,000 of capital powers contained in the Caledonian Railway Order, 1907, which passed too late for its provisions to be given effect to in the accounts now before you. Of this large amount, as I explained at the Wharncliffe meeting in March, only about £87,000 is intended to be raised for the execution of new works, and the balance is a nominal credit to capital in order to clear our accounts. Coming to the revenue account, we find an increase in the receipts under every head, except live stock and rents from depôts and stores, which show decreases of £1,021 and £83 respectively. Passengers are up £9,927, parcels £5,946, and mails £208. First-class passengers have increased in number by 11,150, fetching £794 less money, whilst 763,663 more third-class passengers have been carried, bringing in £10,027 more. The receipts per passenger work out at 1s. 3d. per head first-class and 6.68d. per head third-class, a falling off of ½d. in the one case and .14 of a penny in the other; the average receipts per passenger, including both classes, come out at 7.12d. against 7.28d., a loss of .16 of a penny. Season tickets show an increase of 2,531 in numbers and of £694 in money, the average price, however, having fallen from £1 15s. 8¼d. to £1 13s. 5d., a loss of 2s. 3¼d. Merchandise (less cartages) is up £1,037 and minerals £20,463. As regards tonnage, merchandise shows a decrease of 21,476 tons and minerals an increase of 486,587 tons, the receipts per ton being 5s. 5d. as against 5s. 4d. in the one case, and 1s. 2d. as against 1s. 2¼d. in the other.

INCREASED EXPENDITURE.

The expenditure side of the accounts shows a rise greater or less under almost every head; the exceptions are maintenance of way, works and stations, which is down £4,011, compensation, which is £6,560 less, and Government duty, which marks a decrease of £162. Premium to servants is stationary, and £407 less remuneration for working other lines was received. The smaller amount expended upon maintenance is partly due to more re-sleepering and less relaying having been necessary during the half-year, but more particularly to the good prices received for the old material taken up and on hand. Under Mr. Matheson's direction you may rest assured that the line has been fully maintained. On the other hand, there was a heavy increase in the expenditure on repairs to bridges and on remedial work generally. Locomotive power is responsible for an increased expenditure of £49,455, £45,579 of which is to be attributed to extra cost of fuel; the balance is due to oil, tallow, and other stores £2,304, to locomotive wages £1,493, and to miscellaneous expenses £117; repairs and renewals are down by something under £500. Repairs and renewals of carriages and wagons show an increase of £3,255, of which more than one-half is due to the higher cost of material. Before passing from the subject of working charges, it may be observed that, but for the increased expenditure on coal compared with last year, the difference, about £45,000, would have sufficed to pay an extra dividend of ½ per cent., say 4 per cent., being the largest dividend paid in what is termed the lean half-year since 1900. I fear that there will be no relief for us as regards the price of fuel during the current half-year, but that, on the contrary, our coal bill will be even higher than the one before us. When we met last March I pointed out the disadvantage at which the railways had been put in comparison with other traders by the action of the Legislature in virtually putting it beyond their power to reimburse themselves during the periods of high prices for wages, fuel, and stores, by raising their rates for the conveyance of goods and minerals. We are still suffering under that disability, and even more acutely. Under the pressure of this heavy burden we thought it our duty, in concert with the two neighbouring railways, to arrange for a conference with the Association of Coalmasters, and to make strong representations to them as to the reasonableness of their agreeing to a small increase of rate of carriage. The answer of the coalmasters has not yet been received.

RELATIONS WITH OTHER COMPANIES.

At last half-yearly meeting I stated that the relations between this company and their two neighbouring competitors were now of so cordial and harmonious a character that the time seemed to have arrived when these friendly relations might be turned to practical account. Following up this announcement, I lost no time in putting myself in communication with the chairman of the North British. A satisfactory reply was received. A preliminary meeting took place in April, and special committees of each board were appointed to deal with the subject. We have good hope of bringing these negotiations to a successful termination—(hear, hear)—and of adjusting an agreement, extending over a long period of years, which would be the means of effecting economies where possible, and putting a stop to all unnecessary competition, while at the same time providing all reasonable facilities for both passenger and goods traffic. (Applause.) An agreement so important and far-reaching must be based on the figures of past earnings at all competitive places. The officers of the two companies have been engaged in the inquiry for several months, and I am glad to say their labours are nearly completed. It may be that this agreement, if completed, may also lead to more intimate relations with the Glasgow and South-Western Company. Meanwhile, I may say that an understanding has been come to on the part of the three companies for the winter coast service, whereby, *inter alia*, the Caledonian will withdraw her Arran steamer, and the South-Western in return will give up the Kilcreggan, Blairmore, and Holy Loch traffic to our company. (A voice: "High time.") This tentative arrangement, which will still afford reasonable accommodation to the public, is, I hope, only a foretaste of more important arrangements for the summer traffic. We are of opinion that in some cases our passenger fares are unduly low, and in our negotiations with the other companies it will be a point for careful consideration, after full inquiry, whether in any and in what cases an increased charge may be fairly and safely made. You will remember that at our last meeting I referred to the importance of substituting large wagons for small ones throughout the company's system, and said that a scheme was being adjusted for abolishing about 4,800 six and seven ton wagons, and replacing them by wagons capable of carrying 16 tons of minerals. (Applause.) A beginning has now been made with 1,300 new 16-ton wagons, and the small wagons as they come in for repair are being broken up, and the value of the materials applied in reduction of the cost of the new ones. An account has been opened under the title of "Small Wagon Replacement Account," and the cost of these 1,300 new wagons will be liquidated by a revenue charge in each half-year sufficient to pay off the whole amount within a reasonable period. The amount remaining to be liquidated in future half-years is entered in the general balance-sheet, table No. 13, and amounts to £81,924, having been reduced by credits extending to about £37,000 from the original sum of £119,375. Traffic charges are up £6,755, the chief items, with the exception of wages, being £1,825 for coal, gas, and water, and £2,125 for joint station expenses; the greater part of the latter increase, however, is accounted for by a special credit received a year ago in connection with Carlisle Station. Wages are more by £3,484, of which £2,244 is attributable to coaching, and £1,240 to the goods department, due to increased train running, reduced hours of working and revised scales of wages, also to additional staff for cleaning carriages. General charges show an increase of £1,164, of which £1,044 is for repairs of damage caused by the severe snowstorm last winter, coupled with the higher prices ruling for materials. The result of the revenue account is that there is £1,031,537 to carry down to nett revenue account, being £4,324 less than a year ago. The dividends on shares held by the company are not so good by £1,972, and there is a falling off of £6,051 on the credit side of the account. The changes on the debit side of the account are in feu duties and ground annuals, interest on temporary loans and general interest account, which are up £998, £6,229 and £1,090 respectively, the latter rise being accounted for by a special credit last year. As usual £10,000 has been placed to the credit of reserve—bridge renewals and contingencies account. The result is that there is a balance available for dividend of £705,247, as against £719,611, or a decrease of £14,364. After providing for the preference dividends, which will absorb £366,167, this leaves available for the ordinary dividend the sum of £323,155, which is sufficient to pay at the rate of 3½ per cent. per annum on the ordinary stock, carrying forward £15,923.

ATTITUDE TO SHAREHOLDERS' COMMITTEE.

As regards the shareholders' committee, I regret sincerely that they consider themselves to have been treated unhandsomely

This was not our intention. With the members of the committee personally I have no fault to find. At the joint meeting held at the request of the committee there was virtually unanimity of view. But although the members of the committee showed much knowledge of railway affairs, I believe it was found that every point raised by them was already under the consideration of the directors. ("Oh," and laughter.) It transpired incidentaly that the committee did not intend to challenge the policy or actings of the directors at the coming half-yearly meetings. But this was not the question which concerned the Caledonian board. They were strongly of opinion that as long as their policy was not challenged by the shareholders they should not be made responsible to any committee, but only to the shareholders as a whole. Prior to the meeting of 4th instant the board had approved of sending out a circular, and had instructed proxy forms to be issued to rather less than half the shareholders on the register. They adopted this course, not from ill-feeling towards the members of the shareholders' committee, but simply to ascertain how far the shareholders agreed in their policy. If in the result our anticipations are realised, the confidence accorded to us by the shareholders will encourage and stimulate us in the prosecution of our policy of economy and friendly co-operation with other companies, and it will not interfere with our freedom to meet in friendly conference with any body of shareholders when we consider it likely to promote the interests of the company. (Applause.) You will have observed from the speech of Mr. Bell, M.P., in Manchester, reported in the newspapers yesterday, that it is proposed to take a ballot of the members of the Amalgamated Society of Railway Servants as to whether "they should withdraw their labour at a given time." Your directors, whilst greatly regretting the possibilities involved in the decision which may be arrived at, see no reason to make any change in the position which the Scotch companies, in concert with the English railway companies, have taken on this subject. We, in common with other railways, find ourselves in this position, that, although there is a considerable expansion in our traffic, working expenses are more than keeping pace with it, and that it is quite impossible for us, consistently with our duty to the shareholders of the company, to accede to the demands which are made upon us. The directors will, however, be ready, as heretofore, to consider carefully any particular case of hardship in respect of hours of labour or wages; and they will also continue their existing practice of meeting when necessary any section of the company's servants who consider they have a grievance, in order to discuss it with them, and do what is just and fair under the circumstances. (Applause.)

Sir Charles Bine Renshaw seconded the motion.

The Chairman: Before putting the motion to the meeting, I shall be glad to hear any shareholder who wishes to speak.

Mr. Macdonald: I would like to hear from you what will be the order of conducting the business, and whether it will be in order during the consideration of the accounts for me to move the adjournment of this meeting, or that you will be content to wait until the accounts be approved and the dividend declared.

The Chairman: I think it will be more convenient after the accounts are passed, on the understanding that your rights are not interfered with in any way. (Applause.)

MR. BELL'S PRONOUNCEMENT.

Provost Keith, Hamilton, said that, while not rising in any sense to move an amendment to the report of the directors, and while not in the least degree attempting to impinge upon the rights and prerogatives of the Shareholders' Committee, who had been ably represented by Mr. Macdonald, he wished to take exception to the chairman's remarks, which, he supposed, expressed the views of the directors upon Mr. Bell's pronouncement on Sunday. He (Provost Keith) sent in a notice of motion which he proposed to move at that meeting, but the secretary wrote to him that that motion would be ruled incompetent. He suggested that it was entirely in the interests of the harmonious working of the railway system of this country that the best relations possible should exist between employers and employees. (Hear, hear.) He was not prepared to say that they were not right in saying that as a company they were not going to allow a large association of labour to coerce them. He did not believe in coercion in any shape or form, but he considered that the directors of the railway companies of Scotland need not associate themselves with the railway companies of England in a matter of this kind. (A Shareholder: "Why not?") Because the conditions of labour in Scotland necessarily differed from the conditions of labour in England. (A Shareholder: "No.") Yes, they did.

Mr. H. Mayberry: Is Provost Keith in order in discussing troubles affecting the companies at a meeting called to accept or reject the report?

Provost Keith: I beg to suggest to you that you have asked for observations on your moving the report, and that my observations are expressly directed to your observations in regard to capital and labour. Is that not so?

The Chairman: I have always desired when presiding at any public meeting to give the fullest possible opportunity to gentlemen present to express their views.

Provost Keith asked whether, in the event of reasonable arrangements being made, the directors of the Caledonian Company, in conjunction with the directors of the Glasgow and South-Western, the Highland, and the North British, would consider the formation of a Conciliation Board, represented on the one side by the directors of the Scottish railways, and on the other side by accredited representatives of the men. (Cries of "No.") If the relations of the employers and employed were not to be on a friendly and reasonable footing, trouble would follow. (Cries of "Sit down.")

A Shareholder: A point of order has been put to you, and you have not replied. This is not the business before the meeting. Provost Keith began his address by saying he did not intend to move any amendment to the motion you have made.

The Chairman: You are right on the point of order. I extended indulgence to Provost Keith, and I hope he will not abuse it. I might say right off, however, that it is very unlikely indeed that my board, though I cannot speak for them officially, would see their way to taking part in any Conciliation Board such as you suggest. (Applause.) We are proud of our men. They serve us faithfully and well, from the lowest porter up to the highest official. We have perfect confidence in them. Our relations in the main are most friendly. We deal with them as kindly and as liberally as our finances enable us to do, and I think it would be very much against their interests that they should proceed to take extreme steps such as are recommended to them. (Applause.) We have only to-day been asked to meet with a section of our men, and we have unhesitatingly agreed to fix on the very earliest day that they should meet the board. The men are always quite able to conduct their own case, in a manner on the one hand respectful to the directors, and on the other with full knowledge of their rights and of their difficulties.

Mr. Bosher, Sheffield, speaking as an English deferred stockholder, holding £40,000 of stock in the company, said, although they could not congratulate themselves upon the result of the past half-year's working, still, in fairness to the chairman and to the executive, he might say that they were not in fault in this case. It was entirely the price of coal and other commodities that had made the difference between this time last year and now. He was not out of sympathy with the motives and aims of the Shareholders' Association, because he presumed that primarily its aims were to benefit the unfortunate deferred stockholders; but he submitted that time had not been given to the three railway boards to carry their negotiations to any successful issue. ("Nonsense.") That was why he had not joined the ranks of the association. There was another aspect of the question. Had the members of the Shareholders' Association been members of that board, they would have felt somehow it was a kind of vote of no confidence in them for such an association to be brought into existence just at the time the chairman had decided that they would try to do their best for the company.

The resolutions adopting the accounts and the recommendation of dividend were then agreed to.

MOTION FOR ADJOURNMENT.

The Chairman: The next business before the meeting is the election of directors.

Mr. Macdonald: Will you bring my motion before the meeting?

The Chairman: I think it would be more in order that I should put my resolution, and then that you should object to it. Gentlemen, as this is likely to be opposed, it will be better I should propose the list of directors *en bloc*. I beg to move the re-election of——.

Mr. Macdonald: Those who have been nominated by you may not necessarily be opposed. I think we should have time to consider the matter.

The Chairman: I beg to move the re-election of Mr. Henry Allan, Mr. Edward Cox ——.

Mr. Macdonald: I beg to move that this meeting be adjourned to October 1.

Sir Charles Bine Renshaw: I beg to second the proposal made by the chairman.

The Chairman: What is your counter-motion, Mr. Macdonald?

Mr. Macdonald: It is a substantive one, not a counter-motion. Will you allow me to judge as well as you that the promise was clear and distinct that I should move it immediately after the passing of the accounts.

The Chairman: What I said was that your power would not be interfered with by the passing of the accounts. If you had opposed the passing of the accounts, you would have made a counter-motion to my resolution, and now that I have put the second resolution, the re-election of these directors, you make a counter-motion to that. (Cries of "No.")

Mr. Macdonald: If I had not had the promise you gave, I would have moved that the accounts be not passed.

The Chairman: That would have been an amendment, and this also must be an amendment. (Cries of "No.")

Mr. Macdonald: Not necessarily.

Mr. Mayberry: I do not wish to dictate to the chair, but in view of the notice of motion which I have given, could it not be disposed of before giving effect to Mr. Macdonald's motion? (Cries of "Sit down.")

Mr. Macdonald: I would like to hear your decision now. Will you receive my motion as a substantive one, or as an amendment?

The Chairman: Let me hear your motion.

Mr. Macdonald: That this meeting be adjourned till October 1 at one o'clock. (Cries of "No" and "Yes.")

The Chairman: Would that not be a competent amendment to my motion? (Cries of "No.") It seems as broad as it is long, and it would come to the same thing in the end. (Cries of "No.")

Mr. Macdonald: I am quite willing to abide by your ruling, provided it is supported by the audience here to-day. If you consider that that is the right course, I shall not interfere with that, but I thought that immediately after passing the accounts

you would allow my motion to come forward, and I thought it would be a substantive motion. (Applause.)

The Chairman: I have already explained, Mr. Macdonald, that my understanding was that if I refused to give you an opportunity of immediately speaking after, that you would move an amendment to my resolution—(cries of "No")—that you would move that the accounts be not passed. ("No.") That was what you intended to do. ("No, no.") What did you propose to do?

Mr. Macdonald: I asked permission before passing the accounts to bring forward my motion for the adjournment of this meeting until October 1.

The Chairman: Then I did not understand. With that explanation I think it would be only fair if you had that impression that I should now allow you to move the adjournment. (Applause.) I wish to treat you with every fairness. (Applause.)

Mr. Macdonald: I beg to move the amendment. I will not take up your time with any elaborate statements, but will content myself with reading a quotation from the circular issued by the Railway Shareholders' Association. This document, which was freely circulated among the shareholders, contained the following passages:—

"As, however, we are more concerned with the future than with the past, it is intended to move, immediately after the declaration of the dividend, that this meeting be adjourned till Tuesday, October 1, at one o'clock. If this motion is carried—and it is hoped it may be—then in the meantime, and as soon as possible, a meeting of the members of this association and other shareholders will be called to consider who should be nominated for directors. The committee have studiously endeavoured to avoid the charge, or even the appearance of place seeking. Their sole object throughout has been to promote the welfare of the company. The conference held on September 4 was of such a satisfactory character, and the promises given were apparently so sincere, that the committee had quite decided to recommend the shareholders to allow the present board a full opportunity of working out their own salvation. Since then, however, circumstances have changed. But, desiring to be free from any allegation of selfishness either on their own part or their friends, the committee have refrained from suggesting anyone for directorship, preferring instead to afford the shareholders themselves a full opportunity of deciding who should be nominated. If it is found that the retiring directors are best for the position, then the confirmation of their appointment by the shareholders, after full consideration, will assure them of whole-hearted support, but if they are not (and the inference from the poor results of the last few years' working are against them) then let us without hesitation replace them by other and more qualified men. I therefore respectfully ask you to support the motion for adjournment, in order to afford time for sifting those who are at present in office and are now seeking re-election, or to find others who will more completely meet with your approval."

Mr. W. T. Duff seconded the motion for the adjournment.

The Chairman: It would be very unfortunate if the board were without five or six members for a fortnight—("Oh")—and I beg to move as an amendment that the business of the meeting now proceed.

Sir Charles Bine Renshaw seconded.

The Chairman: Then I suppose we will take a show of hands.

A show of hands was taken.

The Chairman: The majority being in favour of the motion, I now desire a poll.

Mr. Mayberry rose to a point of order, and was received with cries of "Sit down." How was it known, he asked, that they were all shareholders who were present?

Mr. Macdonald: What is the use of the chairman asking a show of hands if he does not make it known?

The Chairman: I have declared the show of hands, but that is not conclusive. ("Oh!") Mr. Macdonald has proxies and I have proxies, and these must be taken into account, and it is only after a poll that we shall know what the decision has been.

A shareholder: Can that be taken just now?

Mr. Macdonald: I think with all deference we are entitled to have a declaration of the vote by show of hands. (Applause.)

The Chairman: I have already declared what the result of the show of hands is. ("No.") I have declared it was in favour of Mr. Macdonald's motion, and I have asked for a poll in my duty to the shareholders as well as those here present.

A shareholder: I think we can congratulate ourselves at this stage on having achieved a moral victory. (Laughter and applause.)

The Chairman: In connection with the poll we must have the names and votes of those here present. The secretary will call out the name, and you will vote the one way or the other as the case may be. (Cries of "Oh!" and "Adjourn.") Those who have handed in proxies, of course, may go, because their votes have been already recorded, but those who wish to have their vote recorded should remain, and we will take the vote after they answer to their name.

A shareholder: Adjourn the meeting, and that is the end of it.

At this stage a large number of those present began to leave the hall.

Mr. Macdonald: If you have not given a proxy I would advise you to wait. (Cries of "Adjourn the meeting.")

The Chairman: Those who voted in favour of Mr. Macdonald are doing him a great injustice by going away without recording their vote.

A shareholder: How long will it take to take this poll?

Another shareholder: Can you not have a paper sent, and that will give you the result, one way or another?

A shareholder in the gallery: How many proxies do the directors hold, and how many does Mr. Macdonald hold?

Rev. Mr. Scott, Sanquhar: I wish to ask you what you propose to do with those proxies which Mr. Macdonald asked? Were they to personate them at this meeting? That would be dishonest and dishonourable. It would be using the funds of this company, of which I am a member, to promote a policy of which I disapprove. It is dishonest to use my money, as Mr. Macdonald proposes to do, in support of a policy of which I disapprove.

A poll was then taken, and by the time it was completed only a few shareholders remained. At the close the Chairman stated that the result would be announced in the Merchants' Hall at a meeting on Thursday at one o'clock. The meeting would be advertised so that everyone might know.

On the motion of Mr. Mayberry, seconded by Mr. Bosher, a vote of thanks was accorded Sir James King for presiding.

RESULT OF VOTING.

The adjourned half-yearly meeting of the Caledonian Railway Company was held in the Merchants' Hall on Thursday. Sir James King presided. There was a comparatively small attendance of shareholders. At the meeting on Tuesday a poll was taken on a motion to adjourn until October 1, and an amendment proposed by Sir James King and seconded by Sir Charles Bine Renshaw that the business should be proceeded with, and at the close of the voting the meeting was adjourned until Thursday.

The Chairman said that he had now to declare the result of the poll which he demanded at the meeting in the City Hall. It was as follows:—For Mr. Macdonald, who proposed the motion, 7,394; for the directors, 61,908; so that there was a majority in favour of the directors of 54,514 votes. That being so, the business ought now to go on.

Mr. Macdonald (interposing): Will you allow me to make a remark at this stage? I think it is only fair I should be allowed a word on the result of the vote.

The Chairman: Is it necessary? I have made no remark.

Mr. Macdonald: Whatever you like. I think it is necessary. In that case I should be glad if you would give the money value.

The Chairman: I shall be glad to do that. The amount of the stock represented by proxies in favour of Mr. Macdonald is £2,538,000. The amount of the stock represented by those who support the directors is £12,439,000.

Mr. Macdonald: That is, Mr. Chairman, 5 to 1, or something like that.

The Chairman: According to deferred stock it is something more if you take the number of votes, because when the ordinary stock was divided, the preferred portion got three-quarters and the deferred portion got the other quarter vote.

Mr. Macdonald: Quite so.

The Chairman: There is in that way a disparity between the amount of stock and votes.

Mr. Macdonald: I quite understand. I want to emphasise the point that those who are suffering most are those who are crying out most—the deferred shareholders. If you examine it, the votes in favour of the directors only give 2 to 1 when you come to the deferred shares.

The Chairman: That I do not know.

Mr. Macdonald: That is the point I wish to get at, but I do not wish to be captious in any way, but I think it is well to draw the lesson from it. Besides, there is another lesson.

The Chairman: You are making a speech now.

Mr. Macdonald: No, I am not making a speech.

The Chairman, in answer to a shareholder, explained that the individuals who voted for Mr. Macdonald numbered 752. Those who voted for the directors numbered 4,956. Then the next business before the meeting was the re-election or election of the directors, and, as in ordinary times, he proposed to nominate them singly for re-election. He therefore moved the re-election of Mr. Henry Allan.

Sir Charles Bine Renshaw seconded.

Mr. Macdonald: I would like to ask as the name of each director comes up how many meetings he has attended during office. Several questions have been put to me in the letters which I have received on the subject.

The Chairman: I wish to extend to you every information that is fair and reasonable, and though this is a most unusual question, and it is not to be regarded as forming any precedent, I think your purpose will be served if I take the five directors, give you the number of board meetings that have been held, and give the attendance of the highest and the attendance of the lowest, and you will see there is so little difference between them that it would be rather invidious to ask what the actual attendance of each happens to be. Well, there have been during the three years since their election sixty-eight board meetings; that is almost every fortnight. The highest attendance is sixty-five out of the sixty-eight; the lowest attendance is fifty-nine out of the sixty-eight. (Applause.) I do not know any board that could show more regular attendance than that. (Hear, hear.) I think from the information I have given you, you need not ask the individual attendance when between the highest and the lowest there are only six. I trust this question will tend the more to lead you to place confidence in the continuous attention to your business on the part of those who form the members of the board. (Applause and a voice: "Quite right.") Then I may take it that Mr. Allan is unanimously re-elected. (Applause.)

The other retiring directors—Mr. Edward Cox, of Dundee; Sir M. Mitchell-Thomson, Bart.; Mr. David Tod, and the Hon. G. R. Vernon—were also unanimously re-elected on the motion of the Chairman, seconded by Sir Charles Bine Renshaw.

The Chairman said the next business was the notice of motion given by Mr. Mayberry. It would be taken up at next half-yearly meeting, as in the case of the Glasgow and South-Western Railway Company. It was as follows:—"The shareholders of the Caledonian Railway Company, realising that in view of the keen competitive trading prevailing between the Scotch railway companies, the serious difficulties under the present circumstances in obviating same, the large sums of money incurred, and likely to be incurred, to carry on the present war of trade, are of the opinion that no substantial saving is likely to be effected except by a well-arranged working agreement to be loyally adhered to, or, better still, by some form of amalgamation, which latter is believed to be the true solution and remedy for the present large expenditure, and resolve to impress on the directors accordingly to proceed forthwith in this direction."

The Chairman said that before parting he would like to acknowledge the fairness and the courtesy with which Mr. Macdonald had acted all through this contest. (Applause.) He (the Chairman) thanked the shareholders for their attendance, and assured them that, possessing, as they did, so large a share of the confidence of their shareholders, the directors would be more than ever resolved to do everything they could to promote the interests of the company. (Applause and a voice: "Bravo!").

Mr. Macdonald proposed a vote of thanks to the chairman. As Sir James King had been very kind in referring to him, it was only courteous on his part to ask them to award a hearty vote of thanks to him for presiding at this meeting and the previous one. There never had been the least acrimony introduced into this contest. They felt they had a duty to do, and as they had discharged it, it would, as he (Mr. Macdonald) had said from the beginning, inspire them with greater confidence in the directors than they had had before. (Applause.)

Mr. Bosher, Sheffield, seconded the motion.

The Chairman returned thanks for the consideration given of his services.

The meeting separated.

ALBY UNITED CARBIDE FACTORIES.

The first annual general meeting of the Alby United Carbide Factories, Limited, was held on Tuesday at Winchester House, Old Broad Street, E.C., Mr. A. E. Barton, chairman, presiding.

The Secretary (Mr. H. A. McMahon) having read the usual notice,

The Chairman said: The working expenses, &c., to December 31 last resulted in a loss of £5,443. This, however, is nothing more than might have been anticipated, as it necessarily takes time to establish the business and place it on a revenue earning basis; but had the profits earned by the Alby Carbide Company of Sweden been paid away in dividends instead of being utilised in the extension of the factory, as the holder of 90½ per cent. of the shares in that company our proportion of such profits would have been more than sufficient to extinguish the loss above referred to. You will doubtless have been pleased to see that the extension of the factory at Alby was completed in July last, and that the whole of the output for the present year has been sold at prices that should return a profit of over £20,000. Since the half interest in the Meraker Carbide Factory was acquired the factory has ben remodelled, and the Alby process of manufacturing carbide installed. The whole of this factory's production for the current year has also been sold, and our share of the profits should exceed £10,000. These works are now being enlarged, so that by the end of this year the output should be increased by about one-third, the profits being, of course, proportionately greater. The large factory we are installing in Norway, when completed at the close of the present year, will be one of the finest up-to-date carbide works in the world. The whole of the output for 1907 from both the Alby and Meraker factories has already been sold at prices which are estimated to show a profit to our company of about £30,000, and forward contracts for a large portion of the output of the three factories for delivery during 1908 have been made, so that the profits to this company on such sales should exceed £100,000. Since the report was sent out further sales have been made that will, I estimate, increase the above-mentioned amount by fully £25,000, so that the estimated profit on carbide already sold for delivery during the ensuing year exceeds £125,000, and when the balance of the output has been sold I believe that the profits to the company on the year's production will certainly be over £150,000. In this profit no allowance has been made for dividends that may be received on our holding in the North-Western Cyanamide Company, in which company we own 39,000 shares, out of a total of 120,000. The Cyanamide Company's factory will, it is anticipated, also be completed about the close of the present year, and from the success that has been attained with the product manufactured in Italy it is only reasonable to anticipate that the North-Western Cyanamide Company will meet with equal success, and become a steady dividend-paying concern. Cyanamide is a product that will be used principally as a fertiliser, and as it contains a high percentage of nitrogen can take the place of Chili nitrate. Chili is now exporting about 2,000,000 tons of nitrates annually, so you will readily see the enormous opening there is for a fertiliser which can replace the Chilian product. Moreover, cyanamide being a lime nitrate, has a distinct adavntage over the Chili product on certain soils. The plant being installed by the North-Western Cyanamide Company is capable of turning out 12,500 tons in the first year; but as this is such an infinitesimal quantity in comparison with the annual consumption of nitrates, to which I have already referred, you will readily appreciate the possibilities for such an enterprise. Our company has the right to supply the Cyanamide Company with the whole of the carbide required at its factories; and as it takes three-quarters of a ton of carbide to produce one ton of cyanamide, it will be seen that this new industry is likely to require very large quantities of carbide, and consequently be an important factor in the future of our company. I think you will agree that we have reason to congratulate ourselves on the soundness of the business in which we are concerned.

Mr. Albert Vickers seconded the motion. After a short discussion, the Chairman, in reply to questions, said that they were engaged in building up a huge undertaking, and he did not think the board would pay a dividend before next June. They might be able to pay an interim dividend, but that was a matter which would have to be considered later. The report was adopted unanimously.

PEARKS' STORES (AFRICA).

The ordinary general meeting of Pearks Stores (Africa), Limited, was held on Friday at Winchester House, Old Broad Street, E.C., Mr. Charles Steel (the chairman of the company) presiding.

The Secretary (Mr. John Dumphreys) having read the notice calling the meeting and the auditors' report,

The Chairman, in the course of his speech in moving the adoption of the report, said: I will first refer to the capital account. There is not much to be said in respect to that. The whole of the authorised capital of the company has been issued, and the whole of it has been paid up with the exception of a small sum of £250. On the expenditure side we have spent a certain sum in connection with the new branches which we have opened up during the course of the year. Now I come to the question of the business of the year. We have received in profit on trading £31,803; that is a larger sum than we have ever before realised in the history of the company. It is an increase over the previous year of £4,704, and is largely due to the establishment of the retail places which I have just mentioned. We expected to have a very much larger increase of business at the places which were already established when the year began, but the year through which we have passed has been an extraordinary one. I should like, if it were possible, to call it an abnormal year. As the year went on we found matters were getting worse; the depression continued, want of confidence in business existed, and I am bound to tell you this—that at the close of the year, having regard to all that we had gone through, we as a board felt satisfied that we had been able to achieve the results we have achieved. I come before you to-day—both I and my colleague—with every confidence and with a certain amount of—shall I say satisfaction?—at the result which we are able to place before you. I now want to refer to the administrative expenses, £21,074. These are heavier than last year by something over £4,000, but these administrative expenses are almost entirely due to the expenses which we have incurred in the new places that we have opened. We have opened retail branches at Boksburg, Turffontein, Doornfontein, Fordsburg, and Belgravia. This is in pursuance of the policy which we have always had before us, and that it is a sound policy I am perfectly satisfied. From the very time when each of these places has been opened the business has increased, and it has increased at a greater ratio so far as the returns for this year come to hand than in the previous year, and I am hoping that in the future these places will prove a source of strength to us. Deducting the expenses from the profit on trading, we have a balance to carry down of £10,080 1s. 5d., which we have to dispose of in the way shown in the report.

Mr. W. Salmon seconded the resolution, and it was carried unanimously.

PEARKS' STORES (AFRICA), LIMITED.

During the past year the balance of this company's capital was paid up, so that with the £15,000 issued to Pearks, Limited, in accordance with the terms of the purchase of the business, the total now stands at £100,000 as compared with only £25,000. The new capital, however, seems to have been raised at a very inopportune time, and owing to the condition of affairs in South Africa, has not yielded a compensating increase in revenue. That is to say, the trading profits for the year ended March 16, in spite of the additional funds employed, only improved by £4,702 to £31,803. Other revenue gave £261 or a total of £32,064 against £27,100, but expenses took £7,810 more at £21,975, and the gain in nett revenue was no more than £154 at £10,089. At the last meeting the chairman stated that the issue of more shares would relieve the company of a very heavy charge for interest and discount, but so far from that being the case the item is actually £314 heavier at £2,500. After writing off £1,166 or £487 more for depreciation, transferring another £2,000 to doubtful debt reserve and writing £500 off underwriting commission against £527 off outlay on extension of the business, a balance of £3,770 or £521 less was left. Adding £2,740 brought forward, the available total was £1,070 up at £6,516, but with the new capital ranking for dividend the distribution has to be cut down from 10 per cent. to 5, and even then the sum carried out is £1,070 smaller at £1,670. One thing the additional funds have enabled the company to do is to pay off some of its floating liabilities, and these, including £3,532 borrowed from the bank, are £10,252 down at £55,097. On the other hand, sundry debtors have risen by £10,818 to £66,118, against which there is a reserve of £7,344, and stocks are valued at £62,510, but cash has shrunk to £447. Leases, plant, &c., were increased by £4,770, and after deducting the depreciation allowance, show an advance of £4,130 at £34,287, and horses, vans, &c., are also up by £327 on balance at £1,220.

NOTICE TO READERS.

COMPLAINTS reach the Publisher often based on the

Difficulty in Procuring Stray Copies of the INVESTORS' REVIEW at Railway Stations.

We know the difficulty exists and cannot remedy it. The Public itself can do so if it insists on having the paper, or if it applies at the shops or leading

Bookstalls of Messrs. W. H. SMITH & SON.

The PUBLISHER, however, prefers grumblers to SUBSCRIBE DIRECT. They save money by so doing, and can have their copies sent after them anywhere at a day's notice. With the

ADDRESS:—THE PUBLISHER, PRINTING HOUSE SQ., LONDON.

A READABLE WEEKLY

"Public Opinion" was very much prized by Thomas Carlyle, and was one of the last journals he read, said Dr. W. R. Nicoll in "The British Weekly."

PUBLIC OPINION.

TWOPENCE WEEKLY.

Edited by PERCY L. PARKER.

"Public Opinion" is eminently a readable paper. There is no padding in it. It is a paper which exists to put on record the ideas which men are thinking, and especially the ideas which make for Religious, Intellectual, Political and Social Progress as these are recorded in the world's books, papers and magazines.

It is a paper specially suited for those who exert public influence — for **"Public Opinion"** does not reflect one side of life only—it seeks to cover all sides of thought and opinion.

It is the bare truth to say that there is no other paper published in Great Britain which every week contains such stimulus to thought, or such a vast amount of real information presented lucidly and in a readable type.

"Public Opinion" is published every Friday, and its price is Twopence. It has been in existence 47 years.

"Public Opinion" can be obtained from any newsagent or bookstall, or will be sent post free for one year to any address in the United Kingdom for **10s. 10d.**, and to any place abroad for **13s.** per annum. Orders should be addressed to:—

"PUBLIC OPINION."

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 508. SATURDAY, SEPTEMBER 28, 1907. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

The Investors' Review.

The Post Office Monopoly.

(FROM A CORRESPONDENT.)

Down to the seventeenth century it was the practice of the Crown to grant monopolies for the importation or exportation of commodities, for producing certain manufactures, or for establishing markets. The granting of monopolies to individuals is now restricted to the legitimate case of patented inventions. In England we are not in love with the system of State monopolies. Most persons are of opinion that it is better that the State should tax the raw material or the manufactured article, if imported in that condition, as in the case of tobacco in its various forms, rather than that it should itself enter on the manufacture. We are mostly convinced that if the manufacture and sale of tobacco were monopolised by the State we should have inferior tobacco, without any advantage to the revenue. There is, however, one conspicuous case in which most persons—there are, or have been, exceptions—believe that the collection and distribution of letters is the fair subject of a State monopoly. The business is vast; some of it, the delivery of letters in scantily populated districts, is unprofitable, and under a system worked solely with a view to profit, would risk being neglected. A portion of the business of the Post Office being international, the need arises for treaties or arrangements with foreign countries, and such matters can best be treated by the Government. On these and other grounds it is generally held that the business of the Post Office should be placed as a monopoly in the hands of the Government. Were a monopoly not granted, we should have interlopers competing with the Government for the portion of the service most easily conducted, leaving the Government in undisputed possession of only that portion of the service for which other agencies did not find it worth while to compete.

Assuming then the advisability of a State monopoly, we have to ask on what principle the monopoly should be exercised. Is the State to regard the monopoly as a means of taxation, or should the Post Office be conducted solely with a view to the public convenience? There ought, it would seem, to be no hesitation in answering the question. If the State conducts a business with an eye to profit, it is certain that, whether the business be the manufacture of tobacco or matches, or the administration of a post office, the service will not be so good as if the sole object were the public convenience. The State will be exposed to the constant temptation to starve the service in order to increase profits. It will hesitate to adopt new inventions, or new methods not promising an immediate return. It will look on while rival agencies are establishing these new inventions, intervening only when success is established, and will then have to buy out the intruders at a rate which fatally burdens or, at least, cripples development. A condition of the exercise of the Post Office monopoly seems, therefore, to be that the Post Office should make no profit beyond a moderate sum sufficient to assure that the balance is on the right side; all profit beyond this moderate sum should be devoted to the improvement and development of the business.

The difference in the results of carrying on the business with one or other of these objects—profit or public convenience—becomes very clear if we compare Post

Offices worked on these opposite systems. Let us compare with the British Post Office, frankly worked as a means of taxation, the Swiss Post Office, carried on with a sole view to the public convenience. We will here leave out of the question all that relates to telegraphic and telephonic services.

We are at once struck by the larger aims of the Swiss office. It claims the monopoly of carrying persons, unless where, as in the case of railways, concessions have been granted by the State. The monopoly includes, as with us, the carrying of letters, it extends also to the carriage of newspapers, and to parcels not exceeding 5 kilos. in weight. This concerns only the exclusive right; the Swiss Post Office does not confine itself to this weight. Every traveller in Switzerland has felt grateful for the postal arrangements by which he can send his baggage at a very moderate charge even to remote valleys. For the purpose of carriage of parcels the Swiss postal territory is divided into 34 groups, to one or other of which every post office belongs. For parcels not exceeding 20 kilos. there is a uniform charge without regard to distance. For parcels in excess of this weight the charge is graduated according to distance. Every post office falls into one of four divisions, and the charge varies from 30 to 120 centimes for each 5 kilos. A more limited system of graduation is applied to ordinary letters. The Swiss Post Office carries a letter up to the weight of 8 ozs. for ½d. if the distance does not exceed 10 kilometres; for any greater distance within the territory the charge is 1d.

The system of "remboursement," or "cash on delivery," is, of course, in full operation in Switzerland. Great Britain is perhaps the only European country which has not adopted this most convenient plan.

Here, if one wishes to send money through the post, he has first to get a money order and then to be at the cost of sending it in a letter. The recipient has to go to a post office to cash the order. In Switzerland the Post Office receives the money, giving a receipt for it, and pays the amount to the recipient at his house.

Perhaps the most astonishing thing about the British Post Office is that for one day in seven a population of five millions of persons living in the metropolitan district is cut off from postal communication with the rest of the world. Why the metropolis should be thus singled out it passes the wit of man to discover. All round London there is an imaginary line. On the one side, the further from the postal centre, letters are delivered on Sunday as a matter of course; on the other, nearer to St. Martin's-le-Grand, a letter can be got through only by prepayment of a very heavy fee. Why should the correspondent of a man living in Wimbledon have to pay 2s. 3d. to get a letter delivered on Sunday, while letters are delivered free at Surbiton? The country which produced Calvin knows nothing of such restrictions, though the work of the Post Office is quite rightly reduced on Sunday to a minimum. On Sundays and public holidays, and, for the Catholic cantons, on certain great festivals, post offices are open for four hours only—two in the forenoon and two in the afternoon.

As an example of attention to detail, it is worth while to note arrangements with regard to the carriage of books. A subscriber to a circulating library can have books up to a weight of 4 lbs. delivered for 1½d., which sum covers, in addition, return postage.

Everyone who has visited a post office in one of the chief towns of Switzerland must have noticed nests of boxes fitted with glass fronts. These boxes are accessible to the public. By their means letters can be obtained without waiting for delivery by the postman on his rounds. The charge for such a box, with key, is fr. 1.50 per month. In the British post offices there is what appears to be a clumsy approximation to this at a charge of £3 3s. a year.

But space would fail to tell of the many ways in which the public convenience is studied by the Swiss Post Office. If one goes into an office he finds provision made for those who desire to write letters. Here, even when the business is not carried on in the corner of a shop of a baker or grocer, there is no such provision. On the contrary, we are met by a number of discourteous and even hostile warnings. We are not to expect change, we must not look to have our letters weighed, especially are we warned not to use, except for writing telegrams, the pen attached to the wall by a yard of string. What an attitude for a business concern to take towards its customers! The Swiss Post Office accepts responsibility for loss or delay; in its postal guide it instructs the public how to make claims, and gives information as to the bringing of actions against it. Compare with this the really insolent attitude of the Postmaster-General. He disclaims responsibility for delay or non-delivery, and in the guide prints in heavy type this monumental sentence:—

> "Compensation an Act of Grace.
>
> "All compensation, whether for registered correspondence or for parcels which have not been registered, is paid as an act of grace, and not under any legal liability, and the decision of the Postmaster-General upon all claims to compensation is final."

It is well to remember these things when we are urged to put the administration of the railways in the hands of the State, and especially when, as in a speech recently made by Lord Brassey, the appeal is enforced by reference to "the high efficiency of the postal service." If the Post Office is used as an engine of taxation, for collecting money to be spent upon "Imperial expansion," in making railways in Uganda and Nigeria, what reason have we to suppose that the railways would be administered in a different spirit?

Foreign Lottery Bonds.

An important subject is broached in the witty letter of a correspondent on another page, but we cannot answer all the questions with which it winds up. Of the "Lyrical Coutts" we know nothing, but should judge him, in the Irish way, to be somebody else, and his penny bazaar sort of tinsel rhetoric is of the substance that soap or butter advertisements are often composed. Its frothy simulation of enthusiasm can impose, one would think, on the young and inexperienced alone. The proprietor of the magazine, too, may be supposed to know his business, and, like the owner of the halfpenny newspaper, would probably say that without the revenue advertisements of this kind produce he could not continue to illuminate the world by help of his publication. That may be no excuse, and in our eyes is none, for the world might continue to revolve on its axis were the "Royal" and all its class silently consigned to the tomb, but if the proprietor of such publications thinks otherwise the moral responsibility is his as much as the profits. In our view this description of beguiling or cajoling advertisement, of which not magazines like this "Royal" one only, but most godly newspapers like the *Daily News*, are now loaded up, is likely to produce a harvest of popular disgust in time, a harvest of something other than profit to their owners; and we prefer to let the final judgment be the judgment of the reading public. It is slow but usually sure, as some of those newspaper owners who have been foolish enough to lend themselves to the hustling, falsehood-suffused style of Yankee puffery have already begun to discover.

Of the financial status of the International Securities Syndicate we shall likewise refrain from speaking further than this—it presumably depends entirely upon the amount of response in the shape of money down made by the impressionable public to its tawdry appeals. As, however, these appeals are expensive—magazines and newspapers would not insert them else—it is fair to assume that the syndicate does not vend its wares at the lowest market figure. The probability, rather, is that if it asks £10 for an article other vendors of it could be found who would supply it for £9, or perhaps less. We have never bought, and do not know by experience, but the assumption is not unreasonable. Thus

it comes about that were we disposed to ignore the law of the land, like the organisers of a "Charity" or clerical bazaar, and to invest in lottery bonds of continental cities and states, we should apply to one or other of the many accredited agencies of foreign banks or to responsible dealers in foreign bonds of any sort to be found in London, rather than to such vendors as this "International." In their case the buyer has to pay his share of the cost of the advertisements, and it is a fair inference that the greater the lavishness in advertising the larger must be the "loading" to meet their cost put upon the price of the articles sold. Beyond this it hardly seems necessary to go, for with all its wordy wealth it may be the reverse of uncharitable to suspect that these advertising syndicates have, on the average, a pretty tough job of it to lay hold of much of the gold of their dreams for the gratification of those who organise them. So with one question, and one only, we shall leave this part of the subject. Has the International Securities Syndicate obtained leave from Lord Rothschild to insert his portrait in its illustrated advertisements?

Another and more important subject remains, the lottery bond itself. Mr. Shiell may be surprised to learn that we have no hostility to it; or none greater than we might theoretically have to the issue of any kind of bond at a discount redemption of which is guaranteed at par, or of a bond at par redeemable at a lower or higher fixed premium. We have plenty of such bonds on our own market, all of which afford a more or less distinct gratification to that instinctive craving for unearned profit which is as strong with us as with any people on earth. Between our ways of cultivating this passion and the ways of the Continent there is no essential distinction, but lottery bonds gather into heaps the bonuses our system distributes to all and sundry. Occasionally, also, the lottery form of raising loans may enable the borrowing authority to get the money a little cheaper than it could do were a mere level benefit in interest promised with or without a bonus at the end in the shape of redemption at par or at a fixed premium. Just now, for instance, there is hardly a municipality in the United Kingdom that could borrow on established lines and for a long term of years at less than 4 per cent. Many would have to pay 4½ per cent., some higher rates still. But by the Continental lottery system it might be, and often is, possible to knock ¼ or perhaps ½ per cent. off the current rate of interest by offering the bait of occasional prizes more or less appetising.

Assume that a municipality—Paris or Brussels, any great city—requires £1,000,000 and finds the usury market against it so that it would have to pay 3½ per cent. on a mere straight "borrow," and that it is resolved to pay no more than 3 per cent., and it will proceed in this way:—The 3 per cent. will be divided into two portions, one representing the interest to be paid half-yearly on the nominal amount of the loan, and the other the sum to be gathered up and periodically distributed as prizes on lucky bonds drawn. The interest portion may be 2½ per cent. and the bonus portion ½ per cent., or it may be 2 per cent. and 1 per cent., just as the state of the money market determines, and the bonds may be issued at a discount, so that holders at the end all participate in the great bonus just as with us, but it is held abroad that borrowers on the average get their money cheaper by the lottery method than by any other. What is certain is that the multitude of the lenders provide the prizes for the few by foregoing some part of the interest they would in ordinary straight lending expect or be entitled by the condition of the market to receive. The generosity is, therefore, theirs, not at all or in any measure that of the borrowing municipality or state. It gets as much money out of the public as it can, on the best terms possible, and resorts to lotteries because these are found by experience to excite most effectually the generosity of the greedy. The whole system is immoral and degrading, you may say, and it doubtless is, but not more so, perhaps, than all systems of lending and borrowing on a large scale, or any scale, tend to become. And what we desire clearly to state is that the multitude which consents to lend at a low rate of interest in the hope of drawing a big prize, a prize much in excess of the amount of interest income foregone, must always be disappointed. The spiders who spread their advertisement nets to catch the silly flies, honey or money laden, never put that fact in the forefront of their story. They speak of prizes, of great heaps of gold won by a turn of fortune's wheel, never of the multitude of the blanks, and in this ensnaring reticence is found the abiding motive for condemnation. The loan issuers themselves use the same bait, though usually with less *réclame*, and in doing so throw over the entire business an air of insincerity and quackism repulsive to the healthy mind. All the advertising tout does is to emphasise and exaggerate in order to harden and broaden his market.

Odds and Ends of Facts about the United States.

We gather them from an interesting report upon the trade of the Republic in 1906 compiled by Mr. Seymour Bell, the British Commercial Agent there. It is not possible to co-ordinate the facts with any degree of success, and we are not sure that many inferences can be prudently drawn at the present juncture, but there are a goodly number of isolated statements which seem worth putting down much in the order followed by Mr. Bell. He tells us, for example, that the purchasing power of the country has increased rapidly of late years. In 1905, according to the latest available statistics, the wages per hour were 18.9 per cent. higher than the average for the 10-year period ended with 1899. In 1905 earnings per week were 14 per cent. higher than the average for the same previous period, and the average hours of labour 4.1 per cent. lower. The average weekly earnings, moreover, of all employees were 52.3 per cent. higher in 1905 than the average for the 10-year period ended with 1899, while the number of employees was 33 per cent. greater. Nothing, indeed, has been more remarkable in the recent history of the United States than the power shown to absorb human labour. Last year 1,225,000 immigrants were admitted into the country, and yet so great was the demand for labour that railways and manufacturers were actually handicapped in their business because they could not get a sufficient number of workmen. Hence the railways alone had to increase their wages bill by an amount computed at about £21,000,000 per annum. The only remark we should make upon this is that it by no means follows the people are better off in proportion as their wages have risen. The purchasing power of money has fallen in the States, as elsewhere, to an extent which probably in great measure neutralises the higher scale of pay. A severe panic in the United States is almost impossible, says Mr. Bell, owing to the diversity of crops, but of late years the Union has enjoyed exceptionally great advantages in the way of crop yields, and in 1906 the "farm value" of the outturn is put at the stunning total of £1,404,000,000, or roundly £100,000,000 more than the estimates for 1905. Food products alone are put down as worth £620,000,000 in the past year. Naturally, when the harvests have been good and where the increase in the areas under cultivation has been so rapid, manufacturers have also prospered and developed to a remarkable extent. It is estimated that the factories in the United States turned out products to the value of about £3,820,000,000 in the past year, textile industries giving £455,000,000 and iron and steel £475,000,000. The average increase in farm products was about 44 per cent. last year upon 1899, and in manufactured products the increase in 1906 over 1905 is put at 10 per cent. Bad crops, however, may be expected to come in their cycle just as good ones have done, and when they do, although there may be no general scarcity, nothing like famine prices for any article of consumption, a check must be given to the speed at which industrial development has been hurried forward in recent years.

Gold to the value of about £20,073,000 was mined in the United States last year, or about £1,860,000 more than in 1905. More interesting than this is the remarkable growth in the consumption of copper within the Union. It rose from 273,653 tons in 1905 to 340,015 tons last year, the total production of 1906 being 408,482 tons. Exports of copper were consequently much less last year than in 1905, and the price of the metal was forced up in a manner scarcely ever paralleled, until compared with an average of £89 4s. 5d. for electrolytic and £90 8s. for Lake copper, the high figure of £105 16s. 6d. was reached for electrolytic last December and £103 13s. 3d. for Lake in the previous November. We have so often dealt with the iron production of the United States that it is unnecessary to go over that ground again, but it may be mentioned that the estimated total iron ore resources of the Republic is put at about 3,000,000 tons, and as the iron trade has about doubled every 10 years during the last half-century, a trade paper has computed that within some 30 years from now the present known ore supplies will all be exhausted. That is a good deal worse than we thought. From 75 to 80 per cent. of the pig-iron is made from Lake ores, and it is more than probable that extensive deposits in that region are still either undiscovered or untapped, but Mr. Bell says that the average phosphorus contents of the iron ore received at Lake ports is steadily rising, while the metallic iron therein is as steadily falling, and that also is by no means good news. Regarding this iron and steel trade, Mr. Bell further says it ought to be noted that steel manufacturers "believe as a rule in the policy of cultivating foreign trade, irrespective of domestic demands." For an illustration of this disposition it is only necessary to turn to the figures of exports, which show that the iron and steel exported last year were valued at £35,640,000, or upwards of 20 per cent. more than the exports of the previous year. This export trade went on at a time when the domestic demand for all classes of iron and steel goods was unprecedented. In other words, the ironmasters had no scruple in starving or stripping the home trade in order to maintain or conquer markets abroad, so that they might be in a position to dump their overplus in foreign markets when the home consumption declined, as it has now begun to do.

In textile manufactures the United States has been also remarkably progressive of recent years, and yet not so progressive as it would be if home trade conditions were more favourable. Last year the scarcity of skilled labour was conspicuous, and it was estimated that from 10 to 20 per cent. of the cotton looms of the country were idle, in a more or less general way, during the entire year from this cause alone. Nevertheless, and in spite of the larger imports of foreign textiles, of which the United Kingdom got its full share, the spinning of fine yarns is very much on the increase in the States, and fine cotton goods are also being woven now, so that many classes of tissues, such as cambrics, lawns, and fancy weaves, are being produced within the States instead of being imported from the United Kingdom and the Continent. No similar progress seems to have been made in the woollen industries, but statistics in regard to these do not seem to have been available when Mr. Bell compiled his report. He notes, however, that the number of sheep in the United States has been falling off in recent years, but the weight in wool harvested last year was none the less larger than in 1905, owing to the increase in the average weight of the fleece.

Other items worth noting are a falling off of about 10,000,000 barrels in the production of petroleum last year, and an increase in the length of railways built of about 5,623 miles or 28 per cent. more than in 1905. But railway extension has been much hampered by scarcity of labour and high prices, especially in the Western States. None the less the length of railways built since, and including 1900 up to the end of last year was quite 36,000 miles or 14 per cent. on the previous aggregate. Gross earnings in the same time have risen about 56 per cent., passenger earnings about 90 per cent., freight earnings about 56 per cent., and expenses about 59 per cent., the nett earnings being 50 per cent. larger. The amount spent by railways on new rolling stock and motive power in 1906 is put at £78,500,000, and that fact alone, if fact it be, helps to account for the financial distress in which so many of the roads now are. Altogether the United States possesses 220,000 miles of railroad, representing an investment of £3,300,000,000, of which £1,343,000,000 was represented by share capital "of an average market value of nearly par." But these railways are to an amazing extent imperfectly built, and still more imperfectly equipped. The lines were generally constructed in a hurry and on a vast scale, and their promoters have been too intent on paying dividends, on manipulating the stock market, so that the properties have been kept in poverty instead of having had their resources husbanded. Hence the continual appeal for further capital when business in the slightest degree expands; hence also the recurring periods of bankruptcy.

We must not end this scattered summary without noting that the manufacturers in the United States are paying increased attention to markets in South America and making plans for increasing exports to that quarter of the globe. "Literature is being distributed freely in the way of high-class illustrated publications and catalogues, most of which are printed in Spanish, and made attractive." What are our manufacturers doing to meet this competition? To all Central and South American States the Northern Republic is now sending much more of its products than it formerly did. To Mexico alone the total exports came to £12,866,497 last year, an increase of 21.7 per cent. on the previous year and of 75.9 per cent. on the average of the previous ten years. Our exports to Mexico also showed an increase of 23.7 per cent. last year over 1905, but the total value was only £2,325,839, and the increase this value showed over the average for the previous ten years was only 27.8 per cent. It is about time we woke up a bit.

Economic and Financial Notes.

The Anglo-Russian Convention.

We hope it will do good. In many aspects an agreement between England and Russia may seem a futile thing at the present juncture, and we are not indisposed to sympathise with those who have declaimed against the effecting of any understanding whatever with the blood-stained bureaucracy of Russia; and it is probably true that but for the distress now weighing on that bureaucracy the Government of the Tsar would never have approached us. That it has done so, and that a compact partially defining the respective spheres of influence in Asia should have been signed and sealed seems to be at least proof that the rulers of Russia are in no position for the present to play the game of our jingoes. In this we find consolation and a hope of good results. So long as Russia is paralysed as an autocratic expansive empire by her internal disorders there is little probability that the agreement now made public will be used by her politicians as a cloak to hide schemes of aggrandisement at our expense in Asia, and during the interregnum, as it may be called, a better understanding may arise between the two democracies greatly conducive to an enduring peace. For this compact not only defines the boundaries of moral influence in respect of England and Russia, but recognises the independence of Persia, Afghanistan, and Tibet, the last-named being regarded as subject to the overlordship of China alone. We come under the obligation to restrain Afghanistan from aggressions against Russia and Russia engages in turn to have no dealings with Afghanistan except through the Simla Government. Persia is a more ticklish subject to handle, and it is in regard to the future of that misgoverned country that we should be apprehensive of an

early breach in the imperfect compact reached. To divide the dominions of the Shah into zones of influence and to exclude from these zones the Gulf territories are measures that hardly promise absence of friction. We, therefore, could have wished that Persia had been let alone as no particular affair of ours; yet even here time will have been gained during which Persia may possibly wake into new life and assume once more the care of her own destinies.

To us, however, the most interesting of all questions in connection with this diplomatic feat is, How will this compact affect militarism in India? For generations past the diligently cultivated Russian bugbear has been utilised as a pretext for increasing the load placed on the Indian peoples by the maintenance of a frequently enlarged native Indian army. Without this army—strong, efficient, increasingly numerous—we were told that it would be impossible for us to sleep in our beds free of nightmare, and as the natives paid in blood and money we at home did not mind much, permitted the canker to grow until it has to-day filled India with unrest and discontent from end to end. Surely the opportunity has now been given to abate this dangerous, this empire-undermining infliction. It should be impossible any more to terrify either the bureaucrats of Simla and Calcutta or the clerks of the India Office here and Mr. John Morley with horrid visions of Russian armies stealing over the Pamirs, or through Afghanistan, or over the bleak passes of Tibet in order to overwhelm us on the plains of India, and with the disappearance of this horrid dream the necessity for a native army in India of the existing strength should also disappear. By how many millions, therefore, is Mr. Morley preparing to reduce the Indian Army expenditure next year? That is the practical question, and on the answer to it more than on anything else will depend the value of the laboriously constructed agreement now concluded and proclaimed between the Russian and British Governments. So we wait upon Mr. Morley, trying to be confident that here, at all events, his principles will not be deserted by him. Much depends on his resolution; the very fate of our dominion in India may depend on it in the ages to come.

Great Eastern London Motor Omnibus Co., Limited.

Here we have a motor 'bus company which earns, or at any rate shows, a modest profit on its operations. It was one of the brood that came to life in the early part of 1906, and the directors were so convinced of the public enthusiasm for the latest method of road transit that they gave the enterprise a capital of £405,000, divided into 400,000 ordinary £1 shares and 100,000 deferred 1s. shares. As we showed in our issue of September 1, 1906, when overhauling a good many of these motor 'bus ventures, the public did not exactly break its neck in the effort to get shares, and the directors were clearly well-advised to have £100,000 of the capital underwritten. From the details on record we gather that something like £90,000 had to be taken by the guarantors, leaving the public "in" to the extent of, say, £10,000, or probably less. The first report ever issued covering the period from March 20, 1906, to June 30, 1907, has now made its appearance, and probably comes as a very pleasant surprise to the shareholders after the hopeless muddle that so many of the smaller enterprises have managed to get themselves into. Some have broken down altogether, others, we imagine, must be on the verge of bankruptcy, and those in a position to keep their motor 'buses going are only doing so at very heavy loss. What this company actually took in the period named, and how much it has cost to run the 'buses, we are not allowed to know, the directors adopting the device of setting out the receipts from traffic and other sources after deducting the working expenses. In this way they produced a revenue of £16,391, and transfer fees were £8, so that the income to be disposed of is £16,399. From this £6,488 is allowed for depreciation, &c., and in order to have a record for future use we may point out that £4,500 is written off the chassis, £347 off goodwill, £87 off plant and tools, and £9 off furniture. Preliminary expenses have been reduced by £1,544, directors' fees are £802, interest £364, law and accountancy charges £111, and income-tax £429. Balance of nett profit, therefore, comes to £8,140, and from it the directors provide a dividend at the rate of 6 per cent. per annum on the instalments as paid up, leaving £2,475 to be carried forward. This is not so bad, as things go, but one or two items in the balance-sheet excite a little criticism. The omnibuses are valued at £44,690, and the depreciation on the chassis, as already mentioned, is only £4,500, which seems altogether inadequate if the reports current as to the rate at which the machinery wears itself out are true. The amount written off goodwill, leaving it at £3,127, may or may not be sufficient; all depends upon the company's performances in the future; and we note that, whereas £3,900 was spent on account of property construction and equipment, raising the figure to £47,485, nothing at all was allowed for wastage. The cash balance of £2,727 is about as much as one could expect to find it, and while debtors are only £677 against creditors of £6,397, there are stocks of materials on hand worth £6,013. It evidently cost a rare sum of money to get that £100,000 of capital underwritten, as the preliminary expenses came to £15,441, of which £1,544 is now written off. The total issued capital is £105,000, of which £104,778 has been received, the balance being in arrear. The company appears to have had some bother with the contractors in connection with the chassis, and a note in the balance-sheet is to the effect that a contingent liability exists in respect of some of these machines which were not in accordance with the contract, and are now the subject of dispute. The amount, if any, is not at present ascertainable, owing to claims by the company for defects in construction and penalties under contract.

Birmingham Small Arms Co., Limited.

The affairs of this well-known company have been very prominent during the past twelve months or so, first in connection with the directors' departure in establishing a secret reserve in face of very strenuous opposition, and afterwards, in connection with the absorption of the well-known Eadie Manufacturing Company. Details of the amalgamation were given in these columns at the time it was carried out, and there is not much more to be said except that the profits of the Eadie company have been kept separate from those made at the Small Heath and Sparkbrook works. This is because the fusion was not effected until towards the close of the company's financial year. What the Eadie profits were we are not informed, the company being quite notorious for suppressing information, and all we know is that the revenue has been applied in paying the sum in lieu of dividend on the 42,500 shares issued to the Eadie shareholders at the same rate as that paid to the original B.S.A. shareholders for the past twelve months, in accordance with the purchase agreement; in writing off the difference between purchase price and the value of the assets, and in writing off amalgamation expenses, depreciation at Redditch, &c. While the profits made by the acquired business are not shown, the assets, as well as the liabilities under the purchase agreement, are included in the balance-sheet. The ordinary share capital of the Birmingham Small Arms Company has therefore been increased from £304,725 to £517,225, the preference issue remaining at the old figure of £203,150. There is a mortgage of £50,000 on the Sparkbrook factory acquired from the Government during the year before last, but sundry creditors and other accounts show some reduction to £58,654. Sundry debtors owe £71,833 compared with £59,027, and while investments have been reduced a little to £67,192, the cash

and bills at bankers and in hand stand at the substantial amount of £56,712, compared with the trifle of £117 shown a year ago. In other ways the balance-sheet issued grows more meagre every year, and one item now covers the freehold land and buildings, plant, machinery, and tools at Small Heath, Sparkbrook, and Redditch, the whole being valued at £669,256. Some leasehold cottages at Small Heath are in at £2,587, and the stock of finished and unfinished work, raw materials, and stores, is valued at £139,877. The reserve fund, including £25,000 taken from the past year's profits, will amount to £100,000. These profits, which include rents and interest on investments, but are struck after allowing for depreciation, amounted to £80,252, an increase of £6,140 over the previous year. Including £11,363 brought forward, the available balance is £91,615, which provides the preference dividend, 15 per cent. on the ordinary shares and £25,000 for reserve, as just mentioned, with a slight drop to £11,256 in the carry forward. The assets representing the internal reserve have been omitted from the balance-sheet, and the auditors report that they have been invested and applied in accordance with the provisions of the articles of association.

Swansea Improvements and Tramways Company.

Although this creation of the British Electric Traction Company's made a little headway during the six months ended June 30, its progress is very slow, and in receiving no dividend for the half-year the shareholders have to undergo an experience which is unfortunately no new one for them. The number of passengers carried increased by 130,941, resulting in a modest improvement of £614 to £22,318 in the gross revenue. Expenses, including £3,636 paid to the Swansea Corporation, £595 for interest on advances by the British Electric Traction Company and £854 for debenture and other interest, took £63 more at £18,576, leaving a profit on the tramways branch of £3,742. Adding £2,000 brought forward, the disposable surplus was £5,742, of which £1,000 is put to reserve and depreciation fund, £1,299 is absorbed by dividends on the two classes of preference shares, and £3,443 is carried forward. With the sum now transferred the reserve and depreciation fund amounts to £21,858, a figure which, if it were separately invested, would be little enough, considering the heavy weight of dead assets with which the balance-sheet is burdened. Capital outlay on old tramways now reconstructed, for instance, stands at £102,923, while Parliamentary costs come to £4,137. These two items, it may be claimed, really represent the cost of goodwill, but even so their total is far too large and requires to be drastically reduced before the company can really hope to do any real good. Expenses of new debenture issue £445 and expenses of leases from Swansea Corporation £148 are two other items which should have been wiped out long ago. Instead of doing that the directors content themselves with writing off £40 and £4 respectively, and at that rate of progress it will be 12 years in the one case and 38 years in the other before these "assets" disappear. Expenditure on the reconstructed tramways and their equipment has cost £144,640, and as the company's issued share and debenture capital for this branch is only £206,250 the British Electric Traction Company has had to come to its help with a loan of £20,000. The "Improvements" undertaking, although nominally separate, relies on the tramways to help it out, and owes £5,139 for money advanced. They, in turn, have to depend on credit to a greater extent than is comfortable, and floating liabilities therefore come to £13,342. Against these, sundry debtors, including £1,444 due from the Mumbles Railways and Pier lease account, amount to £2,994, stores and materials are valued at £2,871, and cash in hand is £2,686.

For years the Improvements undertaking has done nothing but pile loss upon loss, and the result for the past six months was a repetition of the old story. The Palace Theatre of Varieties, which cost the company £17,059, seems to be so poorly patronised that the surplus for the half-year was only £40, while the other property owned, consisting of lands and buildings, valued at £82,945, was even less remunerative, giving a yield of £8 from rents. Interest on loans, on the other hand, required £302, and with a modest £2 for general charges the loss came to £256, making the debit balance to date £6,351. So unfortunate has the venture been that, in addition to the share capital, which seems to be hopelessly lost, it has had to raise £1,533 by mortgaging its general property, as well as a specific mortgage on the Palace Theatre, which has been swollen from £8,838 to £12,130 by the accumulation of accrued interest, and it is further indebted to the Tramways undertaking for £5,139.

Trade of Pernambuco.

In spite of a predilection for British-made goods our direct trade with Pernambuco does not seem to grow to any appreciable extent, and our Consul there naturally thinks this points to a lack of "push" on the part of home manufacturers. Already a big business is done in Manchester cotton goods, but it is in the hands of German houses, whose travellers visit the country in considerable numbers. The same is true of hats, but here Austria-Hungary is ousting us with her own goods, while in the boot trade American manufacturers are rapidly beating us. Much of this state of affairs might be remedied if British firms woke up to the opportunities they are letting slip past them, and sent out suitable representatives. At present the number of German travellers who visit the market regularly is considerable and greatly exceeds the total number from all other countries. English travellers, on the other hand, are few, and their absence cannot be made good by volumes of correspondence or catalogues, especially if, as is often the case, the compilers persist in quoting in English weights and measures instead of in the metric system. Possibly reluctance to pay the tax of about £13 7s. formerly imposed by the State on all travellers may have kept firms out of the country in bygone days, although the amount was really an insignificant addition to the expenses, but even that barrier has been removed since January 1, unless the traveller carries goods actually for sale. No statistics are kept by the Custom House, or any other official department, as to the countries whence the imports come, and it is therefore impossible even to guess at the proportion British goods bear to those of competing countries. Most of the imports, however, wherever they come from, seem to be carried in British vessels, as the proportion of British tonnage increased from over 60 per cent. of the total in 1904-5 to nearly 70 per cent. in 1906. There seems, however, to be some danger that this satisfactory state of affairs may not continue. The coasting trade law in force prohibits any but Brazilian vessels from carrying cargo from one port to another, and it is thought that advantage will be taken of this to help the Lloyd Brazileiro with the service of steamers to New York which it has recently started. Competitors in that trade will be frozen out by the simple process of boycotting the home trade of shippers who send goods to New York by other lines. A beginning, in fact, has already been made, and the Lamport and Holt Line, which used to have a monopoly of the trade between the Northern Brazilian ports and New York, has had to withdraw its boats.

With regard to the openings for British trade, Mr. Staniforth considers that there ought to be a good field for household articles of all kinds, enamelled ironware, cutlery, hosiery, and stationery of all kinds. Linen, too, is very greatly in request for suitings, &c., and the demand for table and household linen is at least normal, "which for a town population of 200,000 means something considerable." Scotch whisky is consumed on a very considerable scale, and the taste for it is extending greatly amongst the native Brazilians, to say nothing of the British community numbering about 600. That last phrase seems to indicate that there are notable drinkers amongst the exiles,

but it is Mr. Staniforth's, not ours, and anyway, it offers a prospect to our distilleries of reducing their over-heavy stocks. Irish whisky, although not used to the same extent, is highly appreciated and growing in popularity, so the distillers in that country might also hope for relief if they went to work judiciously. Mr. Staniforth recommends Canadian boot manufacturers to send out a man to learn all he can about local tastes as to shapes, &c., with a view to extending their market in this direction, while the trade in British provisions, such as hams, bacon, tinned meats and vegetables, pickles, jams, and sweetmeats, &c., only requires a little pushing, as all these are already in the greatest favour.

Rich as the country is there are two serious impediments to its prosperity. One is the heavy taxation which, Mr. Staniforth says, crushes local industry and enterprise, and the other is the protective tariff. Between the two the Brazilian people find it hard to live, and even those of substantial incomes have to forego many little luxuries and comforts. Even in houses occupied by people with incomes of £1,000 a year and upwards the arrangements are primitive, doors without handles or latches, and windows with glass of the poorest quality, full of flaws and bubbles, while such conveniences as bells are unknown, and the visitor seeking admission to his friend's house must use his knuckles. A silk hat, the trade price of which would probably not exceed 10s., costs £3, so that such headgear has gone out of fashion. That would not matter very much, perhaps, but it is otherwise with sponges, the use of which has also been restricted owing to their expensiveness, a sponge worth 10s. in the United Kingdom costing as much as £3 10s. These two items are mentioned as examples, but the same rule holds good in other directions, and things which in other countries are regarded as necessaries become luxuries in Brazil from their prohibitive cost. The result is that even a very large fortune fails to bring with it a commensurate degree of comfort. No wonder Mr. Staniforth concludes by saying that although the country is undeniably very beautiful, with an extraordinarily fertile soil, it is for climatic and a variety of other reasons utterly unsuited for British immigration.

American Business Notes.

Mr. Cortelyou's deposits of Government cash with the banks would seem to have begun at last to tell, although he has seldom let free so much as £1,000,000 in any single week. Most of the money has been bestowed on New York banks, and last week their nett deposit averages showed an increase of £2,420,000 compared with an increase of only £1,720,000 in their loans and discounts average. But then the specie average was almost £700,000 up, and greenbacks were £208,600 better, so that the Federal Treasurer must have loosened his purse strings with effect. The surplus reserve is accordingly £301,000 higher, and is now £1,683,000 as against £2,263,200 a year back. Still, neither the Secretary nor the market is satisfied, and Mr. Cortelyou is now urging the banks to increase their note issues, which looks like desperation.

With all this, money is not easier to come by on Wall Street or anywhere within the union. Call loans may be easy enough, and as treacherous for the borrower as cheap; but time loans are rarely to be had at 6 per cent., in spite of Messrs. J. P. Morgan and Co.'s pretty liberality, and industrial and distributing concerns are finding it particularly hard to get the funds necessary to finance their business. Some of the greatest firms in the States are said to be paying from 7 to 10 per cent. for accommodation, and still cannot get all the credit they require. Such being the position, it seems a trifle odd to describe the New York City bond issue as a great success merely because it was noticeably over-subscribed. The over-subscription was an affair of finance, the competition of rival intermediaries, and implied nothing more than a free use of credit for a day or so.

Rather a happy phrase has been coined by the *Commercial Chronicle* of New York descriptive of the capitalist view of the growing opposition to monopoly trusts. It is merely an "emotional disorder," in the opinion of this respectable organ, a "disorder," we infer, with which the performances of the Beet Trust and the Standard Oil group have nothing particular to do. It is all in the good order of a wise providence that the Armours, Swifts, and such, or John D. Rockefeller and his associates, should nett six to eight millions sterling per annum, and that the slums of American cities should be fermenting in discontent that may end in revolution. Capital has its rights according to these philosophies, and the people only duties to fulfil as regulated by the will of the monopoliser. The doctrine is a dangerous one, well calculated to fill the minds of unprejudiced observers with apprehension, for capital is safe, "well secured," only in proportion as its demands are just.

The mention of trusts reminds us that John D. Rockefeller is said to have turned his back upon his too zealous and faithful H. H. Rogers. We should expect the man to do that. As long as Rogers gambled with success, "made money" for the gang he served with heart and soul, he was their great man, but as soon as he over-reached himself, as the gambler nearly always does, and became involved in Tidewater Railway speculations that cost too much and were not ready soon enough for the effective bleeding to death of rivals, or as soon as the gang found its copper machinations likely to end in disaster, a scapegoat had to be found, and Rogers, being crippled on his own account, just served the purpose as well as "John D.'s" own brother would have done. The gang will leave him to perish unpitied, and the master Rockefeller may have enough left wherewith to endow another university or build a few more Baptist chapels. We could pity Rogers had he not done so much mischief with a callous indifference to every principle of honour and justice, let alone human suffering, hardly surpassed by his master. If copper would but ruin them all, we should feel that poetic justice had been in some measure done. And it, or something else, will in time. But a short while ago, and we were obliged most days to read of "unprecedented copper consumption," of "the marvellous and enduring increase in the consumption of copper," with other lacquered phrases of the same kind; and now all the talk is of "enormous stocks" carried by the producers, of sudden mysterious dryings-up of "consumptive demands," of falling copper mine dividends and curtailments of production. The same organs that assured us of the stability of the copper market and the impregnable position of the monopolists now dance to the other tune, and prominent among the "roundabouts" is this same *Commercial Chronicle*. It tells us that there is now "absolutely no demand for the metal," that stocks reach 150,000,000 to 200,000,000 lbs., that the price of copper has dipped officially from 26½ cents per lb. to 16, with no sign of bottom to the market, with other information of the same type; and we gather that the demand which did exist, and whose magnificent proportions so excited the emotional disorders of this organ of the "interests," was in great part a credit-engendered one. It was, too, no doubt, visibly so, as anybody might see who cared to look, and, being so, copper will bury a goodly number of the mine and market manipulators when the credit scaffolding finally gives way. What is to-day the position of the Rockefeller banks?

A company called the Greene Gold-Silver Company, with a share capital of £5,000,000, of which £1,000,000 is 8 per cent. cumulative preferred, has had to suspend its preferred dividend. Could not borrow the needful, we suppose. The directors of the powerful and independent Calumet and Hecla Copper Mining Company have prudently reduced their quarterly dividend to $15 per share as compared with $20 paid for each of the preceding three quarters. This is 60 per cent. per annum against 80 per cent.

Reports of United States railroad companies for their fiscal year ended June 30 last are now rapidly making their appearance, but we doubt very much whether they deserve the same minute analysis we are accustomed to bestow upon those of British railway companies. Hitherto we have given up no small space to these American concerns, and some few of them will always deserve careful and minute attention. But it is otherwise with the great majority, and we propose to set out a few salient points only relating to most of those now being published. If we are mistaken in adopting this course, readers will please admonish.

A railway in the second rank, for example, is the Chicago, Milwaukee, and St. Paul. It has a length of 7,049 miles or 229 miles more than it had four years ago, and last year it spent $8,456,000 of new capital principally on additional rolling-stock, line doubling, and other improvements on existing routes. In addition $10,146,000 has been spent out of the "renewal and improvement fund" over an unspecified number of years. The money seems to have been profitably laid out, and last year's gross earnings were $60,549,000, out of which, after meeting working expenses and taxes equal to $41,687,000 or 68.85 per cent. of the gross income, all fixed charges were met and dividends of 7 per cent. distributed on both the preferred and common stock, with $4,194,000 to spare. A most pleasant display, hardly blurred, perhaps, by the sure increase in the capital load upon the property, and there does not appear to be any floating debt. Expenses, however, grow faster than income.

Another noticeable road is the Chicago and North-Western. It is 7,551 miles long, and is therefore larger than the Milwaukee. Its earnings are also larger, and amounted for its past year to $68,879,000, a total from which working expenses took away $47,254,000 or 68.60 per cent., also an increased ratio compared with recent years. But the company met all its debt charges and paid 8 per cent. on its preferred and 7 per cent. on its common stock, with $7,830,000 to spare, so that the directors might again devote $6,000,000 to capital purposes, as they did the previous year, and still have a few dollars in hand. In the three years ended June 30, 1906, no less than $14,600,000 was apparently withdrawn from nett income to be utilised as capital. Why the habit is now broken we do not know, but the board has fallen back on capital issues, and will require much money still to bring the property up to traffic and public safety requirements. Last year the capital outlays came to $10,112,000, including nearly $4,000,000 for new rolling-stock, and the doubling of the main line goes on slowly. A nett increase of $24,433,000 took place in the amount of the company's common stock and scrip during the year. This brings the total stock issued up to $124,352,000 or £24,874,000, and the authorised total is £40,000,000 (forty millions sterling), besides which the company has a debt of $165,214,000 or £33,043,000.

Many years ago now the Denver and Rio Grande Railway was a favourite with the home public, and many holders of its securities are probably still among us. But it has become a jog-trot standard gauge affair nowadays, and all the excitements of past insolvencies and revelations of bad work and contractors' plunder have calmed down. The company is not yet able to pay dividends on its common stock, but its board takes pride in displaying the progress made since 1896, when dividends were resumed on the preferred stock with a distribution of 2 per cent. In the interval and down to June 30 last the common stock of the company has been increased by $22,111,000 to $45,761,000, mostly owing to the purchase of the Rio Grande Western line. The funded debt of the combined roads has also increased by $19,681,000, but the total of both share and debenture capital is at this day only $162,578,000 or £32,516,000, which does not look unusually extravagant for a line 2,552 miles in length, provided all is well built and in good order. Of the mileage, though, only 73 miles or so are double-tracked even now, but then the directors have been very sparing in outlays on improvements. Nearly all the $12,000,000 or more laid out in the interval embraced by the two dates compared has been taken from revenue, a wise proceeding. In the eleven years gross income has gone up about 114 per cent. and nett by nearly 100 per cent., while fixed charges are only 33 per cent. up. During this time 200 miles of narrow gauge line have been standardised, and the length of the system as a whole has been increased by about 375 miles. The board, too, is putting 85-lb. rails on the tracks in places. Last year the exhibited free balance, after paying the full 5 per cent. dividend on the preferred stock and setting aside $700,000 for "betterments," was $245,000. The entire nett revenue was $8,400,000, of which funded debt charges took $3,211,000, taxes $759,000, and new equipment $825,000. By-and-bye the common stock may get a dividend.

Yet another American railroad whose name used to be on the lips of all market players is the Norfolk and Western, upon whom, if we mistake not, the dethroned H. H. Rogers had designs of a ruining kind. Its accounts for the past company year indicate that it might have made a good fight for independence, and yet it is far from being a strong property, although the management does squeeze out a surplus of $1,345,000, after meeting interest, a 4 per cent. dividend on the preferred and a 5 per cent. dividend on the common shares. This was done, too, after devoting $997,000 to the equipment fund and $250,000 to betterments, and the line is no doubt advantageously graded so as to be in a position to haul enormous loads of coal to tidewater at small cost. But its expense ratio is growing like that of all other roads, and was 65.81 last year, while its debt also mounts, is now $16,576,000 more than it was a year back, without counting equipment trust certificates, whose total of $11,900,000 is $2,500,000 up on the twelvemonth. There is likewise a trifle of $4,076,000 representing deferred instalments due to the company on an issue of convertible bonds, and the line needs all the money, for work of the "betterment" or renewal kind seems to be going on all over it. No wonder, therefore, that the aggregate expenditure on equipment, construction, and betterment was last year $6,110,000, of which $3,916,000 was charged direct to capital account. The mileage is only 1,863, of which, however, 233 miles is double-tracked. Of the authorised $34,000,000 of convertible bonds $14,576,000 has been sold, and the balance may be put out at any time convenient. Concurrently with the bonds a like amount of new common stock was authorised, which will be held back to be exchanged for the bonds when fortune favours this kind of chop and change finance.

The New York, Ontario, and Western Railway is one of the smaller lines, with a total mileage of 492½ miles, and is often known as the milkman's line. Traffic in that commodity, however, did not increase appreciably during the past year, the extra revenue being only $17,000, but there was a substantial improvement of $583,000 in the receipts from coal. The total revenue was $937,000 up at $8,202,000, and expenses rose by $411,000, leaving the nett earnings $526,000 better at $2,558,000. Interest, rentals, and other charges having been paid, a dividend of 2 per cent., or the same as for the previous year, is paid on the common stock, and after making sundry adjustments and providing $242,000 for discount on general mortgage 4 per cent. bonds sold the balance at credit of profit and loss is raised from $4,908,000 to $5,136,000. In February last an issue of $1,948,000 general mortgage bonds was authorised for equipment, construction of second track, &c., and $1,334,000 had been issued by the end of the year. Nothing was done in the way of relaying the lines with heavier rails, and rather over half the system therefore still consists of 76-lb. rails; but the work of laying the second track was proceeded with, and, except for 6½ miles under construction and 1¾ miles in tunnels, the main line is now double from Cornwall to Cadosia, a distance of 106¾ miles, while there are 19 miles in use on the Scranton division. An interesting series of tables showing the evolution of the road during the past 20 years is given in the report. Tons per train carried

have risen during that period from 123 to 307, the tons per car being now 13.36 against 7.20, and the cars per train 23 against 17.1. Cost of maintenance per mile of road has increased from $807 in 1890 to $2,035, and the cost per annum of the engines and cars has increased from $958 and $38 to $2,036 and $85. Alongside these advances, however, the gross receipts per mile have improved from $4,048 in 1887 to $15,026, and the nett earnings from operations from $768 to $4,686.

Railroad gross earnings have not yet begun to display that recoil the smaller volume of trade said to be now being done in the United States might lead people to anticipate. It always takes time, however, after the sluices are closed for the swollen stream to subside, and the full gross earnings shown by many of the roads are probably fed by many runnelets of traffic direct product of the continuing outlay of capital by the railroads themselves. And the nett earnings are certainly declining.

Passing Events.

What possessed the Stock Exchange to rush to the conclusion that a strike of railway hands was imminent? The "bears" possessed it no doubt, for no ground has been furnished by the leaders of the men on which to base any such assumption. Preparations for a strike to take place some day will doubtless be made if the railway boards continue to maintain the high and mighty attitude, but no strike is coming this winter. It is just because the danger of one is not immediate that we so earnestly deprecate the attitude of the boards. It is an attitude calculated to stimulate the men to organise, to smother differences, and to husband resources, so that when the strike is declared it may have the greater chance to be triumphant. Surely tactics calculated to produce this consequence cannot be regarded as masterly. By adhering to their pride and seclusion the directors are playing into the hands of the men and betraying the interests of the shareholders they represent. What possible harm could come to railway property from the recognition of the men's union? If the directors have a strong case they can present it with much greater force to the delegates of the general body of their servants than to arbitrarily chosen members of particular staffs. The greater their success in repelling demands in justifying their past policy and present treatment, the fuller and more far-reaching would then be their victory.

But both sides are now playing the old-fashioned game of bluff. Mr. Bell is busy keeping up the courage of his followers, and the boards are equally busy in disseminating the impression that they are ready to fight and beat the men should foolhardiness impel them to declare a strike. That programme of traffic arrangements during strike said to be the work of directorial delegates is to be accounted for only by the exigencies of the game. The boards hope that their servants may be intimidated by it, and it will most likely have the opposite effect. Reliance may also be placed by the boards on the signs of division among the men. Like their brethren on the other side of the Atlantic, they would appear to have taken care of their engine-drivers, so that community of interests should not be established between them and the other branches of the staff. That also may prove to be a miscalculation should the tug-of-war be provoked by hardness in dealing with these other branches. A temper vigorous in its attitude towards the men may also stir up trouble for the companies in the House of Commons, and altogether the policy now adhered to by the directors appears to us to be indiscreet, to say the best of it.

Prodigious prosperity continues to be exhibited by the railways of New Zealand, according to the official report for 1906. Gross receipts rose by no less than £274,896, which was £174,600 beyond the estimate, and the nett income was naturally greater, though only by £83,653. This appears to indicate slack management, since the Minister of Railways, Mr. Hall-Jones, had the capital account to dip into, as usual, in order to keep expenses down. Indeed, he spent over £1,000,000 of new capital in the past year, exclusive, apparently, of what went into unopened lines, and we can only infer that political exigencies have again obliged the Ministry of Sir J. G. Ward to increase the number of the railway staff. How to reach a less invidious conclusion we know not, since the expenditure of £1,005,300 fresh capital added only 50 miles to the length of the lines open for traffic, bringing it up to 2,456. On the basis of the capital set down against this mileage, the cost has risen to about £9,500 per mile, a figure that beats the Yankee.

We sympathise sincerely with Mr. Dadabhai Naoroji in the illness that has delayed his return to his native land. His name has been familiar to us for more than 30 years as that of a sincere, cultivated, and consistent advocate of better government for his fellow-countrymen, and we have long held that no more sincere and disinterested patriot lives than Mr. Naoroji. He has given a long life to the exposition of the grievances of India, and during all that time his language has never been in the least degree seditious or even intemperate. The things he dealt with were the hard facts of Indian life and Indian economies, and what he aspired to was the elevation of India into the position of a free, self-governed State or congeries of States under British suzerainty. However impracticable we may deem this aspiration, of its nobility there can be as little doubt as of the sincere admiration for England and English institutions which inspired it. We sincerely hope this brave old patriot's illness will be but temporary.

The Government of Newfoundland has courted and received a rebuff which we trust will do it good. It was coolly setting the imperial authority at defiance, and in its fury against the United States—a fury not without grounds, we admit—was preparing to enforce its dog-in-the-manger laws against United States fishing vessels in defiance of the *modus vivendi* arranged between the Governments of Washington and London. Sir George Grey had, therefore, no alternative but to override these laws, pending the decision of the Hague tribunal, and meanwhile the Government of Newfoundland has time to meditate on the meaning of loyalty to the empire.

A correspondent of the *Manchester Guardian* has once more drawn attention to the obscurity of our emigration and alien statistics. It is without excuse. There ought not to be the slightest difficulty in so compiling the figures relating to the arrivals and departures of people at and from the United Kingdom as to permit anyone to know exactly each year how many aliens had been "dumped" on us and how many had merely passed through on the way to other lands. But the Aliens Act seems to have further confused instead of clarifying the returns, and we cannot say with assurance whether we received additional population from abroad in 1906 or not. That we lost a large number of our own people, through Irish emigration principally, and, as usual, seems to be proved, but how many aliens came in to take the place vacated by our own emigrants we cannot even guess. "Most of the emigrants left for America," the *Guardian* correspondent says. It took 144,817 British and Irish last year and 193,508 foreign, but does it follow that all these people had left their native land in quest of happier homes elsewhere? We cannot say, but it would appear that in 1905 we lost 2,781 more aliens than we gained, and that last year the nett influx was only 321 exclusive of the 12,000 foreign seamen employed in our mercantile marine, whose movements are not registered.

Last Tuesday's *Financial News* contained an article by Mr. Percy F. Martin on the Leopoldina Railway and Brazilian Government bad faith. "Percy F. Martin" is, we understand, the pen-name used by a brother of Mr. H. H. Marks, M.P., the editor of the paper, and we may, therefore, accept it as a fact that

the brothers are in accord just now in running down everything Brazilian. How far they are also in accord with the financial backers of Brazil in this country may be matter for conjecture, but we think there can be no question of the impolicy of the attitude the *Financial News* has assumed. Assume the Brazilian Government to be as corrupt as "Percy F. Martin" alleges, and is it any the more likely to seek honourably to keep its engagements if subjected to a persistent detraction that at times looks positively malignant? On the contrary, the Government and people of Brazil are much more likely to be provoked to retaliation. That finance houses should be reluctant in present market conditions to subscribe a new loan for the federal Government we can understand, but even this affords no justification for the attitude assumed by newspapers supposed to speak in their interests or under their inspiration. We hold no brief for Brazil, knowing-as we do, that investors here have on various occasions suffered, and sometimes cruelly suffered, at the hands of its Government, but we decidedly think their interests are more likely to be permanently ...t by articles such as that referred to than by any ...r single influence. And has not Brazil suffered ...t the hands of the projector and financier? Is the blame all on one side?

We sincerely hope that the Marquis Ito will be able to conciliate the inhabitants of Corea, but there is no disguising the fact that his undertaking is one of the most difficult a man could face. Nor are we sure that his efforts will not be secretly thwarted by the Chinese. The Coreans have nothing in the past that we know of to thank the Chinese for, yet they appear to cling to traditions of Chinese suzerainty, and that to an extent which impels them to increased hatred of the Japanese. And the worst of it is the Corean is endowed with a degree of obstinacy rarely surpassed in a decaying race, so that conciliation of the official or courtly classes may at once be given up as hopeless. They cannot even be bribed into loyalty, their dominant instinct being to betray. Therefore, the hope of the Marquis Ito, and of his Government, must lie with the cultivator class, and if the rural population can be brought round, and led into better ways, all may be well. If not, "friendliness" is but too likely to end in substitution.

"British coalite is all right; you may take your 'davy' as to that." Such, in a phrase, is the declaration made by Mr. Albert G. Kitching, J.P., to the large assembly of expectant shareholders gathered on Friday, September 20, in the great hall of Salisbury House to hear the latest news. Well, Mr. Kitching made a brave show of words, and he was courageously backed up by other speakers, for the substance was thin and did not glow at all, any more than the coalite. We read the speech carefully, and found nothing at all new in it. The company has not yet got its works in operation, and its "patents" appear to be just what they were when the coalite prospectus appeared. A stunning catalogue of names was reeled off by the chairman to show what a lot of scientific luminaries believed in coalite, but the patents, like the fuel, hang fire, though said fuel is "practically free from sulphur." Mr. Kitching enjoyed also much luxury in jeering at the Gas Light and Coke Company's "carbo," but could not go so far as to hint that it violated the coming or still to come "coalite" patents. He could only say that "carbo" and "coalite" were two different products, and it is no doubt true that a cwt. sack would not at one and the same time hold one cwt. of each. But the shareholders are happy in the purchase of a future hope, and we shall leave them to enjoy themselves.

It is in no vindictive spirit that we say "Sir George Arbuthnot has been let off very lightly." His crime was one of the worst a private citizen can commit against society, and he has been sentenced to only eighteen months' "rigorous imprisonment." He was convicted of fraudulently and dishonestly disposing of property belonging to others in favour of his firm, and the Arbuthnot failure disclosed a long series of callous dealings with moneys and properties not the firm's own. Doubtless Sir George's career is broken, his name blighted, and in this there is a deeper punishment than any legal sentence can inflict. For all that, the sentence is light, much lighter than a criminal less well placed would have been ordered to undergo.

Holders of the mortgage bonds and debenture stock issued here by the Shawinigan Water and Power Company will be interested to learn that the company has declared a first dividend on its common stock for the quarter ending September 30 at the rate of 4 per cent. per annum. Further evidence of the company's satisfactory progress is afforded by the particulars published by its agents in announcing the dividend. Earnings for August amounted to £10,535, being at the rate of £126,420 per annum, compared with £5,984 or £71,806 per annum for the corresponding month of last year, and this revenue will soon be considerably augmented by the operation of several new important contracts for the sale of power. One of these is for the supply of 3,250 h.p. at $19 per h.p., with a substantial Montreal manufacturing concern, the proceeds of which will be entirely nett revenue, and another is a further contract for 2,000 h.p. with the Montreal Light, Heat, and Power Company. These will make a total of 18,000 h.p. delivered over the Island of Montreal, and the revenue from this source alone will be over £55,000 per annum.

The dividend just declared by the New Jagersfontein Diamond Company caused some disappointment. Ever since the capital was split up and converted into preference and deferred shares, the latter have received distributions of 30 per cent. each half-year, or at the rate of 60 per cent. per annum. For the six months ended September 30, however, the dividend on the deferred is reduced by 5 per cent. to 25 per cent., this being the interim payment on account of the financial year ending on March 31 next. The drop caused some slight depreciation in the shares, but the market had one or two more or less satisfactory reasons to explain the falling off. The new profit tax of 7 per cent., which came into operation on July 1, could not have had much influence, as it would hardly have cost the company more than £7,000 or £8,000, and it is more probable that the subsidence in the mine during the half-year was primarily responsible for the lower distribution.

It was in March last that the shareholders of M. B. Foster and Sons began to grow anxious about the serious falling off in the company's business and the steady decline in profits which finally became losses. An agitation set on foot for the appointment of a committee of investigation and thorough overhauling of the company's affairs was narrowed down into the selection of a consultative body which was requested to have a look into things and subsequently report to the shareholders. Since then, six months have elapsed, and this committee's report has now made its appearance. It is a well thought out and carefully prepared document, and, just as we feared, reveals a quite disastrous condition of affairs. The policy of the directors, both as to the conduct of the business and the channels into which the company's resources have been allowed to go, are very severely criticised, and, notwithstanding that a writing down of capital took place in 1895, the committee see no other way out of the present muddle than a further reorganisation. In at least one case the method adopted of producing profits is open to very strong objection, and shareholders would not have received with much pleasure the slender dividends they did get had they known that a profit on the sale of certain debentures was partly the means of paying them. Although the committee possessed no plenary powers, the directors expressed their willingness to accept their recommendations at the meeting held on Wednesday, but any further reconstruction of the capital must be accompanied by some reorganisation in the administrative and manage-

ment departments, and it might be well if someone representing the independent body of shareholders were elected to the board.

The starvation of the French railways in the matter of rolling stock during the past few years has placed the home manufacturers of locomotives and rolling stock in an unfortunate position. It is said that the orders from the companies have been so small that the builders have not provided themselves with the plant and machine tools necessary for the work to be placed this year, which is estimated to amount to £10,000,000 sterling. Already the purchase abroad of 38 locomotives for the Tunisian railways has been authorised, and as French makers will not be in a position to fill any orders for three years it is probable that several of the French railways will also have to go out of the country for their requirements.

Critical Index to New Investments.

LEOPOLDINA RAILWAY CO., LIMITED.

In July last the shareholders authorised the creation of 100,000 5½ per cent. preference shares of £10 each for purposes which were explained in our issue of July 27, and the directors now invite applications from existing shareholders for 55,000 of these shares. A considerable increase of revenue is anticipated from the extensions to be made with this money, but even without that the shares should be a satisfactory investment as the dividend on them will only take £30,250, while the nett revenue last year after providing for debenture interest was £333,256.

LILITA NITRATE CO., LIMITED.

Out of a capital of £100,000, in £1 shares, this company pays to the Nitrate Securities Trust £82,500 in shares and £17,500 in cash or shares for a property comprising about eight Chilian estacas, which adjoins some of the grounds of the Lautaro Nitrate Company. Apparently this is for the grounds alone, and in order to pay for the necessary machinery an issue of £75,000 6 per cent. registered debentures has been created which has been bought by the Nitrate Securities Trust at 90 per cent., and is now offered by it at 96, together with 15,750 of the shares. The price paid to the original vendors was £82,500 in ordinary shares, so that one way or another the Trust expects to make a very decent profit out of its deal, even after it has paid the preliminary expenses of £2,300, and the underwriting commission of 3½ per cent. and brokerage of 1 per cent. on the debentures. It is calculated that the nitrate area available contains over 7,000,000 quintals of nitrate, and on the basis of 360,000 quintals per annum at 8s. 6d. per quintal, the directors look for a nett profit, after providing £7,875 for debenture redemption, of £46,125. These figures, however, are merely calculations which may or may not be realised, and even the debentures, therefore, must be considered as speculative.

KARAK RUBBER CO., LIMITED.

This is yet another rubber undertaking formed to woo fortune in the Federated Malay States, where it acquires 2,000 acres in Pahang. The land is acquired from the Karak Rubber Syndicate for £1,500 in cash and £4,500 in shares, and 21,500 £1 shares out of a capital of £50,000 were offered for subscription. It is proposed to develop the estate by planting 1,000 acres during the next three years, and the 5s. per share payable on the present issue is expected to suffice for the planting out of the first 400 acres. The directors, in calculating the chances of profit, allow for a fall in the market price for rubber to 3s. 6d. per lb., and put the cost of collection and bringing to market at 1s. 6d. per lb., so that they seem to have provided as far as possible against contingencies. On the basis of these figures they estimate that the profit from each acre of 150 trees should be £7 10s. in the sixth year and double that in the eighth year, and if these expectations come anywhere near being realised, investors will reap a fair return for their long wait.

Letters to the Editor.

"MILLIONS OF UNCLAIMED GOLD.

"HOW FORTUNES ARE GIVEN AWAY BY GOVERNMENTS AND MUNICIPALITIES.

"A CAPITAL OF £8 MAY BE INCREASED IN A SHORT TIME TO ONE OF £20,000, AND THAT WITHOUT RISK."

DEAR SIR,—The other day, at a railway bookstall, my son, a young public-school boy, picked up a fourpenny magazine, the "Royal." Among the papers of that particular number were, appropriately enough, one upon "Spiders as Pets," and another upon Bears, "The Bears of Bern," and not the Bears of the Stock Exchange, which would have been more apposite. Last, but by no means least, were some pages at the very end with the above seductive heading, and in type and get-up undistinguishable from the other matter of the periodical, save for the contraction [Advt.] hidden away within its brackets at the conclusion—"Advt."—word so significant and full of caution to the experienced, but so unmeaning to ingenuous youth. The article, embellished with an illustration of the bullion vaults of the Bank of England, and with a vignetta of the noble and aristocratic features of Lord Rothschild, "the head of the great family of bankers, whose name has become a synonym of wealth," proceeds from the dithyrambic pen of Mr. Harold Coutts—a name, too, redolent of money. "Gold, Piles of it, Masses of it. Gold, minted gold. Sacks bulging with the gleaming metal," bursts forth, and continues in like strain for a space, this rhapsodist. The moral of all this ecstasy appears to be that, though you cannot make your way into the bullion vaults, and there out of the bulging sacks fill your pockets with gold, minted gold, gleaming metal, yet, by having recourse to the altruistic and benevolent offices of the International Securities Syndicate you will do nearly as well as though you could. A postcard dropped to the above-mentioned philanthropists "will," so the article, or advertisement, concludes, "bring you all the information you require, and lead you directly, without any circumlocution, to the Portals of Wealth and Success."

My young son (*pace* my esteemed friend Mr. Alfred Marks) has managed to put by some £10 in the Post Office Savings Bank, and, having read this precious effusion of the bardic Coutts, came to me hot foot for his deposit-book to draw out at once, and, by entrusting his little all to the tender mercies of the International Securities Syndicate, pass without further to-do through the "Portals of Wealth and Success."

I pointed out to him that the article, going so far as *montes auri polliceri*, was an unblushing appeal to some of the basest instincts of humanity, its cupidity, avarice, and greed, and quoted the Virgilian tag about *auri sacra fames*. In vain, alas! in vain.

Ethical considerations having failed, I took him next on the financial aspects of the case, in which, however, I am not so strong. I showed him that most of the schemes were not genuine investments at all, but neither more nor less than State or municipal lotteries, and that of those some were endeavours, by offering large money prizes or bonuses, to induce foolish persons to lend their money at low rates of interest. For instance, you may invest in Brussels municipal bonds at either 2½ or 2 per cent., but if you are contented with the lower rate you will qualify for an award of far more valuable "premiums" than if you stick out for 2½ per cent.

The investment that most took the fancy of my boy were the French Government bonds of the par value of £16, but offered at half the price at £8, nearly the amount of his capital, and therefore presumably the reason for his selecting it. The inducements held out are the "eventual" redemption of the bond at £16, or a profit of 100 per cent., and the annual distribution of cash bonuses ranging from £20,000 downwards. I told him that if those bonds were such good things they would hardly be obtainable at a discount of 50 per cent.

The article represents that "the shrewd investors of France and Germany, men and women, drawn from every class of the community, have, it is said, invested over £800,000,000 in these securities, with the most satisfactory results to themselves and their families." I asked our young investor what chance he thought his poor little £8 would have among all those millions of winning a prize of £20,000, or even £40.

Still, he remains unshaken in his resolve. Of course, I could interpose the parental categorical imperative, but I had rather that he were persuaded by reason than overpowered by authority. Occasionally he takes up my copy of THE INVESTOR—poor boy, he is under the delusion that as I subscribe to it I must have something to invest, and on the *omne ignotum* principle—I mean no offence—has formed the highest opinion of your knowledge and judgment, wherein for once he is not mistaken. In my difficulty, therefore, I come to you to say, "without any circumlocution," a thing you are not prone to, what you think of the lyrical Coutts and his article, of the proprietor of the magazine that inserts it as an advertisement in the guise of an article, and of the moral and financial status of the International Securities Syndicate.

I am,
Yours faithfully,
A. G. S.

Brighton, September 22, 1907.

CLOSER PRICES IN THE OFFICIAL LIST.

SIR,—Numerous letters have appeared from time to time in the financial papers advocating the quotation of closer prices, especially in the Official List. In Australia there seems to be no difficulty in getting the very closest prices. A client, say, in Brisbane, who asked his brother there to do his best for him, would see when he opened his paper on the following morning the progress of his investment, not only in Brisbane, but all over the Australian Continent, what buyers had offered, what sellers would take, and the price of every sale made that day. In fact, a broker's client can follow the course of the markets almost as closely as if he were a member himself.

And it benefits the investor or speculator out there by giving him a guide as to where the buying or selling is coming from, and also tells him whether the market for his shares is alive or dead. For often a £1 share may be called, buyer 15s., seller 25s., with no business, while the next closes 19s. 11d. buyer, 20s. seller, with numerous sales, up or down as the case may be, at a penny or twopence difference. As many of the shares dealt in are low in price, and the brokers charges moderate and carefully graduated, it encourages a great deal of business, mostly small investments for cash. But if such a method of quoting prices were adopted in London, what would become of the inside jobbers and the outside brokers? There is certainly no room in the House for 2,500 brokers with their present estimated annual profit of £5,000,000 on a turn of one penny. And still less could the outside broker who at present fattens on his pretended "no commission," his fictitious "£3 margins," tape prices, and on an emergency his recourse to the Gaming Act, continue to spend other millions on circularising and advertising. But as long as there are 1,750 proprietors to control the House, collect their 100 per cent. dividends, and keep brokers in a minority on the Committee, reformers will find it uncommonly difficult to alter the Official List as at present published.

J. W. R. STUART.

Gresham House, E.C., September 25, 1907.

The *Captain* starts two new serials this month—a schoolboy story by that popular writer R. S. Warren Bell, and a strange tale of adventure in the Far East by Captain Charles Gilson, which, if it gees on as it begins, will be very adventurous. *C. B Fry's* offers us, among other things, a description of those wonderful Olympian Games, which have been so much talked about and which we are to see next year, and it also has an article on the Jockey Club; an interesting account of the beginnings and the goings on of that remarkable institution, "the most amazing thing of its kind ever known."

The fifth steamer of the well-known "A" class of the Royal Mail Steam Packet Company was successfully launched from Messrs. Harland and Wolff's yard at Belfast on the 26th inst. The *Asturias* is 535 feet in length, and has a gross register of about 12,500 tons. She has most luxurious passenger accommodation all on the upper deck, including cabines de luxe, state cabins with bedsteads, a very large number of single-berth cabins, a nursery, an electric laundry, a gymnasium, and an electric passenger elevator serving all the decks. The *Asturias* is intended to make her first voyage in the Australian mail service, sailing on January 24 next.

The directors of the Indian and General Investment Trust, Limited, have elected Mr. W. A. Browne to the seat on the board rendered vacant by the death of Sir Alexander Wilson.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and September 21, 1907:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Sept. 21, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Sept. 22, 1906.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,334,212
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,451,487
REVENUE.			
Customs	31,923,000	15,474,000	16,113,045
Excise	35,965,000	15,594,000	15,538,689
Estate, &c., Duties	18,697,000	9,368,000	9,591,893
Stamps	8,000,000	3,831,000	3,609,000
Land Tax and House Duty	2,600,000	400,000	350,000
Property and Income Tax	30,500,000	5,713,000	5,266,000
Post Office	17,600,000	7,220,000	6,890,000
Telegraph Service	4,400,000	2,190,000	2,080,000
Crown Lands	500,000	200,000	180,000
Receipts from Suez Canal Shares and Sundry Loans	1,100,000	688,500	681,683
Miscellaneous	1,550,000	1,075,025	798,293
*Revenue	152,835,000	61,753,525	61,098,603
Total, including balance		68,685,948	71,550,090
OTHER RECEIPTS.			
Repayment of Advances for Bullion		750,000	450,000
For Treasury Bills (net amount)		4,587,000	—
Under Telegraph Acts, 1892 to 1904		170,000	750,000
Under Naval Works Acts, 1895 to 1905		—	965,000
Under Public Buildings Expenses Act, 1903		80,000	75,000
Under Public Offices Site (Dublin) Act, 1903		—	10,000
Temporary Advances, Deficiency		1,500,000	1,000,000
Temporary Advances, Ways and Means (Treasury Bills)		—	500,000
Total		75,772,948	75,300,090

EXPENDITURE AND OTHER ISSUES.

—	Estimate for the year 1907-1908 (including Supplementary Estimates).	Total Issues out of the Exchequer to meet payments from April 1, 1907, to Sept. 21, 1907.	Total Issues out of the Exchequer to meet payments from April 1, 1906, to Sept. 22, 1906.
EXPENDITURE.	£	£	£
National Debt Services	29,500,000	10,675,557	11,947,083
Other Consolidated Fund Services	1,685,000	758,785	779,818
Payments to Local Taxation Accounts, &c.	11,205,000	3,546,200	4,637,910
Supply Services	110,678,000	46,011,299	44,742,536
Expenditure	153,068,000	60,991,841	62,107,347
OTHER ISSUES.			
For Advances for Bullion, &c.		900,000	600,200
For Advances for Interest on Exchequer Bonds issued under the Capital Expenditure (Money) Act, 1904		90,000	90,000
Under Telegraph Acts, 1892 to 1907		370,000	755,000
Under Naval Works Acts, 1895 to 1905		440,000	1,292,000
Under Military Works Acts 1897 to 1901		150,000	—
Under Public Buildings Expenses Act, 1903		175,000	75,000
Under Public Offices Site (Dublin) Act, 1903		—	10,000
Under Cunard Agreement (Money) Act, 1904		177,234	625,910
Surplus Revenue applied to reduce Debt		3,500,000	1,000,000
Deficiency Advances repaid		1,500,000	1,000,000
		68,294,075	67,555,457
Balances in Exchequer:—	1907. Sept. 21.	1906. Sept. 22.	
Bank of England	£ 6,587,931	£ 6,857,845	
Bank of Ireland	890,942	886,788	
		7,478,873	7,744,633
Total		75,772,948	75,300,090

NOTE.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

MEM.—Treasury Bills outstanding on September 21, 1907:—

Bills issued by Public Tender	£12,800,000
Bills otherwise issued	2,500,000
Treasury, September 24, 1907. Total	£15,300,000

Lord Dunedin has accepted office as one of the trustees for the 4½ per cent. debenture holders (1st mortgage debenture holders) of Samuel Allsopp and Sons, Limited, in place of the late Hon. George Allsopp, the other trustee being Mr. W. Gardner Sinclair.

The Employers' Liability Assurance Corporation, Limited, have appointed Mr. G. A. Burras, chief clerk and surveyor at their Yorkshire branch office, under Mr. L. F. Wilcher, district manager, City Chambers, Infirmary Street, Leeds.

The directors of the Bank of England elected Mr. Reginald Eden Johnston—a director of the Bank, and of the firm of Edward Johnston, Son, and Co., of 6, Great St. Helens, merchants—Deputy-Governor for the remainder of the year, in the room of Mr. Edgar Lubbock, deceased.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation. — Earnings for week ended September 21, $4,234, increase $135; aggregate from July 1, $50,226.

Argentine North Eastern. — Traffic receipts for week ended August 23, £3,007, increase £12; aggregate from July 1, £23,086, decrease £196.

Assam Bengal.—Traffic receipts for week ended August 24, Rs. 77,529, decrease Rs. 9,569; aggregate from July 1, Rs. 6,93,750, increase Rs. 98,221.

Bilbao River and Cantabrian.—Traffic returns for August £10,501, increase £3,933; aggregate from January 1, £75,633, decrease £6,149.

Canadian Northern Railway.—Traffic receipts for week ended Sept. 21, $175,500, increase $24,300; total from July 1, $2,412,000, increase $769,800.

Egyptian Delta.—Traffic receipts for week ended August 31, £4,643, increase £339; aggregate from January 1, £103,442, increase £15,939.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 24, Rs. 24,640, decrease Rs. 3,346; aggregate from July 1, Rs. 1,82,023, increase Rs. 8,415.

Midland Uruguay. — Receipts for month of August, £5,958, increase £832; aggregate from July 1, £11,022, increase £1,007.

North Western of Uruguay.—Traffic receipts for August, $22,000, increase $3,503; aggregate from July 1, $42,800, decrease $904.

Quebec Central Railway.—Traffic receipts for the 3rd week of September, $19,241, increase $736; aggregate from January 1, $730,229, increase $53,818.

Quebec and Lake St. John.—Traffic receipts for August $68,753, increase $4,833; aggregate $405,615, increase $49,546.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended August 24, Rs. 18,585, decrease Rs. 260; aggregate from July 1, Rs. 1,59,470, increase Rs. 26,816.

Uruguay Northern.—Gross receipts for month of June, £2,221, increase £642; aggregate from July 1, £22,618, increase £3,445.

White Pass and Yukon Railway. — Traffic receipts for week ended September 7, amounted to $70,604.

ENGLISH.

Cleator and Workington Junction. — Receipts for week ending September 21, £1,417, increase £167; aggregate from July 1, £15,802, increase £1,379.

Cockermouth and Keswick Railway. — Receipts for week ending September 21, £1,133, increase £135; aggregate from July 1, £13,279, increase £183.

East London Railway.— Traffic receipts for July, £3,859, decrease £376.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending September 21, £470, increase £82; aggregate from July 1, £5,004, increase £1,237.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending September 18, £934, decrease £20; aggregate from January 1, £30,712, decrease £1,285.

Blessington and Poulaphouca.—Traffic receipts for week ending September 18, £24; aggregate from July 1, £379, decrease £49.

Bristol Tramways and Carriage.—Traffic receipts for week ending September 20, £5,553, increase £387; aggregate from July 1, £65,759, decrease £1,067.

British Electric Traction.—Receipts of all the Associated Companies for the week ending September 20, £30,532; 424½ miles.

Burnley Corporation.—Traffic receipts for week ending September 21, £1,214, decrease £28; aggregate from July 1, £15,839, increase £739.

Dublin and Blessington.— Traffic receipts for week ending September 18, £161, decrease £11; aggregate from July 1, £2,044, decrease £115.

Dublin and Lucan.—Traffic receipts for week ending September 20, £157, increase £20; aggregate from July 1, £1,892, increase £146.

Dublin United.—Traffic receipts for week ending September 20, £7,225, increase £2,108; aggregate from July 1, £89,367, increase £20,538.

Edinburgh and District. — Traffic receipts for week ending September 21, £4,980, decrease £346; aggregate from January 1, 1907, £189,504, increase £877.

Hastings and District. — Traffic receipts for week ending September 19, £1,495.

Isle of Thanet.—Traffic receipts for week ending September 21, £1,010, increase £172; aggregate from October 1, £30,929, decrease £555.

London County Council.— Traffic receipts for week ending September 14, £32,713, increase £6,650; aggregate from April 1, £753,773, increase £120,058. Miles 116⅛, against 98¾.

London General Omnibus.— Traffic receipts for week ending September 21, £22,038, increase £41; aggregate from July 1, £258,757, decrease £23,708.

London Road Car.—Traffic receipts for week ending September 21, £9,245, increase £2,076; aggregate from July 1, £104,071, increase £8,870.

London United.—Traffic receipts for week ending September 20, £7,681, increase £1,611; aggregate from January 1, £250,672, increase £9,856.

Provincial Trams.—Traffic receipts for week ending September 21, £2,078, increase £290; aggregate from October 1, £89,194, increase £7,030.

Rossendale Valley.—Traffic receipts for week ending September 20, £201, increase £6.

Sunderland District.—Traffic receipts for week ending September 18, £480, increase £56; aggregate from Jan. 1, £17,274, increase £1,964.

Yorkshire (West Riding) Electric.—Traffic receipts for weekending September 22, £1,227, increase £410; aggregate from January 1, £44,130.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending September 23, £16,114, increase £580; aggregate from January 1, £625,449, increase £61,008.

Auckland Electric.—Traffic receipts for four weeks ending Sept. 13, £9,905, increase £195; aggregate from January 1, £93,074, increase £3,668.

Brisbane. Traffic receipts for month of August, 1907, £15,225, increase £1,039.

British Columbia Electric.—Nett earnings for August, $61,438, Increase $16,648. Aggregate nett earnings, including income from investments, from July 1 to August 31, $145,942, increase $33,557.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for week ending September 23, £6,655.

Calcutta.— Traffic receipts for week ending September 21, Rs. 48,434, decrease Rs. 2,094; aggregate from January 1, Rs. 18,35,309, increase Rs. 1,62,877.

Cape Electric.—Traffic revenue for month of Aug., Cape Town, £9,240; Port Elizabeth, £2,854.

Carthagena and Herrerias.—Traffic receipts for the month of August, £3,362, decrease £346; total from January 1, £38,847, increase £3,624.

Geneva Trams.— Earnings for Aug., fr. 239,474; increase fr. 15,670.

Kalgoorlie Electric.—Traffic receipts for August, £4,549; aggregate from January 1, £31,955.

Lisbon Electric.—Earnings for August, milreis 125,228.

Madras Electric.—Traffic receipts for fortnight ended September 15, Rs. 18,221, increase 23½ per cent.; aggregate from January 1, Rs. 2,92,821, increase 20½ per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for August, £42,000.

Mexico. — Nett earnings for month of August, $196,675, increase $24,431; aggregate nett earnings from January 1, $1,341,758, increase $71,330.

Perth (W.A.) Electric.—Traffic receipts for week ended September 20, £1,280, decrease £38; aggregate from January 1, £53,399, decrease £1,866.

Rio de Janeiro.—Nett earnings for August, $202,424; aggregate from January 1, $1,308,074.

Sao Paulo.—Traffic returns for August: nett earnings, $108,573, increase $573; aggregate from Jan. 1, $882,290, increase $17,031.

Twin City Rapid.—Traffic receipts for the month of May, $496,711, increase $48,607; aggregate from January 1, $2,317,873, increase $247,855. Nett traffic receipts, $260,724, increase $21,884; aggregate from January 1, $1,169,500, increase $98,320.

The Investors' Review.

The Week's Money Market.

Bank Rate 4½ per cent. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

The artificiality of the present conditions of the Money Market has been admirably exemplified during the past week. Last Friday we had to chronicle the fact that on one of the days in the period then reviewed, day-to-day balances had been offered at ½ per cent. without always finding borrowers; now we have to record 4½ per cent. as the top rate touched in Lombard Street, while the Bank of England has had to be applied to for loans at 5 per cent. for a week. Of course, an upward rush in rates is normal enough at this period, when currency is wanted in the country and in Egypt—not to mention Turkey, Roumania, Italy, and a few other places—and when the solemn window-dressing farce makes its monthly appearance for one night only in due succession at its various haunts; but there is reason in all things, and it is difficult to explain the extent and rapidity of the development of stringency on any grounds that are apparent on the surface. The total of the private deposits held by the Bank of England is still over 45 millions, or 4 or 5 millions above the level at which tightness generally makes its appearance, and yet there was stringency in full swing comparatively early in the week. It was very clear that somebody or other was sitting on money, and harassed bill brokers recalled the retort of the outspoken jobber in the American market. No satisfactory explanation was forthcoming as to why anyone should be carrying out this unprofitable sedentary manœuvre, and there seemed to be some doubt as to how long it would last. Curious rumours were current as to some big lock-up which was to transfer several millions to the Bank for some time, but how or why or by whom such an unaccountable transaction was to be carried out was a matter which even the unfettered ingenuity of rumour was quite unable to explain. So many things, however, are inexplicable nowadays, and so many of the points and landmarks by which monetary pilots were once wont to steer have been shown to be untrustworthy, that the addition of another puzzling problem is accepted with more or less resignation as an inevitable part of the programme.

Nevertheless, the discovery that money could be quite wanted in spite of the big total of the private deposits, and the nods and smiles about a big impending withdrawal, were not without effect in the discount market, and would certainly have hardened it materially if there had really been a discount market worthy of the name. As it was, the bill brokers were less eager for bills, but holders, on the other hand, regarding the present stringency as a temporary phase, kept their bills back as far as they could, and so its effect on rates was comparatively insignificant. All the external appearances, of course, were in favour of the contention of holders, for with the Government dividends coming out next month, and the quarter day demand being once passed, there ought, according to the figures of the case, to be a prompt return to abundance of cash, which ought to endure until gold withdrawals and the maturing of the bills held by the Bank of England gradually absorb the surplus. But appearances are a very unsafe guide, and most of the bill brokers appear to have arrived at the conclusion by some process of rule-of-thumb dead-reckoning that whatever may be the fluctuations in loan rates during the next few weeks, discount quotations have touched bottom.

Certainly the re-establishment of the handsome margin that has ruled so long between money and bills would be very welcome to the brokers, and there can be little doubt that those on whom the responsibility of guarding London's gold store rests would not be sorry to see discount rates harden a little. The international monetary situation has been improved to some extent superficially, but the attitude in all the great centres is still one of caution and defence, and all of them would be only too glad of an opportunity of strengthening themselves, if only they could do so without causing alarm and embarrassment elsewhere, and starting a war of Bank rates and a general flutter in the monetary dovecote. Our Bank's position is materially stronger than it was a year ago, but in the first place last year is a bad standard of comparison, and in the second it is not well to feel too certain that the demands which drew so imperatively on London's gold in September, 1906, may not be repeated, though perhaps on a smaller scale at a later period of this year. Last year the ease with which American finance paper was accepted and discounted here enabled New York to draw early in anticipation of the crop movement. This year the London market has shied at American finance paper, and so prevented anticipation, but it does not follow that when the actual produce bills come forward the exchange will not go down to gold point. The prophets of smooth things assure us that the liquidation already carried out, and the arrangements made by Mr. Cortelyou for assisting the United States money market, will enable New York to finance itself without the help of our gold; but these optimistic gentlemen have already been proved wrong about the Egyptian demand for gold, and may, probably enough, be wrong again about New York. Egypt took nearly £400,000 last Saturday, including £100,000 that went to Constantinople and was generally believed to be meant for Egypt or going on Egyptian account; and another substantial parcel is talked of as likely to be withdrawn to-morrow. A Brazilian loan is said to be on the stocks, and its launching will enable Brazil all the more easily to take gold from here, and Argentina, with its fine harvest and rapid expansion, is likely to want currency. In the meantime, a nice large parcel of bars is due to-morrow from the Cape, and it is hoped that the Bank may get some of it, since it will be too late to stop gaps in Berlin at the end of the quarter, and Paris, though a probable competitor, is generally moderate in its demands at any moment.

Silver.

A fairly large business was done this week mainly on account of the Indian Government, but supplies were ample, and the spot price after dropping to 31 1/16d. per oz. remained steady at that figure for several days. The Indian bazaars took a little metal from day to day, but their purchases were not sufficient to influence the market, and it was only when the Far East also came in as a small buyer that the quotation hardened to 31 3/16d. per oz. Forward silver went back with cash metal to 31 3/16d., but recovered to 31⅜d. on an increase in stocks and the firmer tendency of money. Tenders for the Rs. 30,00,000 lakhs of India Council drafts offered on Wednesday reached a total of Rs. 2,85,58,800 in bills and Rs. 1,50,000 in telegraphic transfers. The whole amount was allotted in bills, applications at 1s. 4 1-32d. per rupee receiving about 12 per cent. Next week another Rs. 30,00,000 will be offered.

The Stock Markets.

The closing hours of last week saw a further slight advance in gilt-edged securities, and an appreciable rally in Home Railway stocks, on the more favourable views prevalent with regard to the labour agitation, the reported refusal of the Drivers' Union to follow the lead of the Amalgamated Railway Servants' Society inducing bear operators to repurchase, and when it was further stated that the general secretary of the Associated Society of Locomotive Engineers and Firemen, which has a membership of about 19,000, have expressed an opinion that there would be no strike, the Home Railway market became buoyant. The conciliatory nature of Mr. Bell's speech at Cardiff on Sunday induced everyone to take a more hopeful view of the outlook; dealers in the Home Railway market prepared for a boom, and there were indications on one or two days that the general public was taking a hand. Public buying was not very vigorous and died away almost before it commenced, so far as Home Railway stocks were concerned. Elsewhere the story was a little more encouraging, more especially as regards Foreign Government and Foreign Railway stocks, which have been steadily bought all the week. Speculative markets for some days during the early part of the week were dominated by the copper outlook, expectations being current in Wall Street of a reduction in the dividend of the Amalgamated company, and similar expectations were prevalent in Paris with regard to the Rio Tinto. While it lasted, this talk made nearly all the speculative markets flat, and much grumbling arose on all sides that the unsound condition of the copper market should thus be allowed to damp the ardour of all markets. But when markets are so sensitive to all kinds of influences, it is a little unkind to throw the blame on any one particular sinner. Later, copper took a turn for the better, and the Continental Bourses, which had been idle and listless (Paris because of the depression in copper pure and simple, and Berlin because of the adverse influences at work in Wall Street), recovered their cheerfulness, and thanks to the Anglo-Russian Treaty developed quite a respectable degree of strength. On the whole, the account that has just come to an end must be summed up as rather disappointing, in view of the hopes entertained at its commencement.

Contangoes.

The account to be arranged was a small one, and money was quite as easy as a fortnight ago. Bankers lent at 3⅜ per cent., money brokers being supplied at 3½ per cent., which were exactly the rates ruling at the last settlement. Continuation rates differed very little from those ruling at the mid-monthly account.

On Home Railway stocks the contango charge was usually about 5 per cent., the carry-over disclosing the fact that there was practically no speculative account open, and money-lenders were again obliged to deliver stock. Brighton deferred was as usual carried over at about even to ⅛ per cent. contango, and at one time a small backwardation was exacted. On South-Eastern deferred on this occasion the rate was also conspicuously light, at even to ⅛ per cent. contango; while Chatham ordinary was carried over at 3d. to 6d., and Great Northern deferred at 9d. to 1s. 3d. contango.

On Foreign Government bonds seldom more than 4 per cent. was paid, while on Spanish, Turks, Chinese and Japanese the charge was 2 to 4 per cent., Peruvian preference and ordinary enjoying the exclusive privilege of a 4 to 6 per cent. charge. In the American market money was freely offered owing to the difficulty of employing it in other departments, and the general charge was 3¾-4¼ per cent., which contrasts favourably with the 4½ per cent. paid by many operators a fortnight ago, and this in spite of the fact that commitments did not appear to have been reduced. On South American Railway stocks the rates were not quite so high on this occasion, 5 to 5½ per cent. being the general charge, whereas a fortnight ago borrowers had not infrequently to pay 6 per cent. to continue their speculations. The presence of a bear account in Rio Tintos caused the contango to rule easy at 3 to 5 per cent., or fully 1 per cent. lower than a fortnight ago. In the case of Hudson's Bay shares the rate, after opening at 2s. to 4s., ran off to 1s. towards the close. Anglo-American Telegraph deferred was continued round about 1s., and on motor shares the rate ran up to 8 per cent. in some cases, though Humbers were an exception at even to 2 per cent.

In the list of making-up prices, apart from Home Railway and Mexican Railway stocks, practically the

whole of the changes shown on the account were in favour of holders, Rio Tinto shares being carried over at almost the same price as a fortnight since, in spite of the heavy fall in the price of the metal; Amalgamated Copper, however, was 5¾ lower. The fall in Mexican Railway ordinary on balance came to only 5¼, thanks to the rise in prices during the early part of the account, but Central London Railway ordinary was down 7½ and the deferred 5½. On the other hand, San Paulo Railway ordinary was 10 higher, and Antofagasta ordinary rose 7½, Northern Pacific in the American section showing a rise of 6, and Union Pacific an advance of 3¾, after allowing for the dividend.

Consols and Other Trustee Securities.

A steady stream of small investment buying kept the leading gilt-edged stocks steady. The Government broker was thought to have been in the market on one or two occasions, but it is not always easy in these times to find out whether he is buying on official account or otherwise. It used to be customary for the official broker to bid openly for the stock that he wanted, but times have changed, and he is now content to pick up small parcels here and there in a quiet, unobtrusive manner. The news that the Bank, by arrangement with Continental buyers, had secured about £200,000 of the gold in from the Cape, had a cheering effect, and tended to stimulate the appetite of investors and others who watch the course of events closely. As yet there are no indications of new issues of trustee stock beyond a bare intimation that the Belfast Corporation is seeking an opportunity to raise an additional £75,000 or so, but there must be a goodly number of other Home Corporation and County bodies anxiously awaiting a favourable opportunity to place a line of stock for the purpose of getting rid of unwieldy overdrafts at their bankers.

The Foreign Market.

The foreign market has been comparatively active and decidedly firm during the later dealings, thanks to a keen investment demand which extended to most of the popular stocks. At the start the outlook was not promising, heavy realisations on the Paris Bourse in Rio Tinto shares having a depressing effect, and French Rentes weakened in consequence of the renewal of hostilities in Morocco. Berlin also started the week in an uncertain mood, owing to the weaker tendency of the Western bourses. But when the turn came in the copper market matters quickly mended, and the terms of the Anglo-Russian agreement appear to have given a considerable amount of satisfaction to all the Continental centres. Russian bonds were notably firm, as might be expected, after showing a flat tendency, which was attributed to the circulation of a rumour in Paris that M. Stolypin had resigned. The appointment of a new Argentine Finance Minister was the signal for an outburst of buying orders for all bonds connected with that country, and Brazilian descriptions have been put higher, possibly to prepare the way for the long-talked-of new loan, which is expected at any moment; it is likely to take the form of 5 per cent. bonds at about 93½, the amount to be offered being £3,000,000. Berlin operators sent buying orders for Peruvian Corporation stocks, and the market on this side was found to be short of stock, a new experience so far as "Perus" were concerned, as for a long time past a large amount of stock has been hanging over the market. This has now gone into stronger hands, or so it is reported in the market, and for the present at any rate there are more buyers than sellers. A new Buenos Ayres municipal loan has been authorised, for the purpose of "improving and embellishing the city," according to Reuter; it is for £3,000,000 bearing interest at 5 per cent., and redeemable by a sinking fund of 1 per cent.

Home Railway Stocks.

Home Railway stocks started the week in buoyant fashion, Mr. Bell's speech on Sunday pointing rather towards peace than war in the opinion of the market. After a careful study of what he really said, it is a little difficult to arrive at the same confident conclusion, but as the market wiseacres decided that what he meant to imply was that the Amalgamated Society was not in a position to risk a strike at the present juncture, the bears thought it advisable to get their books even. Their repurchases sent prices soaring upward, and a little genuine investment buying also marked the opening of the new account. Traffic receipts on the whole are everything they should be; according to the *Railway News*, the earnings are equivalent to £100 19s. per mile on the 54 principal lines, whereas for the corresponding period of last year they worked at only £106 15s. per mile. Even the Brighton company reported a decrease this week smaller than for any other week during the current half-year; considering the brilliant weather, it was not too much to have hoped for an actual increase over last year. At any rate, the Central London has felt the full effects of the hottest days of the year coming in September, and another very bad return was the result; holders have therefore lost heart, and sold their stock, hence the further appreciable decline in the deferred and ordinary. Complaints are now being heard that the company is reducing the length of its trains in order to effect a saving of expenses if possible. When we hear stories of passengers being left behind during the busiest times of the day this seems rather poor policy on the part of the management. A revival of the wonderful stories regarding Kent Coal developments sent South-Eastern and Chatham issues forging ahead. Nothing of great interest transpired at the North British meeting, the chairman simply endorsing all that was said last week by the chairman of the Caledonian company with regard to the probability of an arrangement being arrived at by all the Scottish companies with a view to preventing undue competition. Lord Dalkeith, however, announced that certain minor economies had already been effected, and larger proposals were under consideration, but he declined to state the amount lost to the company by the Elliot Junction disaster, or the proportion of the entire loss borne by the company.

American and Other Railway Issues.

For some portion of the week the undertone of Wall Street markets was fairly good, with a more confident feeling all round and a steadily improving tendency in most stocks. Bears tried to take advantage of further offerings of Amalgamated and other copper stocks; but it was noticed that their offers were being readily absorbed, and when they attempted to cover prices were promptly raised against them. The market was strengthened by the appearance of a favourable-looking Associated Banks' statement, which brought out a fair number of buying orders, the fairly large expansion in the loans being attributed to the increase in speculation. The curtailment in the copper output had a reassuring effect, but the uncertainty regarding the dividends to be announced by the Anaconda and Amalgamated Companies checked undue buoyancy. Crop news remain fairly good, the Government reports indicating that while in no instance will any of the great crops establish new records, yet they are much above the average. Railroad returns are keeping up with remarkable tenacity, and some of the annual reports now reaching this side furnish some astonishing reading. That of the Missouri, Kansas, and Texas, for example, shows an increase of 48 per cent. in net earnings, the ratio of operating expenses and taxes to earnings, being 5 per cent. less than last year. President Roosevelt's forthcoming speech-making tour in the South is not viewed with favour, and it is expected that his remarks may not be without influence in Wall Street. Later in the week dulness was the chief feature of the market, and, with the varying moods of operators, prices fluctuated considerably. The temporary ease in the New York money market had little influence, as it is generally expected there that rates will tighten with the approach of the end of the month. Bull operators took heart on the news that

Judge Landis at Chicago has dismissed the Chicago and Alton case in connection with rebates granted to the Standard Oil Company, thus sustaining the railway company in its claim for immunity.

During the later dealings reports of severe frost in the corn belt, rumours of a reduced dividend to be announced by the Atchison Company next week, and the offering of Steel stocks on the continued reports of reduced activity in the trade were not without their effect. A lively duel is in progress this week between Mr. Fish and Mr. Harahan; the former started operations by addressing a circular to the stockholders of the Illinois Central in which he declared that the last annual report was packed with misstatements regarding the earnings of the road, and he accuses those of the directors who act in the interests of the Union Pacific of high-handed methods. These allegations seem to have pretty effectually raised the wrath of the other side, and Mr. Harahan retorted by declaring that the statements contained in Mr. Fish's circular are absolutely untrue. Both sides have thus come to close grips in the opening moves of the game, and further developments are awaited with interest by those who are anxious to have more light poured upon some of these questions.

It was announced in all seriousness in various quarters that the Standard Oil Company will be reorganised after the current litigation has been brought to a close, and that the new company will probably have the present capitalisation quadrupled. But why stop at that?

The Foreign Railway market has produced some of the biggest movements in prices this week. Interest centred in the stocks of the old Mexican Company, which were banged down in a sensational manner; the ordinary tumbled from 47¼ to about 41 and the second preference from 93 to 88, a huge amount of stock coming to market. Such a fall naturally aroused a considerable amount of speculation as to the why and the wherefore, and rumour had it that a large amount taken over from an embarrassed speculator a few weeks ago had been thrown on the market. Why the stock was being turned out in such haste it was impossible to find out, but it was said that the heavy fall in Tanganyika shares was due to sales from the same quarter, at least 20,000 shares coming to market. If the liquidation of these two distinct sets of securities really emanated from the same quarter it was not difficult to guess the source, one name in particular having been freely mentioned in connection with these particular stocks back in the early summer, but there must have been some disagreement amongst those parties that arranged to take over the stuff to account for the reckless fashion with which it has now been sacrificed. It may be noted that the Mexican dividend was not announced until the end of October last year, so that it is still early days to be talking of sales in anticipation of that event. In some quarters it was alleged that selling orders from Mexico City was the real cause for the fall, but this was not generally credited.

Apart from this the story of the Foreign Railway market furnishes more pleasant reading for holders of stock. Argentine descriptions continue to find favour, reports to hand stating that it has rained all over the Republic, and the weather conditions are very favourable for the coming harvest. It is calculated that the area under cultivation is about 50 per cent. greater than last year, and contracts are already being made for new wheat for delivery in February. These reports thus fully endorse the statement recently made by the Minister of Agriculture that prospects of a full crop are exceedingly bright. Entre Rios stocks were buoyant on the appearance of the report, the directors being in a position to pay 2½ per cent. on the second preference; a year ago the first preference had to go short of its full interest. The report adds that the good harvest of the past year has encouraged the farmers of Entre Rios to extend the area of wheat and linseed under cultivation, and the opening of the new extensions enables the railway to serve a considerably larger agricultural district. Among Brazilian undertakings San Paulo ordinary went further ahead, and Leopoldina attracted a good deal of support, the issue of new preference shares made in connection with the arrangements recently entered into for the extension of the companies' concession having been well received. The new shares are fairly well secured, and considerable advantages are naturally anticipated as a result of the new expenditure. Western and United of Havana issues were well maintained, the traffic receipts looking very fat, but it must not be lost sight of that a year ago the companies were hampered by an insurrection.

Banks, Breweries, Commercial, and Other Securities.

Interest in Marconi shares has revived, owing to the receipt of a common or garden cable, apparently from Nova Scotia, announcing that Mr. Marconi has arrived there, and has stated his intention of remaining on the spot until wireless communication with Europe has been established on a commercial basis. He is confident that he has now finally overcome all obstacles, that three weeks will be occupied with the preliminary trials, and then when these are finished the Transatlantic service will be thrown open for regular business. Holders of Anglo-American Telegraph stocks took the matter seriously to heart, and sold stock; at any rate, prices gave way, but it goes without saying that the company must have been doing badly lately, arbitrage business having shrunk to such small proportions in Shorter's Court. Possibly, however, an overloaded bull account in Anglo deferred has had something to do with the fall.

Tea-producing companies' emissions were buoyant, an impression gaining ground that an advance in the price of tea is imminent, and the market is still short of shares. Pahang Consolidated shares (which are still dealt in in the Miscellaneous market, simply because at the outset the undertaking was not regarded as a mine, the tin being just scraped off the surface) have shown some lively movements, prices trending slightly in the downward direction towards the close. London Road Car shares were bought on the steady expansion shown in the earning power of the company, and the London General Omnibus Company has also managed to get an increase in its earnings this week, the first seen for quite a long time. British Westinghouse debentures, Lewis and Allenby debentures, United Collieries debentures, and Eastman Kodak common may be singled out for special mention, their prices being 3 to 5 higher on balance, while Canadian Electric ordinary fell 4. Dealings in Motor shares were more limited, and prices gave way. Argyll ordinary was offered down to 10s., owing to fears of new capital requirements, and Daimlers and Darracqs relapsed, pessimistic views being taken as to the present outlook of the trade. The revival of interest in things connected with Egypt has kept prices steady to firm, and the Brewery market has shown signs of animation, American descriptions coming in for notice, owing to the appearance of some satisfactory trading results. Bieckert's ordinary was also 5 higher, and there was a demand for some of the better class of English debentures. Bank shares had a dull appearance, and Rubber ventures have shown less activity. A company is said to be in course of preparation which purports to have secured a substitute for rubber which can be placed on the market at a cost of a few pence per pound.

Friday's Markets.

Almost without exception the speculative markets took a slight turn for the worse to-day, under the lead of American Railroad and Copper shares. Wall Street closed heavy and weak last night, and prices opened lower on this side this morning. No improvement was shown in the position this afternoon, Wall Street being reported in the dumps. Copper shares followed a relapse of 15s. in the price of the metal, Amalgamated falling to 62½ and Rio Tinto to 71¼. Home Railway stocks remained firm up to the close, the feature being a demand for Chatham first and second preference issues. Foreign Government stocks

were steady, Peruvian Corporation preferred closing at 36⅞. Mexican Railway ordinary was offered down to 41, and closed at 41⅜, and San Paulo was weaker at 199½. Hudson's Bay shares relapsed to 84½. Coats ordinary was a shade weaker on a report that the strike movement amongst the company's employees was spreading, and Anglo-American Telegraph deferred was dull at 15⅞. Pahangs were firmer at 40s. 6d. bid, a bear squeeze being talked of. Tanganyika closed dull at 3⅜.

THE WEEK'S PRICE MOVEMENTS.

WATERWORKS.—Fall: S. Essex Db. 4, to 103-108.

Notes on Books.

Issues, 1907, January 1 to June 30. A Reprint of the Prospectuses of Public Companies, &c., advertised in the *Times*. (London: George Edward Wright, the *Times* Office.)

We note the 33rd number of this valuable record which is a facsimile reprint of the prospectuses of all kinds that have appeared in the advertisement columns of the *Times* during the past half-year. To people interested in finance and in the fortune and fate of joint-stock adventures the book is always useful for reference, and at the end of it there is a list of the loans offered for tender, together with a tabulated exhibit of the particulars relating to the joint-stock companies of the half-year, details of which are supplied in the body of the volume.

The Revolution in the Baltic Provinces of Russia. (Socialist Library, 1s. 6d. nett; J. D. P., 23, Bride Lane E.C.)

This is an enlightened and humane age, but it is very hard to believe it when we read of the ghastly and brutal horrors told in this book. And it is claimed for it that "the tale is too moderate a measure of the barbarism of the Russian bureaucracy," for the crimes did not take place in "the corner where the fiends in the pay of the Czar have been allowed the most freedom." Socialism is a creed that over here is not exactly adhered to or admired by everyone; but never an individual of us does not "believe in freedom's cause as far away as 'Russia is," and therefore it is with something of a grim satisfaction that we learn of the dogged, persistent determination of a tortured people to conquer against all odds. The book is published to enlist sympathy for the Russian revolution, and should surely get it from those who read.

American Railways as Investments, by Carl Snyder (New York: The Moody Corporation; London: Frederic C. Mathieson and Sons.)

This is not an ordinary "manual," but a critical appreciation of the statistical position, earning capacity, trustworthiness and prospects of most of the railways of the United States. Mr. Snyder has adopted a definite and intelligible plan, which seems to us i

the main trustworthy, and the result is a work of no small value to those who desire to invest with intelligence and prudence in this class of security. He succeeds in showing that there are railroad systems in the Republic that are not merely large and in the enjoyment of enormous traffic incomes, but also carefully managed and steadily profitable to their stockholders. Some of them have paid steady dividends for a generation back, and although all are continually expending more capital, the character of the good properties is never lost through unmeasured indulgence in this form of vice. They do not seem to go beyond their depth, and, unless their treatment of the capital account is the same as that of our own railway companies, their bonds at least ought to be safe for investment. We hold to the opinion that no person on this side should invest permanently in any United States Railroad share; the risk is too great and the fluctuations to which all, even the best, are liable, much too severe and treacherous to make them anything but speculative investments, and sometimes poor enough at that. Quite a romance of railroad history is found in the story of the Atchison, Topeka and Santa Fé Railway, given at the beginning of the book, and that of the Baltimore and Ohio, the Missouri Pacific, Northern Pacific, and others is just about as fascinating and well-nigh as instructive, if sometimes less charged with tragedy. Small roads are included with great roads, as for example the St. Louis South-Western, which has been a most unsatisfactory possession to all who have touched it. The Erie Railroads is naturally surveyed, but not in the fulness that some of the newer roads have been treated with. Mr. Snyder also goes over to Canada and gives particulars about the Grand Trunk and Grand Trunk Pacific companies, as well as the Canadian Pacific, nor does he omit even such a singular product of American financial ingenuity as the Chicago Great Western. Altogether the book is a most useful one to the limited class of people on this side who desire to possess intelligent conceptions of United States railroad finance.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Monday was occupied in the mining departments in making the necessary adjustments in view of the carry over due to commence on the following day. Apart from this there was no business of any sort going on, with the exception of the usual attention paid to the copper shares market, which has absorbed most of the interest for a good many weeks now. In the absence of further support prices naturally inclined downward, and small losses added to those accumulated during the previous days of the account naturally made the making-up list wear a rather unsatisfactory appearance.

The carry over was conducted with the usual smoothness and so far as rates were concerned there did not appear to be the slightest difference in the speculative position. Rates were almost precisely the same as they were a fortnight ago or as they have been now for many months. In the Kaffir Circus the general charge for continuation was 6½-7½ per cent., and this figure also covered the principal counters in the Land and Finance Group. There were, of course, the usual exceptions, the rate on Rand mines and East Rand being only 4½-5½ per cent., while on Goldfields it hardened from 5-6 per cent. to 5½-6½ per cent., Randfonteins, Modders and Johnnies were all taken in at 5½-6½ per cent., and among the leading Diamond shares De Beers could be borrowed on at 3½-4½ or 1 per cent. less than last time, indicating a little bear selling during the account. On Premiers, Jagers and New Vaals the contango was 4½-6½ per cent. and the general Rhodesian rate was 6-8 per cent., with Chartered done ¼d. cheaper than last time at ¼d.-⅜d. per share. On West Africans and Siberians the rate was also 6-8 per cent. and the general charge on West Australians was 6½-7½ per cent., except that Great Boulders, Oroyas and Great Finalls were carried over at 5½-6½ per cent. Broken Hills and Australian copper descriptions were usually taken in at 5-7 per cent., and of the copper shares contangoed in the foreign market no Tintos and Anacondas were each arranged at 3-5 per cent. Most of the Miscellaneous group were arranged at 6-7 per cent.

Making-up prices showed a preponderance of falls under the lead of Tanganyikas, which were 1¼ lower. Roberts Victor Diamonds were down ¾, Rand Mines ½ and Eldorados, Heriots and Zambesias all 7-32. On the other hand, Premier deferred, which have been in some demand, made up 1/16 higher and the preference ½ to the good, while De Beers' preference, after allowing for the dividend reduction, were ¼ better. Rand Klipfonteins and New Brightons were also ¼ up. The West African assortment showed few changes of importance, and the only ones to be mentioned are a fall of ½ in Nigeria Investments and a rise of 1/16 in Nigeria Bitumen. Among West Australians Kalgurlis were ⅛ higher, while Great Fingalls and Lancefields were each 3-32 easier. The only prominent movement among Broken Hills was a rise of 3-32 in Block 10. In the Copper group Rio Tinto made up only ¼ lower after the wide fluctuations during the fortnight, but Namaqua and Utah Consolidated were each down ½. Bostons showed a loss of 1/16, Newhouse mines of ⅜ and Arizonas of 7s., while Great Cobars made up ⅛ to the bad. Mining Explorations were 1/16 lower and Mount Lyells 3s. worse. Among the losses in Tin shares may be noted ⅜ in Redhills, ¼ in Bohemians and Croftys and 1/16 in Troonbs. In the Miscellaneous section Alaska Mexicans made up ¼ better, while Sosans were ⅛ lower in the Siberian group and Central Siberians and Spasskys were both ¼ easier.

In the Kaffir Circus business for new time did not commence in a very startling fashion and dealers found little to occupy their attention. Few further buying orders of any sort were received, with the result that the tendency still continued extremely dull. It often happens that prices show some improvement at the beginning of a new account, but that did not occur in the case of Kaffir shares this week, and it was not until a few buying orders came along from Paris that prices could even be steadied. The effect of these was to bring about a rally in a few instances, but there was no real vigour in the market, cannot be unless the public again comes back to play, of which there is still no sign. On several days dealers had so little to do that they amused themselves with the new game called "Diabolo," and it is really pitiful to think of the condition of complete stagnation into which this once active corner of the House has fallen.

With the exception of Tanganyika shares, which continued to be pretty badly knocked about by the bears, Rhodesian shares were just as inactive as Kaffirs. We have not been able to gather a satisfactory reason for the attack on "Tanks," all the reports previously current having been met with prompt denials, but we shall probably learn something more definite presently, because such onslaughts rarely take place without somebody being in the know. Zambesias slipped away, too, and Eldorado Bankets were also miserably weak, other things being dragged down in sympathy, although there was no active selling. Diamond shares commenced badly, Premier, De Beers and New Vaals all going lower, but De Beers subsequently rallied despite the depressing influence of the reduced Jagersfontein dividend. This time the distribution on the deferred shares is 25 per cent. as compared with 30 per cent. for the corresponding period.

Nothing worth a line of space happened in the West Australian list, the tendency being dull for choice, and West Africans slept peacefully throughout the week. New Zealands moved irregularly, closing fairly steady, but Broken Hill shares again showed pronounced dulness. Zincs were easier again, and any movement that took place in Deep Lead shares was adverse. Copper shares again showed incidental fluctuation, but the market perhaps was not quite so wild as of late. Copper metal opened flat and share prices followed it down, and further depression ensued on talk of dividend reductions by all the leading companies. It was said that the forthcoming distribution on Tintos would be only 35s. compared with 50s. a year ago, and the Amalgamated and Anaconda announcements, both of which were due this week, were expected to be unsatisfactory. Later it was officially announced that the Anaconda declaration would not be made until October 1st, while a significant silence has been preserved regarding the Amalgamated distribution. A sharp recovery in the price of the metal in the middle of the week caused some improvement in prices, but the market is in a very disturbed condition, and it by no means follows that the fall in quotations in the market has yet reached its limit, as some are now prepared to assert. Tin shares have been rather weak, movements in the metal having been very erratic.

Among Miscellaneous mines Camp Birds were sold on the meeting, which was not considered particularly satisfactory, and among other American gold shares Esperanza, San Francisco and Le Rois were all inclined to ease. Indian gold shares went down and the Siberian group continues decidedly off colour.

Sheba Gold Mining Company.—We are beginning to fear that this South African mine, from which so much was expected, must be classed among the failures of the Rand. It is not so long ago that it went through the reconstruction stage, and it cannot be said that prospects have much improved during the past 12 or 18 months. In a concluding paragraph to his report, the general manager so aptly sums up the situation that we cannot do better than repeat what he has to say. It is as follows:—"While there is no disguising the fact that the returns have fallen off during the past few months, that the north reef shows signs of giving out, that the Hill claims have hardly come up to our expectations, that the Zwartzkopje sheet has become smaller and poorer in depth, we must not look wholly on the dark side, for when I returned to the property 3½ years ago the north and south reef was unknown, the Zwartzkopje was under water, the Hill claims were not thought worth acquiring, neither had the Insimbi been found, and yet these blocks of ground have yielded 93,208 ozs. of fine gold, and by persistent prospecting and developing there is no reason why they should not continue to produce and other reefs be found." The manager's report is quite a voluminous affair, but beyond what we have just set out there is little in it that need be repeated. It shows, however, that during the past year an average of 70

stamps ran about 363 days, crushing 66,250 tons of an average grade of 10.92 dwts. per ton entering the mill as compared with 79,390 tons of 12.003 dwts. per ton during the previous year showing a decrease of 13,140 tons and of 1.083 dwts. in the assay value. The general average extraction, however, was 91.004 per cent. which, compared with the previous year, shows an increase of 18.214 per cent., due to the fact that at the end of June, 1906, the mine had a considerable quantity of rich concentrates on hand and under treatment, which were carried over, treated and recovery shown in the figures now under notice. The close clean ups in the past three months of the financial year also contribute to the high extraction. The total cost per ton was £1 12s. 4.38d. as against £1 7s. 8.50d. for the preceding year, attributed to the reduction in the number of stamps at work since November 1, 1906, and consequent less tonnage crushed. Total output of gold from all sources was 33,122 ozs., which realised £139,633, other items including stock on hand on June 30 last, interest and discount raising the total revenue to £145,079. Stock on hand at the end of the previous year was £7,271, mining charges came to £116,530, London expenses were £2,790 and other payments £2,667, so that only £15,820 remained as nett profit, increasing the total credit to £39,062. At the date of the accounts the company had the substantial cash balance of £99,765, but £44,648 was owing to creditors under various heads, of which £26,500 has since been liquidated.

Central Nigel Deep.—This mine has proved an utter failure, and since the shareholders have very wisely declined to put more money into a hopeless venture there is nothing for it but liquidation. A brief statement has just been sent out to the effect that no response having been received from the shareholders as regards finding funds for the upkeep of the claims and other necessary outgoings, an extraordinary general meeting of shareholders has been called for November 1 next in Johannesburg, at which resolutions will be submitted for winding up. In the circumstances it is rather amusing to note that certain reserve shares are under option at par to July 31, 1908, to the Consolidated Goldfields of South Africa. From the look of the accounts it seems as though some people will be hit pretty badly over the break up, those issued to July 31, 1906, showing loans against security £127,950—what security?—accrued interest £12,608 and debit balance £97,209, the cash in hand being about £90.

North Broken Hill Mining Company.—Milling operations during the half-year ended June 30th were the most extensive in the company's history, 53,433 tons of crudes being treated. Recoveries were again high, being 75 per cent. of lead and 54.6 per cent. of silver, or slightly below the excellent record of the previous half-year. The mill capacity has been further improved to over 2,300 tons, and it is expected that this will be gradually raised to 2,500 tons weekly, while construction work on the new mill with a capacity when completed of about 4,000 tons weekly is being proceeded with. The plant has been ordered and a large portion is on the ground. Very extensive additions and improvements have been made to the surface equipment, and though the cost has been considerable the directors consider it advisable to raise all the plant to the highest possible standard, while profits are large. There is no fault to be found with this policy, and it is said that the mine on completion of work now in hand will be one of the best equipped on the field. Revenue from concentrates produced was £110,979, from which expenses on mine account were £33,256, on mill account £12,713, and on the development account £8,032. This leaves a balance of profit of £56,978, to which must be added £63,799 brought forward and interest and fixed deposit £692, bringing up the total to £121,469. Various sums written off for depreciation amount to £16,224, and after providing general administration charges the directors have declared two dividends of 2s. 6d. each and a bonus of 1s. absorbing between them £42,000. Sum still remaining was £59,741, and on July 16 another 2s. 6d. per share was paid, amounting to £17,500. Extensive development was carried out during the period under review, aggregating 2,235 ft. against 1,509 ft. in the previous term. The results of this work are described as extremely satisfactory, and the directors say it is clear that during the current half-year very material additions to the ore reserves of the mine will be made. Ore raised was 53,703 tons, and the quantity developed above the 800 ft. level 48,703 tons, the reduction in reserves therefore being 5,000 tons, leaving them at about 487,000 tons above the 800 ft. level. Below this level excellent ore of a higher grade than the average of the upper levels has been proved to extend as deep as the workings have so far been carried—namely, 950 ft.—and operations during the current period should lead to large additional reserves being made available. Capital expenditure was on a moderately large scale, but depreciations seem very fair and the finances generally leave little to be desired.

Great Tower Hill Gold Mines.—The report of this company covers the trifling period of two years and eight months to January 31 last, and now that shareholders have at last had the position of the company's finances put before them, they are not likely to look forward to the future with very great confidence. It appears that the preference share issue made in November last in order to provide further capital for development in consequence of the falling off in the value of the main shoot at the lower level was only partially responded to, 310,497 shares out of 1,100,000 having been subscribed for. The intention to continue sinking the main shaft to 1,500 ft. and to develop other payable shoots hitherto in part only opened up had therefore to be abandoned for the time, and pending the arrival of Mr. Doolette the mine was partially shut down. Shortly after his arrival work was entirely suspended, and the company's available resources were devoted to satisfying so far as possible the outstanding liabilities. Mr. Doolette's report and recommendations have been circulated to the shareholders, and beyond what has been stated no further reference to them is made. During the period under review the revenue in Australia was £91,155, and in London £185, making a total of £91,339. On the other hand, the outlay in Australia was £61,944 and in London £6,681 leaving £22,713. The whole of this and a little more has been absorbed in providing for depreciations, and a debit balance is carried out of £164. The financial position is not exactly brilliant, the company's floating liabilities being pretty heavy, while the cash balance is only £1,202 and £4,911 still stands for preliminary expenses.

Golden Blocks Taitapu.—The position of this New Zealand gold mining company is about as miserable as can be imagined, and we see mighty little prospect of any improvement now or later on. Just in the usual fashion the directors regret that the reefs have been very narrow and patchy, but they are said to change rapidly, and further development is being vigorously carried on in the low levels in the hope of finding rich bodies of ore similar to those already worked. But the workings in the mine have recently reached the southern boundary of the property, and the directors have been obliged to obtain from the Taitapu Gold Estates an option for extension to the south of the company's block 3 in accordance with the manager's opinion referred to in the last report. The statement now under consideration shows that during 1906 the ore crushed amounted to 1,713 tons yielding 1,404 ozs. of gold or about 16½ dwts. per ton. That can hardly be considered very grand, but the results of the working this year are still more disappointing, 1,163 tons having yielded only 794 ozs. Last year the revenue from bullion sold was £5,429 and interest and transfer fees produced £111, a total revenue of £5,540. Expenditure in New Zealand was £5,082, and in London £727, while £123 was allowed for depreciation and machinery. This means a loss on operations of £392 but fortunately £2,265 was brought forward, so that there is still a credit of £1,873 to the revenue account.

Redhills Tin Mining.—This company was registered as recently as February, 1905, its properties being situate at Batu Gajah in the State of Perak, and up to the present its operations have hardly been attended with brilliant success. In fact, for the year ended March 30 last there was a loss on working of £4,071, tin sales yielding only £6,027 as against a total cost of £10,296, of which £9,904 was incurred at the mine. Needless to say the directors regret the disappointing character of these figures, but they anxiously call attention to the detailed explanation given by the managers in their report and to their hopeful forecast of the future working. Without going into a long rigmarole, it may be said that all the blame for the want of success is thrown upon the plant, which seems to have fallen a long way short of expectations. So difficult do the managers find it to explain why the Blondin haulage system has proved useless that they send along to the directors a photograph which they trust will make their observations quite clear, but as the directors have not had copies of this made for circulation to the Press we are unable to say whether this method of explanation is satisfactory. However, the Blondin business seems to have been discarded, and the picture mentioned shows the latest addition to the plant in the shape of an incline tramway running to the bottom of the pit. This should be in full working order shortly the managers say, and then very much better results are anticipated. At present they can do no more than express regret at not being able to send a report of a more exhilarating nature, but at the same time they feel confident when next they have the pleasure of writing a report the task will be undertaken with feelings of a very different kind. The shareholders will no doubt be delighted to read these picturesque phrases, but whether they will consider them an efficient substitute for a dividend is doubtful.

Company Reports and Balance Sheets

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

Buenos Ayres and Rosario Railway Co., Limited.

Being an interim report only, the statement issued by this leading Argentine Railway for the six months ended June 30 last does not contain complete details of the operations, but enough information is afforded to enable shareholders to follow the progress made by the line. From the point of view of gross earnings the period was again a very satisfactory one, the revenue from all sources amounting to £2,427,447 or an increase of £107,874, but when we look to the expenditure side of the account the showing is much less satisfactory, the total working expenses having risen by £193,795 to £1,426,986, meaning an increase in the percentage to gross receipts of 5.63 to 58.79. To those who have closely followed the working of railways in the Argentine during the past three or four years this rise in outlay will not come as a surprise. Working expenses have been steadily growing for some time past and have risen in greater proportion than the actual increase in business. The cost of labour in the Argentine has been steadily on the up-grade for a good many years, partly due to scarcity, and partly to the excessive cost of living now prevailing in Buenos

Ayres and its immediate neighbourhood. In the period under review an extra £103,323 was paid for wages and salaries, and the general manager fears there is no indication of the company being able to effect any serious reduction in this branch of outlay for the present. Another £33,289 was absorbed by the increased cost of coal, and we suppose the remainder of the increase was spread over the various other items of expenditure. Account must, of course, be taken of the additional 214,288 train miles run, but this was only partly responsible for the greater outlay, as shown by the increase of 7½d. in the expenses per train mile. There was an increase in the average length of line worked of 29 miles and the gross receipts per mile went up by £34, but the working expenses were £75 heavier, so that the average nett receipts showed a reduction of £41. The passenger traffic again did pretty well, an increase of 775,377 in numbers, leading to an advance in revenue of £29,945. The improvement was especially noticeable on the Buenos Ayres Suburban section and is attributed to the fact that many people in order to avoid the high rents and ever increasing cost of living in the capital have removed thence to the suburbs. The failure of the maize crop had a detrimental effect on the main line passenger business, especially as regards second-class. Parcels and excess luggage did better by £4,833, and notwithstanding a slight decrease in the tonnage of goods and live-stock handled the receipts from these sources were better by £70,782. While there was a great falling off in maize, a low rated traffic, it was counteracted by a pronounced increase in wheat, linseed, general goods, &c., the haulage of which is more remunerative. The livestock traffic yielded £7,287 less owing to a falling off in the number of sheep carried, sheep farming naturally showing a tendency to wane in view of the constant spread of agriculture. The new president of the local committee, Dr. José A. Frias, makes an interesting report, in the course of which he touches upon many matters connected with the welfare of the country and the railways. It is instructive to note that at the present time a committee is studying the customs law with a view to ascertaining on what articles of commerce duties can be conveniently remitted or reduced. During the investigations the committee have apparently satisfied themselves that articles of first necessity are heavily taxed, which makes the cost of living very expensive, and we are told that this has been further enhanced by the ill-considered action of the working classes, who have fostered strike after strike to obtain increased remuneration. But if the cause of these strikes is removed in the shape of a reorganisation of the customs tariff which would render the cost of living cheaper it is probable that few further disturbances would have to be faced. Evidently the authorities are impressed with this aspect of the case because they are said to be studying the causes which have given rise to these continued strikes and general conditions of the working classes. They have organised a special labour department connected with the Ministry of the Interior for collecting and publishing data regarding labour conditions throughout the republic, particularly in relation to capital, and to investigate the administrative and legislative reforms necessary to improve the social and material conditions of the workmen. All these actions show that the authorities are animated by the best spirit, and the so-called tariff reformers and preferentialists in this country may usefully take note of the tendency of the times in every quarter of the globe, which is directed towards giving greater freedom of trade rather than imposing further restrictions upon it.

Entre Rios Railway Co., Limited.

This Argentine system grows in importance and prosperity every year, another first-rate statement appearing for the twelve months ended on June 30 last. The gross revenue from all sources was £204,252, or an improvement of no less than £65,104 compared with 1905-6. At the same time working expenses grew by only £20,479 to £139,030, leaving the nett receipts better by £44,685 at a total of £124,013. The ratio of expenses to receipts was reduced by just over 7 per cent. to 52.84 per cent., and it is hard to believe now that only a few years ago practically the whole of the revenue of the line was swallowed up in expenses. To the balance mentioned has to be added the sum brought forward, general interest and exchange, and after making small deductions the disposable balance is £135,011. Out of that the directors add £25,000 to reserve and renewals, and propose the full dividend at 5 per cent. per annum on the first preference stock and a distribution at 2½ per cent. per annum on the second preference issue created under the capital reorganisation scheme of two or three years back. After accomplishing these things there is a sum remaining to be carried forward of £9,183, or an increase of £2,194. For the previous year the distribution of the first preference stock was at 4½ per cent. per annum only, and, of course, nothing was paid on the seconds. The average length of line worked during the period under review increased from 472 to 503 miles, and the total mileage opened to public traffic at the end of the financial year was 541. Further extensions are in course of construction, and the plans for the new export port at Ibicuy have been approved by the National Government, and the iron work for its construction is now being shipped. The port should be completed in good time to deal with the 1908-9 crops, and meanwhile temporary arrangements are being made to handle freight at the port. The reconstruction of the Buenos Ayres Central Railway over which the company obtains access to the city of Buenos Ayres is to be completed by the end of December next. During the crop season the labour supply for extension of the works became exceedingly scarce and expensive, and the heavy rise in the price of all material has also added to the difficulties that have attended in the last two years the execution of large works in the Argentine. The revision of the Customs tariff referred to in the report of the Buenos Ayres and Rosario Railway clearly becomes more pressing every day. Every important branch of traffic contributed to last year's good results, the number of passengers carried showing an increase of 29,99, and the revenue of £8,359, while goods traffic yielded £43,05; more and live-stock a good £10,000 extra, the total weight be... larger by 128,537 tons. The wheat and linseed crop proved good in quality and quantity, and provided quite as much traffic as could be handled with the rolling stock available in the second half of the year. Unfortunately the maize crop was destroyed by an invasion of locust, but as the cultivation in Entre Rios is on a small scale the loss was not important. Flour and bran gave another good traffic, and the expansion of trade caused the business in general goods to be brisk throughout the year. The live-stock trade transported over the railway far exceeded the movement of any previous year, and has now become an important source of revenue. The principal increases in expenditure were under locomotive and carriage maintenance, locomotive running and traffic expenses. General charges were also higher, and, although less ballasting was done than in the previous year, the track is said to have been well maintained at a small additional cost. There was a considerable drop in the miscellaneous outlay. Capital expenditure was on a fairly substantial scale, but considering the pace at which the business is progressing it looks as though the outlay will be fully justified. The amount spent was £511,835, and shareholders are assured that beyond extensions and additional rolling stock equipment the expenditure has been strictly limited to works of immediate necessity only. As regards the immediate future, business being still active and there being a larger balance of the crop to carry than at the same period last year, with fair weather traffic receipts should show a decided increase, at least up to December, when the new crops affect the position. At present, however, the increase in cultivation is judged to be about 15 per cent., and as the weather for agricultural purposes could not have been more favourable prospects are distinctly good.

North-Eastern of Uruguay Railway Co., Limited.

This line is leased by the Central Uruguay Railway Company of Montevideo, which pays an annual rent for its lease, so that the company's reports are of a more or less formal character. The total sum received from the Central Uruguay for the twelve months to June 30 was £53,200, in addition to which £93 is provided for administration expenses, and after deducting £2,800 on account of income-tax the sum available for division is £53,293. The odd £93 is used for the company's expenses, and the balance, after paying preference interest, admits of a dividend of 7 per cent. for the year upon the ordinary shares. The company's capital is £800,000 in equal amounts of preference and ordinary shares, and on the other side construction account stands at an equal amount. A small sum due to shareholders on account of dividend warrants is represented by cash in hand, and the income to be distributed for the past half-year was at the date of the balance-sheet due to come in from the Central Uruguay Company.

Lanarkshire and Ayrshire Railway Company.

Very little space need be taken up with the report of this line, which is worked by the Caledonian Railway for 50 per cent. of the gross receipts. Revenue for the six months, owing to a falling off in merchandise, live stock and minerals, was £1,881 down at £43,597, and after meeting all charges the nett income, including £143 from rents and transfer fees, came to £10,245 compared with £10,652. Debenture interest was unchanged at £4,401, but general interest took £1,306 more at £8,240, leaving a balance of £6,039 against £8,892, and after paying a dividend at the rate of 2¼ per cent. per annum or 1 per cent. less, the sum carried out is increased from £193 to £616. Capital expenditure was only £2,804 for the six months, but the debit balance amounts to £322,894, and in addition to a temporary loan of £125,000 there is £195,910 due to the bank.

Ulster Bank, Limited.

This important Belfast bank does not make up its accounts to the date chosen by most institutions, the report and balance-sheet always covering the twelve months to August 31. In the past year the nett profit after deducting rebate, interest, income-tax and all other charges, including ascertained bad and doubtful debts, came to £116,357, and £22,141 was brought in, bringing the total to £138,498. A dividend and bonus aggregating 10 per cent. has been already paid, and further similar distributions are now proposed, making 20 per cent. for the year. A sum of £25,000 has been provided for writing down Consols and other Government securities, the superannuation fund gets £2,000 and the widows and orphans' fund £1,000, the sum carried forward being largely reduced to £10,498. But the steps taken to reduce the value of investments has put the bank in a very strong position, the Consols being held at 80, National War Loan at 95, and Transvaal 3 per Cents and Local Loans at 92. Altogether the investments in these securities now have a balance-sheet value of £800,000 and other securities amount to £1,405,603, or a total of £2,205,603. Cash on hand and balances with London banks is £1,346,460, and bills discounted, advances to customers, short loans on securities, &c., amount to £6,137,716. The bank has a note circulation of £922,200 and its public liabilities on deposit and credit accounts are £7,510,882. Paid-up capital is £500,000, and besides the reserve fund of £650,000 there is a dividend guarantee fund of £50,000.

Bank of Australasia.

The present prosperity of Australia seems to have enabled this bank to collect some of its bad debts, as the directors state that the revenue for the half-year ended April 15 included some exceptional recoveries from old accounts. These recoveries, too, must have been substantial, as the nett profits, after providing for the usual charges and writing down the investments to market price or under, were no less than £97,914 up at £388,043. Expenses at the same time only increased by £8,246 to £160,580, and although the balance brought forward was slightly smaller the available surplus came to £244,325 compared with £155,350 a year ago. The directors very properly do not regard the windfall as divisible profits, but transfer £100,000 or £70,000 more to reserve, raising it to the excellent total of £1,410,000, and write an extra £3,000 at £15,000 off bank premises. These appropriations leave £129,325 to be dealt with against £113,350, so in addition to the usual dividend at the rate of 12 per cent. per annum the bonus of 8s. per share given for the previous half-year is repeated, and £17,325, or practically the same balance as a year ago, is carried forward. Note circulation shows a small reduction of £39,077 at £504,671, and depositors are £341,314 down at £16,622,967, but bills payable and other liabilities have increased by £367,433 to £3,291,936. On the other hand, specie, bullion and cash balances are £108,471 higher at £3,598,435 or 21.64 of the deposits, but loans at call and short notice have been reduced by £788,344 to £2,240,000. Most of the money set free in this way has been invested, and the item of Indian and Colonial Government securities and other investments is £524,404 larger at £700,083, while bills receivable, advances on securities, &c., have risen by £356,865 to £15,840,960. British Government securities, owing doubtless to the writing down, are £39,556 lower at £927,585, and bank premises are now valued at £251,836, the aggregate of the balance-sheet being £23,558,899.

Delhi and London Bank, Limited.

The improvement in gross profits for the six months ended June 30 was on a smaller scale than usual, and amounted to no more than £418 at £23,890, while expenses rose by £367 to £14,632. Adding £5,384 or £875 more brought in, the total to be dealt with was £926 up at £14,642, and after paying the usual dividend at the rate of 4 per cent. per annum and writing another £2,000 off doubtful accounts, the sum carried out is increased from £4,963 to £5,889. A year ago the directors made a beginning with the task of clearing up the balance-sheet, and their efforts have so far succeeded that the amount considered necessary to wipe out the losses on the irregular accounts is now put at £12,500. This is still a heavy enough obligation, and one which seems likely to prevent the bank from making anything like real progress for many years to come. Current and deposit accounts have increased by £44,840 to £1,357,666, and the bank has been able to reduce its liabilities for loans on securities by £19,000 to £58,000. On the other hand, Government securities are £3,480 up at £78,483, but other securities, including cash at agencies and bills purchased show a decrease of £14,867, so that on balance there is a reduction of £11,387 in the investments. Cash, however, is £23,292 larger at £226,144, and loans, advances and bills discounted come to £59,669 more at £1,423,456.

Cortes Commercial and Banking Co., Limited.

In 1904 the businesses of the London Bank of Central America, Limited, and Enrique Cortes and Co., Limited, were amalgamated under the above title with a capital of £155,000 in £1 shares, of which 90,740 have been issued as "A" shares, and 50,677 as "B" shares. The "A" shares are entitled to a dividend of 6 per cent. and half the surplus profits after the "B" shares have received 3 per cent., and for the first 14 months to June 30, 1905, the distributions were at the rate of 7 and 3 per cent. respectively, but for 1905-6 the "A" shares only received 6 per cent. Gross profits for the past 12 months were £20,135, and after providing for all charges, including directors' fees and participation, the nett surplus was £8,740, or about £1,400 less. Balance brought in was £150 larger at £1,529. giving a total of £10,269 to be dealt with, and by reducing the amount transferred to reserve from £3,000 to £2,000 the directors are able to repeat last year's dividends of 6 per cent. and 3 per cent., with a decrease of £225 to £1,304 in the sum carried forward. The bank does not appear to have a very large *clientèle*, as its current and other accounts only reach a total of £69,704. Liabilities on bills payable amount to £121,104, and, on the other hand, cash is £21,378, investments are valued at £16,540, bills of exchange appear at £39,089, and loan and other accounts at £219,039. Goodwill, a most unsatisfactory asset for a bank, is valued at £50,677, against which the reserve now stands at £8,500, and properties and furniture £2,300 bring the aggregate of the balance-sheet up to £349,024.

Denver United Breweries, Limited.

A further slight increase in manufacturing costs was accompanied by a falling off in the nett selling price of this company's beers, and largely neutralised the improvement of 6,609 barrels in sales for the year ended June 30. Gross profits in Denver, including £1,065 from interest, rent and transfer fees, were £1,788 up at £56,636, but on the other hand expenses, in spite of a reduction of £1,079 to £6,506 in the allowance for bad debts, &c., rose by £1,258 to £17,298. After writing off £8,765 for depreciations and meeting London office charges the nett balance was £28,437 or £682 more, and with £2,763 brought in gave a disposable total of £31,200, of which debenture interest absorbed £11,484. The surplus remaining would, under ordinary circumstances, be sufficient to pay the preference dividend for the year and leave £3,716 to be carried forward, but as the working capital is so restricted the directors consider it advisable not to do more than pay off the arrears to June 30, 1906, amounting to £8,000. A year ago they paid a full year's dividend on the preference shares, so that the present return is worse from the shareholders' point of view. The position of the company, however, is none too strong, in spite of the apparent preponderance of liquid assets over current liabilities, and the directors have chosen the wisest course. Sundry creditors and bills payable have been reduced by £11,126 to £15,215 against decreases of £9,843 to £9,180 in cash and £3,173 to £65,594 in sundry debtors, but it is obvious from the large appropriations from revenue for bad debts considered necessary each year that the directors are far from sure how much of the latter item can really be considered good. The allowance for depreciation of real estate, buildings, &c., was £6,077, but the book value is only £4,821 down at £531,619, and barrels and kegs show a reduction of no more than £541 at £14,836, in spite of £2,687 having been written off, while the reserve, of course, remains at £20,000.

Colchester Brewing Co., Limited.

This fairly large business is presided over by Sir Alfred Newton, and in the tweve months to June 30 last earned a gross profit of £52,779, while profit rentals and interest yielded £3,711, and transfer fees £16. This makes a total of £56,506, and after meeting expenses of every kind, including £1,645 allowed for compensation fund charges, the balance over is £18,678. Sum brought in was £621, increasing the sum for disposal to £19,299. Of this the interest on the company's heavy debenture debt absorbs £16,221 and interest on loans another £75, so that only £3,004 was left for dividend purposes. All that can be done, therefore, is to make a payment of 2s. 6d. per share on the 7 per cent. £5 preference shares, and to carry forward £1,129. In order to provide for further loss on properties deprived of licences an additional sum of £2,000 has been transferred from general reserve to property reserve fund, reducing the former to £5,000 and increasing the latter to £4,000. These are the only accumulations possessed against an estate and goodwill account of £527,806, and plant, machinery, casks, horses, &c., of £19,961. In other ways the company's financial position is anything but satisfying, and the debenture debt of £558,450 is quite out of proportion to the share capital of £199,750.

Tennant Brothers, Limited.

Nett profits of this Sheffield brewery for the twelve months ended June 30, including dividends and interest received, showed an improvement of £4,639 at £24,189, and with £2,759 brought forward the disposable total was £26,948. The directors therefore are able to pay a dividend and bonus aggregating 12½ per cent. compared with 12 per cent. for the preceding year, to transfer £3,500 or £1,500 more to reserve and to raise the sum carried out to £3,435. Additions to property during the year cost £3,045, making a total of £276,810, against which the reserve now amounts to £42,000, and is practically all invested in the shares of Wiley and Co., Limited, valued at £41,274. The company owes £2,160 on mortgages and loans and £6,863 to sundry creditors, but is fairly comfortably off, as in addition to £8,974 in stocks it has £8,523 to come in from sundry debtors and cash amounts to £6,197.

Tongaat Sugar Co., Limited.

For the year ended May 31, 1907, the revenue gathered by this company was £80,565, and after deducting expenditure of every kind, fully set forth in the profit and loss account, the balance of nett profit is £12,794. Before arriving at this figure the sum of £4,971 is provided for depreciation and £3,041 for debenture interest, besides £1,200 for the directors. With the sum of £1,406 from the previous account, the available balance is £12,794, and enables the directors to pay the preference dividend of 7 per cent. and 15 per cent. on the ordinary shares, which includes a bonus of 5 per cent. The balance carried forward, however, is reduced to £994, and on glancing at the balance-sheet we find it a little difficult to justify quite such a high return. The reserve fund is £8,000 only against the property account of £107,202, and however prosperous the business may be, this is just the kind of enterprise that should always have something solid to fall back upon in case of need. The growing crops are valued in the balance-sheet at £76,780, and against this we have an item called "fluctuation in crops account," being the figure mentioned less the value of the crops on the formation of the company at May 31, 1899, of £52,014, leaving this reserve at £24,766. Trading accounts are rather against the company and the total cash balances are £2,914.

Santa Fe and Cordova Great Southern Land Co., Limited.

On the whole conditions were again very favourable for this South American Land Company during the year ended on June 30 last, and the directors are able to report that the prices of cattle, sheep and wool have been good, while the great rise in the price of wheat which has recently taken place will, if it is maintained, advance the interests of the company to an important extent. We are sure we hope so, and it is also very good to learn that the water supply on the estancia leaves nothing to be desired, five more wells of excellent water having been sunk during the year and pumping gear erected. Very dry weather and abnormal heat seem to have been experienced during the summer months, but notwithstanding this the con-

dition of the cattle and sheep was excellent, and the independent valuer, Mr. Ross, reports that the quality of the stock has again greatly improved. At the end of the year the company owned 16,718 cattle, 5,162 sheep, and 612 horses, &c. The one unpleasant incident of the period was the appearance of a plague of locusts in December last, which did a great deal of damage to the alfalfa pastures and rendered the year's working less satisfactory than it might have been. Three more leagues have been handed over by the colonists, sown with their due proportion of alfalfa, and by March 1 next the company will have in hand 12½ leagues of alfalfa and fine pasture. Revenue from all sources was $440,135 and the general estancia expenses, including charges, repairs, &c., $101,565, leaving $338,570 as the profit on operations. This looks a lot, but it only produced £29,558 in sterling, while proceeds of land sales gave £2,184 and interest and transfer fees £1,265, making £33,007 in all. Expenses in the Argentine, where the business is carried on, were £1,413, and in London, where it is merely supervised, £2,540; income-tax taking another £700 and debenture interest £1,601. From the £26,753 still left, increased to £39,562 by the sum brought forward, the directors write off the debenture issue expenses £3,900, add £10,000 to reserve, and pay the satisfactory dividend of 12½ per cent., carrying forward £8,126. The dividend is 2½ per cent. better than in the previous twelve months and 5 per cent. better than in the year before that. The reserve fund is now £20,000 and the finances generally are in good order.

Buxton Lime Firms Co., Limited.

This is a business of some importance, and the revenue account sets forth in very full detail what the company's income amounts to and what the various items of expenditure are. In the twelve months to the end of June last the sales of lime, stone, &c., produced £252,409 and all other materials £15,420, while by taking in the stocks, stores, &c., at the end of the year of £18,062 the total receipts are made up to £285,892. Among the chief items of expenditure may be noted carriage, carting and wagon hire £107,178, wages £63,682, coal £29,096, and general repairs, materials, stores, &c., £13,845. There must also be deducted stocks, stores and materials on hand on July 1, 1906, and under all heads the outgo was the pretty considerable amount of £257,208, leaving the nett profit at £28,684. Deducting debenture interest £6,640 and adding £11,117 brought forward, the balance available for dividend is £33,161. Out of that a distribution of 5 per cent. on the share capital of £400,000 takes £20,000 and the sum carried forward is increased about £2,000 to £13,161. Besides the share capital there is the debenture debt of £132,800, and shareholders have been asked to sanction a further increase in the capital by the sum of £200,000 to enable the directors to purchase the lime works and business of P. W. Spencer and, as occasion arises, to purchase other lime works and businesses which come into competition with the company, and which it may be thought advisable to secure. At present the property account has a book value of £572,299, additions for the year having been £6,786 and the depreciation allowed £4,431, which seems extremely meagre, particularly in view of the slender character of the reserve, amounting to £26,000 only. Sundry debtors owe £52,545 against £32,290 due to creditors, but £22,580 has been borrowed from bankers, notwithstanding which the cash balance is under £21, so that the financial position is not of the best.

Leeds and Liverpool Canal Company.

Receipts from freights and tolls for the six months ended June 30 fell off by £2,018 to £77,627, and with £10,713 from rents and sundry receipts the total revenue came to £1,872 less at £88,340. At the same time traffic expenses took £916 more, and maintenance and ice-breaking charges were respectively £272 and £325 heavier, but there was a big reduction of £1,281 in law and Parliamentary expenses, and the total outgoings consequently showed an increase of no more than £227 at £64,413. Including £5,445 or £4,351 more brought in and £120 from general interest the nett revenue was £2,316 up at £29,402, of which interest on debenture stock and terminable loans again absorbed £7,422, bank commission £141, and rent of Lancaster Canal £3,538, and after transferring another £4,500 to subsidences and special expenditure account £13,892 was left compared with £11,570. Out of this the dividend on the preference stock is met and £11,904 is carried forward to be dealt with at the end of the year. Expenditure on works rendered necessary by subsidences was £2,826, and other capital outlay, less £107 received for easements, brought the total up to £4,734, which has been charged to the special account, leaving the credit balance on capital account at £14,827. Working stock has been reduced by £664 to £30,541, and plant, &c., by £795 to £5,652, while materials in hand are valued at £5,849 or £296 more. On the other hand the insurance and contingent funds remain at £12,000 and £15,000 respectively and there is still a balance of £1,070 on special expenditure account. Creditors are £3,686 down at £35,515 against a decrease of £1,550 to £40,548 in debtors, and cash amounts to £10,910.

Carreras, Limited.

Trade during the twelve months ended July 31 was maintained at practically the same level as in the previous year, but no attempt is made to take advantage of the present spell of prosperity to put the company's affairs in order. Gross profits were £146 up at £28,835, but expenses, including managing directors' commissions and assistant managing director's salary, which are no longer stated separately, have risen by £641 to £9,464, and after providing £375 for interest and writing off £896 under various heads, the nett profits showed a small reduction of £281 at £18,099. Balance brought in, however, was considerably larger at £10,048, giving £28,147 to be dealt with, against £26,123, but in spite of this the directors reduce the dividend on the ordinary shares from 10 per cent. to 7½, and add £5,175 to the sum carried forward, making it £15,223. No reason is given for this step, and we can only hope that it foreshadows an intention to write down the unwieldy item of £131,269 for goodwill and trade marks, which constitutes such a menace to the company's stability. A change has been made in the method of drawing up the balance-sheet, and the extent to which the company is relying on borrowed money is now concealed by deducting the bank loan from the cash in hand. Partly because of this, no doubt, floating liabilities are £10,393 down at £11,522, while cash has been reduced by £6,763 to £4,005. Stocks show a decrease of £5,092 at £37,595, and sundry debtors owe £14,238 or £4,290 less, but against these investments have been increased by £6,666 to £16,664, and the item of leases, fixtures, plant, &c., after deducting the depreciation allowance, is £650 up at £8,455.

Commercial Enterprise, Limited.

This concern arose out of the ashes of the Chardonnet Silk Company when that undertaking came to grief in 1901, but it has seemingly abandoned all idea of carrying on the work of making artificial silk for an unappreciative world. In what direction it now finds vent for its energies we do not know, but we suspect that part of its business is dabbling in shares, a game which it has found far from remunerative. For 1901-2 a splash was made with a dividend of 10 per cent. on the ordinary shares, but since then the lack of adequate income and the necessity for writing down the investments in drastic fashion has resulted in loss being piled upon loss until on June 30, 1906, the debit balance amounted to £8,520. Dame Fortune seems to have relented a little last year, and on the strength of having £6,000 "to credit of investments in various undertakings," and having received £232 from interest and transfer fees a profit of £5,138 is brought out, reducing the debit to £3,382. The balance-sheet reveals a very unsatisfactory state of affairs, and almost the only comforting item in it is an increase of £2,950 to £5,330 in the cash balances. Sundry debtors have been reduced from £7,300 to £3,312, while investments at cost or estimated value now stand at £5,337 compared with £875, but the directors state that there is a further liability on call account of £4,000 in respect of these investments. The only other "asset" is the suspense account of £3,500 representing the loss which accrued on the realisation of the old company's property.

Broomhill Collieries, Limited.

This company has Sir Christopher Furness as its chairman, and is able to present a very satisfactory report on account of the year to June 30 last. The coal trade is reported in a prosperous condition, and the outlook for early delivery favourable. The output for the year was 850,868 tons compared with 851,167 tons in the previous twelve months, and the gross profit on coal sold was £71,301. Revenue from other sources amounted to £4,096, and after providing £900 for directors' and trustees' fees £74,497 remains. That is increased to £90,198 by the sum brought in, from which debenture interest and sinking fund instalment take £20,500. Dividend on the preference shares for two years requires a further £10,050, and 10 per cent. is provided on the ordinary shares amounting to £16,625. Ten per cent of this sum or £1,662 is added to the reserve fund, and £31,460 remains as surplus profit, the whole of which also goes to reserve as provided by the articles of association. In this way the total accumulations are increased to £34,442, and the sinking fund, which has been applied in purchasing the company's debenture stock, now amounts to £73,494. The debenture debt has now been reduced to £187,144, and the share capital is £350,000. Under all heads the outlay on capital account reaches the pretty considerable sum of £701,602, and in addition to a big excess of ordinary creditors over debtors it has been necessary to raise a special loan of £40,000 from bankers. Sundry stocks seem rather low at £18,086. The boring for the Shilbottle seam of house coal is proceeding, and the directors further state that the assistance given to the Warkworth Harbour Commissioners by the company has enabled them to increase the depth of water at the harbour, thus attracting steamers up to 2,000 tons which are now frequenting the port to the advantage of the company. Although the production of coal showed such a trifling increase, it is worth noting that the nett profit of £74,497 was considerably more than £30,000 in excess of the previous year, a striking illustration of the advance in prices.

Broken Hill Water Supply, Limited.

In the half-year ended June 30 the reticulation mains of this company were lengthened 1½ miles, making a total length in use of 40 miles, and at the same time the services connected were increased by 90 to 3,500. The consumption of water amounted to 180,204,140 gallons or an increase of 43,492,700 gallons compared with the previous six months, and 22,513,860 gallons more than for the corresponding half of 1906. At the same time the company has been charging its maximum rates to all consumers since February 1, with the result that profits rose by £12,840 to £35,110, and with £97,052 or £43,175 more brought in and £7,500 taken from contingency reserve, the total revenue was £103,721 up at £110,771. The directors state that for various reasons they had deemed it advisable to defer

dealing with the question of depreciation until the present, but they have now decided to readjust the balance-sheet in such a manner as to emphasise the fact that the company's lease terminates in December, 1918, and that the whole scheme then becomes the property of the N.S. Wales Government. Accordingly they have restricted the dividends to the usual 5 per cent. for the half-year, a rate which requires £2,500 less than a year ago, owing to the return of 5s. per share made to the shareholders. Out of the balance they propose to transfer £21,500 to a sinking fund for repayment of capital and to write off £62,892 for depreciation on water rights, construction account, buildings, &c., leaving £18,879 to be carried forward. With the object of further simplifying the accounts the contingency reserve has been renamed "sinking fund for repayment of capital," and with the present addition amounts to £40,000, the whole of which is represented by investments or deposits. The result of this rearrangement is that against a paid-up capital of £150,000 the construction account, &c., now stands at £130,535 and plant, machinery, &c., is valued at £25,219. Creditors are small at £1,375, while debtors owe £7,157, and cash comes to £8,705.

THOS. HEITON AND CO., LIMITED.

This Dublin business of shipowners, coal and iron merchants, &c., made a nett profit for the year ended July 31 of £10,797, increased to £14,596 by the balance brought in. Preference dividend having been met, the ordinary shares receive 5 per cent., £3,000 is written off premises, plant, steam colliers, &c., and £1,500 off investments, leaving £3,596 or £203 less to be carried forward. During the year £3,339 was spent on additions to the property, and in order to reduce the book value a little £2,000 was taken from steamers depreciation and renewal fund, so that this item after deducting the amount now appropriated from profits, will stand at £118,088, against which there are the depreciation fund of £13,500, and reserve and insurance funds of £7,426. Trade liabilities amount to £14,345, while debtors owe £23,706 and cash and bills stand at £7,762. Stock in trade is valued at £11,863, and investments costing £8,995 are now written down to £7,495.

MUIRHEAD AND WILLCOCK, LIMITED.

This small Manchester company earned a nett profit of £4,220 during the year ended August 3 to which was added £433 brought forward, making a total of £4,654. Preference dividend for twelve months takes £1,900, and after paying 5 per cent. on the ordinary shares and placing £500 to reserve there will remain a balance to carry forward of £591. This addition will build up the reserve to £5,400, not a very large sum against a goodwill and property account of £63,211, but it is invested outside the business in good-class securities, and that is a lot gained. Trading accounts are a long way in favour of the company; stock is valued at £2,178, and the cash balance is £2,808.

SMEDLEY'S HYDROPATHIC CO., LIMITED.

Apparently the block of bedrooms recently added to its premises by this Matlock undertaking has already justified the outlay upon it, as the year ended July 31 was the best in the company's history for business done and for profits realised. Gross takings were £47,949, and after meeting all charges and providing for depreciation at 2 per cent. on the premises and 7½ per cent. on the furniture, fittings, &c., the nett profits were £11,879, out of which the usual dividend of 12½ per cent. is paid and £5,129 is added to reserve. Expenditure on the bedrooms during the year was £5,477, and of this £3,654, or two-thirds, has been met out of reserve, and the balance charged to capital account, while the outlay on furniture, amounting to £3,968, has also been charged to capital. Freehold premises and land are now valued at £62,090, the Farley Farm stands at £6,596 and furniture, &c., at £12,783 or a total of £81,469, against which the reserve, less £350 transferred to form an insurance fund, comes to £4,574. Trading balances are adverse to the extent of £1,293, and the company owes £1,888 to its bankers, while cash is small at £383, so that the position hardly seems to justify the maintenance of the dividend at such a high rate.

TRADE AND PRODUCE.

WHEAT.—The samples of new wheat put upon the market are of a better quality than was expected. Some of the grain, indeed, is excellent, but on the whole it does not come up to last year's standard. Prices have risen another 1s. to 1s. 6d., from 35s. to 37s. being asked, and foreign also is up another 1s. 6d. or more, Northern Manitoba being quoted at 41s. 6d. to 42s. 9d. Cargo holders are firm to their quotations, and when they do business it is generally at from 1s. to 2s. advance. Demand is rather slow for the present, the high prices having checked it, but the position is considered good, and with lighter shipments and the bad news of last week from Russia confirmed concessions are not likely to be made. American markets also have been firmer towards the end of the week and Continental trade is more active. Our imports for the week amounted to 579,157 qrs. against 441,023 qrs. in the same week of last year, and the quantities of wheat and flour on passage to the United Kingdom are estimated by Dornbusch at 2,120,000 qrs. against 2,015,000 qrs. last week.

WOOL.—The first assortment at the London sales was comprised chiefly of crossbreds, which were secured at values on a par with last sales, a few greasy parcels advancing 5 per cent. Large and more varied offerings were brought forward on the following days, merinos being in good selection and prices ranging from 5 to 10 per cent. dearer, while the initial rise in the finer grade crossbreds was fully maintained. So far the effect of the higher prices upon markets has been good. Considerable inquiry is being made for finer home-grown wools at prices against the buyer, and though the situation of colonial wools has practically not altered prices are more firmly held and more willingly paid. Neither spinners nor manufacturers are very happy over the stiffer values, but both branches are very busy—in cheaper goods, it must be confessed, are manufacturers chiefly employed.

COTTON (from our Manchester correspondent).—The market during the past week has been steady in most quarters, but there has not been a large amount of business done either in yarn or cloth. The raw cotton situation is uncertain, and until more is known as to the probable extent of the American crop there does not seem to be much likelihood of free operations. The general prospects are healthy both as regards supply of the raw material and also as to our markets abroad. There has been a fair amount of cloth demand, but many of the offers have not been of a practicable character. Manufacturers vary to a considerable extent in their order lists. Certain producers have recently improved their position, and rates are more firmly held. On the other hand, certain makers are wanting business, and orders here and there have been put through at a loss rather than have looms standling idle. Encouraging advices have again come through from India. The outlets of our dependency are healthy and piece goods are well absorbed by the country dealers. Fine goods and shirtings have been sold to a moderate extent, but buyers have not been stimulated to place large lines. China has rather quietened down again, after the large sales of last week, but in fancy cloths odd sales have been reported here and there. For the Levant and Egypt very little headway has been made by sellers in booking orders of any magnitude. South American buying is also on a comparatively small scale. Home trade cloths have rather improved in request, but prices are considerably resisted by buyers. Flannelettes have again moved off to an encouraging extent. Colder weather would undoubtedly help this section of our trade. Printing cloths have met with a sorting-up business, but many of the bids are considered very unsatisfactory. T-cloths and Mexicans have again been slow, and here and there looms are standing for want of work to go on with. American yarns for home use have been firm, with a quiet, steady demand. Spinners, on the whole, well maintain their position, although in wefts there is slight irregularity, especially in the coarser numbers. Shipping yarns have been in demand for the Continent, but business in this section is difficult to arrange owing to the long delivery which has to be given. Egyptian yarns are strong in practically all counts and qualities. Producers are much pressed for deliveries. A fair turnover has transpired. Sir Jacob Behrens and Sons' opinion on the present state of the market is that the tendency of prices as regards American cotton has of late been in buyers' favour. First New York and then Liverpool have tried to force a reaction, but so far with very little success. The trade generally is well supplied, and with no demand for investment purposes, the market has been left to the professional operators, who have been inclined to take a rather pessimistic view of the situation and to sell short. Reports of frost in some of the cotton-growing districts gave the market a bit of a scare, and the covering of "bear" sales lifted prices a few points; but it is thought that very little damage can have been done so far. On October 3rd we shall have another Bureau report, which may affect the market one way or another.

COAL.—There is very little to say about coal this week, as the situation practically remains unchanged, only a few more signs here and there showing that the great rush of business is over. Those in authority still seem to think that business is on a very sound basis, and the outlook promising for some time yet, but there is no doubt that steam coal prices are shading off a little. Gas and coking coals, on the other hand, are dearer, and coke in proportion at prices much too high for manufacturers, and they are refusing to buy it except in the smallest possible quantities, as they do not believe that the high rates will be maintained. House coals show no signs of cheapening, transactions in them being too active to admit of that, and, as we said last week, October 1 is to see them up 1s. per ton locally. It looks as if the railway companies are coming in to line at last with the coal owners, one of them—the Midland—having agreed to the demands of the South Yorkshire collieries, and paying in consequence 3s. 6d. per ton more for their contracts this year than last.

COPPER.—The uncertainty prevailing with regard to the outlook in America caused our market to open weak, and on a further drop in prices being recorded in New York values here fell to £64 5s. for cash and £64 10s. for three months. A large business was done on Wednesday when some 1,100 tons changed hands during the morning session and with "bears" anxious to cover, a rally to £67 5s. for future metal was brought about. Selling, however, was promptly resumed, and final values were no better than £65 12s. 6d. for both positions.

TIN.—Business in this market was decidedly strong at first, and prices were pushed up rapidly in sympathy with the firmness in the East until they touched £169 10s. for spot and £166 5s. for future shipment. Cash metal was then offered rather freely, but had only relapsed to £169, charging the forward quotation down a few shillings in sympathy when a fresh effort was made to steady the market. The selling pressure, however, proved too strong for the moderate amount of support

that was forthcoming and prices were driven down to £162 15s. and £160 15s. respectively.

Iron and Steel.—The tone of the iron market is a little more optimistic than last week. Autumn products are considered to have improved and prices are again on the upward move. That is for Cleveland pig-iron, warrant quotations having risen to 55s. 6d. per ton cash, which is 1s. 7½d. higher than the worst price of the month. Shipments have improved, and confidence is given to the position by the small stocks in public stores, Connal's on September 25 holding only 158,729 tons, a decrease of 27,492 tons this month. In the hematite trade, both east and west coast, very little has been done, as buyers are still waiting for a lower market. Neither is there much activity in manufactured iron and steel, it is decreasing in fact, and until trade conditions are on a more satisfactory basis all round, which means in the first instance cheaper fuel, is not likely to improve.

Tea.—Importers of Indian brought forward 38,063 packages, and demand was distinctly better with rather higher prices for good liquoring teas, while the downward tendency of common sorts was checked. Messrs. Gow, Wilson, and Stanton, Limited, consider that the general quality of the crop, as far as can be judged, seems to be about up to the average, while among recent arrivals from Assam and Darjeeling there have been some good flavoured teas. 36,155 packages were sold on garden account at an average price of 8.11d. against 35,037 packages at 7.64d. in the same week of last year. Ceylon arrivals are now beginning to show the improvement in quality expected about this season, and for any that have been specially so competition has been keen. Good teas generally are dearer, and common kinds firm, without material change in quotations, 7.87d. being the average obtained for the week, against 7.72d. in 1906. There was good competition and a firm market in Javas, prices, where they show any change, going against the buyer.

Sugar.—With cold nights, frost and an absence of rain the price of May beet improved from 10s. 2d. to 10s. 3¾d., but a falling barometer and higher temperature reduced it again to 10s. 1¼d. The weather is all important, and may do much yet to improve the final average figures. Reports are circulated that each fine day adds 2½ cwt. to the weight of an acre of roots, but it must not be forgotten, insists Mr. Czarnikow, that it did the same last year. The question is how much excess, if any, over the corresponding week is added weekly now, in order to make up the present backwardness. With perfect weather last year to compare to, that excess, if any, must be very small, and we still doubt of reaching the same final yield per acre, not in each country separately, but in the European total. Owing to the decrease in American meltings it seems that the world's figures are shaping less favourably than anticipated, but a shorter Cuban crop may right this later on, and, with the higher cost of production, it seems that the European figures by themselves, even including the Russian stocks, are not discouraging, quite apart from possible American requirements next summer. But the trade continue to operate sparingly, though consumption (according to imports) is quite up to last year's, and refiners only buy from hand to mouth. In fact, there is not much offering with a Hamburg stock in raws of 13,000 tons, partly sold. The American market has been quiet, with centrifugals remaining at 3.95 cents. Landings for the week were 30,000 tons, and meltings 41,000 tons, leaving stocks at 235,000 tons. From cane-producing countries there is no special news, except that mail advices from the West Indies confirm the expected shortage in Demarara and Barbados. In Louisiana the prospects are in favour of a large crop.

DIVIDENDS ANNOUNCED.

RAILWAY.

Entre Rios.—5 per cent. on the 5 per cent. first preference stock and 2½ per cent. on the 4 per cent. second preference stock, carrying £9,182 forward.

BANKS.

Chartered of India, Australia, and China.—Interim for half-year ended June 30 at the rate of 13 per cent. per annum.

Colonial.—3 per cent. for half-year ended June 30, being at the rate of 6 per cent. per annum.

MINES.

Mount Morgan Gold.—1s. 3d. per share for three months ending Nov. 30, payable Oct. 1.

New Jagersfontein Mining and Exploration.—For half-year ending Sept. 30 of 2s. 6d. per share, equal to 25 per cent. per annum, on the preference shares, and 5s. per share (interim for the year ending March 31, 1908), equal to 50 per cent. per annum, on the deferred shares.

MISCELLANEOUS.

A. Darracq and Co. (1905).—On the preferred ordinary shares for half-year ending Sept. 30 at the rate of 7 per cent. per annum, and a further of 3 per cent. per annum (making 10 per cent. for the year) by reason of the payment of 10 per cent. per annum on the ordinary shares having been made.

Anglo-Argentine Tramways.—Interim of 4s. per share on the ordinary shares Nos. 260,008 to 580,007, which, under the recent special resolutions, become second preference shares.

Anglo-Malay Rubber.—Interim of 10 per cent. per annum on account of 1907, payable Oct. 15.

Babcock and Wilcox.—Interim on the ordinary shares of 1s. 7 1-5d. per share.

Bandarapola Ceylon.—Interim at the rate of 10 per cent. per annum for the half-year ended June 30.

Batu Tiga (Selangor) Rubber.—Interim of 2½ per cent.

Bengal Mills.—Interim of 5 per cent.

Bexhill Water and Gas.—At the rate of 8 per cent. per annum on the 10 per cent. shares and at the rate of £5 12s. per cent. on the 7 per cent. shares for half-year ended June 30, carrying £3,253 forward.

Brett's Stamping Co.—7½ per cent. on the ordinary shares.

Buenos Ayres (New) Gas.—Interim at the rate of 6 per cent. per annum for six months ended June 30, payable 21st prox.

California Oilfields.—Interim of 15 per cent., payable on Oct. 15.

Colombo Commercial.—Interim of 2½ per cent. on the ordinary shares.

Consolidated Waterworks of Rosario.—Interim at the rate of 6 per cent. per annum on the ordinary shares for half-year ended June 30.

Dobson, Molle, and Co.—At the rate of 10 per cent. per annum on the ordinary shares for year ended May 31.

Dundee (Natal) Coal.—2½ per cent. for six months to Sep. 30.

Ederapolla Tea of Ceylon.—Interim at the rate of 5 per cent. per annum for half-year ended June 30.

Edinburgh Collieries.—Interim of 5 per cent. for half-year ended July 31.

Folkestone Electricity Supply.—Interim of 2 per cent. on account of 1907.

G. and J. Maclachlan.—At the rate of 6 per cent. per annum on the preference shares.

Greenwich Inlaid Linoleum.—Interim of 5 per cent. on account of the year to March 31.

Henry Ford and Co.—Second interim for the current year of 7½ per share, or at the rate of 12½ per cent. per annum.

Highland Tea of Ceylon.—Interim at the rate of 5 per cent. per annum for half-year ended June 30.

House Property and Investment.—Interim of 2 per cent. on account of year to March 31.

Illinois Car and Equipment.—Further of 3 per cent. on the share capital, payable on Nov. 1, making 5 per cent. per annum.

James Nelson and Sons.—At the rate of 6 per cent. per annum for six months ended June 30 last on the first and second preference shares.

Kimberley Waterworks.—Interim of 2½ per cent. on the ordinary shares for half-year ended June 30, payable Nov. 1.

Law Reversionary Interest.—Interim of 2½ per cent. on account of 1907.

Manchester Brewery.—Interim at the rate of 5 per cent. per annum on the ordinary shares for the half-year ended Aug. 31.

Merry and Cuninghame.—Interim of 10 per cent.

Milestone and Staniforth.—Interim on the ordinary shares at the rate of 5 per cent. per annum for half-year ended June 29.

Mutual Property Investment and Accident.—5 per cent. on the paid up capital, together with a bonus of 2½ per cent. for past year.

Natal Land and Colonisation.—Interim of 2½ per cent. on the ordinary shares for half-year ended June 30.

Owen Owen.—Interim at the rate of 8 per cent. per annum on the ordinary shares for half-year ended Aug. 20.

Poonagalla Valley Ceylon.—Interim at the rate of 5 per cent. for half-year ended June 30.

River Plate Gas.—Interim at the rate of 7s. per share for half-year ended June 30.

Robert Roberts and Co.—Interim at the rate of 5 per cent. per annum on the cumulative preference shares for half-year ended June 30.

Salar del Carmen Nitrate.—Interim of 20s. per share, payable Oct. 15.

Scottish Ceylon Tea.—Interim on the ordinary shares at the rate of 6 per cent. for half-year ended June 30.

South British Fire and Marine Insurance of New Zealand.—6s. per share per annum (of which 3s. was paid in April), placing £20,000 to reserve and £5,000 to reinsurance fund.

United States and South American Investment Trust.—Interim at the rate of 4 per cent. per annum on the deferred stock for half-year ended Oct. 4.

Western and Hawaiian Investment.—After transferring £1,000 to the reserve fund, at the rate of 10 per cent. per annum for year ended June 30.

MINING RETURNS.

British Broken Hill Proprietary.—3,526 tons crude ore produced 417 tons concentrates, containing 258 tons lead and 10,842 ozs. silver. Carbonates, 97 tons.

Carrington's United.—Crushed 270 tons for £165. Concentrates on hand 321 tons.

Day Dawn.—282 tons 331 ozs.

Day Dawn Block and Wyndham.—Treated 1,084 tons quartz, value, including concentrates, &c., of £3,300.

Duff Development.—Prospecting dredge 32 ozs.; No. 3, 65 ozs.; total, 97 ozs.

Great Cobar.—Ore treated, 16,400 tons; matte produced, 1,050 tons; contents of matte, 356 tons copper, 1,150 ozs. gold, 6,200 ozs. silver; ingot copper made at Lithgow 332 tons, despatched 357 tons.

Hyderabad (Deccan).—Output of coal 30,102 tons.

Mill's Day Dawn United.—Crushed 1,052 tons quartz, value, including residues, of £9,600.

No. 2 South Great Eastern.—Crushed 1,493 tons, 340 ozs.

North Broken Hill.—Treated 2,370 tons of crude ore, producing 420 tons concentrates, containing 290 tons lead and 7,980 ozs. silver.

Palmarejo and Mexican.—Zapote.—Crushed 3,597 tons; treated 2,800 tons, producing $12,480 gold, $42,440 silver.

Rhodesia Matabeleland.—Output of Murray and Darling Downs: Crushed 1,242 tons.

Weardale Lead.—Ore raised, 364 tons; pig lead smelted, 320 tons; average price obtained for pig lead sold, £19 4s. per ton nett, including slag and fume.

West Canadian Collieries.—Output of coal for half-year to June 30, 128,495 tons.

Deposits against future queries may be lodged with the Publisher.

Timothy.—There is nothing to fear in holding your present stock, but you would, of course, get a better return for your money by exchanging. No. 1 is the most tempting looking purchase, but there is less risk of fluctuation in capital value with either No. 2 or No. 3.

A. C.—(1) We are not very enamoured of these, and think you should leave them alone. (2) These are well secured, and should be a good enough investment. (3) Such a security is difficult to find, and we know of nothing at present that we would care to recommend. (4) The guarantee should be quite good, but the bonds do not seem particularly cheap at the present price. As we are unable to answer your third question we hold 1s. to your credit.

J. W. M.—(1) Company's financial position is not particularly strong, and more capital may be necessary. There is a fair margin of profit for the preference capital, but at the best it is not worth more than 106 or so. We should not sell the ordinary at current prices, but 95 is its full value under favourable conditions. (2) The quotation you refer to was marked in error. Beyond the notice, nothing seems to be known about the company's position. Like many others, it is overloaded with capital, and dividends on too lavish a scale were distributed at the commencement of its career. The passing of the interim dividend looks ominous, and we are inclined to think you should cut your loss. (3) On the general grounds that the whole financial situation is unhealthy. If you refer to the past record of this and other railways you find that there never has been any certainty about the majority of the roads in the country. They are too much under the control of cliques, who manipulate not only markets but traffics as well for their own ends. Such tactics do not commend these stocks as investments.

Ballater.—(1) It is impossible to predict so far ahead. Lately there has been a recovery in the company's business, and the stock looks like improving, but more capital is being issued, and that, of course, does not help the ordinary stock. So much, too, depends on the crops, which form the staple business of the road, and we are unable to prophesy what will happen with regard to them. (2) We favour a waiting policy. There has been considerable activity in land as, no doubt, you know, but the latest advices are not so encouraging. No doubt the company has built up a wonderful business, but one or two bad seasons would have a serious effect.

J. W. B.—It is hardly worth while averaging now as the stocks has already recovered about 5 points from the lowest. There is no reason beyond the general condition of markets to account for the fall, and in the long run the stock should recover again.

Cardigan.—(1) The bonds are a good enough security, the only objection to them as an investment being that they mature in 1909. (2) These are also good. Nominally they are fully paid, but there is a contingent liability for an amount equal to the capital plus the note issue. The contingency of this being called up, however, is so remote that it may reasonably be ignored.

NEXT WEEK'S MEETINGS.

Monday, September 30.

Alliance and Dublin Consumers' Gas.—Dublin, 1 p.m.
Commercial Enterprise.—Moorgate Place, 11 a.m.
Klerksdorp Extended.—Salisbury House, noon.
Pearson and Knowles Coal and Iron.—Warrington, noon.
Swansea Improvements and Tramways.—Donington House, W.C., 11 a.m.

Wednesday, October 2.

Great Eastern London Motor Omnibus.—Winchester House, 12.30 p.m.
Read's Drift Land.—Salisbury House, noon.
Scottish Cyanide.—Edinburgh, 11.30 a.m.

Thursday, October 3.

Bank of Australasia.—4, Threadneedle Street, E.C., 1 p.m.
Manchester Liners.—Manchester, 1 p.m.
Platinum Corporation.—Salisbury House, noon.
Santa Fé and Cordova Great Southern Land.—River Plate House, noon.
United African Exploration.—Winchester House, noon.
United Excelsior Mines.—Winchester House, noon.

State of San Paulo 5 per Cent. Exchequer Bonds.—Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents, advising them that they have further encashed £20,300 in respect of the surtax collected for the service of this loan, making a total of £160,050 encashed since August 1.

The Union of London and Smiths Bank will open a branch on October 7 at 91, High-street, Oxford, under the management of Mr. Bryce McMaster.

COMPANY MEETING.

MURCHISON ASSOCIATED GOLD MINES.

The statutory meeting of the Murchison Associated Gold Mines, Limited, was held on Thursday at the offices of the company, 3, Queen Street, E.C., Mr. Wentworth Vernon presiding.

The Secretary (Mr. W. Fenton Pugh) having read the notice convening the meeting and the auditors' report,

The Chairman said: It is a source of much satisfaction to us that out of 600,000 shares 452,460 have been already subscribed for by 1,135 shareholders, and we are quite confident that we shall not have any difficulty in disposing of another 100,000 shares out of the 150,000 which are still unsold. I think you would like to know how matters stand at the mine. No time has been lost, and the diamond drill is already in full operation. Mr. Thomas is still in charge, and the more we hear of him and the more we come into contact with him the more confident we become that we could not have a more high-minded, a more energetic or a more capable man to manage our affairs than we have in Mr. Thomas. The Chairman then read a report from Mr. Thomas, dated August 10, regarding the work being done at the mine. In the course of that report Mr. Thomas stated that what appeared to be a new reef had been found lying to the west of the main vertical shaft. A little work was being done to prove it, but so far no gold had been found. Continuing, the Chairman said: In that connection I may say that the diamond drill has clearly shown that that new reef, which was found at the surface, carries down to the 800 ft. level and below it. I will read to you a telegram which arrived yesterday from Mr. Thomas:—"Present depth of diamond drillhole No. 1 is 105 ft. vertically below 800 ft. level completed. Formation and quartz 64 ft. to 80 ft. assays average 2s. per ton of 2,240 lbs., 99 ft. to 101 ft. 6 ins. assays average £1 1s. 3d. per ton of 2,240 lbs. Present depth of diamond drillhole No. 2 is 102 ft. 9 ins. to the west of vertical shaft, 800 ft. level completed; 76 ft. to 81 ft. quartzose formation, the quartz carries a little mineral. Borehole is now being put down west of No. 1 crosscut, south drift.—Thomas." This is so far satisfactory that it proves the continuity of the lode. It would almost appear as if there were two branches of the lode met with at the 800 ft. level, one being 16 ft. in width from 864 ft. to 880 ft. and the second leg being 2 ft. 6 ins. in width from 899 ft. to 901 ft. 6 ins., the latter evidently carrying more gold. The No. 2 borehole was, according to the plan, to be put out horizontally, and at 76 ft. from the shaft a lode 5 ft. wide appears to have been met with, which no doubt is the new reef recently found. The fact of this new reef having been proved to exist down to a depth of 800 ft. would certainly warrant some little expenditure in development work at the surface. As regards the assays, it must be borne in mind that the core is only 2½ ins. in diameter, and it would be too much to expect that we should be fortunate enough to put the borehole down right into a chute at the first or second attempt. In his letter of August 10 Mr. Thomas said that if the borehole to the west from the main shaft plat at the 800 ft. level located anything he would again bore west from the crosscuts already driven in the north and south drives at the 800 ft. level. He now intimates that he is going to do this, and therefore he evidently considers some importance attaches to having passed through another ore body. That is about as much information as I can give you as to the work up to the present time. I must say that we are all of opinion that our company has never stood in a more promising position than it does at this moment. We shall have ample funds, and there cannot be the smallest doubt that if gold can be found in our mine we have now the opportunity of finding it. There is one very satisfactory thing about it, and that is that at the present moment our work is being practically done by the Government itself. We can rest assured that everything in connection with our mine will be absolutely right and fair for the company. We shall keep you fully posted up with regard to all news from the mine.

A vote of thanks to the chairman, proposed by Mr. G. C. Howard, terminated the proceedings.

Antwerp Water Works Company.

The interim report for the six months ended June 30 states that the income in Antwerp amounted to £36,772, or an increase of £3,280. Expenses rose by £3,167 to £12,038, but included in these figures were special expenditures of £1,355 against £278, which are chargeable to reserve, and after deducting these the nett revenue in Antwerp was £1,189 up at £26,088. Receipts in London were £48 larger at £220, but the expenses took £78 more at £822, leaving a surplus on working of £25,485 compared with £24,326, out of which a dividend at the rate of 8½ per cent. per annum, or ½ per cent. more, is paid.

The directors of the Marine and General Mutual Life Assurance Society have elected the Right Hon. Lord Rathmore to the seat on the board rendered vacant by the resignation of Mr. J. Herbert Tritton.

The directors of the Union Bank of Scotland have appointed Mr. Arthur C. D. Gairdner assistant manager at London office, to be London manager in room of the late Mr. Andrew Gordon. Mr. Thomas Henderson, presently sub-agent at St. Vincent Street, Glasgow, succeeds Mr. Gairdner as assistant manager at London office.

NOTICE TO READERS.

COMPLAINTS reach the Publisher often based on the

Difficulty in Procuring Stray Copies of the INVESTORS' REVIEW at Railway Stations.

We know the difficulty exists and cannot remedy it. The Public itself can do so if it insists on having the paper, or if it applies at the shops or leading

Bookstalls of Messrs. W. H. SMITH & SON.

The PUBLISHER, however, prefers grumblers to SUBSCRIBE DIRECT. They save money by so doing, and can have their copies sent after them anywhere at a day's notice. With the

"INVESTORS' REVIEW"

AND THE

"KEY TO ANSWERS"

prudent people may easily protect themselves from the snares of the Promoter and the blandishments of the Bucket Shop.

Try the experiment for a year or for six months, sending the money as per scale on third page of this issue direct.

PUBLISHER,

"THE INVESTORS' REVIEW,"

NORFOLK HOUSE,

NORFOLK STREET, STRAND, W.C.

The Times
WEEKLY EDITION.

EVERY FRIDAY. PRICE 2d

Or with one Supplement (Literary, Engineering, or Financial) 3d.

Contains a careful Epitome of the Events of Interest during the Week, together with the Most Important Leaders and Special Articles from "The Times" *in extenso*.

Parliament and Politics.
Colonial and Foreign News.
Naval and Military Matters.
Trade, Money and Stocks.

ADDRESS:—THE PUBLISHER, PRINTING HOUSE SQ., LONDON.

A READABLE WEEKLY

"Public Opinion" was very much prized by Thomas Carlyle, and was one of the last journals he read, said Dr. W. R. Nicoll in "The British Weekly."

PUBLIC OPINION.

TWOPENCE WEEKLY.

Edited by PERCY L. PARKER.

"Public Opinion" is eminently a readable paper. There is no padding in it. It is a paper which exists to put on record the ideas which men are thinking, and especially the ideas which make for Religious, Intellectual, Political and Social Progress as these are recorded in the world's books, papers and magazines.

It is a paper specially suited for those who exert public influence — for **"Public Opinion"** does not reflect one side of life only—it seeks to cover all sides of thought and opinion.

It is the bare truth to say that there is no other paper published in Great Britain which every week contains such stimulus to thought, or such a vast amount of real information presented lucidly and in a readable type.

"Public Opinion" is published every Friday, and its price is Twopence. It has been in existence 47 years.

"Public Opinion" can be obtained from any newsagent or bookstall, or will be sent post free for one year to any address in the United Kingdom for **10s. 10d.,** and to any place abroad for **13s.** per annum. Orders should be addressed to:—

"PUBLIC OPINION,"

30 and 31, Temple House, Tallis Street, London, E.C.

SPECIMENS SENT FREE ON APPLICATION.

Printed for the Proprietors by ST. CLEMENTS PRESS, LIMITED, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by CLEMENT WILSON at Norfolk House, Norfolk Street, Strand, W.C.—SEPTEMBER 28, 1907.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 509. New Series. SATURDAY, OCTOBER 5, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility or statements made therein.

The Investors' Review.

The Cost of Empire.

"A Government may push taxation up to that point where it arrests all increase in the means of subsistence, but the moment this stationary condition of society is produced the people will begin to consume a portion of the wealth previously absorbed by the public taxes, and the revenues of the country will have a tendency to decrease; or, what is the same thing so far as the political law is concerned, the Government will find greater difficulty in collecting the same amount of revenue, and if it succeed, will cause a diminution in the population."

Thus wrote Mr. George Finlay, one of the greatest of modern historians, in his story of "Greece Under the Romans," a cheap edition of which has recently been published in Messrs. Dent's admirable "Everyman's Library." It is a book thoughtful citizens will do well to study in these days, when the possession of an Empire is tending with us to produce the same consequences which brought Europe, Asia Minor, and Northern Africa into a condition of exhaustion, from which many portions of them have not to this day recovered. In our own land we may as yet see no traces of the blight and demoralisation produced by excessive taxation, but it is otherwise with some outlying portions of our unwieldy and ill-knit dominions, above all otherwise with India. In India over-taxation is producing depopulation now, and in more than one of our self-governing colonies the natural growth of population has been more and more checked for many years past. The native population of Australia and New Zealand does not expand as it should do were the communities there fiscally in health, and they have almost closed their doors to the immigrant. Their increasing uneasiness amid such circumstances is made manifest in their tariff regulations, which are excusable only on the ground that the collection of adequate revenue by other and less oppressive expedients has become impossible. As yet the symptoms of coming exhaustion may be little visible on the surface, but the disease is there, and in due time its ravages will become manifest.

At home symptoms of approaching exhaustion are also as yet almost invisible, although the extravagance of social life is ominous enough. The fact, however, is that our fiscal strength is sustained by the freedom bestowed upon the home population to utilise its means and expend its industrial energy in whatever direction may seem to it to afford chances of profit. As yet this freedom has enabled the nation to rise superior to the adverse influences making for its decay, and to exhibit to the world an energy in production along certain well-defined lines that looks at times well nigh exhaustless. Also our strength at home is recruited by the tribute drawn from our dependencies in the shape of interest on money invested, a source of fiscal virility at best precarious. The provinces of Rome, eastern as well as western, were exhausted and decaying long before the populations of the cities of Rome and Constantinople felt the effects of their ruin, and there is no reason to suppose that our history would follow a different course

or that the end of our Empire would be less disastrous that that of the Roman or any other empire if the same mistakes are committed by us, if we exhaust the provinces in order to swell the total of our spendable wealth. The failure of any one of our greater colonial or dependent debtors to fulfil the obligations laid upon it would at once bring the mother country to the verge of a crisis that might prove to be the turning point in our Imperial history. This being so, it is our duty as a prudent and conservative people to guard against any overloading of the home population; we should husband instead of squandering the resources bestowed upon us by our investments abroad, so that when the distress over-taxation always produces comes to a head and to a disaster-laden conclusion in any community deply in our debt, we might possess reserves with which to meet the shock and tide over the loss.

Does our present habit of spending, whether as a nation or as individuals, conduce to the belief that we are thus prudently acting? We fear not. It is the oft iterated complaint of the Investors' Review that an unwholesome expansion has taken place in the nation's expenditure. In local as well as in Imperial affairs we have become lavish to such an extent that the capital of the country is being drawn upon. Instead, therefore, of possessing a reserve to be availed of when financial distress, no matter how produced, overtakes us, we shall only possess undermined credit —credit that has been substituted for capital devoured.

Because this is our conviction we are increasingly afraid to praise the present Government. It has done something, no doubt, but the something amounts to so little that it merely tantalises. Were a crisis, the product of exhaustion, to arise in any part of the Empire it would find us unprepared, and not only unprepared, but so over-committed in many directions, so over-burdened by taxation as to be rather in need of help ourselves than capable of affording it to the crippled section or sections of the Empire when need arises. "The revenue is elastic," we are told. Yes, but how long can this elasticity be trusted to continue? And does its present abundance dispel the fear that more is being drawn from the people than the great bulk of them can afford? In the eight years ended with March 31 last the Imperial Government drew something near £290,000,000 more from the home tax-payer than in the eight years immediately preceding, and it is in the current year purposing to extract about £30,000,000 more than it did in 1898-99. Will any man in his senses venture to assert that the resources of the people have been strengthened by this formidable augmentation of the nation's load? They have not been strengthened, but much the reverse, as the coming winter is too likely to demonstrate. Dear coal and dear bread, higher prices for nearly all articles of consumption are certain to bring home to the people the fact that they have been impoverished by the extra taxation they have been called upon to meet. Fourteen years ago the property and income-tax produced only £13,470,000, last fiscal year it gave £31,600,000, and in the current one £30,500,000 is looked for. Has the paying capacity of the nation grown in like ratio? By no means; rather has the power to pay diminished, so that the collection of this tax on the existing poundage, and after all drawbacks and allowances have been made upon small or earned incomes, has become a measure of oppression, cruelly destructive of the capacity of large classes of the people to save something against the day of adversity.

And the income-tax is but one of our augmented burdens, one whose yield has been much increased of late years by a more ruthlessly scientific system of collection. The nation is smitten, if possible, more cruelly still by the enlarged customs revenue extracted from it, and to some degree also by the increased burden of excise. Fourteen years ago Customs yielded only £19,715,000, last year the product was £32,930,000, and in 1904-5 it was £35,730,000. It is still expected to give about £32,000,000. Excise in 1892-3 gave the Exchequer £25,300,000, and last year its fruit was £30,350,000 nett, after allowing for the payments to local taxation. In like fashion the income from death duties of all forms has risen from £8,351,000 in the earlier year mentioned to £14,400,000 last year. Put in another way, the burden of income-tax was last Government year larger by 134.6 per cent. than it was in 1892-3, that of Customs larger by about 66 per cent., that of Excise by nearly 20 per cent. nett, and that of the Death Duties by nearly 73 per cent. The Death Duties, we must remember, represent drafts from capital all spent as revenue. Has any corresponding increase taken place in the country's resources? It is not possible. On the contrary, the savings of the community have been more and more intercepted, with the result that its financial affairs are now displaying signs of distress, and private financial embarrassments are greater than any similar manifestations of exhaustion witnessed during the present generation.

How could any other result be looked for when we realise that the average annual draft upon the nation by taxation alone has been fully £36,000,000 more for the past eight years than it was in the previous eight. Much of this £36,000,000 odd more per annum must have come out of the savings of the people, and it does not represent the entire added burden. Our "public services" have been contributing to Governmental extravagance, and the whole tendency of our administrative habits is to impel Parliament to maintain taxation at an excessive burdensomeness. A gross income of £119,000,000 for Imperial purposes alone is looked for from taxes this year, and the entire tax revenue estimated for is almost £128,000,000. Fifteen years ago the total was little more than half this amount. It represents a scale of taxation which is eating up the capital of the United Kingdom, which could not be maintained for six months were financial distress to overtake our business.

Has there been any imperative necessity for this oppressive increase in the demands of the tax collector? During the South African War, yes, but surely not since. Our rulers are merely continuing the habits of crippling, not to say ruining, waste that war engendered. And the present Government, which was going to do so much, which the majority of the nation, and we among the number, hailed with such relief, has done nothing, is doing nothing, appreciable to abate the monstrous, life-stifling absorption of wealth. Before the war broke out the army and navy together were costing but about £40,000,000, and in 1892-3 they cost only £33,266,000, whereas they now cost well nigh £60,000,000, more than this, indeed, if borrowings for public works are included. Nominally, however, we have brought the outlay on the army and navy down from £65,304,000 in 1903-4 to little more than £59,000,000, but in effecting a present reduction care seems to have been taken to make future increases sure. We, for example, are building leviathan warships, whose upkeep and renewal are certain to prevent any substantial reduction in the navy estimates in years to come. Much more likely are the costs to increase. What the military merits of Mr. Haldane's new army may be we know not, and have no means of knowing, but the financial consequences look easy to gauge; they will ensure an augmented budget in days to come, because the standard of efficiency is to be raised for branches of the land fighting services hitherto regarded as ornamental or auxiliary. Both the militia and the volunteers will cost the nation more than they have done in the past, and the more they cost the less possible will it be for any future Government to reduce taxation. And the cost of the civil administration is also growing, and likely to grow. It cannot help growing under the present demands of the population, before the upward pressure of the masses with votes, but this inevitableness is none the less ominous for the stability of our finances. We get back, indeed, to the old formula—either find means to reduce the outlays upon the army and navy, or submit to see domestic reforms arrested, and the nation enter upon a career of economic reaction which may lead to its permanent decay. No empire can long maintain its expenditure on a war footing in time of peace and avoid impotence.

The Progress of Life Insurance.

Some months ago the annual Board of Trade volume containing the abstract returns of life insurance companies doing business in this country made its appearance. It is rather a barren volume so far as the public is concerned, and the information contained is far from being adequately digested or summarised. Its facts are also belated, since the figures of the volume bring us down only to the end of 1905 or to March, 1906. In order, however, to get some idea of what life insurance business is in this country and what its progress has been, we have gone back a full quarter of a century, and compared the figures of last year's summaries with those contained in the insurance book published in 1882. That book gave us the insurance returns for 1880 or to March 31, 1881, and when we put the figures therein contained side by side with those in the book issued for 1905-6, the results are in some ways quite dazzling. One of the first things that strike the mind in making the comparison is the remarkable stability of a certain class of offices and the equally striking instability of others. What a number of life offices have disappeared in the last twenty-five or twenty-six years! Some of them have died a natural or other death, but the majority have been absorbed in other companies after the fashion recently illustrated anew by the disappearance of the Hand-in-Hand, the Union, the Imperial, and other companies. The spirit of amalgamation is supreme, and the number of native companies doing life business tends steadily to contract. This may be for the good of the insured if no change takes place in the policy of the high-class companies by whose operations the absorptions are brought about, but we fear in the case of fire business clients may have cause to grumble. At present, however, we are dealing only with the life companies, and some figures illustrative of their progress are well worth giving.

At the earlier date the amount of the life and annuity funds of the British offices whose reports are summarised in the Blue Book was £123,675,355, and in the Blue Book recently published the total had risen to £296,003,001. This represents an increase of £172,327,646, or nearly 131 per cent., within this period of time. No such increase has taken place in the reserve funds, however, which gained by only £1,181,919 and now stand at £4,573,663. But the profit and loss balances carried forward are larger by £4,646,703 at £6,520,572, and there are now depreciation and investment balances aggregating £2,434,548 against none at all at the earlier date. In all respects therefore these life companies appear to be in a much stronger position now than they were then. But figures of this description give us no light upon their liabilities. All we can do is to look at the assets and see where increased resources in the possession of these companies have been lodged. Here, also, the comparisons are striking enough. No less than £92,854,000, for example, was invested in mortgages, chiefly within the United Kingdom, we presume, at the latest date available, and this figure means an increase of £22,067,000 on the amount thus invested at the end of 1880 or at the beginning of 1881. Large as this increase is, it is exceeded by the amount invested in debentures. That was only £10,569,636 altogether at the earlier date, and at the end of 1905 it was £68,413,937, or an increase of over £57,844,000 in this class of investment alone. Almost equally striking is the increase in the amount sunk in shares, which is £32,701,334, making the total now £40,700,115, against rather less than £7,739,000 at the end of 1880. Other channels of investment show large increases, but none equal to these just particularised. Loans on the companies' policies, for instance, have gone up by over £11,000,000 in the interval, their holdings in Indian and Colonial Government securities have increased by £12,182,283, and in foreign securities by £[illegible]15,138. They have also invested £7,284,000 more in life interests and reversions, bringing the total of this class of security up to £9,071,404, but loans on personal security have increased by only £464,135 to £2,267,776, and the restriction in this direction is a welcome indication that insurance business is not pushed in this country for the mere purpose of getting clients into debt. A larger field of investment than any of these just enumerated is that afforded by land and house property and ground rents, and the total sunk in these directions is now £28,093,227, or nearly £20,814,000 more than at the end of 1880. This class of investment and mortgages together, in short, account for nearly £43,000,000 of the entire £296,000,000 at the disposal of the companies, and if we add in another item not yet mentioned, viz., loans on rates, the increase in which has been £14,300,415 within the period named and the total of which is now £33,714,471, the aggregate amount put away in these classes of investments is almost £77,000,000, or rather more than one-fourth of the entire amount available.

There are other minor items in the accounts relating to outstanding balances, unpaid premiums and cash and outstanding interest which do not require to be set forth. They are all naturally larger now than they were when the resources of the companies were much smaller, but it is more interesting to note the growth of the revenue which has been just as striking as the expansion in the resources and investments. Naturally, with such an immense increase in resources, there has been a corresponding growth of income, and this enlargement probably illustrates more vividly even than the growth of the funds in hand, the extent to which life insurance has developed during the past quarter of a century. At the first date dealt with, the premium income shown was £13,600,313, and the figures for the latest date are £36,952,296. This shows an increase of no less than £23,351,983 or 171.7 per cent., and no account is taken of the capital moneys received in purchase of annuities, nor do these figures include the returns of American and Colonial offices which have gradually edged their way into the life insurance business of the United Kingdom. The Board of Trade quite justifiably excludes the figures of these alien offices from its summary tables on the ground that they do not supply statistics relating to their British business alone. We should like, however, if the officials could see their way to present a separate table giving an abstract of such returns as these foreign and alien companies make. That may be all it can do until power is given to the Government to compel every life office doing business in this country to make a return of such business, and such business alone, in the form prescribed for domestic companies. In all probability at least £500,000 would have to be added to the aggregate amount of the premiums collected at the latest date given by the British companies were the British returns of these other companies included. Even without them, however, the progress has been remarkable, and it would be still more striking if we added the figures for the companies doing what is called industrial business, but that opens up another field which will be better left for a separate article.

A subject more intimately important in connection with these life companies doing ordinary business is suggested by the above summary of their investments. Obviously the handling of some £300,000,000 of trust money is a most arduous business, and one that necessarily involves considerable risks. Grouping the various classes of investments together, and leaving out of account such comparatively small totals as life interests and reversions, loans on personal security and outstanding balances, they form, broadly, two classes, the one embracing what may be called real estate investments of various descriptions, mortgages, loans on rates, and land and house property, and ground rents, and the other what are known as marketable securities. Of the one class, at the date of the reports embraced in this Blue book, the insurance companies held £157,382,000, and of the other, the marketable securities, the aggregate holding was £140,000,000. Is there no depreciation on either of these classes of investments? We may consider that loans on rates, and land and house property and ground rents form a class of investments upon which there is, as a rule, little or no danger of depreciation. Assuming that the

property has been well acquired, and that the rates levied do not arise through the dangerous inflation of house building or excessive municipal enterprise, then these securities ought to be perfectly safe, and the same may perhaps be said of mortgages, especially if they are, as most of them undoubtedly are, mortgages upon property within the United Kingdom; and yet it is probably true that, had it not been for the large amount of imperial money devoted by Parliament to the purchase of estates in Ireland, our insurance companies would have had to encounter serious deficiencies on their real estate mortgages in that island. We will assume, however, that the investments aggregating upwards of £157,000,000 in these various kinds of non-marketable property are all perfectly good, and that the insurance offices are under no obligation as trustees to provide against depreciation in that quarter.

It is otherwise, however, with the £147,000,000 sunk in British Government securities, Indian and Colonial Government securities, Foreign Government securities, debentures and shares, and it would be interesting to know that adequate provision had been made by the various companies and mutual offices against the serious risks existing in this direction. Old companies have doubtless what may be called a hidden insurance against loss in the fact that their earlier investments were probably made when prices were even lower than they are now for many classes of stocks embraced in these various groups, but it must be otherwise with newer offices that had to make their investments in such classes of stocks during the inflation period, and who, therefore, now stand to lose seriously upon any realisation. Doubtless the fact that the nature of the business prevents the offices from being obliged to sell securities is a safeguard. They need not recognise the losses, in other words, unless they choose. They are not subject to devastating calamities like that of the San Francisco fire, which may compel the fire offices to sell or pawn their assets to the tune of many millions. Still, their duty as trustees for the policyholders dictates caution, and the utmost vigilance against even remote dangers, and we should like to know what the present value of these stock and share investments is compared with the cost price, for all classes of Stock Exchange securities have been stricken with blight during the past seven years, and not a few of them are more or less unsaleable even at the lower prices now quoted. A 10 per cent. depreciation upon these stocks would mean the setting aside of nearly £15,000,000, and 10 per cent. is by no means sufficient to cover the shrinkage of recent years. What, then, is the position of our life insurance offices in relation to their investments in stocks and shares? What kind of shares have they put their policyholders' funds into? Does the £41,000,000 or so shown by the Board of Trade return to be sunk in this class of security consist exclusively of preference, guaranteed or other privileged shares, or are there ordinary shares amongst them? A clear answer to these questions would be interesting and valuable, but we doubt whether we shall get it, and, after all, the depreciation in shares has not been greater than in many classes of debentures of Government securities, Home, Colonial, and Foreign.

All considerations of this description merely serve to indicate that insurance business has its risks, however carefully conducted it may be. All goes well and comfortably so long as markets are favourable, while prices on the Stock Exchange are maintained, while no setback occurs to the value of house property, while the ground rents acquired have been based upon property of durable value, and while the business is not beset by any description of misfortune. But plainly it is a business whose smooth operation depends absolutely upon peace between nations, upon prudence in the management of national and corporate finance and upon an infinite variety of ever changing circumstances. The risks may be distributed, but they exist always, and the very fact that such enormous masses of money are involved might produce aggravated symptoms of distress were adverse conditions prolonged.

Economic and Financial Notes.

Last Quarter's Income.

The revenue figures continue to display a wonderful elasticity all things considered, and in the quarter ended September 30 the nett increase was £213,551, making the increase for the half-year £883,490. It thus seems probable that Mr. Asquith's budget anticipation will again be exceeded. Still, the Customs revenue is running much as the Treasury officials bade him forecast. Their estimates were for a decline of £1,190,000 upon the whole year, thanks to the abolition of the export duty on coal, and up to the end of September the decrease was £592,000, or just about one-half of the estimate. The estate duties are also showing less elasticity than the budget estimate led people to look for. For the whole year Mr. Asquith expected to get only about £200,000 less on this account, and he has actually received £258,000 less. Stamps, on the other hand, have yielded £274,000 more for the half-year against an estimated increase for the whole year of £50,000. What the income-tax is going to do cannot yet be guessed, because the ninepenny duty on earned incomes has not yet begun to be collected. It was estimated that the reduction thus brought about would involve a loss of £1,250,000 on this head in the current fiscal year, and an ultimate loss of £2,000,000 per annum, but so far the tax has given £463,000 more than it did for the first six months of the past fiscal year. The Post Office and Telegraph services have also done well, and altogether the revenue outlook is astonishingly comfortable when we bear in mind the financial distress which is stealing over the kingdom and beginning to unnerve business in many directions. On the expenditure side money flows out in a fashion also satisfactory enough, we should judge, to the revenue spenders. Altogether up to the end of last week the expenditure had reached £74,991,000. A year ago to about the same day it was £73,530,000. On the mere Exchequer issues, however, which have amounted to £67,538,000, there is a slight reduction of about £388,000. Even so the outgoings, apart from capital items under military and naval works, telegraph accounts, and so on, are at the rate of £125,000,000 per annum.

The quarterly skeleton balance-sheet will be found on another page, and in regard to it we must emit a little grumble while welcoming the simplification of the revenue statement. Until recently the figures of the various branches of income collected specially for the Treasury or for Imperial purposes were given separately, and the amounts assigned to the various local grants in aid were also set out in a separate column. This subdivision is now abolished, and the gross revenue paid into the Treasury is set forth without regard to its ultimate destination, a proper and valuable improvement. Why, however, is the summary account of the expenditure retained in its old form? It has always been a meagre account of no real value, a waste of space to print indeed, and to be at all up to requirements it ought to give in detail the outlays for the quarter under the various principal heads of expenditure—civil services, army, navy, local. What is the use of setting out such an item as this: "Amount applied out of revenue supply services, £25,555,273"? It is like the pudding-stone kind of entry found in so many company balance-sheets, which fuse up goodwill and patents and real estate and machinery, stock and debtors all in one dumbfounding aggregate. Is it too much to ask the Treasury to give us the account in greater detail? And if it be too much, surely without any appreciable extra exertion the overworking officials could separate the sums paid over to local authorities from those devoted to meet charges strictly Imperial. Let them give us another line, in short, showing us how much of the gross revenue has each quarter been handed over to the local authorities, and not leave us to dig the information out of stray returns some months after the fiscal year has closed.

British Thomson-Houston Co., Limited.

From one point of view last year's display is not at all a pleasant one. The report only just issued covers the eleventh year of the company's existence, which ended on March 31 last, and shows a trading profit of only £14,994. Including £4,125 brought forward, the available balance is only £19,119, and even this does not go to the company's shareholders, for the whole of it, with the exception of £1,072 brought forward, has been applied to various depreciations. Thus £800,000 of capital goes without any reward. In some respects, however, this is a favourable symptom, and the company may pull round in time if this system of writing down is adhered to when free revenue is available. A large amount of business appears to have been done by the company, and the work turned out is declared to be satisfactory. The company, for instance, has supplied during its past working year 10 electric locomotives to the Metropolitan Railway and the electrical equipment for several trains; also the equipments for heavy traction work heretofore supplied to various railway companies "continue to give complete satisfaction," including those used on the tube lines of the Underground Railways Company. There is not much hinted about future business, but it should be large, seeing that the apparatus, meters, supplies, patterns, &c., at the Rugby and London store-rooms and in the provinces, finished and in process of manufacture, are valued at £292,209, while £286,157 is represented in the assets by sundry debtors, retention of moneys, and other outstanding accounts. Thanks to the writings down and sellings in the adjustments of the past year, the asset represented by shares and debentures in lighting, traction, and other companies, "including at par value certain shares received in payment of contracts," has been brought to the relief-giving total of £105,802. The board has disposed of a large amount of this class of securities, and reduced proportionately the liabilities of the company. After taking into account some additional shares acquired during the year, the nett amount produced by such sales was £136,727, and after allowing for £54,000 sunk in shares of a patent-owning company not specified, the nett reduction during the year in all securities of this description held amounted to a little over £111,000. Nevertheless, the company still owes a great deal of money, including £212,000 of 4½ per cent. debenture stock and £239,671 due to the General Electric Company of New York and allied interests. It also owes sundry creditors £142,038, so that altogether its indebtedness amounts to about £594,000. Its cash at banks and on loan and short notice was £105,252 at the date of the balance-sheet, and the suspense account has been written down to £16,708 by £15,000 taken from profit and loss. In some respects, therefore, the accounts and report are encouraging in spite of the heavy burden still carried, but the history is most suggestive of the dangerous manner in which electrical business has been financed and forced in this country.

London United Laundries.

The inevitable capital reorganisation of this miserable enterprise took place during the past year, and in order that the latest balance-sheet might show the effect of the reduction, it has been made up for 13 months to June 30. The writing down was drastic, as might be supposed, and only £60,500 is left of the original capital of £230,000. It now consists of 140,000 shares of 8s. each and 90,000 shares of 1s. each, and the actual debenture debt to be referred to presently amounts to £5,850. It is almost unnecessary to say that the capital reconstruction has not improved the fortunes of the company—how could it?—and the display now made is worse than ever. The inclement weather and high cost of materials are the primary reasons, but the "publicity given to the attacks upon the company at the time when the reduction of capital was under consideration has also had some adverse effect." To which there is only one comment—rubbish. The profit and loss statement tells us that the balance brought from laundries trading account was £10,683, from which general repairs and renewal of plant and premises took £3,999. In view of this charge, which includes a very considerable sum spent in improving the various properties and plant, no specific amount is allowed for depreciation of plant and machinery. That is not a very good start, despite the directors' opinion that values have been fully maintained during the year. Besides the deduction named, gross profits were further reduced by £1,641 from discounts on work done, bad debts, &c., but a few pounds came in from interest, &c., so that the credit balance was £5,106. But expenses and outlays of various kinds, including the nice little amount of £1,012 for directors' fees and £1,033 for mortgage and loan interest and commission ran away with £4,350, leaving just £750 as actual profit, which will be carried forward. Now as to the debenture debt. This, together with the loan secured thereon, was due for repayment on March 1, 1907, but the directors arranged an extension until March 1 next, and will immediately take into consideration the question of making the necessary provision for repayment or extension. The loan, which previously stood at £7,539, was reduced during the year to £7,080, and the mortgages were brought down from £6,237 to £5,187. A further sum of £1,300 has been borrowed on the security of Consols, and when we glance at the assets side of the account it is obvious that the company has not the means of paying off these debts. There is a moderate excess of debtors over creditors, but stores and materials are no more than £2,393, and the cash balance is £1,704. Property and goodwill are now in at £73,178, and the directors announce that for the purpose of economy the trade of one of the smaller laundries has been transferred to another branch, and the laundry let at a small profit rental. At the meeting last week the report and accounts were accepted without much fuss, but the election of directors produced no end of fun. In accordance with a promise, the whole crowd retired, but each was desperately anxious to still hang on, and therefore offered himself for re-election. But the shareholders did not want them all, and decided that the services of a couple could be dispensed with, new men being put in their places. Presently a meeting will be called to pass the necessary resolutions for the consolidation of the capital into shares of £1 each.

Willans and Robinson, Limited.

Now that this old company has in great measure cleared its feet by the reorganisation of capital, which was carried through during the past half-year, its report makes much more pleasant reading than has been the case for many a day. Profits on manufacturing account at Rugby amounted to £37,996, and with royalties, interest, and other receipts, gave a total income of £39,7[illegible], and after providing for expenses and debenture interest and writing off £5,467 for depreciation, the nett profits were £18,275. Compared with the second half of 1906, these figures show decreases of £3,612 and £4,523 respectively, but the Queen's Ferry branch, although still carried on at a loss, was less of a drag on the business, and the result of the two combined was decidedly better. Manufacturing profits at the last-named establishment were only £1,870, while expenses, including the proportion of debenture interest chargeable, came to £4,[illegible], leaving a loss of £2,234. This compares with a loss for the previous six months of £12,204, and the directors point out that as the loss is less than the contribution to the two items of debenture interest and directors' remuneration it is more profitable to keep the works open and employed even upon the present inadequate scale than to close them. The nett surplus from the two branches was £16,041, and as the debit balance was wiped out in the process of reorganisation the whole of this is available for distribution, and after paying the preference dividend the ordinary shares receive 10 per cent. on the reduced amount, which is equal to 2 per cent. on the original shares, and £2,708 is carried forward. Under the scheme of reorganisation the property at Rugby was not touched, and the value of the

freehold premises, plant and machinery, after deducting the allowance for depreciation is now £309,057, but the leasehold premises, plant, and machinery at Thames Ditton have been written down to £100,000, or the amount which the directors thought they should realise if a purchaser could be found. Preliminary and experimental work has disappeared altogether, but the item of patents and experiments is only slightly reduced at £7,422. Sundry creditors are higher at £53,052, and, on the other hand, work in progress is less at £41,473, and cash is down to £29,808, but these changes are much more than counterbalanced by increases to £170,068 in sundry debtors, and £77,983 in stocks and shares, engines, &c. The accrued dividends on the preference shares have been got rid of by an issue of funding certificates for £35,000, which are only a contingent liability redeemable out of profits.

Kent Coal.

It is time to utter an emphatic protest against the derisory manner in which Kent coal affairs are always treated. It is all very well to jeer, but the semi-ruined coal consumer scarcely realises what he owes to the Kent Collieries. Those voracious colliery proprietors in the north put their prices higher and higher, and would have bled us white before the winter was out if our southern pits had not scared them almost out of their wits. The instant it was rumoured that the Dover Collieries were pouring out coal at the rate of five tons a day, and threatening to flood the market, lo, the coal boom collapsed, and if we are to believe the newspaper reports, coal will soon be no dearer than gold. So let us hear no more nonsense about Kent coal. After all, we do not think that more than two or three millions sterling and about fifteen years have been spent in getting to the five tons a day stage, and the chairman does not hold that position because his name is Slacke. Nor do we believe the stories current that the coal falls to pieces directly it is looked at. The report gives the lie to that in the most emphatic manner. "The working of a small quantity of coal from the 20-inch seam has been commenced in the No. 2 pit. Headings have been driven to all the points of the compass, and the necessary ventilation provided for carrying this forward. The coal is of excellent quality, and the seam has a good roof and floor." Could anything better be wished for? What with Kent coal and coalite we shall make the coal boomers sit up before long. We should like to print in full the wonderfully interesting report just issued by Kent Collieries, Limited, but space forbids. How familiar sounds the phrase that there has been "considerable expenditure" on the sinking operations in Nos. 2 and 3 pits, and the supplying and fixing of battery in the latter! The work done must have kept a small army employed, and everything is of the best, and quite up to date, including the electric installation. What we are most pleased to read is that with ordinary luck "the funds that are or will be available should be sufficient to place the company in a commercial and profit-earning position." The prospect held out by that is simply bewildering, and anyone who goes a bear of Dover "A" ought to have his money taken away. Think of the revenue to be earned when South-Eastern trains fly all over Kent at something under 10 miles an hour and deposit the precious mineral on the very doorsteps. Kent coal can be kept in heaps along the track, and during the stops—between the stations—what more simple than to take in a hundred weight or so, and save time and labour at the terminus? The possibilities are infinite, and Mr. Cosmo Bonsor knew what he was about when he refused to discard the S. E. and C. in order to one day become Governor of the Bank of England. The latter glory sinks into significance beside Kent coal, and we will not range ourselves alongside those who refuse to treat the matter seriously. The cash balance is £1,704 17s. 4d.

Trade of Guatemala in 1906.

Our Consul in Guatemala joins the ever-swelling ranks of those who complain that British manufacturers are by their lack of up-to-dateness in their methods allowing our competitors to beat us in the struggle for trade outlets abroad. Although this country has never held the first place in the matter of supplying Guatemala we were second in 1905, but now Germany has outdistanced us. The United States is easily first, and in spite of a falling off in imports of corn, flour and lard to the value of £120,000 was able to maintain its total trade within £6,000 of the previous year's high figure. As regards cotton yarns, lawns and clear cotton textiles, ready-made cotton goods, linen and jute goods and woollens, we are able to hold our own well, and our imports of these things were enormously in excess of those from the United States and Germany combined, but America beat us in grey piece goods and drills as well as in machinery and most descriptions of hardware. Germany, too, appears to have supplied considerably more of such things as rice, preserves, beer and spirits, glass and crockery, papers and matches, but the data supplied may not be quite accurate, and it is possible that many of the items invoiced as from Germany were actually British. Even if this be the case though, it seems none the less a fact that our home manufacturer is content to rely upon the German middleman, instead of securing the additional profit his intervention represents.

The Guatemala Railway is now open to traffic between Puerto Barrios and Sanarate, and the gap between the latter place and the capital is only some 30 miles, which it is expected will be completed by the end of 1907. As soon as interoceanic communication is thus established a line is to be built from Pajapita, connecting the Oco's railway with the Mexican system, another line from Cabullo Blanco to Pajapita uniting the Occidental Railway of Guatemala with the Oco's Railway, and a third from Zacapa to Santa Ana in Salvador, so that the network will be pretty complete. At present most of the export carrying trade is in the hands of Americans, the United Fruit Company, the Atlas Line, and the Hamburg-American Line all having regular services established on the Atlantic littoral. As the result of this the tonnage of American vessels entered at the Guatemalan ports during 1906 was about four times that of British vessels, and Mr. Fleischmann expresses the hope that the latter will soon make a bid for the trade now that there will be sufficient inducement.

Development of Angola.

The Portuguese possession of Angola which, except for an interval between 1641 and 1648, dates back to 1575, has not been marked by any strenuous attempts to develop its natural resources. A large business it is true was done at one time along the seaboard and rivers, but it was killed by the heavy depreciation in coffee values, and the country has since suffered from acute financial depression. Yet in Mr. Consul Mackie's opinion there is a big future before it in the direction of rubber cultivation, as an expert botanist who recently penetrated as far inland as the reaches of the Zambesi has reported the existence of vast rubber-producing areas. At present these are too far from the coast to be profitably exploited, but the Portuguese have at last wakened up to the possibilities, and three railways are now under construction which will penetrate into this region. The most important of these lines is the Lobito-Katanga, which is being built by an English company with the primary object of reaching the Katanga copper mines. These are reputed to equal all the combined copper mines of Anaconda, the Clifton and Bisbec mines of Arizona and the Rio Tinto mines, not only in the grade of the ore, but also in the quantity, and if this proves to be true the control of the market in future will be beyond the reach of the Amalgamated Company or any successor.

This railway is expected to do great things for the province, and to raise at least one of the ports to a degree of importance that may eventually surpass that of any other port on the coast. Besides linking up Lobito Bay with the Cape to Cairo system, it will be connected with the Beira line. In view of the railway schemes, steamship communication has already been established between Angola and the Cape, and a Cape

Town firm is endeavouring to foster trade in South African fruits and Natal coal. Mr. Mackie, however, believes that the railway may not prove an unmixed blessing to British trade six or eight years hence, as it will enter into formidable competition with the British Central and South African railways by creating a deviation of traffic to the Portuguese ports, where the subsidised Portuguese and German steamship lines are likely to render the carrying trade as unremunerative to British shipping as they did to the French line some years ago.

Belgium Coal Mining.

With coal blazing so vigorously before the public as it is just now, Sir Cecil Hertslet's report on that industry in Belgium comes very opportunely. Compared with our own, coal mining there is a very small thing, but Sir Cecil is not wrong in thinking that certain facts about its management will be of interest over here, or if they are not, they ought to be. One nice little rule we notice which at the present time our manufacturers doubtless would like to see in force, "coal, being used for all the manufacturing industries, must be kept at the cheapest possible level, whether it be coal of home or outside production." "Outside" does not concern us yet, but what about "home"?

The geological and geographical description of the mines is interesting, so are the statistics, those of the year 1905 being fully given, when the balance between debt and credit came out at a reasonable 6·05 per cent. nett to the good all round, and Sir Cecil goes exhaustively into the question of wages, hours of labour, output, &c. But still more interesting is his account of the precautionary efforts to prevent accidents, efforts so successful that, "notwithstanding that the Belgium mines—deep, irregular, and containing great volumes of fire-damp—may be considered as amongst the most dangerous in the world," statistics for the period 1901-4 show "the lowest rate of mortality attained in any country," and Belgium is still at it with "unabated vigour" to make that rate still lower. We also are on the same track, but are we as "up to date" as little Belgium?

The Budget of Victoria

As unfolded by Mr. Bent, the Colonial Treasurer, reveals a happily flourishing state of affairs. The income for the past year ended June 30 was no less than £8,313,000, including the gross receipts of the railways, which amounted to £4,010,000, and as the expenditure came to only £7,501,000 there was a surplus of £812,000, all of which is to be devoted to the redemption of the public debt. A windfall like this comes in most opportunely, as the State Government had to redeem about £3,300,000 of its outstanding obligations on July 1 last. The operation, it will be remembered, was carried out without a hitch. Altogether £840,000 has been utilised out of revenue in the past year to assist and smooth this operation. The balance of the loan was converted into 3½ per cent. inscribed stock, and the loan of £2,000,000 due next April has also been "arranged for" by conversion into that stock, on terms not stated. Working expenses on the railways are said to have reached only 52 per cent. of the gross receipts, "the lowest ratio for 28 years." We trust this does not mean a reversion to the bad practices of past years, under which these railways were permitted to fall into a most disgraceful condition. Rather, perhaps, is it the consequence of recent expenditure whereby some of the evil effects of the past neglect have been remedied. Whatever the explanation, we must regard this as the least pleasant fact in the budget statement. For the current year Mr. Bent puts the income at £8,102,000 and the expenditure at only £14,000 less, which means that the income is expected to go down by £212,000, while the expenditure goes up £587,000, and that likewise is not a good sign. Perhaps, however, there are explanations and excuses not mentioned in the telegraphic summary, and meanwhile prosperity rules the land. Savings Bank deposits, all utilised in one guise or another by the Government, have risen to £12,800,000, an increase of £1,028,000 on the year; but old-age pensions, now raised to 10s. per week be it noted, are still growing, and on the new higher scale are expected to add £60,000 per annum to the charge upon the revenue. Over-sea exports, exclusive of gold, showed an increase of 250 per cent. on the figures of 1903 at £12,400,000, and imports came to £15,000,000, an unwholesome-looking position for a debtor State, which the new tariff will probably do much to correct. The colony, however, sent £4,750,000 worth of its product to neighbouring States, so that its entire export trade came to £17,150,000, exclusive of gold. The trade account is therefore less suggestive of inflation than the mere oversea figures indicate, and we must on the whole congratulate the colony. It has stood up manfully to its difficulties.

American Business Notes.

Owing to the lateness of the harvest in most parts of the United States, it was only last week that the autumn drain of currency to the West seems to have told noticeably on the resources of the New York Associated Banks. Their specie average for the week showed a decrease of £720,000, and after allowing for a slight increase in the greenbacks held the cash resources of the banks were still about £645,000 down on the week. Loans and discounts, however, rose by £560,000, and thus the decline in deposits was kept from becoming marked. It amounted to only £360,000, and, thanks to the small decrease in the liabilities on deposits, the surplus reserve was brought down by £554,000 to £1,113,000 compared with £2,508,000 at the same date last year. So small a surplus reserve at this time of year may lead to gold imports at no distant date, and our market must not lose sight of this contingency. Several times recently the New York exchange on London has dipped in an ominous fashion, and although it has been higher these last few days we are by no means out of danger. Indeed, the American finance markets may be compelled to make sacrifices in order to obtain gold lest that dreaded credit disturbance breaks out once more and in an incontrollable fashion. The future, however, is very uncertain, partly because the power of American banks to draw gold from us is much circumscribed this year by more than one influence. To begin with, our market is not disposed to accept finance bills, and, in the second place, the steady selling of American securities by Europe has the tendency to neutralise that legitimate power of New York bankers to draw away metal which might otherwise be found in the shipments of grain and cotton to our side of the Atlantic. It may be that these shipments will reach a magnitude which will give for a brief season the American money market power to draw away gold, but this is by no means certain. Up to now it is computed that American debt in Europe in this floating shape is but about £30,000,000 as compared with £80,000,000 last year. But ways and means will be found if money in New York continues as dear as it is now. Call loans rose to 10 per cent. in the middle of the week, but in spite of that, and of heavy sales of grain for export, the exchange on London rose sharply.

According to the Treasury account, it does not look as if Mr. Cortelyou would be able to add very much to the amount of money already deposited by him in the banks. On August 31 the total of the Treasury balances of all kinds came to rather more than £77,000,000, of which £30,000,000 must be held permanently as a cash reserve fund against the paper money liabilities of the Government. This left something beyond £47,000,000, which might possibly be all in the hands of the banks, although that is doubtful. Anyway, of this £31,420,000 had been already deposited at the date of the return. There was thus a margin of barely £10,000,000, out of which to further increase the available resources of these dealers in credit. But the current liabilities of the Treasury are always considerable, and as the rate of national expenditure is

enormous it is probable enough that Mr. Cortelyou has nearly reached his limit. In that case we may soon see 25 per cent. call money and gold sought for at any cost.

The position of copper continues to exercise the minds of speculators on both sides of the Atlantic. The United Metals Selling Company, which handles the product of mines controlled by the Standard Oil people, and as much more copper as it can lay hands on, has gradually reduced its selling price until 16 cents per lb. has been reached, but without tempting buyers to come forward, and evidently buyers are not going to be tempted as long as they possess the knowledge that an inconvenient stock of the metal is held off the market by the Standard Oil financiers. Predictions are accordingly now current that the price may again touch 12 cents per lb. before the turn is seen, and should that forecast be fulfilled there is certain to be widespread affliction not merely for the Standard Oil monopolisers, but for miners and handlers of copper of all degrees of importance. Rumours have been set afloat in the States that a "consumers' syndicate" is about to be formed to buy up surplus stocks so as to prevent the slump from ruining them through the dear stocks of goods they already hold; but that seems a most fantastic idea, and is cited only as an indication of the desperate condition into which business has been driven by those who set out to control the markets for this metal, and to regulate production and price wholly without regard to any interests except what they believe to be their own. Thanks to their temporary success in forcing the market price of the metal to an unwarrantable and unsustainable height, labour has imposed its demands upon the financiers, and the cost of production is now alleged to be 2 to 3 cents per lb. higher than it was before Mr. Rockefeller and his associates began to try to do for copper what they had succeeded in doing for mineral oil. If, therefore, the price of the metal shrinks much further, as it seems only too likely to do, the producing companies may drift into an embarrassed position, which will not only cripple them for years, but put a stop to dividend payments by them. The market extracted some little comfort this week from the announcement that the Anaconda Company has reduced its dividend only by 5 per cent. per annum to 15 per cent., and it is easily pleased. Probably, if the whole truth were known, this company has no business to pay any dividend at all just now.

The President of the United States is now engaged in stumping the country, and his enemies say it is with the hope that he may next year secure the Republican nomination for the Presidency by acclamation. These enemies are uncharitable enough to scout belief in Mr. Roosevelt's reiterated declaration that on no account would he again accept the nomination. They allege that he has put up Mr. Taft, and that he may put up other impossible or improbable rivals, with a view to demonstrate his own inevitableness. We hope this is not so, and have no wish to join the mud-throwers of any sort, but it is to be regretted that in his speeches the President continues to sound what must be regarded as a false note. He is all for "righteousness" in business, and full of denunciation of the wealthy wrong-doers, full also of a resolution to punish them at no matter what cost, but he never says a word about the unjust and misery-breeding tariff under which these magnates and their trusts have grown rich, and continue to flourish in defiance not only of public right, but of common honesty. "If righteousness conflicts with the fancied needs of business, then the latter must go to the wall," said the President, and he went on to add that a year or two ago certain representatives of labour called upon him, and told him that they regarded him as their friend. He replied that he certainly was, and would do everything in his power for the labouring man except anything that was wrong, and he makes the same answer to the man of business. Just so, but why then maintain the source of the wrong with a resoluteness, an obstinacy of silence, a tacit acquiescence which disappoints every reflecting honest man from one end of the United States to the other?

Would it, for example, be possible for the Beef Trust to maintain its monopoly against farmer and consumer, against the fruit-grower also all over the Union were the ports of the country open to the products of neighbouring lands? Would Mr. Rockefeller be in a position to coerce in the manner described by an official of his Oil Company rival oil refiners, so that they dare not quote a price or export a single gallon of their refined oil except through his Standard Oil Company, if the tariff barrier was removed, and the whole world allowed to compete in the United States market and elsewhere on even terms? And what of the Sugar Trust, or of the great Iron and Steel combination, one of whose products is a weekly slaughter of the inhabitants of the Union on its ill-equipped railways system? Would it be possible for the Carnegie Steel Trust to supply brittle rails to the companies, or would these companies rest satisfied with rails of light weight, and therefore small carrying power, if they were at liberty to buy their materials in the best or cheapest market? It is not to be thought so for a moment, and we must therefore continue to insist that until Mr. Roosevelt squarely faces this side of his task and decides to follow the policy outlined by his predecessor shortly before he was murdered, we must regard all his declarations with no small scepticism.

Some interesting particulars are to be found in the preliminary report of the Inter-State Commerce Commission of the United States with regard to the railways of the country. The figures are somewhat antiquated, like so many of our own statistics, for they do not bring the facts down to a later date than June 30, 1906. Even so, however, they are instructive and not without suggestiveness. At that date the total length of single track mileage in the United States was 224,363 miles, being an increase of 6,262 miles on the total for the preceding year. Of this enormous length of road only 17,936 miles were double lines. The companies had, it is true, 1,766 miles of third track and 1,280 miles of fourth track, besides 73,761 miles of yard tracks and sidings, but even so the primitive condition of this great system of railways is significantly indicated in these facts. Most of the roads can only be in the initial stage, much in the position of light railways in Ireland or the single track spurs which our English railways are now throwing out in various parts of their districts, only not so well built or equipped. How much capital will be required to bring these railways up to European standards of efficiency? That is a question the answer to which must never be lost sight of by those who think sometimes of investing in American Railroad shares. And these railways have by no means been cheap to construct. Their capitalisation works out at an average cost of about £13,600 per mile, the total nominal capitalisation on June 30, 1906, having been £2,915,000,000. Of this imposing aggregate no less than £455,400,000 received no dividends whatever. This is equivalent to 33.46 of the total share capital, but on the remainder something over 6 per cent. was paid on the average.

The companies, however, had about £57,800,000 of bonded debt on which no interest was forthcoming in that year. The Inter-State Commerce Commission also gives incidentally some slight indication of the cause for this apparent unproductiveness, since it mentions the fact that of the total amount of railway stock outstanding, which was £1,360,752,000, no less than £451,435,000 was in the hands of the railroad companies. This is exclusive of £122,261,000 in railroad bonds also held by them. What does this mean except that the capital cost of this system of railroads has been indefinitely swollen by the issue of nominal capital in various forms for which no equivalent whatever was given? A rough railroad of the type of the greater part of those lines embraced in the imposing interests of the United States could at this day be built and equipped for £3,000 per mile or less.

What looks like an immense business was done by this system of railroads, and the aggregate income of the year would seem to have been forced up a little by

augmented charges, at least on passengers. The average income per passenger per mile, for instance, was in the year ended June 30, 1906, 2.002 cents, which was .040 cent higher than in the preceding year. On freights, however, there was a decrease of .018 cent in the receipts per ton, which came to 0.748 cent. Strangely enough, the ratio of working expenses to receipts showed a decrease of .70 per cent. at 66.08 per cent. compared with 1905. Gross earnings altogether amounted to £465,153,000, which was nearly £50,000,000 more than the total for the previous year, while working expenses went up by £33,255,000 to £307,400,000. From these figures it is to be deduced that the nett earnings of all the railways came to £157,778,000 or £19,400,000 more than the nett income of the preceding year, but only £54,570,000 of this total was distributed as dividends to the stockholders, the remainder having gone to meet interest charges or to pay for improvements, except an amount of nearly £22,500,000 treated as undistributed surplus. Interest of various kinds and rents swept away about £91,000,000 and taxes took about £15,000,000. Little more than £9,000,000 was charged to revenue against permanent improvements. The business done is thus an enormous one and the staff on the pay rolls of the companies aggregated on June 30 of last year 1,521,355 individuals, being an increase of 139,159 on the preceding year. How much was paid to these employees cannot be exactly stated because of the loss of the railway records in the San Francisco calamity, but it may be put at £186,000,000.

Among the railroad reports issued last week was that of the Reading Company, which embraced the Philadelphia and Reading Railway Company and the Philadelphia and Reading Coal and Iron Company. As usual, the most salient fact displayed in the accounts of this agglomerate is the unsatisfactory character of the coal and iron company's business. The railway company is made to show great prosperity. Its gross receipts went up by $2,916,000, and it managed to pay 4 per cent. upon all its stocks, even the common stock, yet working expenses went up $3,752,000, and the position would not have been anything like so pleasant-looking if the Coal and Iron Company had not been as usual stripped of all profit for the benefit of the railway. The Coal and Iron Company's gross income went up by $4,709,000 during the year ended June 30 last, but of this increase little more than $311,000 remained as nett gain, and the company is only paying 2 per cent. on its debt to the covering Reading company; yet it did a larger business than ever before, as did also the railway, and showed a gross revenue of $38,748,000. Complaint is made that the wages of colliers have gone up and the cost of coal mining and repairs certainly shows an increase of nearly $2,000,000 at $18,494,000 for the year, but it is the charges paid to the railway that account for the absence of any profit. These, including the cost of transport by water and of unloading coal at the depôts, amounted last year to $12,500,000, and after meeting the charge upon the debt due to the Reading Company, the result was a deficit of over $71,000. We cannot put confidence in a railroad prosperity thus induced, and it is to be feared that the expenditure on upkeep and improvement, of which much is made in the report, foreshadows large drafts upon capital later on. The total expenditure on betterments out of revenue was last year only about £370,000, and little more than £186,000 additional was spent on capital account, both sums being according to past experience altogether inadequate to maintain a large railway property of this or any description in a state of efficiency. About the physical condition of the line, however, we get very little information.

Complaint is made by the president of the Missouri, Kansas and Texas Railway Company, Mr. Adrian Joline, about the hostility displayed by the various State Legislatures towards railroad property. Railway managers, he says, have good reason to view the future without optimism. They feel misgivings as to their ability to maintain the present standard of efficiency, or to produce nett returns as large as those of former years. In taking this view he is doubtless right, and there is also fair ground for grumbling at the haste with which State law makers are struggling to emancipate the people from the tyranny, as they call it, of the railway monopoly. All the same it will be a mistake if a man in the position of Mr. Joline endeavours to set public opinion at defiance, and railway controllers must not believe that the demagogue is going to be forsaken by the American citizen, while said citizen continues to feel that he has good grounds for complaint at the manner in which the railways treat him. The demagogues would be powerless were there no unjust rebating, were over-capitalisation not the rule and did the railway managers betray the least solicitude for the welfare of their customers. What are the people to think of the railway slaughter which goes on unchecked all over the country, a slaughter direct product of contemptuous railroad management and dishonest equipment? This Missouri company is not a very large one, but still it earned $26,184,000 in its fiscal year closed on June 30 last, and after meeting the working expenses was able to pay all the bond interest and the dividend on its preferred stock with $3,162,000 left over as compared with $1,393,000 over at the end of the preceding year. The increase in gross earnings was $5,025,000 or nearly 24 per cent., and the nett earnings of $8,508,000 were $2,764,000 or 48 per cent. up. That jump is something not to be looked for in the current year, even if the Government of Texas is unable to sustain its law forbidding railroads to charge more than 2 cents per mile as a passenger fare, or to force its will on the common carrier in other directions.

Is the Standard Oil Company going to be swamped in its own oil? Sundry items published as special information by the *Pall Mall Gazette* this week lead us to ask this question. Within five years the estimated output of oil in the United States has increased by about 50 per cent. from 100,461,337 barrels in 1903 to an estimated 150,000,000 barrels for the current year, and to an actual 134,718,000 barrels in 1905. In other parts of the world oil is also being produced in greater quantities, and it would not be at all surprising were the result to be such a glut as would compel the Standard Oil people to make a sacrifice in prices. They hold the trade of the North American Union entirely in their grasp, but the world is not yet conquered by the trust, and if the production of the Indian territory and Illinois fields continues at its present abundance, there may soon be a stock of unsold oil as dangerous to its wealth as its stock of unsold copper.

Presumably the United States Steel Trust has made a good bargain in paying little more than £120,000 for the property of the New York Steel and Wire Corporation of New Jersey, which recently came to grief. The concern thus picked up under a liquidation sale originally cost £500,000, and when the receivers were applied for it owed £600,000 with assets of only £200,000. Presumably this is an illustration of the power of the Steel Trust to crush feebler rivals and destroy their property. Their loss is its gain.

Passing Events.

A new Russian loan is at hand. It is inevitable because, as the Russian Finance Minister frankly admitted, it is impossible to make ends meet on the basis of the ordinary revenue. How large the loan will be is not yet disclosed, but it is probably not likely to be less than £50,000,000, and may very well be nearly twice that amount. All will depend on how much the loanmongers can be forced to take. The loan will, of course, be issued in Paris, the bankers there having no choice but to do as they are bidden in this matter under penalty of loss by default. A Paris correspondent of the *Financial News* says that already a contract for the issue of new bonds or debentures for the South-Eastern of Russia Railway Company has been signed by the Banque de Paris representing a group of French banks. This, however, is only a fragment of the loan

raising necessary, and it will be curious to note how far the public comes forward to support the bankers in this latest effort to supply the Russian bureaucracy with the sinews of war. Without a loan of colossal proportions furnishing resources well ahead of wants the bureaucratic system of Russia would break down in less than a twelvemonth, and some chance might then be given to the Russian people to elect representatives for their Parliament without the coercion of the Petersburg Government. Here no doubt a portion of the loan will again be offered for subscription, but our market will not be found cordial towards it, notwithstanding the brand new Asiatic compact. The distrust is not of the Russian people, but of its rulers.

Apparently the people of the United States are not particularly happy over their imperial acquisition in the Philippines. Republican purists and financial cheeseparers are raising objections to the cost of their republican-imperial flukey acquisition. This cost seems to amount to about £8,000,000 per annum, and Mr. Speaker Cannon probably expresses the general view in saying, "I would be in favour of getting out of the Philippines to-morrow if there were any honourable way of doing so." At present the revenues of the Federal Government are so abundant that a mere waste of £8,000,000 per annum may not strike the average citizen as a matter of much importance, but it would be quite otherwise in the event of an industrial setback, and the apprehensions of some people are driving them to suggest that the Philippines ought to be sold. That would be all very well if a buyer could be found who would give anything for a possession costing its present owner so many millions of dead loss per annum. Naturally the thoughts of the careful American turn to Japan, and he deprecates the ostentation of the President—a gentleman who thinks he has much in common with the Kaiser—in sending a formidable fleet to the Pacific, because that step may be calculated to excite unfriendliness towards the Republic on the part of Japan. Much better keep the fleet at home, and offer to transfer the Philippine Islands to the Japanese as a dumping ground for their surplus population. Just so; but on what terms could Japan be induced to take over this troublesome possession? It could not pay anything in order to saddle itself with another severe draft upon its resources; the only terms possible would be to invite Japan to step into the American shoes in consideration of an annual subsidy paid by the vendor of, say, £5,000,000 or £6,000,000 per annum for the next ten years. Perhaps on these terms Japan might be induced to look at the business.

In the United States the rise in the price of paper used in the printing of newspapers is bringing the owners of halfpenny, or one cent, papers there face to face with a most serious difficulty, which proprietors of the same class of organ in this country will also have to deal with at no distant day. Added to the demands of labour represented by the Stereotypers' Union in New York, the additional expenditure amounts, according to Mr. John Norris, to an annual sum of £600,000 added to the expenses of the cheap papers in that city. Not more than four of them, he went on to say, "could make ends meet on such terms." How many of the London halfpenny newspapers could make ends meet were paper alone to become appreciably dearer than it is now? It must never be forgotten that, so far as the newspaper proprietor is concerned, a halfpenny means practically a farthing. We doubt, indeed, if the newspaper owner gets as much as a farthing per copy on the papers he sells if the waste of unsold returns is taken into account. But even were he to receive three-fourths of a farthing the sale alone can bring him no profit, and in order to do something more than make ends meet a very large revenue from advertisements must be secured. Otherwise the publication of newspapers of this class becomes a matter of philanthropy, not in any way one of practical business.

Uneasiness seems to be arising in Germany with regard to the new Australian tariff. By dint of hard work and strenuous endeavour, German producers and merchants have succeeded in establishing an extensive trade with that part of the British dominions, and it is now threatened with serious diminution, if not extinction, in many directions. Last year, the Berlin correspondent of the *Morning Post* points out, Germany sent goods to the value of £8,750,000 to the Australian Commonwealth, and bought therefrom goods to the value of nearly £3,000,000. If sales can no longer be effected, purchases will also fall off, and Australia may soon have cause to regret the precipitancy of her monopoly-serving Protectionist Government. But that is not the worst of it. Wounded German commercial interests may push the Reichstag to retaliate upon the United Kingdom by forbidding the German Government to continue to it the most-favoured nation treatment. This point is already being mooted in some German newspapers, and in the present aggressive temper of the German Imperial policy it is by no means beyond the bounds of possibility that we here will be called upon to pay for the fiscal mistakes of Australia and Canada before all is over. Should this be the case, a further most unwelcome object lesson will be bestowed upon those who have sought to inveigle the country into a scheme of tariff exclusion to be applied to the whole Empire.

From the report of Mr. Llewellyn Smith to the Board of Trade on the hours of railway servants for the past year, it is to be gathered that many real grievances are pushing the men on to agitate for corporate recognition at the hands of the companies. Many cases were investigated during the year by officials of the Board, and most of them brought censure upon the companies. Portions of their staff have been habitually overworked, and the fault has been admitted. Remedies are also being slowly applied, thanks to the initiation of the Board, and that is the most welcome aspect of the report. Not only do many of the men work longer hours than is expedient or fair, but they are deprived of days of regular rest. These conditions do not apply to the whole service, but to groups and to classes of servants. The adverse circumstances amid which they work are also more acute at some seasons of the year than at others, but the broad impression left on the mind after reading the details set forth in this report is that without supervision the tendency is for railway labour to drift into conditions amounting to a tyrannical abuse of power over the minor classes of the staff. However, improvements are being effected, and the more they are so the less ground can there be for a refusal on the part of the boards of directors to have any dealings with the men's elected representatives.

The British Chamber of Commerce in Paris has been endeavouring for some years to obtain the repression of the use by foreign manufacturers of English names or phrases for the purpose of marking their goods, and its efforts have at last been successful. In the monthly circular issued by that body for July-August it is stated that instructions have been given by the French Government to the Customs Service to warn the Procureurs of the arrival of such goods, and to the Procureurs to effect seizure. These steps will greatly facilitate the mode of procedure, as British traders and manufacturers who come in contact with foreign goods fraudulently marked as British, and made in or imported into France, have only to advise the Chamber of Commerce for action to be taken.

We shall have to wait until near the end of the year for the full details of French foreign trade, but in the meantime it is interesting to note that the imports for the first seven months of 1907 amounted to 3,566,766f., or an increase of 272,933,000f. Of this the United Kingdom contributed 509,242,000f., or 86,883,000f. more, while out of total exports of 3,239,176,000f. our share was 821,997,000f., the increases being respectively 268,091,000f. and 78,736,000f.

A famine has come upon Turkey; at least, the distress is now more acute and more general than it is on the average of years. The population of that forsaken empire is always on the verge of hunger, its condition in this respect differing not at all from that of

the provinces of the Roman Empire, which the Turk supplanted nearly 500 years ago. The distress, however, has now reached Constantinople, which under the Turkish, as under the Roman, sway has been favoured by the rulers, and in a manner kept from sharing the miseries that have been chronic throughout the rest of the Empire. We fear, however, that the remedy found by prohibiting any exports of wheat or by the remission of the import duty on the grain will not do much to relieve the distress which now extends to the capital, and is everywhere great. In most parts of the Empire, the Constantinople correspondent of the *Times* says, the people are already suffering severely, and it is difficult to see how they will be able to survive the winter. In times of comparative prosperity deaths from cold and hunger are not infrequent among the poverty-stricken populations of Asia Minor. We fear also they are not infrequent in Macedonia and other sections of the European portion of the Sultan's dominions. Depopulation, in short, is likely to be accelerated by the terrible distress now hanging over the miserable people who have to live under Turkish misrule.

Some particulars are at last given relating to the wheat crop of Western Canada. The figures are only estimates, and it is just possible that actual results may be better than anticipations. On the other hand, they may be worse. A year ago the crop amounted to 105,000,000 bushels, this year the estimate is 40,000,000 bushels fit for milling and 25,000,000 bushels not fit. A good deal of this latter quality of grain will probably have to be burnt. Farmers, however, are in great hopes that the price to be obtained for what is marketable will compensate them to a great extent for the small yield, and in Winnipeg the highest quotation ever known has been reached this week. Formerly the $1 per bushel standard was considered a high one, but in Winnipeg the price has this week reached $1.05 per bushel. This is equivalent to about 4s. 4d. Most wheat-growing areas in the Northern hemisphere have poor harvests this year, and Canada will benefit by having something to sell. But how would it be were Canada's harvest bad and the rest of the world's abundant?

In the circumstances it is interesting to note how cheerfully Sir Thomas Shaughnessy spoke of prospects at the meeting of Canadian Pacific Railway shareholders held in Montreal on Tuesday last. The story he had to tell was a marvellous one, leading us to admit that no enterprise in modern times has exhibited such elasticity in development and marvellous vitality as the Canadian Pacific Railway. It has been helped, though, in many directions unavailable for other undertakings of the kind, and Sir Thomas mentioned that Government and municipal subsidies and the proceeds of land sales spent upon the property with other gifts aggregated more than £20,000,000, none of which has been capitalised, and there is more of the same kind of help to come, for the company still possesses nearly 9,000,000 acres of its original land grant, which, if sold at the higher prices anticipated, will furnish millions more to enable the directors to continue their policy of expansion. They can do this the more boldly because money has always been available for this company, the management of whose finances has been superb, and in spite of the help given by the land grants and other subsidies more capital is likely soon to be wanted; "at a future date," said Sir Thomas, and the date is probably not very distant. He told the shareholders that sanction would be asked to the issue as wanted of the balance of the ordinary share capital authorised. Sufficient funds are in hand for present requirements, but the traffic is developing so fast that continual additions have to be made to the rolling stock and to the accommodation furnished upon the line. Last year's traffic, for instance, was £2,200,000 better than that of the year before, and this additional money cannot be earned without great outlay of capital.

Apparently the company has almost completed a great irrigation scheme whereby 210,000 acres out of a total of 350,000 will be brought into cultivation in the Calgary region. Incidentally Sir Thomas Shaughnessy mentioned that the employees of the company now number quite 74,000 of whom 70,000 are located in Canada. Estimating on the ordinary basis of two persons to a family this staff would represent 350,000 individuals or more than one-twentieth of the entire population of the Dominion, and if there be added to men in rail and rolling mills, lumber mills, car and locomotive factories and other industrial establishments engaged largely in the manufacture of materials for the company, he thinks that one-fifteenth, if not one-twelfth, of the people of the Dominion directly or indirectly receive their income from the company. That is the most marvellous fact of all, and we can only hope that Sir Thomas's courageous assurance that a poor harvest is not going to bring about any serious reaction in the business of the Dominion will prove true. If such a reaction did come we may be certain that capital and other expenditure by the Canadian Pacific and other railways in the Dominion would have to be curtailed, and that suffering would spread over a great mass of the working population. And in all human affairs the law of averages asserts itself the swing of the pendulum.

It is officially notified that "the sales of farm lands and town lots by the Hudson's Bay Company for the six months ended September 30, 1907, amounted approximately to £54,000, payable over a term of years, and cash receipts to £127,000, as compared with sales for £218,000, and cash receipts for £147,000 for the corresponding six months of 1906." The Stock Exchange did not like this drop, or rather the "bulls" did not, and put the price of the shares down, but there was no reason to expect anything better. Booms would not be recognised if they did not lead to collapses.

An interesting note on Japanese finance is published in this month's issue of the *Financial Review of Reviews*. It is contributed by Mr. Reijiro Wakatsuki, the Imperial Japanese financial commissioner here, and naturally takes a most hopeful view of the country's prospects. Japan can carry her load, he says, but there is, as usual, no attempt made by the writer to minimise the weight of that load. It is only 24 per cent. of their incomes that her people are expected to furnish to meet the cost of Government, of education, &c., and to pay off debt. Before the war with Russia the debt of Japan was only about 421,000,000 yen; now it is 2,170,000,000 yen, a five-fold increase. But the public revenue has risen from 93,000,000 yen to 260,000,000 yen, and this great demand is made on the people in order that the debt may be rapidly paid off. Add in local taxes and 30 per cent., say nearly one-third of the people's incomes and earnings disappears, exclusive of what may be taken by the State monopolies in the way of profit. This position, however, is better than it was before the restoration of the Mikado, when the people had to earmark half their income to pay the taxes, and had borne the burden for some few hundred years. The truth is, the reawakening of Japan, and the great exertions her people have been impelled to put forth have created new resources for the people, and given an impulse to the whole Empire great enough to carry it over difficulties that, looked at beforehand, would have seemed insurmountable.

All the figures relating to Australian State revenues speak of unexampled prosperity. The revenue of New South Wales for the quarter just ended is put at £3,252,000, or about £301,000 more than in the corresponding quarter of 1906. Queensland is, the relative strength of the two settlements considered, making quite as comfortable a display, and the excess of revenue over expenditure in that colony amounted to £504,000 for the last three months. This is £33,000 better than the show of a year back, but perhaps a good many of the items of expenditure are not fully brought up to date, and the exhibit at the end of the fiscal year may not be quite so glowing. Be this as it may, the present revenue yield is excellent even in Queensland. For the past month the income was £524,000, or £13,000 more than in the same month of last year, notwithstanding a decrease of £15,000 in the amount received from the Commonwealth and of

£10,000 in miscellaneous revenue. The railway income, however, made up these deficiencies and a good deal more. It will be interesting to see twelve months hence how far the new Australian tariff puts a check upon this comfortable and comforting prosperity.

Natal is evidently in a bad way. The Ministry brought in a Bill to tax land holdings, and some members wanted its provisions extended both to urban lands and to native trust lands with a reduction in the tax of a halfpenny in the £. A minority, however, wanted no direct tax upon land, but only one on the incomes from land, and the Government has had to abandon its Bills altogether owing to the opposition overt and covert. Mr. Brunner, the Colonial Secretary, has resigned, and a new official will have to devise some more acceptable way of making ends meet. If Natal were free to do altogether as her people pleased, we might see a drastic increase in its Customs tariff. For the present it is more than an even chance that we shall see before long a composition with the colony's creditors.

After finishing an interesting and most satisfactory review of the business and financial methods of Pearson and Knowles, Limited, for its year ended June 30 last, Mr. Harmood-Banner, M.P., chairman of the board, went on to deal with a question always of absorbing interest, the relation of capital to labour. He pointed out that the total sales of the year, including the recently acquired business of Ryland Bros., Limited, but excluding the returns from the two collieries more recently bought, came to £1,990,247, and on the same basis the total wages paid reached £488,390. Is labour receiving its fair share of this business? Mr. Harmood-Banner contends that it is, and he seems to us to prove his case. The average dividend paid by Pearson and Knowles during the past ten years has been only 3½ per cent., and if the wages for the past year had been 5 per cent. higher than they actually were the dividend for that year would have been less than 6 per cent. Had the wages been 10 per cent. higher the dividend would have been below 2 per cent. Now 3½ per cent. is by no means a fat return upon capital engaged in industrial undertakings subject to so many ups and downs, and there was some reason in the claim made by the speaker that the Labour party ought to accord sympathy to a company like his, and assistance so as to improve the position of both capital and labour in future years. Another point dealt with by Mr. Harmood-Banner is also of great interest, viz., the rise in the price of coal. Colliery owners are not becoming "soap millionaries," he said. Last year the company got 5d. per ton more for its coal than in the preceding year, and of this increase the collier got 3d., so that only 2d. remained to the proprietors. Since June 30 the selling price has gone up another 8d., of which one-half has already gone to the miners, who have still, under the Conciliation Board agreement, a further 5 per cent. to get, so that the increase in cost absorbs a large part of the added price paid by the consumer. The higher wage of the colliers is also, and naturally enough, leading to less work. On certain days of the week at the company's collieries the attendance of men does not exceed 50 per cent. of the number who ought to be in the pits. This also is probably inevitable, but it does not promise cheaper coal in the near future. The speech throughout was thoughtful and full of information.

This comes from a correspondent who has had "luck" with a lottery bond, and illustrates patly enough the influence these securities exercise on the popular mind:—

"Your article on lottery bonds is, on the whole, fair; but have you taken into consideration the effect of the premiums on the sentiment of the working classes in respect of saving? In England working men and women have only the Post Office Savings Bank in which to invest their savings. Sixpence a year interest on £1 seems hardly worth saving for, but if with that 6d. the investor has the chance of getting £800 or £1,000, as in the case of some of the Belgian Municipal Loans, or if he only gets 5d. or 2 per cent., has a chance of £4,000 or even £10,000, as in some of the French Municipal Loans, what an incentive he has for saving. He may wake up some morning, and find himself independent.

"And that the chance is not too remote is shown by my own case. Some years ago I bought a few Lots Turcs at £5 each, and within three months one of them drew a "gros lot" of 600,000 francs. Unfortunately then only 54 per cent. was payable, and I only got £13,000 odd. To-day it would have been £24,000, and that prize falls to someone three times a year. What would that mean to a curate with a large family? It would enable him to give his children the best of education, and a good start in life. What would it mean to a working man?

"So I think there is much to be said in favour of lottery bonds."

Critical Index to New Investments.

Head, Wrightson and Co., Limited.

During the past year a good deal of money was spent by this company on extensions to the shops and machinery of the bridge department, and in order to pay off the temporary loans incurred an issue of 21,000 6 per cent. cumulative preference shares of £5 each was offered for subscription at par. The company, which has an authorised capital of £420,000 and a debenture debt of £150,000, possesses freehold and copyhold property valued at £315,738, while its movable stocks, &c., on April 30 stood at £103,439, work in progress at £149,678, and other assets brought the total up to £602,122, against which the liabilities, including the debentures and £51,907 borrowed from the bankers, amounted to £243,007. Adding the nett proceeds of the present issue, the surplus of assets is £458,615, without anything being included for goodwill. Results for the year ended April 30 last showed a somewhat heavy drop from £44,703 to £26,602, and the ordinary dividend was reduced by 2 per cent. to 5 per cent., but the decline is explained by the curtailment of the output of the bridge department during the alterations, the unusual amount of work in progress on which no profit was taken, and the high prices of raw material and fuel. Profits, however, are given for the past ten years, and for the first half of that period averaged £32,505, while for the second half the average was £43,355, in spite of the above noted decrease. Even in the worst year the margin was ample enough, and the shares therefore are a fair security of their class.

Banteng (Selangor) Rubber Estates, Limited.

This company acquires two estates of about 1,904 acres in extent, of which 360 acres have been planted with Para rubber trees, for £10,000 in cash, £10,000 in shares, and £4,000 in cash or shares, and the granting of an option for three years over 10,000 shares at par. Nothing, according to the prospectus, is payable for goodwill, but the vendors acquired the property for £5,000 in cash and £10,000 in shares, and their profit on the transaction answers to the description of goodwill as much as anything else. The total capital is £50,000 in £1 shares, but 10,000 of these are held in reserve, leaving 30,000 to be offered for subscription, on which the promoters guarantee a dividend of 7 per cent. per annum for the first three years, and will deposit £5,000 with the Chartered Bank of India, &c., for that purpose. After 1910 dividends will depend on the success of the company, but Mr. J. A. Macgregor, manager of the Anglo-Malay Rubber Company, is very optimistic regarding the future, and looks for a yield of 30,720 lbs. of rubber in 1911, 87,100 lbs. in 1913, and 124,800 lbs. in 1915. Taking a nett return of 3s. per lb. as against the current market price of 5s. per lb. it is expected that the profits on this production will be £4,608, £13,065, and £18,720 respectively, or sufficient to pay dividends rising from 9 per cent. to 37. The venture seems to have as good a

chance as its neighbours of realising these estimates, but the shares, of course, can only be considered a speculation.

Somerset County Council.

An issue of 179 debentures of £100 each, bearing interest at the rate of 3½ per cent., is offered through Stuckey's Banking Company, Limited, and its agents, Messrs. Robarts, Lubbock and Co., for subscription at par. The money is wanted for educational purposes, £825 for higher education, and £17,075 for elementary education, and the loans have received the sanction of the Local Government Board. Repayment of the debentures will be made on November 1 in each year between 1908 and 1937 in amounts as set forth in the prospectus. The rateable value of the county is £2,074,357, or excluding the elementary education areas of the boroughs of Bridgwater, Taunton and Yeovil, £2,451,851, and the outstanding debt, after deducting accumulated sinking funds, is £162,724, in addition to balances due on loans contracted by late School Boards amounting to £115,198.

United States of Brazil Government 5 per Cent. Loan of 1907.

This long-expected loan made its appearance on Thursday, when subscriptions were invited by Messrs. N. M. Rothschild and Sons for £3,000,000. Nominally the price asked is 95, but a full six months' interest will be paid on February 1, although only 45 per cent. of the price will have been paid up by that time, and the final instalment is not due until April 13, and these concessions bring the actual cost down considerably. The loan is to be redeemed in 15 years by a cumulative sinking fund of 4½ per cent. per annum, to be applied half-yearly by purchase of bonds when the price is under par and when at or above par by drawings, but the whole amount may be repaid at any time on six months' notice. We regret to see a country whose future ought to be great driven to borrow on terms thus onerous.

Posoltaga Rubber Estates, Limited.

This company is formed with a capital of £30,000 in £1 shares to acquire an estate of about 710 acres on the West Coast of Nicaragua, of which 400 acres have been planted with 90,000 Castilloa rubber trees. An experimental tapping of about 500 of the older trees gave about 700 lbs. of dry rubber, and it is estimated that the yield for the current year should be 6,500 lbs., while as the trees gradually reach maturity the yield is expected to increase to 62,750 lbs. in 1912 and 150,000 lbs. in 1915. These figures, of course, are only estimates, but one thing in the company's favour is the moderate demands of the promoting syndicate, which is satisfied with £500 from the owner to cover out-of-pocket expenses, and resells the property to the company for £8,500 in cash and £4,000 in shares, or the same amount as it paid.

Capital and Counties Bank.—Liabilities on September 24, consisted of £33,815,144 on simple contracts and £507,700 on bills, and assets of £5,332,547 cash in hand and at Bank of England, £5,308,279 money at call and short notice, £4,784,253 Consols and other investments, and £19,768,088 bills of exchange, promissory notes and advances to customers.

London and Westminster Bank.—Liabilities on September 28 consisted of current accounts and deposits £26,711,963, acceptances and endorsements £1,403,566, and other liabilities £1,986,875, against which there were cash in hand and at Bank of England £3,353,148, money at call and short notice £5,000,930, Imperial Government securities £3,885,000, bills discounted, loans, &c., £18,905,498, and other securities £1,664,261.

Parr's Bank.—Liabilities on current and deposit accounts, &c., on September 26 amounted to £29,068,001, and on drafts current, acceptances on behalf of customers, &c., to £1,871,542, against which cash in hand and at Bank of England stood at £4,513,329, money at call and short notice £7,476,968, Government and other first-class securities £3,352,775, bills of exchange £2,447,333, and loans and advances to customers £14,312,090.

The offices of the following companies have been removed to 2, Broad Street Place, E.C.:—Transvaal Exploring Land and Minerals, New Belgium (Transvaal) Land and Development, New Lydenburg Minerals Exploring, Transvaal United Trust and Finance, Transvaal Northern Estates, Ventersdorp Proprietary, and Zwartland (Transvaal) Land.

Deposits against future queries may be lodged with the Publisher.

B. W. J.—(1) These have gone down partly on the price of copper and partly owing to market tactics. We should not sell, but doubt if the time has come yet to average (2) If you do not want the money you might keep the bonds. The country is politically unsettled, but it has a future.

Timothy.—(1) We will answer this question next week. (2) The debentures ought to be all right to hold, although they may go down in sympathy with other things if the rate war continues. (3) We cannot say what they may do on a scare, but the shares are certainly worth their present price. The developments you mention are still all in the air, and not likely to do much harm when put to practical use. (4) Jorehaut.

Hale.—(1) The shares are not cheap, but the mine is a working property, and as a speculation there might be a chance of improvement. (2) These are very speculative; a buyer takes considerable risk. There may be some recovery from present price, but we think it would be prudent to await the coming report.

J. B. G.—We do not know of anything "first-class" in that market, but the one you mention is a reasonable venture, and although the price may go lower you could not do much harm in buying a few.

K. A. Y.—A fair speculation, but doubtful if they should be bought at present. The country is not quite so settled as we should like to see it.

A. C.—(1) The company is certainly more economically managed now than it was, and in view of the state of the trade we think the security a fair one. (2) A good enough security. (3) We agree that the country has a future and is likely to go ahead some day, but it is the present political uncertainty we do not like. (4) These seem a fair investment at the current quotation, with some chance of improvement.

Gold.—The practice you speak of was given up years ago, and there are no traces now of any paper currency being issued for silver. The Government is buying moderate quantities of the metal at present, but the purchases are for coinage only. Thanks for remittances.

H. S.—(1) Not very. The company is heavily over-capitalised, and although it has made a brave show of prosperity, much of it was unreal, and it is now beginning to feel the pinch. Watch the market carefully, and sell your shares on any recovery. (2) These should be safe enough, but they are hardly shares for a small holder, as they carry a liability of twice the nominal amount.

Nemo.—(1) Do not be frightened out of your holding by the talk of competition. Even if the new system is a commercial success, which remains to be proved, it cannot handle more than a very small proportion of the total business, and in regard to speed cannot compare with the existing undertakings. (2) The chameleon-like changes which the company undergoes at short intervals, and the methods of presenting the accounts are so calculated to keep shareholders in the dark as to the true position that the shares do not seem a desirable investment.

Arkay.—The exchange suggested carries too much risk for us to recommend it. You would do much better to buy, say, a debenture in a sound Financial Trust company.

W. P.—The stock is a satisfactory enough security, but the price is almost sure to go lower under present conditions, and you might do as well to wait a little before buying.

H. W. D.—We doubt whether you will have an opportunity of getting in at the price you name, and as the security is good, we think you might buy a few even at a higher figure.

L. B. A.—The notes seem a tempting purchase, as the company possesses a good deal of valuable property, and has an excellent field for development in various ways.

S. B.—(1) This company is a money lending and trading concern in Australia, and is in a strong position, but it has enormous amounts locked up in land, particulars of which it never discloses. The debentures, however, ought to be a fair investment. The next report is due about the end of this month or the beginning of next. (2) We dealt with this company in our issue of June 8. It was badly hit some years ago by the drought, but has been pulled together since, and although its strength is nothing remarkable yet, the first mortgage debentures seem well enough secured.

H. B. C. (Cardiff).—We have never had much faith in the company's process being a commercial success, and the latest authentic information that we have seen only confirmed that view. The report for the past year is now overdue, and it might perhaps be as well to wait for that before selling. If uneasy cut your loss. Thanks for remittance. As you had 1s. standing to your credit we have put the cheque to your account.

Rammer.—(1) The company is a very powerful one, doing a big business, but it is likely to want more capital soon, and for that reason, if for no other, we look for the price to go lower. (2) This is also a very strong concern, and its shares if they can be got at all should be worth buying at the price you mention.

G. R.—(1) We know of no reason why these shares should have gone down. There is nothing in the report to justify the fall, and you should hold on to your shares (2) Nothing is known of the company here, but we will make inquiries and reply to your question next week.

The Investors' Review.

The Week's Money Market.

BANK RATE 4½ PER CENT. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

Barring a small pinch at the end of the quarter, the Money market has continued easy throughout the week. That pinch drove a few borrowers to the Bank, and it charged them 5 per cent. on seven-day loans, but, as the Bank return indicates, the excess of such borrowings over repayments amounted to little more than £214,000. Since the new month came in rates have again eased off, both for call and notice money, until bankers have had to be satisfied with from 3 to 3½ per cent. on the one and 3¼ to 3½ per cent. on the other. Is it to be inferred then that the position is really a comfortable one? By no means. The market is the reverse of comfortable, and although some sanguine men in it have ventured to prophesy a reduction in the Bank rate the majority are far more inclined to look for an advance. Discount rates have accordingly now and then shown a disposition to harden, and we should not be surprised if before another week elapses the three months' rate should come very close up to Bank rate.

For all that, the market is not really strong, either for loans or discounts. Brokers condescended to pay 3¼ per cent. this morning for time money, but they told the lenders that they would give no more than 3 per cent. to-morrow. They are confident through the expectation that the dividends will make the market comfortable for them. It may be that for perhaps another ten days, but after that anything may happen.

As always happens though when money is easy discount rates slip back. There are plenty of bills to be had, some houses say, particularly an abundance of good American produce bills; but the three months' remitted bill rate which has been close to or actually 4 per cent. most days sometimes touched 3⅞ per cent. this morning. Towards the close the quotation hardened, and some houses were slow to work at any time under 4 per cent. The market forgets that a good deal of the money for the Government dividends will have to be borrowed, with the result that incoming taxes must go to pay off the Bank. And then there is the drain of gold already begun and certain to become formidable, even should the New York market be unable to buy. An estimate was current this afternoon to the effect that £2,000,000 of the metal may be bought by New York almost forthwith, but how is it to be paid for? Not only has New York to provide money to satisfy the sellers of American securities, but it will have to finance a renewal of the Pennsylvania Railroad notes falling due on November 1 next, and not all the grain and cotton bills its bankers can create may leave enough margin to meet these demands and also pay for this or any large amount of gold.

It none the less remains with us to-day, as for a long time past, a mere question of gold. Within the Bank week a nett export of £616,000 took place, and withdrawals for one place or another continue on a scale which must again force the Bank rate up at no distant date. No doubt its position is a much better one than at this date last year, when the total stock of coin and bullion was nearly £5,500,000 less than it is now, and when the reserve was almost £5,250,000 less, but the pull upon the Bank may be greater this autumn than last for several reasons. New York may after all be driven to import gold at any cost, but even if this danger is escaped there is probability of heavier exports to Egypt this year than last. The cotton crop there is said to be excellent, and is valued to be worth between £25,000,000 and £30,000,000. As it is nearly all exported and much of it paid for in metal, this opens the prospect of a quite formidable demand for gold here. Germany is also in need of gold, and the Reichsbank figures issued this week should scare optimists sufficiently to make them cautious.

So enormous was the demand upon the Imperial Bank at the end of the quarter that its note circulation is up £19,749,000 compared with the previous week, at the same time that its gold has shrunk by £5,982,000. It results from this that the note circulation is now £25,669,000 above the maximum allowed by law, while a week ago it was £2,052,000 below that maximum. How is the Reichstag to adjust its dangerously straitened position, except by gathering in gold? Notes may doubtless come back from circulation during the next few weeks, but there is small probability of a contraction either in the note or coin circulation adequate to give the Bank an appearance of strength. And the same story is told by the figures of the Bank of France, although they are not nearly so alarming. Still, its note circulation was distended by £9,030,000 during the past week, and it lost £645,000 of its gold, so that its paper circulation is now almost £95,000,000 in excess of its gold in hand. Here also we have a situation suggestive of peril, if not actively dangerous, and in view of the distressed condition of credit wielders and creators throughout Europe we do not believe in an easy money market here or anywhere else this year. How is Paris, for example, going to finance the new Russian loan with its present means?

Exchanges are against us, a sure indication of competition for the gold in the open market on Monday. There will only be about £500,000 available, and the Bank of England will not be left to carry it away. Money is therefore going to be dearer, and soon. The mere destruction of credit and banking capital brought about by the fall in Stock market prices cannot fail to intensify the world hunger after hard cash.

Calls next week are mercifully light. About £160,000 should have been due on Wednesday next, but that issue has been cancelled. On Thursday, however, £500,000 becomes payable, including £375,000, an instalment on the Kowloon Railway loan. For the entire week the total is less than £682,000.

SILVER.

The market for bars has been over-supplied with metal this week, as the unfavourable advices regarding the weather in the Punjab caused the Indian bazaars not only to resell part of their previous purchases, but also to offer the metal for forward delivery. As no other buyers came forward to take their place,

prices fell away sharply to 30 1/16d. per oz. for cash and 30 7/8 per oz. for delivery two months hence, and close weak at those levels. Applications for the Rs. 30,00,000 Council drafts on India offered on Wednesday amounted to Rs. 2,69,15,000 all in bills, tenders for which at 1s. 4d. per rupee received about 8 per cent. Next week another Rs. 30,00,000 will be offered.

The Stock Markets.

It distresses us much to be unable to speak comforting words to holders of marketable securities, but it continues to be impossible. Liquidation goes on day after day, and every little lift in prices brings in fresh selling. Were this state of affairs confined to one or two great markets, we should have hope that the end might be near, but it characterises every market, and it is, therefore, impossible for any one or two centres of distress to obtain relief or support from the others. The settlement on the Paris Bourse this week has been as disastrous as many recent ones in London, and French operators have been trying to unload or selling without regard to prices on every possible chance. The losses incurred by the French in mining securities alone must already amount to many millions. They have this week, for example, been flinging out Cape Copper shares which they bought with avidity some time ago at higher prices than now obtainable. As for the American market, it, in the language of the cable messages, continues to be "wholly professional." The bull and the bear make raids upon each other, score successes, inflict losses, and at the end of every rally or stampede the essential condition of the market is more hollow than before. From all quarters, therefore, we are driven to the inference that the painful and long drawn out liquidation is not yet nearly at an end.

This week our market has been haunted by a dread of its own, the fear of coming banking troubles. It has got hold of a story to the effect that a Manchester bank has incurred losses amounting to £750,000 in connection, some say with the Egyptian collapse, others with losses inflicted by the Armenians. The most diligent inquiry in quarters where the truth should be known has failed to elicit any confirmation of the story, but it persists, and has quite paralysed the Stock Exchange during the current week. In our experience we have never found a tale of this kind spring up and hold its ground without some foundation, and it is probable enough that losses are hidden amongst the Manchester banks, but in instances known to us these losses have turned out to be much less than was at first anticipated, and we do not believe that the Manchester bank whose name is most freely canvassed inside the market as having been smitten in the way described can be involved to anything approaching the amount alleged by the gossips. We go further; if the bank named did have to acknowledge a loss of £750,000 before the middle of this month, as the market also asserts, its position is strong enough to enable it to stand the blow, and to recover within a comparatively short time from the effects thereof. On the whole, therefore, we must regard this persistent story merely as a symptom of the uneasiness which possesses the minds of all dealers in credit. Tired of picking each other's business characters to pieces, of undermining the credit of this firm and the other outside house, the market seems to have turned its thoughts to the banks, and most minds are attuned by their prolonged misfortunes to feed on any tale of impending disaster.

That most of our banks have suffered losses through the depreciation of prices may be accepted as an incontrovertible fact. They could not possibly have escaped, however vigilant their management may have been. That they have been driving clients out of stocks for the last year or two at least is well enough known. They have in thousands of instances forced private customers who had loans with them to pay off the debt, and there is always a residuum in a clear out of this description, consisting of accounts that cannot be squared, and some banks may have been imprudent enough to allow this residuum to become distressingly formidable. This, however, we believe to be the worst

of it, at least with most English banks, and probably with all but one or two of the Scotch banks. At the same time, the mere fact that hidden deficiencies of the kind indicated exist tends to prolong the liquidation, and to intensify the uneasy feeling dominant on the Stock Exchange. Were some weak credit prop or props to crumble, bringing about a violent spasm of general liquidation, we should have greater hope of an early recovery than the visible indications now permit. The condition of all markets warns us, in short, that the disease from which they suffer is too deep-seated to be cured by good words and assurances that the worst is at last over. The worst may not come until we have witnessed an almost utter paralysis of credit.

Consols and Other Securities.

In the circumstances described it is not surprising that business has been throughout the week meagre in the extreme, or that prices should have in the main again slipped back. Consols, however, have been somewhat of an exception, mainly because money has been comparatively easy. There was just a little stringency in loan rates at the end of the month, but nothing to speak of, and Consols dipped very little under it, the market for these and other Government securities being sustained by the hope of a little investment business when the dividends are disbursed at the end of the week. Probably enough too much of the dividend money will be required to meet depreciations and absolute losses, but there will still be a balance over, so to say, available for reinvestment, so that jobbers do well to keep the market up. India stocks were firm, as well as those of the Home Government, and neither the imprisonment of patriotic editors nor the divagations of Mr. Keir Hardie have had any effect on that corner of the market. County Council stocks have also kept up, and Home Corporation securities generally have shown no tendency to recede. In Colonial inscribed stocks business has been well nigh invisible, nor has anything particular happened amongst Colonial and Foreign Municipal securities. There is no demand worth speaking of for any of this class of stock, and one reason why there is none is found in the abstention of the insurance companies. They are holding their money and waiting for better times.

Foreign Government Stocks.

Brazilian bonds have not flinched to any appreciable extent, because of the new loan announced towards the end of the week in Messrs. Rothschild's usual grand manner. Some of the 5 per cents. are down a fraction compared with a week ago, but the principal characteristic of the market is public neglect. Nobody cares to deal either in the old loans or the new. When the prospectus of the new loan came out on Thursday afternoon, some dealers tried to make the price of the scrip ¼ premium, but we could not hear that any dealings had taken place. The loan, however, has all been planted out, and a prospectus was merely a *pro forma* matter. Plantees for the present will be allowed to keep most of what they have taken. If they have to sell it will be at a discount. Argentine bonds were steady, with, however, scarcely any demand for them, and the news that harvest prospects are excellent in the Republic has not attracted buyers. Central American issues were colourless, but there was some improvement in one or two of the earlier Japanese loans, as also in the old Russian loans. The later Russian loans have also been supported by Paris, where a new loan is in preparation, as noticed elsewhere. Take it altogether, however, this Foreign market is stupid enough, and prices the reverse of buoyant. We wish we could say there were bargains in it, but they are not to be seen.

Home Railway Stocks.

Occasionally a certain amount of business is done in Home Railway stocks, particularly those of the "heavy" lines, like Midland and Great Western, but anything like a full market is an event the dealers have almost lost the memory of, and the simmering of that partially factitious labour dispute, as well as the forced liquidation, affected so many speculative investors with an itch to sell that they kept the market down, quite overpowering the feeble investment buying. On the week quotations have sometimes moved a little, but that little has latterly been the wrong way, and not even the news that a practical agreement to dovetail and economise traffic arrangements, said to be already coming into effect between the Caledonian and North British companies, has done anything to lift Scotch Railway stocks. Jobbers and players are even disposed to scent danger in the week's traffic returns. They display, the *Railway News* says, an increase of £32,434, bringing the total increase for the half-year to date up to £903,493, but this is not as good as it ought to be, the grumblers declare. Therefore the country's trade has begun to dwindle. There is no heart to do business, any way. Sometimes, however, a recovery has occurred in debenture and preference stocks, and it is possible that a little more business will be seen in these during the next week or two. There is certainly less disposition shown to sell, and that is a welcome symptom. Many preferences are up from 10s. to £1 on the week, and it only requires a little increase in the trickling stream of investment buying to make the whole list rally.

Indian, American and other Railway Stocks.

Indian Railways have improved on the week through the same influences affecting Home Railway secured issues. A small scattered investment business has been done, and the market now moves at the slightest hint, regardless of sedition in India and everything else, for it carries no stock.

The gamble in Canadian Pacific shares has continued to be one of the leading incidents of the week, and quite a sensational slaughter of "bears" took place some days ago. In New York the price was driven up some $14, and the consequence of the forced closing of accounts open for the fall which this "bear" drive indicated has been increased weakness ever since. Deprived, that is to say, of the support of the accounts open for the fall Canadian Pacific shares have been limp to a degree, and as the week closes the downward tendency has been accentuated by the prospects of a further emission of ordinary capital. Grand Trunk stocks have also given way for various reasons, fears as to the yield of the Western harvest and also as to the effects of the heavy expenditure on the Grand Trunk Pacific undertaking. Business, however, has not been anything like so extensive in the lower stocks of this company as in Canadian Pacific shares.

American Railroad shares where changed at all have without exception lost ground during the week, and the market for them remains one of the most unsatisfactory in the world. Fears of dearer money in Wall Street, the inability to finance commitments entered into before the crisis reached its height, the inability to raise fresh money in Europe and the absence of any public support all help to maintain Wall Street in a state of apprehension, and helpless against the public distrust or indifference. Play has been made during the week with Union Pacific shares, but it does not interest the public here, not the new public at least, and the most noticeable fact relating to the week's business appears to be the heavy liquidation from this side. One day early in the week it was computed on balance London had sold 70,000 shares on the Wall Street market, and most days the balance has shown an excess of sales more or less important. All these shares are not being thrown out by operators here alone; probably the bulk of the selling really comes from Berlin and Amsterdam, certainly Amsterdam has been pointed at this week as a centre of financial distress, one small bank there having failed, and reports about further failures as well as of distress liquidations in Germany have helped to fill the Stock Exchange with unfavourable estimates about the future. It is this heavy selling doubtless which prevents the grain bills now being manufactured at a great pace in New York from exercising that depressing effect upon the American exchange which might herald a demand for gold in our money market. How

the New York Central Railroad or any other needy corporation is to raise money here in such circumstances beats us to divine. The borrowing could only be short-term loans of the sort already so much utilised as to lay trouble enough for next year when payday comes along.

Prices have not been very good for Foreign Railway securities, and business in none of them shows any important vitality. On the whole perhaps the Argentine group has maintained itself best, and the news coming forward about the harvest prospects in the Republic would certainly in ordinary circumstances induce a considerable amount of speculative investment buying. At present it does nothing of the kind, and changes are therefore rare. Sometimes also they are unfavourable, but, generally speaking, calmness prevails. No further development has taken place in the Mexican Railway stocks' gamble, but prices have kept up. Nitrate Railways shares, however, have shown weakness as well as Antofagasta ordinary stock, and some of the issues of Cuban Railway companies. Egyptian Delta Light Railways shares have been put higher without much help from outside influences. They should be a tempting purchase in view of the business prospects in Egypt. South Manchurian scrip has been offered a little, and a want of elasticity has been shown in Brazilian railways, San Paulo ordinary having dropped about 2 and Leopoldina ordinary ½.

Banks, Breweries, Commercial, Insurance and other Stocks.

Bank shares have been firm this week, and the shares of discount companies have also displayed some resisting power, but there was an exception in those of the Standard Bank of South Africa, which seem to have suffered by Lord St. Aldwyn's speech at the Bank of Africa meeting dealt with last week. National Bank of Egypt shares have been pushed up to 22½.

Rather a sharp fall of 10 is shown in Bieckert's Brewery ordinary stock on the week, but it is still quite high enough, and not worth the attention of any but experts. Other Brewery securities have seldom moved, never in any interesting way, although the market as a whole is perhaps inclined to firmness. It is at any rate deserted enough to bear any description the imagination suggests.

Among the Industrial groups motor securities continue out of favour, not without ground we fear, and hotel company shares are not in very good odour either. Portland Cement preference shares, however, have stiffened somewhat on the comforting speech made by the chairman at the shareholders' meeting, and better prices have been attained in Nobel Dynamite preference shares, although the ordinary have been flat, as well as in Bell's Asbestos shares, and the ordinary shares of the Humber company. Lipton's ordinary shares, too, were firm, and some little rally has taken place in Rio Flour Mills shares. Waring and Gillow's debentures have weakened slightly, but the deferred ordinary shares of Waterlow and Sons were dealt in yesterday at 25. In the main, however, the Commercial and Industrial list continues to reflect the general listlessness of markets and the majority of quotations are either unaltered or lower on the week. Several Nitrate shares, for instance, have lost 2s. 6d. to 5s., and Linotype "B" debenture stock is now down to about 52½.

No further recoil worth mentioning has taken place in Electric securities, and the stock of the Mexican Light and Power Company has risen a little. Financial Land and Investment securities, however, have suffered with other things, and hardly a favourable movement is visible in the entire list. Argentine Land stocks have lost favour, and show weakness, thanks probably to forced liquidation, but the heaviest recoil has been in Hudson's Bay shares, which fell sharply on the unfavourable return of land sales published early in the week. Harvest estimates in the West have also had an unfavourable influence. In other directions Peruvian Corporation issues, Pekin Syndicate shares, Scottish Australian Investment stocks, with other Australian Land securities, have given way more or less. Gas stocks have been steady throughout, and the majority of such changes as have occurred amongst Insurance shares during the week are favourable. The business in them, however, is of the poorest.

Had times been ordinary, coal shares would certainly have been in demand. As it is, the market for them makes a very ragged display, as will be seen in our "price movements." Even Pearson and Knowles's shares have failed to rise to the occasion, and though the preference have risen, the ordinary have lost just as much. Pease and Partners' shares, too, are weaker, and the disposition to part with the stocks of iron and steel companies is becoming more marked. Occasionally, as in the case of Willans and Robinson's debenture stock and Dunderland debenture stock, the drop has been sharp. United Collieries' debentures have also been depressed, and as for the issues of the United States Steel Trust, the less you look at them the better.

Tea shares have gone some way with the current, but not far. Telegraph stocks are still influenced by the Marconi scare, especially the stocks of the Eastern and Anglo-American companies. Why cannot people stop and think? The cable companies are in a position to beat the Marconi Company out of the field with its own weapons, provided these weapons prove to be what is claimed for them. As yet, however, the Marconi system has not been demonstrated to be an assured rapid and trustworthy success over long distances. The public should, therefore, keep cool, and not give way to panic every time a Marconi message reaches its destination. How many of the messages sent fail to arrive? Why was so little heard of the *Lusitania* on its homeward voyage?

Tramway securities have done as they might be expected to do—lain still or gone down, all except two or three, amongst which we actually find London General Omnibus stock. Selling has been rather persistent in B.E.T. ordinary shares, and they closed flat last night. London Electric Tramways debentures are likewise heavy enough, but British Columbia ordinary stock has risen.

Friday Evening's News.

Quite a cheerful gleam came over the "gilt-edged" market to-day. Consols rose to 83. It was merely a little "bear" closing, but it is something to get even that comfort in these times. Cheap money, the coming investment of the spare dividends, and the chance of the hour moved the bears to buy back.

Most other divisions of the Stock Exchange were quite listless, and the depression never lifted much. Afternoon prices, however, were often better than those of the morning, and the liquidation on the Paris Bourse seems over for the moment. It was reported that another *Agent de Change* had gone, but if so his account in copper things must have been closed yesterday. "Tintos," "Capes," and "Bostons" finished above the worst. So did Yankee Railroad prices, and Home Railway stocks might almost have been firm had there been any business to do. There was mostly none.

Some amusement has been got out of the Brazilian loan "frost." It has been a perfect failure so far as public subscriptions are concerned, and the wits of the market have dubbed it the "bungalow" or "bungle" loan. The great house of Rothschild, it seems, does not associate itself with anything so vulgar as mere underwriting in the common or colonial manner. Its brokers simply go round the market and tell the jobbers that "you, and you, and you will get £10,000, you £20,000, and you £50,000," as the case may be, and that all will come in "on the ground floor." So the jobbers took the scrip, trusting to the power of the issuing house to keep the price at a premium equal to a good underwriting commission for them. At first 1 to 1½ per cent. premium was talked about, but when the loan appeared and no buyers came forward from among the public the premium vanished. So the market tried to comfort itself by nicknaming the loan the "bungalow," because the members had all got in on

the ground floor, and, lo! there was no first floor for them to get out on.

Motor shares were better to-night on report and dividend anticipations. Carnegie Steel Trust shares were firmer. Canadian Pacific shares and Grand Trunk stock rallied sensibly, and the only weak market at the close was that for diamond shares.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: 2½ p.c. Ann 1905 and Acct. both ¼, to 80½-81, Irish Ld. Stk. Ac. 1, to 84¼-84⅜, India 1931 Ac. ½, to 99¼-99⅜. do. 1948 Ac ½, to 85⅝-86. do. 1926 Ac ½, to 71½-72½.

CORPORATION AND COUNTY STOCKS.—Rise: Metro. Water "B" Ac. ½, to 88-89, Metropolitan Cons. Stk 3½ p.c. ½, to 99½-100½, L.C.C. 3 p.c. Ac. ½, to 87-88, do. 3½ p.c. Cons. and Ac. both ½, to 99½-99⅝, Bristol 3½ p.c. 1, to 97-99. Liverpool 3½ p.c. 1, to 103-105, Metro. Water "A" 1, to 85-88. Manchester 4 p.c. 1½, to 114-118. **Fall**: Corp. of Lon. 2½ p.c. 4½, to 72-75. Edinboro' 1, to 89-91.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES.—Fall: Cape 3 p.c. 1933 ½, to 80-81.

CORPORATION STOCKS.—COLONIAL AND FOREIGN—Rise: Copenhagen 1898 1, to 86-90, Lyttelton (N.Z.) 3, to 115-118, Rosario 1889 3½, to 52-55, Winnipeg 4 p.c. 1, to 97-99. **Fall**: Cape 4 p.c. Ins. 1, to 97-99, Christiania 1, to 98-100.

FOREIGN STOCKS.—Rise: Argentine 1886-7 ½, to 102½-103½, Argentine (B. A. Water) ½, to 100⅜-101½, Chinese Silver Ln. ½, to 105-106, Greek (P. L. Rly.) ½, to 46½-47½, Japan 1895-6, ½, to 100½-101½, do 4 p.c. Ln. ½, to 84½-85, Russian (Nicol. Rly.) 1, to 78-80, Swedish 1894 Ln. 1, to 84-87, Venezuela ½. to 45½-46¼, Argentine Cedulas ½, to 44-45, Dutch Certs. 1814 1, to 72-75, German Ln. 1, to 83-85, Prussian (Jan. and July Cps.) 1, to 83-85. **Fall**: Argentine (N. C. Rly.) ½, to 98½-99½, do. Intern. Ln. ½, to 36½-36⅝, Brazalian (W. of M. Rly. and 1895 Ln.) both ½, to 94-95, do. 1903 Ln. ½, to 97-98, Chilian 1892 Ln. 1, to 96-98, Costa Rica "A" 1, to 43-46, do. "B" 1, to 33-36, Danish 1894 1, to 84-88, Greek 1887 ½, to 47½-48½, Japan 1907 ½, to 99-99½, Russian 1859 1½, to 59-61, do. 4 p.c. Ln. ½, to 74-76, San Paulo Excheq. Scrip 1, to 94-96, Italian 3½ p.c. ½, to 100-101.

HOME RAILWAYS.—Rise: Tilbury 1, to 113-117, Pt. Talbot ½, to 11-12. **Fall**: Caledonian Dfd. No. 1. ½, to ¾-1, Gt. Nthrn. "A" ½, to 31-32, Barnsley ⅝, to 48½-49, Metropolitan Surp. Lds. Stk. 1, to 64-66, S.-Estrn. Pfd. 1, to 103-105.

Debenture.—Rise: Gt. Wstrn. 4 p.c. 1, to 114-116, do. 5 p.c. 1, to 141-144, N. Wstrn. 1, to 88-90, S.-Wstrn. "A" and Cons. both 1, to 87-90, Neath "B" 2, to 70-75, N. Staffs. 1, to 83-85. **Fall:** Cambrian "A" 1½, to 100-103, Gt. Nthrn. Picc. 2½, to 80-83, Chatham Arbtn. ½, to 113-116.

Guaranteed—Rise: Gt. Centl. and Mid. 1, to 97-99. **Fall**: District M.D. Stk. 4, to 30-40.

Preference.—Rise: G. Nthrn. 4 p.c. 1, to 107-109, do. 1899 1, to 80-82, G. West. ½, to 137-139, Lancs. and Yorks. 4 p.c. 1, to 107-110, N. Western 1, to 111-113, Chatham Arbt. 1, to 71-73, do. 2nd 1, to 35-38, Midland 1, to 68-70. **Fall:** Gt. Centl. 1879 1, to 113-116.

INDIAN RAILWAYS.—Rise: Bengal and N.-W. Ord. 1, to 146-149, Bengal Nagpur 1, to 102-105, E. Indian "A" ½, to 20-21, do "C" ½, to 22½-23½, do. "B" ½, to 24½-25½, do. Def. Ann. Cap. (Guar. 4 p.c.) 1, to 108-113, do. 3 p.c. New Deb. 1, to 83-85, do. 3½ p.c. Deb. ½, to 95-96, do. 70 p.c. pd. ½, to 70-71, Indian Mid. 1, to 100-103, Madras 5 p.c. 1, to 107-110, Scinde Punjaub "B" ¼, to 23⅜-24⅜, S. Behar 1, to 106-109. **Fall**: Bengal and N.-W. 3½ p.c. Pref. 1, to 87-90, Nizams 3½ p.c. Regist. 1, to 83-86.

COLONIAL RAILWAYS.—Fall: Grand Trunk of Canada Guar. 4 p.c. ½, to 100-101, do. 5 p.c. 1st Pref. ½, to 120½-121½, do. Perp. 5 p.c. Deb. 1, to 128-130, do. 4 p.c. Cons. ½, to 103-104, Mashonaland 5 p.c. Guar. Mt. Debs. 2, to 79-83, Rhodesia 5 p.c. 1, to 78-83, do 4 p.c. 1, to 68-71.

AMERICAN RAILROADS.—Fall: Atchison Prefd. 1, to 91-93, Chicago Gt. W. Com. 1, to 8⅛-9⅛, Erie Com. 1½, to 19⅜-20⅜, do. 1st Prefd. 1, to 46-48, G. Northern 2½, to 129-133, Mex.
